PETER AND JANE.

By S. MACNAUGHTAN, Author of *The Fortunes of Christina Macnab*, &c.

CHAPTER I.

MRS OGILVIE, red-haired according to the exact shade then in fashion, and dressed by Paquin, sat in her drawing-room reading the *Court Journal*. She thought on the lines of Aristotle, despised most women except Charlotte Corday, Judith, Joan of Arc, and a few others, and she dyed her hair and read the *Court Journal*. People who did not know her sometimes alluded to her as an overdressed woman with a wig. Those who had met her even but once admitted the power of her personality. Perhaps if any one had known her very well he or she would have been bewildered by the many-sided complexities of her character, and would have failed to discover any sort of unity behind its bewildering differences. But then, as a matter of fact, no one did know her well.

Those who cared to remember such an old story used to tell how, as a girl of eighteen, she had been deeply in love with a cousin of hers, Greville Monsen by name, and how almost on the eve of her marriage she had thrown him over and had married Colonel Ogilvie the explorer, a man twenty years older than herself, with an enormous fortune, and accounted something of a hero at the time.

Colonel Ogilvie married late in life, and his brother's wife had long ago decided that it would be better if he should never marry at all. Mrs Lionel Ogilvie was an ambitious woman with a fine family of sons and daughters to whom Colonel Ogilvie's large estates and immense fortune would have been wholly appropriate. She had always been civil to her brother-in-law, although the estates and the money were safely entailed upon his brother, and she weighed in the balance the disinterested affection which she showed him against her feeling of satisfaction in the fact that he was a daring and indefatigable traveller; one, moreover, who was seldom quite happy unless he was in danger, and who never thoroughly enjoyed a journey if any other white man had trodden the ground before he himself visited it.

Mrs Lionel Ogilvie was indignant at the news of Colonel Ogilvie's marriage. Being a very wise woman, she would probably in time have controlled her temper, and by a little judicious management she might have secured a considerable fortune for herself and her children. But, alas! there was a necessity within her of 'exploding' to some one when, as in this instance, her heart was hot and her head not quite cool. And so, with some sense of justice, venting her spleen upon the cause of it, Mrs Lionel Ogilvie said certain very unwise and unkind things about her brother-in-law's fiancée and her cousin Greville Monsen. Of course the heated and uncontrolled words of the disappointed woman were repeated, and there was a terrible and stormy interview between the two brothers, who parted that same day and never spoke to each other again.

Mrs Francis Ogilvie, the colonel's wife, bore the character of being a cold and dispassionate woman. And this was the more remarkable because on the distaff-side she was of Spanish descent, and might reasonably have been supposed to have inherited the instincts of that passionate and hot-tempered nation. She never quarrelled as the brothers had done, but her eyes narrowed for an instant, with a trick that was characteristic of her, when she heard Mrs Lionel Ogilvie's tale. And when, in the quieter moments that followed her husband's outburst of anger, he asked her, with a tone of question in his voice, if Lionel and that odious wife of his could possibly expect to be forgiven, Mrs Ogilvie raised her eyebrows and said simply, 'I do not know what forgiveness means.' She paid no attention to the vulgar gossip which her sister-in-law tried to attach to her name; and Greville Monsen had either got over his disappointment, or was sufficiently attached to his former fiancée to

[*All Rights Reserved.*]

forgive her her treatment of him. He came to the house on terms of intimate friendship, and continued to do so even after Mrs Lionel Ogilvie's busy tongue had spoken.

Mrs Ogilvie was not affected by gossip nor moved by public opinion. To have altered her conduct even by a hair's-breadth because it was not generally approved would have seemed to her an absurdity; but those who offended her were not given the opportunity of doing so twice. To have had small quarrels followed by reconciliations would have been impossible to her. Very few things were worth quarrelling about at all, still less worth forgiving! Mrs Ogilvie was cynically indifferent to transgressions against herself; but when she did sit in judgment she always gave a life-sentence.

When Lionel died, the feud between the brothers would probably have been forgotten had it not been for the lamentable fact that his eldest son, who had grown up into a faithful likeness of his worldly and commonplace mother, took it into his head at the time of his father's death to write to his uncle in a way which showed as much greed as ill-breeding. The foolish young man's letter might have been put into the fire and forgotten, for Colonel Ogilvie had loved his brother long ago, and his death affected him deeply; but young Lionel made a mistake when he referred to the fact that Colonel and Mrs Ogilvie were childless, and alluded to his own prospects. This put an end for ever to all friendly intercourse between the two. Mrs Ogilvie, on her part, lifted her eyebrows again and said, 'The commercial mind is very droll!' But just for one moment she locked her hands together with an impulsive movement that had a whole life's tragedy and disappointment in it.

It was all the world to her and her husband that they should have children. But Fate, who had prospered them in every other respect, had denied them what they most desired. A son and heir was born a year after the marriage, and died the same day. Two years later a little girl was born who lived a few weeks, and then she also died. Since then there had been no children. Many women would have claimed sympathy for their sorrow; most women would at least have accepted it. Mrs Ogilvie, with her health somewhat impaired, came back to the world and assumed her place in it without any expressions of regret for her loss. Probably not even her husband knew whether she felt it deeply or not. No one else was ever permitted to speak of it. Colonel Ogilvie's own disappointment was never expressed. He had too much tenderness for his wife to say anything about it.

'If ever I am to be a mother again,' Mrs Ogilvie said once, 'my child shall be born out of reach of kind inquiries or deep sympathy. If he lives, let those rejoice with me who will. But pity is always offensive, and is generally meant to be so.'

As the years came and went Colonel Ogilvie lost interest in his property, and handed over the care of the greater part of it to agents and stewards, and came very near to hating the lands which some day would go to his nephew. A queer restlessness was upon him, and his wife watched him and said nothing. Until one day, seeing him reading a certain paragraph in a newspaper, she said to him, smiling slightly as they stood together on the broad stone terrace at Bowshott, 'Why don't you go with them on this exploring expedition?'

Colonel Ogilvie protested. He was a married man, he said, and his travelling days were over. It is probable, however, that never was a suggestion more welcome. The past years, in spite of his deep love for his wife, had been full of fret and shadowed by disappointment, and he longed, with a traveller's intensity of longing, for the wild, untroubled places of the world, the primitive life, and if possible some dangers on the road. An exploring party, sent out by the British Government to discover a lost missionary and to punish a warlike tribe, was exactly the thing to suit his adventurous disposition. In spirit he was already in the dangerous places of Central Africa, far from human habitation, and with very often his own right hand the only thing between him and a barbarous death. Even while he protested with conscientious emphasis against his wife's proposal, he already saw the dim forests of Africa, the line of bearers on the difficult march, the tents struck at nightfall, and all the paraphernalia of an interesting campaign.

He was away for eighteen months, beyond the reach of letters and telegrams for the greater part of the time; and during his absence Mrs Ogilvie, whose health had been feeble for some time, went to her native land of Spain for warmth and sunshine, travelling by sea to Lisbon for the sake of the voyage. From her Spanish mother she had inherited a property at Granada, and it was from there that she was able to write and tell her husband that she was the mother of a son. Colonel Ogilvie was in an inaccessible region when that event happened, and it was not until he was on his return journey home that he heard the good news. Two years later another child, Peter, was born; and, ardently as her first-born had been desired, Mrs Ogilvie showered by far the greater part of her affection upon the younger child. Everything had to give way to Peter, and she resented that even such baby-privileges as a child of tender years can receive were bestowed upon the elder son and heir. Her health gave cause for anxiety for some time after Peter was born, and her mental state and the condition of her nerves accounted for the partiality which she showed for her younger child.

The colonel, however, was always a little

jealous for the fair-haired boy who had come to his mother while he was far away; and by his will, which he made at this time, he secured an almost extravagant provision for Edward. He could almost forgive his nephews now for their obtrusive existence in the world, and he settled down to enjoy his property with the happy knowledge that he had two fine, sturdy boys to whom to leave it. He was still in the prime of life, and not all the dangers and privations which he had undergone seemed to have undermined his splendid constitution. But a drive home in an open dogcart, after speaking in an overheated hall at a political meeting, brought on a chill and pneumonia, of which very suddenly he died. His loss was sincerely and deeply regretted in a neighbourhood where he was both admired and loved for his many good qualities, and a monument in Culversham parish church tells of his excellence as a landlord and his intrepid courage as an explorer.

Mrs Ogilvie's health still being precarious, she went abroad for the winter after her husband's death to look into some matters concerning her own property, and to try to court health in the sunny, vine-growing country. And there, in a little, remote Spanish village by the sea which she loved to visit, little Edward Ogilvie, the elder of the two children, died; and not until six years later did Mrs Ogilvie return to England. To all outward seeming she was as emotionless and reserved as she had ever been, and she spoke no word of her double sorrow and her irreparable loss. Her love for her remaining child never showed itself in caresses, and was not even discernible in her speech; but in spite of her reserve there was an undefined feeling in most people's minds that Mrs Ogilvie idolised her son. Of the two who were dead no one ever heard her speak. Whatever she thought of them seemed to be buried in her heart as deeply as if it were their graves. And there remained only cheery, popular Peter Ogilvie—with his mind as open as the day, and not a secret upon his soul, and with as much reserve as a schoolboy—to inherit the fortune which a prince might have envied, and a property which was unique in a county rich in beautiful houses.

The gardens of Bowshott were the admiration of the countryside, and Mrs Ogilvie rarely entered them. The picture-gallery was visited by foreigners from every part of the world. Mrs Ogilvie frequently showed the works of the great masters herself, strolling along the polished floor of the gallery, and telling the story of this picture and that with that inimitable grace of manner which was vaguely resented by her country neighbours, and delighted the distinguished foreigners who came to see the pictures. She herself hardly ever glanced at the old masters for her own pleasure; and although full of technical knowledge on the subject, she had no love of art. It used to weary her when she had to listen to enthusiasm, generally only half-sincere, about her Botticellis or Raphaels. Music never stirred her, and she regarded the society of the country neighbourhood where she lived with a sense of uncomprehension which she sometimes found difficult to conceal.

'Why were such people born?' she used to say to herself at the sight of some rural gathering. On the rare occasions when she went to a party she was always the first to leave; boredom seemed to overtake her before she had been anywhere very long. Entertainments, so called, were horribly wearisome to her, and she never for an instant believed those people who professed to have enjoyed a pleasant party. Parties were all stupid, she thought; just as most people were stupid and most food was badly cooked. Therefore, why meet in somebody else's most probably hideous room, and eat impossible dishes, and talk to impossible people? Her own *chef* had been famous even in Paris, and every evening, according to the custom of the house, an extravagant *menu* was prepared, at which, when she was alone, she hardly glanced.

Mrs Ogilvie discussed all things in heaven or earth with a baffling lightness, turned philosophy into a clever jest, and made a sort of slang of classical terminology. Amongst a clever set in London she reigned supreme when she chose; but a false note or a pose offended her immediately, and the *poseur* or the insincere person would generally receive one of her exquisite snubs which cut like acid into tender skins. The pretentiousness of the so-called cultured set was a vulgarism in the eyes of this woman who could be rude with the airs of a princess, and could give a snub as some people offer a compliment. Inferior people sometimes wondered how she had a friend left. To be popular, they argued, one had to be civil, whereas Mrs Ogilvie was often daringly disagreeable. There was indeed something almost fine in her splendid disdain of the civility of the so-called popular person. She could wound; but she did it with the grace of a duellist of old days, who wiped his rapier with a handkerchief of cambric and lace when he had killed his opponent, and would probably expect a man to die, as he himself would die, with a jest on his lips and a light laugh at the flowing blood. Mrs Ogilvie slew exquisitely, and she never hated her opponent. She smiled at enthusiasm, and thought it bizarre and rather delightful; but towards vulgarity, especially in its pompous form, she presented her poniard point, sharp-tipped and deadly. 'Why should people take themselves seriously?' she would say with a shrug of her shoulders. 'Surely we are a common enough species!' And then the green-gray eyes would narrow themselves in their short-sighted way, and Mrs Ogilvie's voice, charmingly refined and well-bred, would with a few words lightly prick the falsely sentimental or self-inflated wind-bag of oratory that

had presented its unprotected surface to her shaft.

Towards religion her attitude was the well-bred one. She took off her hat to it, as a gentleman removes his hat in church whatever his creed may be. Her own beliefs were as daring and as nearly as possible uninfluenced by outward opinion or by the accepted systems as it is possible for a creed to be. She never tried to force them upon any one else; possibly she did not believe in them herself sufficiently to wish to do so; but, like her queer gowns and dyed red hair, her creed suited Mrs Ogilvie. There was a congruous incongruity about her which set many people puzzling to find out her real character. Pompous persons and snobs detested her. Stupid or vapid people saw nothing in her, or saw merely that she dyed her hair and was dressed by Paquin. Narrow-minded people disapproved of her, and clever people considered her one of the most striking, if not one of the most agreeable, personalities of the day. Women hardly ever understood her; but they respected any one who dressed as well as she did, and they had an undeclared admiration for a woman who could hold so lightly possessions which they believed to be all-important, and which Mrs Ogilvie seemed to find so trivial.

The house and its gardens were open once a week to visitors, and the country neighbours brought their guests and strangers to see it, their pleasure in showing off Mrs Ogilvie's possessions being somewhat tempered by timidity; while those who came to pay a call on the chance of finding her at home would sometimes say with an air of courage and independence to a friend, 'Mrs Ogilvie is considered rather alarming, you know, but it really is only her manner.' She played her part as country neighbour conscientiously. Once a year she gave a sumptuous garden-party, all other garden-parties in the neighbourhood being dated by it. And when Peter was a little boy there were children asked to the house to play games with him, and later there were dances and balls.

Peter accepted his mother, his property, and his position on what he himself would probably have called their most cheery side. He valued Bowshott because there was excellent hunting to be got there, just as he loved his place in Scotland because of the stalking and the fishing and the shooting; but that they were magnificent or enviable never entered his head. Fate had dealt very kindly with him, and its kindliness had provoked a charming geniality in the character of the young man whom it had treated with such lavish good fortune. Taking it all round, Peter considered this world an excellent one, and most of the people in it very good sorts indeed. He accepted his mother, as he accepted everything else, with a simple-heartedness which never looked below the surface or concerned itself with motives; and if any one had suggested to him that she was inexplicable, he would have considered such a judgment quite unintelligible. He enjoyed a visit to her more than almost anything else in the world. She had always been devoted to him ever since he was a boy, and he could never see that she was difficult to understand.

It was the fashion to say that Mrs Ogilvie had altered greatly since the death of Colonel Ogilvie and the little boy. People who remembered all the circumstances of that sad time thought always that in her own way Mrs Ogilvie was the victim of remorse for not having loved her dead child better. But, after all, there was nothing that a child of three or four years old could have felt seriously in his mother's conduct, and his father's affection must have consoled him for any coldness on her part. After the colonel's death there were those who said it would have been better if Mrs Ogilvie had married again; they regretted that she had not a daughter—some one who would have been always at home, and who, to use the common phrase, might have taken Mrs Ogilvie out of herself. Peter was too much away from home to be a real companion to his mother, and there were never guests at Bowshott unless he was there. It would surely have been in reason if the widow had taken a fancy to some nice girl and had had her to live in the house. But Mrs Ogilvie did not take fancies to nice girls. She loved Jane Erskine, but disguised the feeling under a sort of whimsical indifference. And the friendship seemed incongruous enough, if one came to think of it. Jane, with her wholesome love of outdoor life, her fresh beauty, her heedlessness of learning and ignorance of books—what had Jane in common with Mrs Ogilvie in her Parisian gowns and with her dyed hair, sitting in the vast drawing-room at Bowshott reading the *Court Journal* and thinking on the lines of the speculative philosophers?

And even to Jane Erskine her manner was cold. Her chilling philosophy would soon have quenched a less happy and impulsive nature. No one but Jane would have bothered her head about Mrs Ogilvie, the kindly neighbours said, envying, nevertheless, the girl's intimacy at the great house. But as a matter of fact Jane expended a wealth of honest affection on Mrs Ogilvie, and not only thought her the cleverest woman she had ever met, but had even been heard to affirm that her hair was not dyed. She called her 'such a really good sort;' and the words were as inappropriate as the words of Peter Ogilvie and Jane Erskine usually were.

(To be continued.)

'POOR WHITES' IN SOUTH AFRICA.

IT would be difficult to find within the four corners of the British Empire a more cosmopolitan population than exists in the South African Union at the present time; all sorts, conditions, and nationalities commingle—Britons and Boers, Hebrews of every conceivable type (from the man who buys rags and bottles to the opulent millionaire), the swarthy Malay with his scarlet fez, the Greek fruiteller, and the Indian hawker, to say nothing of the innumerable tribes of blacks scattered up and down the subcontinent. But there is one class of people possessing specially noteworthy and interesting characteristics, their direct origin involved in a good deal of obscurity, and their future furnishing much perplexity to the humanitarian.

Broadly speaking, the term 'poor whites' may be taken to mean British subjects of European origin who are domiciled in the colony, and who have been reduced to a condition of great indigence, from which, it seems, they are unable to raise themselves or their families without extraneous aid. Their number unfortunately is fast increasing, and the problem of finding a solution for their betterment is assuming every day a more serious aspect, as it is felt that many of them stand the chance of drifting into a state of helpless pauperism or becoming utterly demoralised. These 'poor' or indigent whites, as they are termed, may be said to approximate in some degree to the 'submerged tenth' in England; though, from a physical point of view, a sunny climate tells much in their favour. The most of them belong to the Dutch Boer class; but their ranks have from time to time been recruited by runaway sailors, soldiers, broken-down schoolmasters, as well as wastrels generally.

Some have drifted into towns, and the effect of their contact with townsmen has in many cases been to familiarise them with the vices of urban life. Those in the country are nomadic and unsettled in their habits, trekking about, some of them, with a few sheep or goats. They may perhaps live in a tent or in a dilapidated shanty constructed of old sheets of corrugated iron or flattened-out paraffin-tins fastened to wooden beams. A few perhaps may aspire to a tenement of sun-dried bricks, but there is hardly any pretence to comfort or convenience in their dwellings.

The children of many parents living in sparsely populated districts have been allowed to grow up in hopeless ignorance, and have never learned to appreciate the gospel of work or the value of time; indeed, self-respect is in too many instances an altogether unknown quantity. They vegetate rather than live in the ordinary acceptation of the term, and this listless, apathetic, spiritless habit of mind continues to be handed down from parent to child as the years go by.

Apart from what may be called the force of circumstances, other causes which have contributed to the number of 'poor whites' have been the extension of the railways, which has thrown numbers of ox-wagon carriers out of employment; the subdivision of farms not adapted for supporting many families, which has compelled the less industrious owners to seek some other calling; and in some cases intemperance on the part of individuals, leading to the impoverishment and ruin of those dependent upon them for support. One of the main causes, however, which has led to the coming into being of this class of people is the want of proper education. The conditions of life in a sparsely populated, non-agricultural country like the interior of South Africa are undoubtedly favourable to the development of a type of character peculiar to the pioneer; but without education people of this class become more or less unfit for the more strenuous struggle for existence which supervenes on the increase of population. There is reason to hope that with the efforts which are being made to extend the advantages of education throughout the country—as, for instance, the establishment of farm-schools—the evil in question will tend to diminish year by year; but there are many prejudices to be surmounted, not the least of these being that, in the eyes of these people, dignity is lowered by the performance of honest manual labour.

This trait has doubtless been fostered to a large extent by the fact that in former times slaves performed all the menial and arduous work, and that to-day natives are the recognised hewers of wood and drawers of water. Very many of the daughters of impecunious parents could readily obtain situations as 'domestics,' but they object to be designated 'servants,' though 'mother's help' might be more to their taste. In the course of examination by a select committee on this question, a witness was asked, 'What is the cause of these people being poor whites?' and the answer given was, 'Because their parents were too proud to let them learn any trade, or in fact would not let them learn to work at all. The young fellows are too proud to work as ordinary day-labourers—they all want to be *klein baases;* the girls prefer to sit at home and wait till they get husbands; a couple of the boys may look after the sheep, and the rest will hang about the place and get up to all sorts of mischief.' I have heard of a comparatively poor family where there are eleven daughters, and not one of them shows any inclination to go out and work, poverty being preferable.

And yet there is some invaluable material among these indigent whites. The superintendent of the Industrial School at Uitenhage, Mr M'Jannett, who had many years educa-

tional experience in Scotland, speaks most highly of the lads with whom he has come in contact. He believes that the solution of the problem lies in educating the coming generation. Young fellows sixteen or seventeen years of age, who have had absolutely no instruction whatever, have come to his school, and better latent talent is not to be found all the world over, if properly developed and supervised. I might say that the institution in question was founded by a committee of the Presbytery of the Dutch Reformed Church. It is supported by Government grants, coupled with the proceeds of the sale of the articles manufactured by the lads.

There is also a girls' indigent home at Graaff-Reinet, the object of which is to take away children from undesirable surroundings and train them to become good mothers' helps, so that in after-years they can earn a respectable living. The Destitute Children's Relief Act was passed in 1895, under which destitute children are admitted to the Home: firstly, those who wander about uncared for and without parents or guardians; secondly, those who live in houses of immorality, or whose mothers lead an immoral life; and, thirdly, those who live among thieves and drunkards. The matron's testimony is to the effect that not a single case has turned out a failure, and the only matter for regret is that such institutions cannot be multiplied and more waifs of humanity brought under their benign and elevating influence. Then, again, an experiment made at the railway workshops shows that the boys, after proper training, become excellent mechanics and do not compare unfavourably with imported labour, notwithstanding that when they start their career they are for the most part absolutely illiterate.

An effort has also been made to enrol men of the 'poor white' class in the police force, for which they appear well adapted, and great satisfaction has been given. One would naturally be led to suppose that, in a mineralised country like South Africa, mining was a pursuit which could be very advantageously exploited; but if European lads were to be taken on and taught the duties of a miner they would have to do the same class of work as the Kafirs—serve a sort of apprenticeship, in fact. Here again sentiment steps in, and the whites object under any circumstances to do the same kind of labour as natives do. Even in the Namaqualand copper-mines the poor whites have not proved a success; men and boys alike have a kind of natural repugnance to the calling, whereas in Cornwall, for instance, boys go to work with their fathers, and begin at the lowest rung of the ladder.

One witness before the commission to which reference has already been made, who possesses a large tannery and boot factory, employs a number of poor whites, and finds them very amenable to discipline and training. The younger ones have no inclination, when they have learned the trade, to go back to the land, as they find there is more money to be made in the factory; but the older men who have grown up on farms have a tendency, after they have accumulated some means, to get a few sheep and cattle and go back to the country again. Many of these latter, however, struggle along for a while and then return to the factory. It must be borne in mind that formerly, when a man got into such a condition that he had no land on which to live, he would simply trek a little farther, and was encouraged to do so, as the Government wanted the country opened up. Then there is the question of the larger farms, the owners of which may each have two or three families of the 'bywoner' class upon their land. The farmer gives them a good deal of assistance, it may be; but after twenty years or so the two or three families may have become twenty families, and then there is no room for them. The same trouble has been experienced in America.

Another contributing factor to the existing state of things is the desire of the people always to live on the old farm, divide it, and subdivide it, and thus the progressive members of the poor white family are held back by their debased and undesirable surroundings. The farms and the water are divided communally, the most cannot be made out of the land because the people will not combine, and the good men are retarded by the others. A clergyman recently in the course of a lecture told his audience that he had obtained for twenty-three young men of poor Dutch families in his parish situations as porters, signalmen, and gangers; and, although the wages averaged two pounds a week, only four of the twenty-three retained their posts. Some said, 'Why should we carry passengers' luggage? We are white as well as they;' and others found the work too hard or too continuous, so they gave it up, and went back to idleness and beggary.

It will be seen from the foregoing that the question is beset with difficulty, the pressure of circumstances and the lack of education telling heavily upon a very large class of the community who, experience has proved, can be raised in the social scale; although it seems that the process must inevitably be a slow one, demanding all the fostering care and supervision that philanthropic effort can bestow. The by no means few instances that have come to light where poor whites have got the better of their surroundings and been converted into industrious citizens are a proof that we know but little of the hidden qualities of things, and that treasure can be frequently extracted from most unpromising material.

THE PARTING OF THE WAYS.

By Samuel Gordon.

IN FOUR CHAPTERS.—CHAPTER I.

Of the many magnificent palaces that line the granite embankment on the left side of the Neva, between the Liteinyi Bridge and the Bridge of Nicholas I. at St Petersburg, that of Baron Anselm de Kolberg, the Jewish banker, was perhaps the most magnificent. He had bought it from a prince, the bearer of one of the proudest names in Russian history, whom insensate extravagance had brought to ruin. There were some, chiefly among the baron's co-religionists, who said that his acquisition of the mansion was rather a piece of ill-advised ostentation; but that did not trouble Baron Kolberg very much. He was not the man to subordinate his private predilections to other people's opinions. Else he would not have been Baron Kolberg.

Through the window of his luxurious study, where he was awaiting the return of his son Felix, the baron looked thoughtfully out upon the streets. It was near midnight, but the mighty city was still bathed in a sea of light. There it stood, a gigantic lie, cloaking beneath its thin European veneer all its semi-Asiatic savagery. Under its mask of ultra-modernity lurked the reactionary barbarism of the Middle Ages. The free, unfettered life that surged through it might have stood as the emblem of all that was meant by liberty and progress. Instead, it was the anvil upon which were forged the chains of galling servitude that turned a whole nation into one immense slave-gang. Its brazen laughter, its fevered gaiety, rose loud and discordant, and drowned the agonised cry of suffering millions. From the hour of its birth it had exacted a merciless toll of countless lives that were spent in redeeming the soil upon which it reared its pinnacles from the grip of the pestilential swamp; and ever since it had gone on glutting its greatness and splendour on human blood and sweat, and flourishing exceedingly on the fare, until in its pride and stony disdain it had become what it was now—a fit monument of the relentless might of the Muscovite Empire.

Baron Kolberg, as he watched the panorama before him, shook his head as though in answer to some secret misgiving. A soft tapping at the door broke in on his reflections.

'Well, Sebastian, what is it?' he asked, turning with a kindly air to the old man who entered.

'I only wanted to know if your excellency required anything. Perhaps a glass of hot punch? It's a little chilly to-night.'

'No, thank you, Sebastian; I'm quite comfortable. You had better go to bed.'

'Your excellency's pardon, but I have never yet gone to bed while any one was up in the house, and I won't make a beginning now.'

'Very well. I don't suppose Master Felix will be long.'

He watched the old major-domo withdraw with an almost affectionate look. Sebastian was one of the heirlooms of the Kolberg family, and one of its most valued. Besides, the baron reflected, Sebastian was the only one living now who shared his greatest secret.

He turned back to the window, falling again to his former meditations, and again shaking his head at his silent thoughts. Presently the door opened noiselessly, and his son Felix entered.

'What are you denying so emphatically, father?' asked the young man, with a smile.

'The advance of civilisation, the coming of the millennium—many things, in fact. I hardly know where to begin,' replied the elder man pensively. And then his voice assumed a lighter tone. 'But it's rather too late to-night to start moralising. Tell me, did you have a good time?'

'Oh, excellent. I think it was the best performance of *La Bohème* they have ever had at the Opera here. And then I was a bit of a lion,' continued Felix with a laugh. 'Crowds of people congratulated me on my picture. Everybody thought it a great thing that a firm like Holzmann should have bought it the very first day of the exhibition.'

'Oh, did they think so?' said the baron with an almost imperceptible smile. 'Let me see. I presume you were in the Kowalevskis' box?'

'I was,' replied Felix a little curtly.

'Who else was there?'

'Only Madame Kowalevski and Vera.'

'Did you see them home?'

'In my motor. Theirs had gone to fetch M. Kowalevski from a reception at the French Embassy.'

There was a pregnant little pause.

'By the way, Felix,' resumed the baron presently, 'has anything been said as yet between you and Vera?'

'Not in so many words,' was the somewhat hesitating reply; 'but we understand one another. I like her, and I think she likes me. And other things being equal'——

'Quite so—other things being equal,' interrupted the baron, seating himself ponderously in his chair. 'But, you see, they are not. As you know, there can be no talk of marriage between you and Vera until the little difference in your respective religions has been adjusted.'

'I am quite aware of that, father.'

'But I don't know whether the Kowalevskis

are. They are not the kind of people to spend their time poring over the statute-book. As a matter of fact, there 's not so much necessity to do that for real orthodox Russians as there is for—ahem!—us Jews. But of course they would be bound to give the question their serious attention when it came to making definite arrangements between you two young people. Their family solicitor would no doubt not omit to tell them that Vera by marrying a Jew is laying herself open to—I don't exactly know what it is, capital punishment or exile. At any rate, it 's something very disagreeable. They would hardly take kindly to the idea of their darling little Vera working in a platinum-mine, even in company with the man of her choice. In Siberia she would probably not find sufficient facilities for the champagne baths which I understand her doctor has ordered her.'

'I thought you were aware that that was just the reason why I have not yet made any formal proposal,' said the young man moodily.

'I am aware of it. And therefore we might seize the opportunity of thrashing the matter out between us. This seems a fitting psychological moment. Sit down, Felix.'

It would be difficult to imagine a greater contrast than was shown in the outward appearance of the two men, a contrast which did not seem altogether accounted for by the difference in their ages. Neither in feature nor in figure was there the least resemblance between this father and son. The baron was short, almost undersized, portly in gait, and his face was cast in a correspondingly heavy mould. Felix Kolberg, on the other hand, was tall and slender, with features delicately cut and a sensitive mouth that vibrated readily to every impulse of his artistic nature. Strangely enough, he showed as little resemblance to the late baroness, a half-length portrait of whom occupied the place of honour over the baron's writing-desk. It was a cold, stolid countenance, in which the Teutonic and Semitic types blended to the effacement of either. She had died some sixteen years back, and the baron had not replaced her.

During the pause that had ensued the baron had been dipping into a cigar-box, choosing among its contents with a deliberate care which seemed significant of the anxiety he felt to put his thoughts into appropriate words. The occasion demanded it.

'The position, my dear boy, is this,' he said at last. 'We—that is, you and I—are occupying a distinctly anomalous place in our environments. We move in a certain class; but we are among them without being of them, and we are not allowed to forget it. Every now and then we are given a sharp reminder that we are admitted into St Petersburg society only on sufferance. We are not even looked upon with the indulgent condescension which is the lot of parvenus. We might eventually live that down. No; the misfortune is that we are allowed to ascend to whatever height we please in the social scale, and yet the sharp line of demarcation follows us wherever we go. In fact, everybody admits that I play a great part in the world, that I am a financial and even a social force to be reckoned with; but even the people who press my hand most gratefully for the profitable investments I make for them, who are most effusive in their praise of my dinners, go away shaking their heads and whispering to one another, "What a pity he 's a Jew!"'

'So much the worse for them,' said Felix dryly.

'Admitted; but unfortunately also so much the worse for us. And what makes this state of things all the more regrettable is that it could be so easily remedied. It is merely a question of label, of outward conformity. Convictions do not enter into the case. I have only to be received into the bosom of the Greek Orthodox Church, and my racial origin is forgotten—or at any rate forgiven.'

'But you are a free agent, father,' said Felix, avoiding the older man's gaze.

'Not altogether. For one thing, I am bound by a matter of sentiment. I gave my mother on her deathbed a half-promise that I would not abjure the faith. I have kept it, and am willing to keep it so far as the considerations concern me. But there is yourself and your career.'

The young man's brows lifted in astonishment.

'My career!' he echoed. 'I should have thought that that was pretty well assured. At least, there is every indication of it. My picture in the Imperial Gallery'——

'Your picture in the Imperial Gallery!' said the baron, spacing his words. 'Yes, that is a case in point. My dear boy, you force me to a humiliating confession. Your picture was not accepted on its merits solely. The chairman of the selection committee told me that it was undoubtedly the finest work of the year. But it was their duty to give native—that is, orthodox Russian—talent the preference.'

'Still, what does it matter? It got in,' exclaimed Felix a little impatiently.

'It did; but the gold that got it in was not entirely confined to the frame.'

'Father!' exclaimed Felix, shocked.

'You see what you have to expect,' the baron continued, unperturbed. 'At every turn we strike against obstacles, and you know even the hide on an elephant's shins will wear away if he runs up against things long enough. And now comes this difficulty about Vera, and I think it 's time we made a clean sweep of all difficulties for now and for the future.'

'What do you suggest, father?' asked Felix dully.

'I haven't quite decided on my course of action. Having waited so long, it 's only right I should not be too precipitate. I want to think

the matter out in all its bearings. I am afraid my apostasy will make something of a sensation. It will be a great blow to my co-religionists, who have come to look on me as one of their staunchest champions—I don't know on what grounds, because I have never put myself out for them. So I want to see what I can do to minimise the effect. But I can't do it here.'

'Can't do what here, father?'

'I can't do any thinking in this noisy, tumultuous city. I must be quiet and undisturbed for a while. Where shall we go, Felix?'

'Well, what about your summer house on the Krestovskiy Island?'

'Where I should meet all my acquaintances of the Bourse and hear nothing but quotations and market-prices from morning till night!'

'A cruise in the yacht, perhaps.'

'I should be seasick all the time.'

'I have it, father!' exclaimed Felix after a short pause. 'Why not go to your estate near Tribunalska?'

The baron looked up, a startled look on his face.

'Oh no, no! that 's quite out of the question,' he returned hastily.

'But why, father?' insisted the young man. 'You have often made me wonder about it. Here is a splendid property, from which you derive a certain portion of your income, and yet you seem to make a point of ignoring its very existence.'

'I have no time to bother about it. It 's administered by an excellent steward in whom I have implicit confidence, and that 's sufficient for me.'

'But, if you will permit me to say so, father, it 's not altogether fair to me. I think you ought to let me satisfy my curiosity about a possession which one day—I hope to heaven it will not be for many years!—may be mine. You don't know how often I have felt tempted to slip away quietly and go there by myself. I hear it has some of the finest scenery in the world. It might inspire me to some good work. And I should think you will find there all the solitude you want.'

The baron had risen to his feet and paced the apartment once or twice. Then he turned and faced his son with an air of resolution.

'Very well, Felix; I think I may risk it.'

'Risk it! Where 's the risk?'

The baron looked a little confused, as though he had committed himself.

'I mean—— You see, here again we are hampered by our disabilities. A ukase has lately been issued forbidding Jews to take up their residence in the country without special permission. I don't like to lay myself open to a rebuff. We might be refused.'

'What, and the Minister for the Interior lunching with us to-morrow!'

'Well! well, I'll see what I can do with Gardanoff. I 'll open for him a bottle of the '54 Tokay. And now, my boy, to bed. I 'm glad we 've had this talk, although I 'm not sure that it has brought us any further.'

'Well, at any rate it has brought us as far as Tribunalska,' said Felix, smiling at him affectionately.

'Yes, as far as Tribunalska,' echoed the baron under his breath. And as he shook hands with Felix the latter could not help noting and wondering at the troubled look of retrospection that had come into the older man's eyes.

(To be continued.)

NOTES ON THE PORTRAITS OF SIR WALTER SCOTT.

By W. Roberts.

PORTRAITS form one of the inevitable penalties of greatness from which there is no escape. To do most great men (and women) justice, it would seem one of the penalties to which they submit with a more or less good grace. The portraits of even moderately famous people are almost past counting; but who shall attempt to enumerate those of such celebrities as the Duke of Wellington, Mr Gladstone, and Queen Victoria, to name but three of the great figures in the history of the last century?

Some interesting and surprising facts concerning the portraits of celebrities may be found in two recently published compilations, neither of which can be described as being of a popular character: Mr Algernon Graves's *Royal Academy Exhibitors, 1769–1904*, and the American Library Association *Portrait Index*. In turning over the one thousand six hundred double-column pages of the latter, one stands amazed at the number of eminent persons whose existence, if nothing else, is demonstrated to us through the ages by means of portraits. In this great work Queen Victoria occupies nearly three columns, Mr Gladstone two and a quarter columns, the Duke of Wellington over one and a half columns, and Sir Walter Scott rather under one and a half columns. As a set-off it may be mentioned that Scott was the only one of the four who had the luck, good or ill, to live before the day of the photographer. Even so, it will be seen that he makes a very good show.

It is not, however, the intention of the present writer to deal at length with the various and many phases of the portraiture of Sir Walter Scott, but rather to confine himself to two aspects which have not yet been dealt with in print: first, with those portraits which have been hung at the

Royal Academy; and, secondly, with those which have at various periods appeared at Messrs Christie's salerooms. Both these subjects will contribute a good many facts to a much-needed *catalogue raisonné* of Scott portraits.

The writer's manuscript 'Index of Portraits' exhibited at the Royal Academy from its institution in 1769 to 1904 consists of nearly fifty thousand slips, alphabetically arranged according to the names of persons. From 1798 to 1810 there were four portraits of 'Mr Scott' exhibited at the Royal Academy—two in 1798 (one by W. Owen and the other a miniature by John Wright); a miniature, in 1803, by A. Plimer; and a portrait by Sir George Hayter, in 1810. Neither of these probably had anything to do with the subject of the present article; for although he had published *The Lay of the Last Minstrel* in 1805, *Marmion* in 1808, and *The Lady of the Lake* in 1809, he had not yet electrified the world with his novels.

We may take it, therefore, that the first portrait of Sir Walter Scott to appear at the Royal Academy was Raeburn's second whole length, painted in 1809, and exhibited at the following year's Academy (No. 79). It was in effect a replica of the portrait painted in 1808 for Constable, which passed at his sale into the collection of the Duke of Buccleuch. Both portraits are described by Lockhart, the repetition of the Royal Academy version being at Abbotsford. This portrait gave birth to at least three enamels by William B. Ford, which were exhibited at the 1859 (No. 822), 1863 (No. 746), and 1882 (No. 1383) Royal Academy. It would be interesting to trace the present whereabouts of these three enamels.

The second portrait of Scott to appear on the walls of the Academy was that of Sam. Drummond, which was No. 439 in the exhibition of 1817. An engraving by Blood was published at the time in *The European Magazine;* and in an autograph sale at Sotheby's on July 9, 1832, there was a letter, dated December 1817, from Scott to Asperne, the publisher of *The European Magazine*, in reply to an application for permission to engrave his portrait. This reply is so interesting that it is worth quoting: 'If you add any letterpress to the plate I hope you will make it as short as possible. In fact, there is nothing to be said; for I was born of respectable parents, and succeeded to a decent fortune, aided by preferments of the nature which my profession and standing entitled me to hope for; so that, except a degree of literary reputation which has far exceeded my own opinion of my deserts, no one has had a more uniform or undisturbed course through life, so far as it has hitherto passed away.'

Thomas Phillips's unsatisfactory portrait of 1818 (done for Mr John Murray) was not exhibited at the Academy, but there was in that year (No. 117) Wilkie's group of 'Walter Scott, Esqr., and Two Sons,' of which Lockhart regretted that he could not 'express much approbation.' In each exhibition of the Academy of 1825 and 1826 there was a portrait of the novelist, who had now become Sir Walter Scott, the earlier being that by G. S. Newton (No. 102), and the later by J. P. Knight (No. 563). Newton's portrait, a small three-quarter in oils, was painted at Chiefswood in August 1824, and is, according to Lockhart, 'the best domestic portrait ever done.' Mr Murray's duplicate is the version engraved for Finden's *Illustrations of Byron.* Knight's 'small head,' a 'juvenile production, ill-drawn and feeble in expression,' was engraved for Lodges' *Portraits.*

Earlier in chronological order than either of these two portraits, Sir Thomas Lawrence's 'unrivalled' three-quarter portrait was painted for George IV. in 1820, but for some reason was not exhibited at the Academy until 1827 (No. 146); whereas Chantrey's bust, for which Scott gave sittings concurrently with those for Lawrence's portrait, was in the 1821 Academy (No. 1133). In another form the Lawrence portrait appeared four times at the Academy, first in 1836 (No. 913), enamelled on china by W. Corden, and as an enamel three times by William Essex, in 1843 (No. 1087), in 1845 (No. 690), and in 1854 (No 665). One of these three was bought at Christie's, on November 15, 1868, by Henry G. Bohn (the size is 3½ in. by 2¾ in.), and forms No. 620 in his privately printed catalogue. It appears in a large ormolu frame with two others —namely, Lord Byron and Thomas Moore—a fact which proves that it dates from 1845, seeing that these three formed Essex's exhibit of that year. J. Watson Gordon's 'excellent' half-length portrait appeared at the Academy of 1831 (No. 149), and was painted in March of the previous year for Cadell the publisher, and is one of the most frequently reproduced representations of the 'Author of *Waverley.*' Following this came Sir William Allan's equally well-known 'Sir Walter Scott at Abbotsford,' which was No. 165 in the Academy of 1832; twelve years later the same artist exhibited his group of 'Sir Walter Scott and Youngest Daughter' (1844, No. 84). Landseer's famous whole-length portrait of Scott in the Rhymer's Glen (Royal Academy, 1833, No. 351), a posthumous portrait painted for Wells of Redleaf, has the disadvantage of not being painted *ad vivam;* but Lockhart said that Landseer's familiarity with Scott renders this picture 'almost as valuable as if he had sat for it.'

So far, then, for such of the portraits of Scott as were exhibited at the Royal Academy. The sale by auction of portraits, authentic or otherwise, of Scott is a much less simple matter. To begin with, there is the all-important question of authenticity. Scott is a good 'selling' name, and his physiognomy had no striking characteristic—such as Wellington's

nose—to distinguish it from those of many other gentlemen of the day. Anything that can be called Scott is, for saleroom purposes, readily attached to his name. Quite recently the present writer was appealed to by an American gentleman in connection with a whole-length, life-size portrait ascribed to Beechey, and said to represent Scott. It was presumably in America for sale as such, but it was dated, and the *provenance* was such that the matter required very little research. There is no record of Beechey ever having painted Sir Walter Scott; and as the cash-books of that artist for the period at which the portrait was painted have been preserved, the matter was settled very quickly. It is more than likely, however, that the portrait will find its way into some American collection as that of Sir Walter Scott, whereas it represents a gentleman whom Scott probably never saw or heard of. There is always a distressing lack of reserve in the matter of iconography in sale catalogues, but a little careful sifting will bring us to what may be described as the bedrock of the subject.

It will simplify matters, in connection with portraits of Scott in the saleroom, to take the various artists in alphabetical order. Sir William Allan's (1782–1850) picture of 'Sir Walter Scott at Abbotsford' was the last portrait for which Sir Walter sat; as already stated, it was No. 165 in the Academy of 1832, the catalogue of which gives a full, detailed account of the various accessories. It was at one time in the possession of Robert Nasmyth, F.R.S., when it was engraved by John Burnet, and at F. Richardson's sale in 1871 it was bought by Scharf, for the National Portrait Gallery, London, for three hundred and fifty guineas. In an autograph catalogue of 1900 there was an interesting letter from Allan to Birch the sculptor, with two pencil sketches, one of Scott and the other of Allan's picture of Rizzio. In the course of the letter Allan speaks of a complete set of drawings of Abbotsford, whence he had returned 'a few days ago,' and 'where I left Sir Walter in such a state that I expect to hear every hour that he has departed this life.'

The well-known picture by T. Faed (1826–1900) of 'Sir Walter Scott surrounded by his Friends,' which realised nine hundred and ten guineas at the Gillott sale in 1872, does not come within the scope of *ad vivam* portraits, and may be dismissed with no further remark. The 'head sketched in oils' by Andrew Geddes (1789–1844) is described by Lockhart as one of the studies for a picture of the finding of the Scotch Regalia in 1818, and as in the possession of Sir James Stewart, Bart. of Allanbank; this original or a replica was lent to the Old Masters Exhibition at Burlington House in 1892 (No. 33) by Sir William Agnew, and at Robert Rankin's sale, May 14, 1898, was sold for two hundred and forty guineas.

Sir John Watson Gordon (1790–1864) painted, as already stated, an excellent half-length portrait of Scott for Cadell in March 1830. He appears to have found the portrait a profitable source of income, for there are many versions of it. They vary from head and shoulders to Kitcat size. The version in the National Gallery of Scotland was presented by the artist's brother, Mr H. G. Watson. One of the earliest to appear in the saleroom was in an anonymous sale at Christie's in 1885, and then sold for fifty guineas. At the artist's sale at Mr Dowell's rooms in Edinburgh, in 1896, one of the Kitcat versions sold for one hundred and twenty-four guineas. The most important of the several versions to appear in the open market was that of the Dowager Lady Napier and Ettrick, sold at Christie's, on June 10, 1899, for one thousand five hundred guineas. This is a Kitcat size, and according to the sale catalogue is not only signed 'John Watson,' but dated 1820, or ten years earlier than the portrait done for Cadell, and three years before he assumed the additional surname of Gordon. This portrait was lent to the Exhibition of Scottish National Portraits in 1884.

In the 1906 sales there were two of the Watson Gordon versions. On May 26 two portraits by this artist, the property of the late Mr James Duncan of Benmore, were of Scott and De Quincey. The former (as well as the latter) was doubtless that which was in the anonymous sale in 1885 referred to above. The Scott portrait is an oval (30 in. by 25 in.); it realised four hundred guineas, and was purchased by Mr Gaskell, at whose sale in 1909 it dropped to ninety guineas. The second of the 1906 (July 16) portraits was the property of Mr John Kirkland of Glasgow; it had been exhibited at Edinburgh in 1871, and was now purchased by Messrs Connell for four hundred and fifty guineas.

As stated by Lockhart, John Graham, afterwards John Graham-Gilbert (1794–1866), painted a half-length, 'not destitute of merit,' for the Royal Society of Edinburgh. Of this a replica was presented to the National Portrait Gallery, London, by the artist's widow in June 1867. On May 7, 1909, an anonymous property at Christie's included a portrait of Scott in gray coat, trimmed with fur, and holding a parchment deed (35 in. by 27 in.), catalogued as by Graham Lindsay, and of which an engraving in line by T. Lupton was published in 1833 by J. M'Cormick, 14 Strand, London. Except that the portrait was the property of Mr George Fuller of Bath until 1852, nothing was known of its history; the portrait realised two hundred and ten guineas, and it was generally stated that there was no such painter as Graham Lindsay known, and that the artist was John Graham-Gilbert.

Sir Francis Grant, P.R.A. (1810–78), painted in 1831 the well-known portrait of the novelist seated at his writing-table and with his 'two

noble staghounds' for Lady Ruthven; this is well known through the engraving by Thomas Hodgetts, and still more familiarised as a picture post-card by a well-known firm of Scotch pen-makers. Grant made a replica of the portrait which at his sale in 1879 fetched two hundred and fifty guineas, and this is now, I think, the property of the Duke of Buccleuch. James Hall, the Scottish advocate and amateur portrait-painter (1797–1854), painted a whole-length portrait of Scott (whose manuscript of *Waverley* he gave to the Advocates' Library), which at his sale in 1855 was secured by a buyer named 'Leighton' for the small sum of five guineas.

Sir Edwin Landseer (1802–73) was another artist who knew Scott in later life, and has left many artistic souvenirs of the friendship. The famous picture of Scott in the Rhymer's Glen has been already referred to as exhibited at the Royal Academy of 1833. At the Wells sale in 1877 it realised three thousand and fifty guineas, and experienced a considerable drop at an anonymous sale in 1886, when it went for one thousand nine hundred and fifty guineas. In addition to two pencil sketches of Sir Walter Scott (which were bought by a Mr Potter for seventeen guineas), the Landseer sale of 1874 included two important portraits in oils, one selling for seventy-five guineas and the other for eight hundred guineas, and both found their way into the collection of Baron Albert Grant. One was presented in 1874 by Baron Grant to the National Portrait Gallery, London, and the other and larger portrait realised five hundred and ten guineas at the Baron Grant sale in 1877.

In 1824 C. R. Leslie (1794–1859) painted a half-length of the novelist for Mr Ticknor, of Boston, U.S.A. Of this several small versions —or it may be the same version—have appeared in the saleroom several times. At the Wynn Ellis sale in 1849 it was apparently bought in at forty guineas, to be offered again in the sensational sale of 1876, when it sold for sixty-nine guineas. At John Heugh's sale, May 11, 1878, it brought one hundred and twenty guineas, and is presumably the same picture (on panel 12½ in. by 9½ in.) which brought fifty-four guineas at Christie's in March 1888, and again one hundred and thirty-five guineas at the Denny sale, March 31, 1906. It was engraved by G. H. Phillips, and the probability is that this small version was done either by the artist or the engraver for the purpose of engraving. In the Appendix to Leslie's *Autobiographical Recollections* (1860), it is stated that the Scott portrait was 'repeated.'

As Sir Henry Raeburn was fifteen years older than Scott, it is quite possible that he may have painted the latter 'as a youth;' but there is no record of this in Lockhart, and any such portrait must be accepted with reservation. There is, however, such a portrait in existence; it was in the W. Russell sale of 1863, and was bought in at three pounds five shillings, for it reappeared in the same collector's sale in 1884, when it advanced to one hundred and fifty guineas; and once more in Lord Tweedmouth's sale, June 3, 1905, when it brought one thousand guineas, and in this catalogue it is stated to have been formerly in the possession of the poet Campbell. In this portrait (29 in. by 24 in.) Scott is shown as a young man in brown coat, with pink vest and white stock. In a sale held on May 8, 1897, there was another portrait by Raeburn of Scott 'when a boy, in Highland costume' (30 in. by 28 in.), which realised one hundred and fifteen guineas.

Of the Colvin Smith (1795–1875) portrait of Scott, done in January 1828 for the artist's uncle, Lockhart tells us that Smith executed fifteen copies (another and later writer estimates the number as over a score) for the novelist's friends. The half-length exhibited at the Scott Loan Exhibition of 1871 realised a hundred and ten guineas at Christie's on July 18, 1896; another on May 31, 1902, sold for three hundred and thirty guineas; and the Edward Cheney example, May 6, 1905, brought two hundred and fifty guineas.

Finally, there are the portraits by Sir David Wilkie (1785–1841), which, like those of other artists, failed to meet with Lockhart's approbation. Wilkie's portrait of Scott (16½ in. by 13½ in.) was in Sir W. Knighton's sale in 1885, and then brought one hundred and ten guineas; whilst 'The Abbotsford Family: a Finished Sketch of Sir Walter Scott and his Family' (11 in. by 14¼ in.), already mentioned as having been exhibited at the Academy of 1818, was offered at Christie's on May 25, 1895, and fell at six hundred guineas. This picture, which is signed and dated 1817, was engraved by J. Smith as the frontispiece to vol. xii. of the Waverley Novels, and was exhibited at Edinburgh in 1884.

THE VIGIL OF VICTORY.

By Harold Pensmith.

IT was Monday, the 19th of June, and the sun, no longer obscured by the storm-clouds brought by the cannonading of the days before, was shining on the steaming city with all the fervour of a fine forenoon. But in the fourth-floor sitting-room that faced the square its strength was tempered by the lowered blind, and, save where here and there a yellow sunbeam stole and struck, flecking the tall hangings with bright splashes of radiant gold, the small

apartment slumbered in a soft and sylvan gloom.

And the tense, almost oppressive, silence was scarcely broken by the appearance of Honorine, as the old doctor stepped aside deferentially to allow of her preceding him from the bedroom, and she entered, pale but resolute, into the cool quiet of the chamber.

'And you still think he can safely be trusted so near the square?' she asked in a low, guarded voice, with a little inclination of her head to show that she referred to some unseen inmate of the bedroom.

'I think so,' whispered the doctor as he tiptoed from the doorway. 'Yes; on the whole, I think it safer to trust him near the square than to let him lie longer fretting in bed. After all, the risks—what are they under the eyes of so tactful, so resourceful a daughter? You will keep the blind down, and continue to interpret matters as you have done.'

'Yes,' she sighed; 'but I can't explain much longer. You see how he starts and pricks up his ears at every cart that jolts by laden with wounded. Already, in the bedroom, he has heard the bugles; out there'—— And she looked round her with a gesture of exhaustion, as though bound and baffled by the sun-barred gloom.

'Come, come—courage!' cried her companion; 'you mustn't give way. This deception is only for a moment—to gain time. In a few days your affianced will return for you, and, in the joy of his coming, defeat will be forgotten.'

'Etienne!' sighed Honorine, the current of her fears diverted, but not decreased, by the mention of her lover. 'You will remember your promise to inquire for him?' she pleaded. 'Of every one—everywhere?'

'Rest assured, dear child,' returned the doctor. 'I shall have ample opportunities of finding out. There are in Brussels this morning many who saw the cuirassiers, and some that felt them.' And then, seeing the spasm that passed over his companion's face at his grim jest, he changed his tone and cried, 'But, come! When I do hear, what news can I bring but good news? Reflect! Seen last as the daylight faded behind La Belle Alliance, still mounted, unwounded, escorting the Emperor on his southward flight—almost in France—what further dangers could threaten him? Come; patience—wait!'

'Wait!' wailed Honorine, wearied out by her long vigil by her father's couch and half-breaking down. 'Wait! Oh, why have women always to wait? If only I knew—if only I knew!'

'Hush, or he will hear you!' said the kindly old doctor, turning a harassed face toward the bedroom doorway; and, even as he spoke, a voice cried from its inner darkness in accents of quavering zeal, 'Know what, Honorine? Know what?'

'Go to him,' commanded the doctor. 'Say you were asking the time of the Emperor's triumphal entry. Then get him out—out now, while I am here to help you;' and, touching her shoulder, he urged her gently toward the doorway.

Then, as she passed out into the bedroom, he turned to complete the preparations for the invalid's reception—pouring brandy into a glass, adjusting the pillows on the high-heaped chair, and arranging a screen before the passage-door to keep off draughts. He was just finishing this when Honorine again entered, carrying in her little hands a horse-tailed helmet and heavy sword. These he took from her and ranged before some violets that were set upon the table, and then stood waiting, as he had done so many times before since young Captain Florentin, placing his affianced cousin and aged uncle within his careful charge, had hastened southward to join the Emperor in the fatal march that led to Longwood and the grave.

And now, fondly deceived, ignorant of what had occurred, and still dreaming of victory in the midst of defeat, the old general was venturing out to see his Emperor come.

Presently he entered, half-supported by his daughter; his tall, commanding figure, though bent and bowed by wounds and suffering, still moving with the mien of masterhood as he tottered to his chair. He was fully dressed, even to his decorations, under the quilt that covered his shoulders; the loose, hanging uniform and high black boots accentuating the tenuity of his once massive limbs.

'Well, well, how do we find ourselves?' inquired the doctor genially, as he watched the effect of the administered brandy.

'Cold, weak—very weak,' replied the general, drawing the rugs about him with a convulsive shudder. 'Sometimes I think that I shall never live to see him. Cast aside like this—dying even in victory—worn out with glory!'

Presently, however, the brandy revived him, and as his pulse strengthened and steadied he lifted his head and said, 'Draw up the blind.'

'Oh no,' cried Honorine, with a quick glance at the doctor; 'remember your eyes!'

'Yes,' confirmed the doctor; 'the sunlight is too strong for them. Your being out here is only conditional, you know, upon your lying still.'

'And obeying your nurse.'

'Yes; and obeying your devoted, your discerning nurse.'

'Well, well!' murmured the general. 'But when the Emperor comes? The Emperor'——

'Wait till he does,' interrupted the doctor. 'Excitement now will only retard your recovery and prevent your seeing him.'

'Bah! Joy does not kill, doctor. I shall be there. Never shall it be said that Napoleon entered Brussels and Sebastian Florentin failed to salute him.'

'Assuredly—assuredly,' assented the doctor. 'Assuredly you will be there. If required, I shall be with the ambulances,' he said to

Honorine; and whispering 'Quiet,' he, with a cautioning nod, stole from the room.

But to enjoin quiet is one thing, to enforce it another; and no sooner had the door closed than the invalid rebelled against the blind. 'Are you sure that we shall see the Emperor?' he inquired, turning a dubious face towards it, and manifesting a desire to rise. 'I tremble lest I miss him!'

'Oh, you need have no fear on that score,' rejoined Honorine. 'Have you forgotten how you looked to see when first we took these rooms? And, drawing the obstructive linen an inch or two away from the woodwork, she looked out in confirmation.

And indeed the position was well chosen. From her elevated stand she could see every yard of the great white cobble-stoned space, over whose farther side carts full of wounded incessantly jolted with their groaning load; and, with a sudden sinking of the heart, she stood watching them till a bugle sounded, keen and piercing, from the shadows of the streets.

'The Emperor!' gasped the general.

'No, no!' she cried, throwing herself beside him. 'It is nothing!'

'Nothing!' he repeated, still struggling to rise. 'Do bugles blow themselves?'

'No,' protested Honorine. 'It wasn't our cavalry.'

'It was our call.'

'No; it was a Belgian escort.'

'Belgian!' gasped the general, with the face of one who has suddenly tasted a bad egg. 'H'm! Turning their coats, I suppose. Bah! What a rabble!' And, satisfied, he lay back quietly while Honorine, not hearing a low knock upon the door, adjusted his wraps.

But her father's strained ears had caught the low, guarded sound. 'There 's some one there,' he whispered with an indicative nod.

Honorine, however, guessed who it was. 'It 's Mrs Osborne—the English lady,' she whispered.

'Ah,' said the general sympathetically, 'I understand! Poor thing! she is afraid of being insulted by pillagers, and has come to us for protection.' And as Honorine ran behind the screen, he cried in his grand manner, 'Ask her in, Honorine, and reassure her. The Emperor does not war with women.'

But once upon the landing, Honorine dropped the mask of dissimulation. 'Any news of Etienne?' she asked with a tremulous sob.

'No; not yet, my dear. I only came with these flowers for your father.'

'How kind of you! Will you see him?'

'Has he been told yet?'

'No; the doctor says we must wait till we have good news of Etienne.'

'Yes; but if—if the news'——

'We can but die,' said Honorine simply. 'But see father.' And, stepping inwards, she showed her visitor the chair from whence the general cried, in smiling, genial patronage, 'Be not alarmed, dear madam. We French are not barbarians, and know how to treat a valiant enemy. Only, pardon me—I cannot rise to greet you.'

'Do not attempt to do so,' replied the Englishwoman. And, tendering her flowers with a smile, she asked, 'Will the victor accept tribute from the vanquished?'

'Ah, madam, it is we who are vanquished by your courtesy!' returned the general. 'Your flowers are not fairer than their giver. Honorine, my dear, put them beside the violets that gave us hope; their joint fragrance will remind us of the kindly acts that follow after war. And, indeed, madam, everything smiles to-day. Do you know, I had quite an appetite for breakfast this morning. Yes, the good news brought strength with it. There 's nothing like a victory'—— He stopped apologetically. 'Ah, pardon!' he murmured; 'I was forgetting. Our joy is your sorrow.'

'Well, we couldn't both win, could we?' replied the lady as a sound of cheering rose in the square.

'He 's coming!' shouted the general.—'Quick, Honorine!—Look, madam, look! Look! look!'

'No-o; it 's some—some people at the end of the square,' said Mrs Osborne. 'I can't quite see—yes, they are posting something up.'

'Posting! Posting what?'

'I—I don't know,' replied the kindly but slow-witted woman, staring helplessly at Honorine and forgetting her French.

But Honorine was quicker. 'I—I think I know!' she cried.

'You! How? Child, have you been practising concealment?'

'No; the care-taker told me on the landing. But—but how could I say it before an Englishwoman?'

'Oh, never mind me,' said Mrs Osborne, wondering what was coming.

'Yes; madam will pardon an old soldier's impatience. What?'

'You will lie back?'

'I am back. What?'

'The Duke of Wellington is a prisoner.'

'The Duke! And you, madam, had not heard of it?'

But the Englishwoman had taken her cue. 'Alas!' she murmured; 'the poor, poor Duke!' And as the clock chimed she counted, crying, 'Nine, ten, eleven o'clock! Dear me, I must be going! Good-bye. I hope you will be strong enough to see your Emperor—when he comes.'

'Ah, he will come, madam! As he came with the violets, so will he come with the victory. And if you should want protection, come to us. If I cannot wield a sword, I have at least my pistols.'

'And you will remember Etienne, madam?' cried Honorine.

'Yes; but see her out, child,' corrected the general. 'The wounded heart is quick to feel an insult, and victory falls heavy on the vanquished.'

However, the news, and the sight of a fresh face, had much revived him; and it was with a great show of resolution that he exclaimed as Honorine came back from holding a colloquy upon the landing, 'Now you must help me to get up!'

But the Emperor had never expended more meticulous care upon the preparations for a campaign than Honorine had upon her plan of operations, and she immediately developed a new line of strategy. Drawing a paper from her pocket, she asked, with well-simulated gaiety, as though not noticing his remark, 'What do you think I have got here for you?'

'For me! What?'

'A captured letter.'

'A letter? My glasses!'

'No; I will read it.'

'But who is it from?'

'The Duke of Wellington.'

'How did you get it?'

'The care-taker copied it.'

'Ah, that's what they posted?'

'Yes. Are you ready?'

'Yes; go on! I'm on fire!'

Then Honorine, sitting so as to screen the imaginary copy from his too inquiring eyes, read slowly: '"Sunday, the 18th of June 1815. From behind Waterloo"'——

'Wat-er-loo!' interjected the general, rolling the word on his tongue—'Waterloo! Yes, it has quite a French sound. That, you see, is what the battle will be called. But go on!'

'"To the Governor of Antwerp. Sir"'——

'Antwerp! Then he's retreating to his transports. Good! Go on!'

'"After the defeat of the Prussians at Ligny, and my own repulse at Quatre Bras by the troops under Ney"'——

'Ney! Yes; the "bravest of the brave" sent them nicely to the right-about, didn't he? But go on!'

'"I was compelled to fall back and take up a position across the road to Brussels. Here I was attacked by the Emperor in person"'——

'Ha! The Emperor! Yes, yes! Go on!'

'You interrupt so! Where was I? Ah, here! "Here I was attacked by the Emperor in person; and after an heroic resistance, in which my army covered itself with glory"'——

'Yes; they are good soldiers, these English. And then they thought, too, that the Prussians were coming to help them.'

——'"covered itself with glory, I was compelled, by the failure of the support promised me by Marshal Blücher"'——

'Aha! You see? Sly fox! Nicely he sold them! But the cuirassiers and the Guard?'

'I'm coming to them. "Compelled . . . to fall back under the incessant onslaughts of the cuirassiers after my centre had been broken by the Guard."'

'Ah, you see how clearly that explains everything! Who could withstand the cuirassiers and the Guard? How well I know it! I seem to see it as clearly passing before me as though I commanded them. I can see our brave fellows spurring to attack and overwhelm the enemy; the horses stretching themselves together like deer, and tearing the earth with their hoofs; the grapeshot, and the men on the ground. And all this passes in a smoke so dense that you can hardly see the squares you are attacking. Why, do you know, at Austerlitz, before the sun broke through, it was so thick that Murat nearly rode into me as he galloped up and gave the word to charge! Yes, how it all comes back to one! We were in front, and to our left were lancers; they were lighter, and led for a stretch or so as we came thundering down. I can see them now: their backs sloping, all in a row; the lances couched and ready; the—the'——

'Father!' cried Honorine, alarmed at his excitement; 'have you forgotten?'

But it was in vain that she clung to him and called his name. He was again a hero in the summer of his strength; his horse was gathering under him, the wind was whistling in his ears, and his face flamed with its ancient fire as his body rocked in the rhythm of the charge. It was not till his weakened heart gave a sickening throb of admonition that he halted and sat still. 'Pish!' he muttered contemptuously, 'what can women know of it? Would God you were a boy!'

But Honorine was used to the old warrior's testy outbursts, and, fearing to provoke him, neither replied nor offered to read further. Born to him late in life, as the outcome of a brief marriage contracted more out of compliance with his Emperor's wish to form an aristocracy out of the old soldiers of the Revolution than to gratify any desire of his own, Honorine knew little of the earlier enthusiasms which had carried the tricolour in victory from Valmy to the Kremlin, and could not sympathise. She knew only the gloom of glory: the long absences in Spain and Russia, the recurring defeats, the invasion of France, the Imperial abdication, and the old King's return—reverses which her father, buried in day-dreams, had almost forgotten. To him, the return of the Emperor seemed as inevitable as the coming of the violets, and quite as natural; the rest were but the winter chills that came and were endured in the lively hope of joys to come. And now that the dayspring had happened, now that the summer lay hot on the land, what could one expect but victory? Nothing. The events of the past week had but justified his forecast, each battle bringing nearer the delectable time when he should see his

Emperor's face. 'Well, well,' he muttered dreamily, 'you shall marry Etienne, and your children will perpetuate the glory of France.'

He was roused from his reverie by the rough jolting of a cart that, after shaking the house with its thunderous reverberations, stopped suddenly somewhere near them. 'What is it?' he inquired as Honorine stole to the window.

'Only a cart full of wounded,' she replied; and then, with a cry that she could not repress, 'Oh, there's the doctor walking beside it!'

'Some friends, perhaps,' murmured the philosophic victor. 'Poor fellows! Still, as old Rapp said at Austerlitz, one can't have omelettes without breaking a few eggs.'

But Honorine had received a signal, and her face blanched. 'If—if I go down and—help him, will you lie still?' she asked in piteous appeal.

'Yes. But why—why do you look like that?'

'I—I—oh, I think he wants me!'

'No; you are again concealing something. Tell me at once!'

Then Honorine summoned her last reserve, and threw in the Imperial Guard of her deferred resolution. 'Yes,' she admitted; 'I was afraid to tell you. I'——

'Come! I insist!'

'It was Etienne who took the Duke.'

'Etienne! My nephew?'

'Yes,' she sobbed, as the tears that she could no longer restrain welled in her dark eyes and overflowed upon her cheeks. 'He—he led the squadron that took the Duke.'

But her father mistook the cause of her emotion. 'Child,' he whispered in an awe-struck tone, 'the name of Florentin will be immortal!'

'Yes, what glory! Can I go?'

'Certainly,' said he, with a flash of inspiration. 'I understand. Etienne, your betrothed—he is below?'

'Ye-es, I'——

'Then go to him, dear child, and thank the hero who has fought for France and glorified her name.' And as his daughter left the room he prayed upon his pillows.

But the false news had fired his brain; the air seemed full of rhythmic movements, and, despite his promise, he could not lie still. And troops, too, were at last approaching the square; in the dim quiet he could distinctly hear their measured footsteps, and he raised his head to listen. A bugle wailed in the distance, and he held his breath; it was repeated, and he sprang up. Again it screamed; and, swaying and clutching the air as he went, he lurched to the table. 'At last!' he muttered as he grasped the brandy and gulped it down.

The raw stimulant nerved and warmed him, as under its inspiring influence he donned his helmet and buckled his sword, and then, creeping to the darkened window, drew up with trembling hands the holland blind.

But, to his horror, the strong sunlight beat upon and blinded him; and he found that he could only see the great square as a misty whiteness, over whose wavering surface a darkening flood was slowly pouring, to the sound of drums. Vainly he waved his hand, as though to part the vapours; and yet he could not be mistaken. If he could not see, he could hear the short, sharp rattle of the roll which was echoing and re-echoing among the tall, gray houses; and, drawing his sword in readiness, he unlatched the window and leaned out to look. And still he stood and doubted. The uniforms seemed unaccountably altered; and where, too, were the bearskins that should have swayed below the shouldered steel?

Then, as he strained, his dim eyes strengthened. Below, in the foreground, a cart was halted; and a girlish figure, with which he seemed to be strangely familiar, was helping a wounded cuirassier to alight. As they turned he saw their faces, and staggered backwards with an anguished sob, as with brazen crash the band struck up the 'British Grenadiers.'

And he remained thus, long after comprehension had come to him—strangling for breath, glaring out into the sunlight with starting eyes and fallen mouth—till Honorine ran in.

'Father!' she cried, and 'Father!'

And her cry drew him back from the grave and recovered his sense of duty. Turning to her at his full height, with sword upraised and face aflame, he gave, in a voice that rang like a clarion above the roll of the drums, the rallying-cry of the legions that were not: 'To ARMS, CITIZENS; TO ARMS!' then, with a crash of jangling steel, fell prone upon the carpet.

'Father!' cried Honorine, and 'Father!' But it was in vain that she knelt beside the silent shape, and raised its head, and cried into its ear. Its spirit had ranged at last with the souls of the cuirassiers, whose bodies lay ranked in glittering terraces around the squares of Waterloo.

A MIRROR OF EDINA.

I MET her in the street, th' enchantress fair,
And places of the past came back to me—
Haunt of the daffodils in meadows where
The east wind loves to blow in from the sea;
The Castle which, when clad in sable night,
Looks like a giant crawling thing that might
Spring on the sleeping town;
Topping the crags the tow'ring height which greets
The morning's smile, and sees the evening blush,
It seems the peak in Darien of Keats,
Impressive most within the midnight hush;
Dome over which the torch of learning burns,
And spire beneath whose crown proud sacred urns
Rest 'mid the tatter'd flags.

ARMSTRONG BARRY.

Printed and Published by W. & R. CHAMBERS, LIMITED, LONDON AND EDINBURGH.

Chambers's Journal
SEVENTH SERIES.

A PUBLISHER AND HIS FRIENDS.

WE knew part of the story of the business romance behind the founding of the publishing house of Macmillan & Co. from the *Memoir of Daniel Macmillan*, so admirably done by Thomas Hughes, and published in 1882. But the part played by the partner who survived him by about forty years was withheld. Now we have the complete relation in the *Life and Letters* of Alexander Macmillan, his younger brother (Macmillan & Co.), by Mr C. L. Graves. The foundations were laid ere the death of Daniel Macmillan in 1857 on which the great structure was reared mainly through the genius and energy of Alexander Macmillan. The literature of the annals of the great publishing houses thus grows apace. Already the houses of Murray, Constable, Black, Blackwood, and W. & R. Chambers have been worthily memorialised; the records of the Macmillans are not the least interesting and important in the series.

It would almost seem as if the friends of Alexander Macmillan had largely helped to make him what he was, while he in turn gave world-wide currency and fame to their writings by securing an audience for them. Charles Kingsley, Tom Hughes, F. D. Maurice, Archdeacon Hare, and a host of others gave him of their literary best. It will be a revelation to many to remark how these brothers, trained in a Scottish Presbyterian atmosphere, helped by their personal influence and publications to extend and consolidate the English Broad Church movement. Mr Graves says it would be hard to name any one of his generation to whom the Church of England as a national institution owes a deeper debt of gratitude. Sterling character, unwearied perseverance, lofty ideals, and enthusiasm, with sure literary instincts, went to the building up of Macmillans' in a single generation—a really remarkable performance. Both brothers took their business and life seriously: 'As truly as God is,' wrote Daniel, 'we are His ministers, and help to minister to the well-being of the souls of men.' They made a literary, moral, and business success of it in their lives. Alexander Macmillan, with a strong head and heart and hand, left in money personalty some one hundred and eighty thousand pounds; but the real *personality* of the man—his broad humanity and intellectual keenness—we can clearly see in a biography of four hundred pages. His best monument consisted in the friends he made and the books he published. The Macmillan *Bibliographical Catalogue, 1843-1899*, covers the working life of Alexander Macmillan, and is a record of which any house might be proud. Only those behind the scenes can realise the stress and strain entailed and the unceasing vigilance required in making such a catalogue possible. But the thing was well and happily done, because Daniel and Alexander Macmillan had found their vocation!

The lives of Daniel and Alexander Macmillan are not only interesting but stimulating and inspiring. The sons of a small farmer with a large family, Daniel was born at Upper Corrie, Island of Arran, in 1813, and Alexander at Irvine in 1818. At eleven years of age Daniel went to Maxwell Dick, bookseller and bookbinder, Irvine, and served a seven years' apprenticeship (1824–31). His health broke down, and the shadow of illness hovered over the remainder of his business life. While with Johnson, Cambridge (1833-37), he began to form what became a fruitful acquaintance with professors and undergraduates. 'Reading men of all ages,' says Mr Graves, 'were naturally attracted by this intellectual young Scotsman, who had not only a thorough mastery of every branch of the business of the book-trade, but knew a great deal about the insides of the books that were worth knowing.' He was in Scotland in 1837, and in Edinburgh saw a good deal of George Wilson, a close and inspiring friend of both brothers. Daniel closed with a Leith stationer, accepting a situation at fifty pounds a year, but was released to fill a situation in Seeley's, London, secured through his friend James Maclehose. His services were so much valued at Seeley's that he was encouraged to invite his brother Alexander to the position of collector there at a salary of sixty pounds, which rose to eighty pounds in 1840. He was duly grateful, and once wrote to Daniel: 'Had it not been for your brotherly sympathy and help, I should certainly to this day have been a wretched and not very useful dominie at the best.' Henceforward only death separated the brothers. Both had received a thoroughly practical training. They had dusted books, read books, bound books, and sold them, and now they were soon to publish them.

Both brothers were inclined to trace any mental superiority they possessed to their mother, Katherine Crawford, 'the most perfect lady in all Scotland,' who instinctively did what was right, and read the great books when she had a chance to do so. She sang ballads and hymns, and influenced her family towards a

[*All Rights Reserved.*]

generous toleration. 'My mother,' Alexander wrote to Guizot, 'was a woman of very devout nature and habits, whose daily life was, as I believe, lived as in the conscious presence of God. She had a very noble, sweet nature, and a certain serenity and clearness of mind that I have hardly ever met with in any other human being.' The missionary visit of the Haldanes to the island of Arran a century ago is credited with good moral and intellectual results in the Macmillan family, without which the life-work of the brothers had not been. Both brothers had only a slender primary-school education. Alexander was headmaster of a small school in Irvine before he was sixteen. In 1833 he was assistant to George Gallie, a Glasgow bookseller, but roused the wrath of his master by reading novels, an offending volume being torn to pieces and put in the fire. This ended for the time the bookselling experiment. He was afterwards a teacher at Shewalton, near Irvine; then in a common school in Glasgow, where the late Dr Alexander Maclaren was one of his pupils. Next he was assistant in a chemist's shop, took a voyage to America before the mast, returned to Glasgow penniless, and was glad to accept an ushership in a school at twelve pounds a year. For nine months he lived on about five shillings a week. He was at the 'drudgical' work of teaching rough colliery-children in 1838–39 at Nitshill, near Paisley, when the welcome invitation came from Daniel to join the staff of Seeley's in London. Alexander said of these links: 'A series of those strange sequences of events which our pious forefathers devoutly, and as I think wisely, called providences of God, led me into dealing in books. There can be little doubt I was led into the line for which my natural gifts fitted me.' The brothers opened a place of business at 57 Aldersgate Street, London, in 1843, from which their first book was published, the *Philosophy of Training*, by A. R. Craig. About this time Daniel thought of an Encyclopædia on the lines so successfully carried out later by Messrs W. & R. Chambers. Daniel had been much impressed by reading Hare's *Guesses at Truth*, and a correspondence with the author led to an invitation to Hurstmonceaux. Hare furnished a loan of five hundred pounds to complete the purchase of a business in Cambridge, the London premises were given up, and a partner named Barclay was assumed, who retired in 1850. Both brothers married during the Cambridge period, Alexander's wife being a sister of George Brimley the essayist. In 1858 Alexander opened a branch in London at 23 Henrietta Street, and in 1863 the headquarters of the firm were removed to 16 Bedford Street, the retail business remaining at Cambridge as Macmillan & Bowes. The present London address of the firm is St Martin Street; and, besides the founders, the following partners have been admitted: George Lillie Craik (1865); Frederick Macmillan (1874), son of Daniel; George Augustin Macmillan (1879) and Maurice Macmillan (1883), sons of Alexander Macmillan. In the year 1845 only some eight books and pamphlets were published; there were sixteen in 1850, forty-four in 1858, one hundred and two in 1863, and three hundred and sixty in 1889 (or nearly a book for every day in the year). Turning over the pages of their interesting *Bibliographical Catalogue*, we find Kingsley's *Glaucus* was reprinted ten times in 1855; the reprints and new editions of *Westward Ho!* were thirty-three; *Tom Brown's Schooldays* had been reprinted fifty times, *Tom Brown at Oxford* sixteen times, and *Water Babies* eighteen times; *Alice in Wonderland* had thirty-five issues; *Ecce Homo* had gone through twenty editions in 1866–88; and some of Miss Yonge's stories had been issued twenty-two times. Other authors are Archdeacon Hare, Matthew Arnold, James Bryce, Dean Church, W. G. Clark, Mrs Craik, Aldis Wright, Henry Fawcett, E. A. Freeman, Sir George Grove, Professor Huxley, Henry James, J. R. Lowell, David Masson, F. T. Palgrave, Dean Stanley, Canon Ainger, and Lord Tennyson. For the latter the firm became publishers in 1884, much to the gratification of Alexander Macmillan, who had published his 'Sea-Dreams' and 'Lucretius' in *Macmillan's Magazine*.

Alexander Macmillan, as far as was possible, read manuscripts for himself, and generally found about one in ten worth any further consideration. Doubtless the points which had much to do with the success of the firm were the publishing of nothing which went against a high standard of literary taste and morality. 'You don't know the influence of prettiness over sensible people,' he said; therefore prettiness in books was encouraged, with good paper, printing, binding, and illustrations. The publisher not infrequently gave an outline for the designs on the covers. Above all, the best results came from the employment of the best men in their own subjects in text-books—such as Huxley for physiology, Roscoe for chemistry, and Balfour Stewart for physics. Early experience at Cambridge, and intercourse with teachers, students, and professors, showed the way to a highly profitable business in school and university text-books. Equally useful in this way was his appointment as publisher to the University of Oxford between 1863 and 1881. The man who wrote to Farrar in 1860 that he could not 'write a book to save his life,' prompted, suggested, and laid down the keels of many books and series of books. He showed wisdom and breadth of mind in letters to authors; for, like Archibald Constable, he was a born publisher. Though he lost money in issuing some of Maurice's books, he was prouder of being that writer's publisher than of his Oxford connection. He criticised adversely Thomas Hardy's first novel, and rejected Robert

Buchanan's poems. He took enormous pains in explaining to authors why their manuscripts were rejected. He must have had a magnificent constitution to be able to sit up reading manuscripts until the early hours of the morning, and appear quite fresh at breakfast. Dr Sebastian Evans describes him thus in late middle-life: 'The face of my friend as I first saw him: the black locks, as yet unstreaked by gray, rippling upwards over a brow already perceptibly marked by lines of thought, but as yet unfurrowed by deep sorrow; the joyous, faithful eyes; the critic nose and sensitive nostril wings; the dear lips parted to speak words of sympathy and encouragement.'

Professor Jack, who was associated with him as a member of the firm, thus commented in the *Glasgow Herald* on his publishing experience, after the issue of the *Life and Letters*: 'He was always in my time, and before it and after it, the soul of all that was done while the famous science primers were coming out, the root-idea of which was his own, though he adopted and worked it out after full and intimate discussion with Roscoe, Huxley, Geikie, Michael Foster, Lockyer, and others. Huxley used privately to call him the Emperor Maximilian—emperor because, though he was not an expert in science as they all were, he initiated, adapted, and finally arranged everything with imperial generosity and imperial steadfastness and breadth of view. It was the same story over again with the *English Men of Letters*, the scheme of which he conceived and worked out, and found the men to write them, with the constant co-operation of his friend John Morley, who knew him and loved him as a younger brother sometimes loves an "elder soldier, not a better"—as Alexander himself loved Daniel. There was the great enterprise of the Cambridge Shakespeare under G. W. Clark and Aldis Wright, and it was followed in a natural development by the Globe Shakespeare and the rest of the Globe series of the great standard writers of English poetry—not forgetting Alexander Smith's Globe Edition of his native Ayrshire Burns. There was his discovery, if one may call it so, of Sir Samuel Baker, and of Sir John Seeley, whose *Ecce Homo* once so profoundly moved the religious world.' It was one of his hospitable habits to give a dinner on All Fools' Day, and the autographs of notable people present are given in the volume. One of the mottoes above the list is from Saint Paul: 'Ye suffer fools gladly.'

The frank and kindly intercourse of publisher and author is very delightful. This from Kingsley: 'I wonder whether I shall always be in Mr Micawber's purgatory—"Income twenty pounds per annum, expenditure twenty pounds and a halfpenny—result total misery;" or ever attain to his paradise—"Income twenty pounds per annum, expenditure nineteen pounds nineteen shillings and elevenpence halfpenny—result total felicity." Did I tell you that *Glaucus* seems to have pierced the "august abodes" of Windsor, and to have elicited the present of a handsome book from H.R.H. Prince Albert, not to mention a very kind letter from Lankester, the editor of the said book? *Glaucus* has certainly got me some dozen or two of introductions to first-rate naturalists, which will be a pleasure to me henceforth.' And this from Thomas Hughes intimating that *Tom Brown's Schooldays* was on the stocks: 'DEAR MAC,—How's yourself and where's yourself? My chief reason for writing is that, as I always told you, I'm going to make your fortune, and you'll be happy to hear that is almost or at least more than half done. I've been and gone and written or got in my head a one vol. novel, a novel for boys—to wit, Rugby in Arnold's time. Ludlow is the only cove, besides my wife, who has seen a word of it (and, mind, if you take it or don't, I can't afford to have it known); and he thought it would particular do, and urged me to go on with it, which I have this vacation, and only want the kick on the breech that some cove's saying he would publish would give me to finish it.' Only next in popularity was its legitimate successor, *Tom Brown at Oxford*, which ran as a serial in the first three volumes of *Macmillan's Magazine*, and came out in the orthodox three volumes. By 1862 Macmillan could write to his friend Maclehose: 'I don't think there is a house in England in a better position or with more capacity for growth than ours. It is all Daniel's far-sightedness in laying the outline and plan. I have been only working out his thoughts in an imperfect way. I feel that it is a wonder I have done so much. God and love for his memory and children helped me.' At Daniel's death, his widow and children had found a home with him. J. R. Green said once: 'Among the Stanley and Kingsley set Macmillan is the pet publisher of the day.'

The first suggestion for a new periodical as an adjunct to the publishing house came from Mr J. M. Ludlow, barrister-at-law. Maclehose was consulted, and the Macmillan parliament of authors, and *Macmillan's Magazine* came out in November 1859, with David Masson as editor. One of the finest of the first contributions is by the early friend of the Macmillans, Professor George Wilson of Edinburgh, on 'Paper, Pens, and Ink.' His beautiful *Five Gateways of Knowledge* had just been issued, with a frontispiece by Sir Noel Paton. It has all the good points of a Macmillan book in that the get-up is perfect, while, like the article, it is the poetry of science. There was a strong list of contributors for the first year, including Alfred Tennyson and his brother Charles, Maurice, Kingsley, J. M. Ludlow, Tom Hughes, Alexander Smith, Sir F. H. Doyle, Huxley, R. M. Milnes, F. T. Palgrave, and Professor De Morgan. Such magazines seem to be too strong meat for this

generation; at least it ceased in 1907. The sale at one time was fifteen thousand a month. Daniel Macmillan and his brother had often canvassed the scheme of a new magazine, and a quarterly had been first thought about. Daniel died in 1857, and Mr George Macmillan, his nephew, tells us: 'For the next five years it was my father's regular habit to spend each Thursday night in London, and to keep open house that evening in Henrietta Street for any one who liked to come and take part in a modest meal, followed by free and easy discussion of literary and other matters. These "Tobacco Parliaments" were a very important feature in the development of the publishing business, especially after the foundation of *Macmillan's Magazine* in November 1859.' The guests were received in a pair of large, uncurtained rooms, one of which was the editor's on ordinary occasions, opening into each other. A round oak table was made at Tom Hughes's special wish by John Roebuck, a member of the Working Men's College, for use at these entertainments, and on its bevelled edge may still be seen the autograph signatures of Tennyson, Herbert Spencer, F. D. Maurice, Huxley, Tom Hughes, David Masson, J. M. Ludlow, Franklin Lushington, G. S. Venables, F. T. Palgrave, Llewelyn Davies, William Allingham, Coventry Patmore, and Alfred Ainger.

Macmillan enjoyed these 'Tobacco Parliaments' immensely at his place of business, as well as the friends who gathered in his future home of Knapdale, Upper Tooting, or Bramshott Chase, Haslemere. He had the true genius for friendship, as Mrs J. R. Green acknowledged after his great kindness to her husband. With his wife he had hurried from London to Mentone, where he remained five weeks until Green died. He believed in John Richard Green's *Short History*, although his fellow-partner, G. L. Craik, was doubtful; it has had a larger sale than any modern history of its kind.

No one interested in books and literature can afford to neglect the Macmillan story, while the human interest beats in every line. The life delineated was happy, busy, and extraordinarily interesting. A visit to America was fruitful in the foundation of an American house. The more he published the more he was perplexed by the laws that guided success in publishing. Had he lived to front the twentieth century he would have been even more perplexed by the problems of authorship and publishing. He resented the 'shameful impudence of modern compilers,' believed time spent in abridgment was well bestowed, and had he guided Maurice's pen his output had been three books rather than thirty. He believed in being masterful to get things done, and hated divided counsels. His relations with authors we have noted; those with his 'boys,' his own staff, were sympathetic and affectionate. The chief sorrows of his life, beyond the death of his first wife and of his brother, were the passing of Professor George Wilson and the loss of his eldest son Malcolm on the Asiatic Mount Olympus, near Broussa, which he had ascended with Sir Arthur Hardinge. As Professor Jack says, this broke the steel springs of his energy; and though he lived on for seven years more, he never held up his head again, and death came in 1896. A few hours before his death his wife was reading to him the last chapter of Bunyan's *Pilgrim's Progress*. She came to the words, 'My Sword I give to him that shall succeed me in my Pilgrimage, and my Courage and Skill to him that can get it.' He smiled, repeated the words, and added, 'To him that can use it.'

'Does it not seem,' he once wrote, 'as if one were constantly finding out how much better other people are, and how much worse we ourselves are than we had supposed?' Mr John Morley (now Lord Morley) wrote as a birthday message in 1878: 'You have now a long retrospect of effective industry and fine service to the world, and I make no doubt that you are wise enough to find in this a perfect comfort against the otherwise uncomfortable flight of years. Not many men in this generation have done better work or in a better kind. It is pleasant to me to think that for one quarter of your life you and I have been friends and fellow-toilers.' Canon Benham termed him the best layman he had ever known, while Tom Hughes could count on the fingers of one hand 'all the men he had known who had as strong heads and warm hearts!'

PETER AND JANE.

CHAPTER II.

JANE ERSKINE was at this present time at that interesting period when her friends and relatives, having just discovered the unexpected fact that she was grown-up, subjected her to mildly severe criticism. They were, they said, under no misapprehension about Jane; in moments of extreme candour, touched with responsibility, they had even been known to say that in one or two respects she was not absolutely perfect. Miss Abingdon, for instance, who always conscientiously encouraged these moods, and censured the General for spoiling Jane, would frequently compare her niece with herself, as she remembered that dim figure of girlhood, and never failed to find cause for unfavourable comparison between the two. From

the portraits which she drew it was generally believed that Miss Abingdon must have been born rather a strait-laced spinster of thirty, and to have increased in wisdom until her hair was touched with gray; when she would seem to have become the mellow, severe, dignified, loving, and critical lady who at this moment was looking out of her drawing-room window, and trying to show her impartiality for her orphan niece by subjecting her to lawful and unbiassed criticism.

'The day of the incomprehensible woman is past and gone,' said Miss Abingdon, and she sighed a little.

Jane Erskine was painting a rabbit-hutch on the lawn. Miss Erskine's attitude showed the keen workman, but disguised the woman of grace. Miss Erskine, in fact, was lying full-length on the greensward of her aunt's lawn, absorbed in the engrossing occupation of putting the right dabs of green paint upon a portion of the inside of the rabbit-hutch which was awkward to get at.

'They are all alike,' sighed Miss Abingdon. She alluded to the girlhood of the present day as it presented itself to her regretful and disapproving eye. 'They wear shoes two sizes too large for them, they don't require to be taken care of, they buy their own horses, and they are never ill. They call young men by their Christian names! I don't think they even have headaches.' Miss Abingdon sighed again over this lost art of womanhood. 'There is my niece Jane Erskine; she might be a graceful and elegant young woman, whereas she is sunburned, and—it is a dreadful word, of course—but I can only call her leggy; perhaps it is the fault of those narrow skirts. Women have never been so much respected since crinolines went out of fashion. I believe the independence of modern girls is no longer assumed—it is not even a regrettable passing fashion; the time has come when, I am afraid, they really are independent. Jane would think me insane if I were to go out and sit with her in the garden when Peter comes to call; and I don't believe she has ever done a piece of fancy-work in her life!' said Miss Abingdon.

She looked round her pretty drawing-room, in which, with a spinster's instinct for preserving old family treasures, she had gathered and garnered antique pieces of furniture, ill-drawn family portraits, and chairs covered with the worsted-work and bead-work of fifty or sixty years ago. She looked regretfully at the piano and the old, neatly bound folios of music with 'M. A.' upon the covers, and she wondered how it was that no one cared to hear her 'pieces' now. She went over to the music-stand and fingered them in a contemplative way. How industriously she used to practise 'Woodland Warblings,' 'My Pretty Bird,' 'La Sympathie, Valse Sentimentale pour le Piano,' and 'Quant' è piu bella,' fingered and arranged with variations!

On Sunday afternoons, when her guests were 'having a look at the mokes,' Miss Abingdon still played through her book of sacred pieces; and it was on Sunday afternoons too that she always stirred the jars of pot-pourri upon the cabinets so that their pungent, faint odour might exhale through the room. The old pieces of music and the scent of the dried rose-leaves together always brought back to Miss Abingdon's mind fragrant memories of long ago.

'We used to take a roll of music with us when we were asked out to dinner,' she reflected; 'and it was all-important to us who should turn over our leaves for us, and we generally blushed and hesitated before we sat down to the piano at all. Last night Jane almost fought with Peter for the larger portion of the keyboard of the piano; and they played music without any tune in it, to my way of thinking, and there is no seriousness at all about any of them.'

'I wonder if they'—Miss Abingdon again referred to that distressing body of young women of the present day—'I wonder if they have ever kissed a lover's letter or have slept with his picture underneath their pillows at night. Or have they ever lain sleepless for an hour because of a loved one's absence or because of a cold word from him? Do they write verses, or exchange valentines, or even give each other flowers?'

It was a relief to Miss Abingdon's sombre reflections when her friend the vicar's wife came in for a morning call. She thought that Mrs Wrottesley's brown merino dress and bonnet, and her constraining mantle which rendered all movements of the arms impossible, looked very decorous and womanly compared with the soles of a pair of brown leather shoes and the foreshortened figure of five-feet-eight of slender young womanhood stretched in strenuous devotion to her strange occupation on the lawn.

When Mrs Wrottesley seated herself opposite the window, Miss Abingdon resisted an impulse to pull down the blind.

'Yesterday,' said Miss Abingdon, glancing at her niece, 'she was trying to copy a feat which she had seen at the hippodrome, and was riding one pony and driving another tandem in front of her over some hurdles in the field.'

Mrs Wrottesley smiled with the rather provoking indulgence with which our friends regard the foibles of our relations.

'She is young,' said Mrs Wrottesley, 'and she is very beautiful.'

'No,' said Miss Abingdon with inward pride at her own unwavering impartiality; 'I honestly believe that if we were to consider Jane without prejudice we should find that she is simply healthy.'

'It is a great charm,' said Mrs Wrottesley.

'No, no,' corrected Miss Abingdon quickly;

'the charm of womanhood consists in its mysteriousness. Now, the girl of to-day is simply a good fellow. She doesn't require to be understood, and she doesn't drive men crazy; she shoves her own bicycle up hills, and fights for the larger half of the keyboard of the piano.' She sighed again.

'She is a moral influence,' said Mrs Wrottesley.

Mrs Wrottesley also alluded to the girl of the period; and Miss Abingdon thought that to refer to her as 'she' or a type, instead of 'they,' had a flavour of culture about it.

'Yes, yes,' she said impatiently, her love of contradicting Mrs Wrottesley and at the same time holding her own in the discussion, inclining her to undue severity, 'she is as straight as any other good fellow, and she pays up if she has lost at Bridge, and would as soon think of picking a pocket as of cheating at croquet; but she is not mysterious; she is absolutely comprehensible.'

'Probably,' said Mrs Wrottesley, 'Jane's shortcomings in this respect are due to the fact that she is lamentably unaffected. Affectation, in the case of girls who ride straight and don't know what it is to have a headache, very often takes the form of boyishness. Let us console ourselves with the fact that, by being perfectly natural, Jane has escaped masculinity.'

'Jane is a lady,' said Miss Abingdon severely, and with the faint suggestion of administering a snub. 'But,' she added with that touch of superiority in her manner which obtruded itself in most of her conversation with the vicar's wife, 'there are certain accepted traditions of womanhood such as conventionality approves, and it was not called artificial to conform to them when I was a girl.'

'I remember,' said Mrs Wrottesley, 'that we honestly thought that we were interesting when we ate very little, and I myself often used to aspire to an attractive display of timidity when inwardly I had no sensation of fear.'

As the wife of the vicar of the parish, Mrs Wrottesley wore brown merino and a mantle, but they hid a great soul securely held in check and narrowed down by a strict adherence to the small conventions and paralysing rules which society seems to have prescribed for vicars and their wives in the rural parishes of England. She prayed every morning of her life for more faith, and meant by that a narrower creed. Mrs Wrottesley was an inarticulate woman, and had gained for herself the character of being reserved. Her own view of things differed in all essentials from those which were held by persons about her. They were even inwardly opposed to those theories which her husband with such gentlemanly eloquence expounded every Sunday morning. People thought themselves charitable when they merely said that they did not understand Mrs Wrottesley.

'A Miss Sherrard stayed here last summer,' said Miss Abingdon, 'a friend of Jane's, and she smoked cigarettes in her bedroom. I know that, for I saw the ashes in her pin-tray.'

Miss Abingdon rather enjoyed making little excursions through her guests' bedrooms of an afternoon when she had the house to herself; and without deigning to touch or disturb anything, she knew pretty well, for instance, whose complexion was real and whose was false, who wore powder and who did not.

Mrs Wrottesley glanced at her own figure in the drawing-room mirror; her mantle disguised the fact that she had either a waist or a pair of arms, and she gave a little, dry smile as she reflected that she had accepted a dolman cloak as she had accepted all the other outward conventions of orthodoxy as understood by society in rural England.

'My cousin Peter Ogilvie comes here every day,' said Miss Abingdon; 'he is crossing the lawn now. In former days these two young people would have been talked about. (Peter is my cousin, you know, on my father's side of the house; he is not related to Jane.) But neither will probably mind in the least what is said about them, and for my own part I am positively unable to say whether they care for each other or not. Had I been Jane I would have sat in the arbour this morning, with a pretty, cool white dress on, reading poetry or some light romance, or working at my embroidery, till my lover came, instead of being found covered with paint and with the footman's green baize apron on.'

The two ladies moved closer to the window and watched the young man crossing the lawn. He was well built, and not much above Jane's own height; and perhaps when one has said that he was fair with that Saxon fairness which suggests an almost immaculate cleanliness, and looked like a gentleman, there is not much more to be stated about his external appearance.

Jane rose from her recumbent position on the turf and shook off some blades of short grass from her apron, and waved a brush filled with green paint in the air.

'Don't touch it, Peter!' she cried. 'Isn't it lovely?'

'Good-morning, Jane,' said Peter, lifting his cap. Whatever else might be said of them, it would have to be admitted that there was a fundamental sense of courtesy and good-breeding underlying the regrettably frank manner of these young people. 'If you wave your brush about in that triumphant way you'll splash me with green paint.'

'I have sacrificed two dresses already,' answered Jane; 'but real art is worth that!'

'The hutch looks ripping,' said Peter; 'but I should feel safer if you would put down that brush.'

'I couldn't resist painting the inside,' said

Jane, surveying her work ecstatically. 'Do you think the rabbits will lick off the paint, and be sick, Peter?'

'Probably,' said Peter.

'Of course we don't know,' said Jane gravely, 'that it isn't their favourite food. Rabbits may flourish on green paint just as we flourish on roast-mutton.'

'It would be beastly to have a green inside!' said Peter.

'I wonder what they are talking about,' said Miss Abingdon, glancing with an apprehensive eye from the drawing-room window. 'Perhaps, after all, they are making love to each other; and if they are, I certainly ought to go out and sit with them.'

Miss Abingdon had antiquated notions of a chaperon's duties.

'I suppose there would be no objection to the match if they do care for each other,' said Mrs Wrottesley in a manner that was often called brusque and had served to make her unpopular. 'Jane is rich'——

'Jane has money,' corrected Miss Abingdon, who saw a well-defined difference between the two statements. 'She is a ward in Chancery, you know, and she will not come of age until she is twenty-five. Peter, of course, has a very large fortune. Still, one would not like to be responsible for a marriage even if it is suitable, and I should not like the Erskines to think I had not looked after Jane properly.'

That nothing should happen always seemed to Miss Abingdon the height of safety and of peace. She mistrusted events of any kind, and had probably remained single owing to her inability to make up her mind to any such momentous decision as matrimony involves.

The young couple on the lawn left the unfinished rabbit-hutch and paint-pots, and strolled towards a garden-seat. All the gates and seats on Miss Abingdon's small property were painted white once a year, and their trim spotlessness gave an air of homely opulence to the place. The bench which her young relatives sought was placed beneath a beneficent cedar-tree that stretched out long, kindly branches, and looked as though it were wrought in stitch-work on deep-blue satin. Jane wiped her fingers upon the baize apron, and Peter lighted a cigarette.

'Have you seen Toffy's new motor-car yet?' he asked.

Had any one demanded of Peter and Jane what they meant by the art of conversation, they would probably have replied that it had something to do with Ollendorff's method.

'How's Toffy going to afford a motor?' said Jane with interest. 'Is it going to be "the cheapest thing in the end," like all Toffy's extravagances?'

Finance, one of the forbidden topics of 1850, was discussed to-day with a frankness which Miss Abingdon thought positively indelicate.

'He says he'll save railway fares,' said Peter; 'and as they are the only thing for which Toffy has paid ready-money for years, I suppose there is something to be said for the motor.'

'Is he going to drive it himself?'

'He says so, and it is to be run on the strictest lines of economy. I am not sure that he is not going to water the petrol to make it go farther.'

'I don't quite see Toffy steering anything,' said Jane, laughing with great enjoyment at the recollection of Toffy's mad riding; 'he can never take his horse through a gate without scraping his leg against it.'

'So Toffy generally goes over the gate,' said Peter, laughing also; 'and probably he'll try the same sort of thing with the motor-car.'

'Toffy *is* an ass!' said Jane affectionately.

'I am sure it is time I should go and mount guard,' said Miss Abingdon anxiously from her post by the window. 'Why should they sit together under the cedar-tree like that unless they are making love?' She stepped out on to the lawn with a garden-hat placed above her cap and a sun-umbrella held over her head.

'Aunt Mary,' said Jane, 'Toffy's got a new motor! Isn't it fearfully exciting? We are going for a serpentine run with him, and our next-of-kin are going to divide Peter's and my insurance between them if we never come back again. Be sure you claim all you can get if I depart in pieces.'

Miss Abingdon laughed. She knew she was weak, even where she disapproved of her niece. Jane never kept anything from her, and she would tell her aunt ridiculous items of sporting intelligence which were as Greek to that excellent lady, and would talk to her as to any other really good friend. Miss Abingdon was conscious of the charm of this treatment; but the disciplining of youth was important, and Jane required both training and guidance.

'I can't think why,' she said severely, 'you should call a young man Toffy. It is a name I should hardly have liked to call a dog when I was a girl.'

Peter raised his fair eyebrows and looked distressed. 'I don't see what else you could call a man called Christopherson,' he said. 'You couldn't call him Nigel—that's Toffy's front name—and I'm afraid he hasn't got any other. I believe fathers and mothers think you must be going to die young when they give you a name like that, and that it will look well on a tombstone.'

'You shouldn't joke about death, Peter,' said Miss Abingdon. She felt almost as though she saw an ally approaching when she perceived the Reverend Canon Wrottesley come up the drive to call for his wife on the way to the vicarage. Miss Abingdon had long ago accepted with thankfulness St Paul's recommendation to use the Church as a final court of appeal.

'How do you do, Peter—how do you do?' said the canon cordially, as Peter went across the lawn to meet him. 'Got leave again, have you? I don't believe you know what hard work is!' The vicar had pottered about a small parish for thirty years, and had given his five sons an excellent education on the handsome fortune which his wife had brought him. This helped to convince the canon that he had borne the burden and heat of the day, and he very naturally regarded idleness as the root of all evil.

'Mrs Wrottesley is looking over the Guild work in the morning-room,' said Miss Abingdon conscientiously. She loved a chat with the vicar, and thought him more genial and charming when his wife was not present. 'Shall I tell her you are here?'

'She likes taking a look at the things the girls have made,' said the canon indulgently.

The Vicar of Culversham and Honorary Canon of Sedgwick-in-the-Marsh was a genial and delightful man. He always spoke kindly of his wife's work, and he could even pardon fussing on the part of a woman. He was a universal favourite, and was no doubt aware of the fact—which gave him a very legitimate and wholly pardonable sense of pleasure. It is doubtful if any man was ever more happily placed than was Canon Wrottesley in the considerable village of which he was the esteemed vicar. In a larger place he might have been overlooked, in spite of his many excellent qualities; and in a smaller one he would not have had so many social advantages nor so many opportunities for usefulness. His rectory was large and well furnished, his sons were well grown and well educated, and he himself had many friends. The part of the country where he found himself was known to house-agents as being 'a good neighbourhood;' and it was not so far away from London as to make the canon feel himself cut off from the intellectual life of his day. Canon Wrottesley belonged to the London Library, and liked to converse on books, even when he had only read a portion of the volumes which he discussed. He often fingered them with truly scholarly affection as they lay on his library table, and he discussed erudite points of learning with a light touch which his hearers, in a parish not renowned for its learning, found truly impressive. Even his vanity was of the refined and dignified order of things, and seemed to accord pleasantly with his handsome, clean-shaven, aristocratic features. Perhaps his one weakness was to be the centre of every group which he adorned. And he held his position skilfully, not only by a well-bred display of tact, such as he showed upon all occasions, but by a certain gift which he possessed of appearing in different rôles at different times according to his mood. Still, in spite of a tendency to a self-convincing form of masquerading, one is fain to admit that the village of Culversham would have lacked one of its most pleasing figures had Canon Wrottesley been removed from it.

Mrs Wrottesley appeared from the house, still clad in her black mantle, which had evidently not been removed while she looked over the Guild work, for it bore traces thereof upon it in the shape of morsels of cotton and the fluff of unbleached calico.

'Come and sit beside me, love,' said her husband, indicating one of Miss Abingdon's garden-seats in close proximity to his own cushioned chair, 'and I will take care of you.'

Miss Abingdon smiled and looked admiringly at him. Conscience frequently protested against her giving way to the thought, but in her heart Miss Abingdon was convinced that Mrs Wrottesley was not quite worthy of her husband.

'I think I must go back to the house and finish the Guild work,' said Mrs Wrottesley. 'I have been very slow over it this morning; but I have got a little headache, and I have been counting up everything wrong, which is very stupid of me.'

'How often have I told you not to work when you are tired?' said the canon, shaking his finger reprovingly at her.

'I'll finish the Guild work,' exclaimed Jane, 'and I'll make Peter come and help me.'

Miss Erskine, who had been sitting upon one of her feet and swinging the other, rose impulsively from the garden-seat and covered the lawn in a series of hops, until her shoe, which had become hopelessly entangled in the laces of her petticoat, released itself with a rending sound. Then she removed her hand from Peter's shoulder, upon which she had been supporting herself, and together they went into the house.

'And this,' thought Miss Abingdon ruefully, 'is courtship as it is understood in the present day!'

(To be continued.)

OST-FRIESLAND AND THE GERMAN NAVY.

'NAVIGARE necesse est, vivere non est necesse' was in times past the motto over the Haus Seefahrt, or Seaman's Asylum, at Bremen; and East or Ost Friesland has always been in agreement with the spirit of this old proverb. It is not only strategic necessity, therefore, which has now fixed the headquarters of the German navy at Wilhelmshaven, on the edge of Ost-Friesland, but also a wise determination to use the resources of a country-side in which the maritime spirit has always predominated.

From Emden, on the Ems, to Wilhelmshaven,

on the Jade, the distance is roughly about seventy kilomètres, and between these two points, on the north-west and north-east respectively, and Oldenburg on the south, lies Ost-Friesland. Our Saxon ancestors came from this land and from its neighbourhood—the Angles coming from Holstein—and many English names are still to be found in the districts round about. Of these, Burlage (Burleigh), Bentley, Bosham, and Russel are amongst the best known. It is, therefore, not to be wondered at that the inhabitants not only resemble us in appearance—having oval faces instead of the more rounded Prussian type—but also have many words in their language or dialect which are exactly similar to English words. 'Platt-dütch,' as it is called, has almost as much in common with English as it has with modern German.

In the good old times, when Emden was a famous seaport and the Ministers of the infant Queen Mary of Scotland made a treaty with the widowed Countess Anne ab Oldenburg and Delmenhorst in order to provide for the disputes which continually cropped up between the sailors of the two countries—it also provided for mutual aid against England—the flat, wind-swept country-side west of Wilhelmshaven was sparsely populated with a few farmers. Nowadays there is a fairly numerous population, which has been created within recent years.

From Emden to Wilhelmshaven runs the Ems-Jade Canal, passing through Aurich, the capital of Ost-Friesland. A project, set on foot by the celebrated German naval writer, Graf Reventlow, has been in existence for some time past to deepen and to widen this canal into one for battleships, like the Kiel Canal. With a supplementary ship-canal of about ten kilomètres in length, from Eckwarden, on the other side of the Jade, to Nordenham, on the Weser, a hostile fleet would not only have Wilhelmshaven to blockade, but also Emden and Bremerhaven as well—an almost impossible task for any navy.

On the southern side of Oldenburg the Ems is also joined to the river Weser. From Oldenburg the river Hunte runs to join the Weser at Elsfleth, north of Bremen; and from a point on the river Leda, which runs into the Ems at Leer-ort, a canal runs to the Hunte. The Ems itself is linked to the coal-measures of Westphalia and to Krupp's works at Essen by the great Ems-Dortmund Canal (soon to be joined to the Rhine); and thus, in case of the railway system being monopolised by the army, there would still be perfectly safe means of communication by which Wilhelmshaven and the shipbuilding yards on the Weser could receive supplies.

The Ems-Jade Canal was cut quite recently, and has had a valuable effect in bringing into being the little-known fen-colonies of Ost-Friesland. People are encouraged to take up holdings on the peat-covered soil by a system of deferred payments. Subsidiary canals connect these holdings with the main canal at a very small expense, and thus the tenants are able not only to convey the *schlick*, or alluvial mud, full of animalculæ, from the *watten* or mud-flats by the seashore, but also can convey their peat or garden produce to market by the same boats on the reverse journey.

Throughout Ost-Friesland the soil is covered with peat to a depth of about three feet. This is used for fuel in North Germany far more extensively than coal, and by selling this as he removes it the fen-settler makes a small profit from the very start. Where the peat has been removed sand is exposed, and to make this fertile it is absolutely necessary to dig the *schlick* into it to a depth of about three feet. The farm produce raised from the ground thus fertilised goes to Wilhelmshaven and the neighbouring towns. It is a curious fact that the families of these fen-settlers supply both the imperial and the mercantile navies with many of their best seamen. Old sailors also settle down in the fen-colonies, and thus the Ems-Jade Canal has in every way amply justified its projectors.

Away from the fen-colonies, the grass-grown peat, intersected by dikes, forms excellent pastures for the horses, for which Oldenburg and Ost-Friesland are so famous on the Continent. Aurich, the ancient capital of Ost-Friesland, and the residence of its princes of the House of Cirksena (now extinct), is the centre of the German horse-trade, and at the end of January in each year a great horse-fair is held there. Anthon Gunther I., Count of Oldenburg, was the founder of horse-breeding in the district, and it was this potentate who presented Oliver Cromwell with the pair of horses which upset him when he was driving in Hyde Park. Numbers of horses, mules, and 'jacks' are exported hence to America; hence also will come the horses for the German army if ever it invades England.

Such of the farms as have arable land grow rye—the only crop which will flourish on so poor a soil; but horse-breeding and cattle-rearing are the chief occupations of the farmer. Sheep are scanty, for the German does not care for mutton.

The peasants have a very curious sport called *kloots* or *kloot* shooting, which appears to be unknown in England, probably because it is only played in winter when the pastures are hard-frozen and when there are no visitors in Ost-Friesland. The game causes as much excitement as does a race-meeting at home. Whole villages turn out with bands and banners to meet an incoming team, and stakes, often heavy sums, are played for. What with this and with a certain amount of betting which also takes place, aided by the *doornkat* drunk to keep out the cold, free fights have been known to occur. For this reason the rulers of the land in times past ineffectually tried to prohibit the game altogether,

one potentate sapiently announcing that it was useless to play a game which was unknown to the ancient Romans. This was in the days of the classical Renaissance; but *kloots* was known for centuries before that, and perhaps the surmise is warranted that it was the ancestor of our quoits. The game is played by casting an apple-wood ball, weighted with lead to about a pound, towards a mark—length of cast being the only object. In order to do this a short run and a violent underhand throw, circles being described with the arm as if it were a sling, are necessary; and the exertion is so violent that even in the depths of winter the players strip to a thin jersey and breeches, and (in order to avoid a slip) wear stockings without boots.

Hitherto the neighbourhood has not supplied the navy with many ships, apart from those built at Wilhelmshaven; but it is safe to predict that in the near future the shipbuilding industries of the Weser and the Ems will assume much larger proportions. The most important yard in the district is at present the Weser yard at Gropelingen, a village near the northern suburbs of Bremen. Here the *Westfalen*, the first German Dreadnought, was launched in October 1909. Here also the *Ersatz Beowulf* is now being built. The Weser Company was formed in 1872, after the purchase of some older works near the town. Several thousand workmen are employed by it, and besides numerous torpedo-boats and small cruisers the company has also built warships for Spain, Persia, and China. Since the new yard at Gropelingen was constructed some of the ships turned out have been very fine ones, including as they do the great cruiser *Viktoria Luise*, the battleship *Gneisenau*, and the three great ships *Göben*, *Lützen*, and *Berlin*, each capable of carrying three thousand passengers, built for the North German Lloyd.

Vegesack, about six miles farther north, on the Weser, at the confluence of the Wümme and the Weser, has another great shipbuilding yard, that of the Vulkan Company, formed in 1893. These works occupy ground extending to about three hundred thousand square mètres, and possess a water frontage of one thousand four hundred mètres. Hydraulic power, compressed air, and electricity have almost superseded steam in this splendidly equipped establishment. A peculiarity of the excellent workmen's dwellings built by this company is that each is surrounded by a garden, which is not at all usual in Germany.

At Bremerhaven and Geestemünde, at the mouth of the Weser, there are three more yards. Tecklenborg's has a river frontage of one thousand six hundred and fifty mètres, and seven slips for vessels up to seven hundred and thirty feet in length. This company was founded in 1897, and employs about four thousand men. Seebeck's was founded in 1895, and employs about one thousand five hundred. The third company, Rickmer's, is an important industrial venture of shipowners who are also rice-millers, and build their own ships. On the Ems there are only the Nordseewerke at Emden and Meyer's yard at Papenburg, but judging by the important government works now in progress at the former place, a second naval yard is sure to be constructed.

THE PARTING OF THE WAYS.

CHAPTER II.

SOME four days later the baron and Felix were installed on the Tribunalska estate. They had made the journey in the powerful road-car, which had brought the whole country-side out of doors in a panic of wonder at the rushing monster. It told the two travellers that they were going off the track of civilisation into the heart of primitive life, and they were not sorry at the fact.

'Ah, here one can breathe!' said the baron, throwing out his chest, as he stood gazing through the windows of the country-house upon the vast stretch of upland before him.

'With one's lungs no less than with one's brain,' added Felix with a smile of content.

The baron nodded. The days that had intervened since their departure from St Petersburg had impressed on him more deeply the necessity of thinking out the task before him. It did not seem to grow easier by becoming more familiar. It was one thing to neglect the outward observances and rites appertaining to his ancestral faith, and another to abjure that faith altogether. There were the instinctive bonds forged round his heart by centuries of tradition. There was also the voice of conscience which made him shrink from the thought of becoming a perjurer to his dead mother.

And yet in the same degree that his scruples had increased, so had his temptations. The very morning after his conversation with Felix the Minister of Finance had called on him, and the recollection of that interview made the baron's heart beat high with the exultation of realised ambition. It was indeed a brilliant chance that lay fair within his reach. As yet he had said nothing of it to Felix. His sense of honour made him loath to influence the young man's decision by any considerations save those which had strict reference to Felix's own particular view of the question.

The country-seat stood in the centre of the estate, surrounded to the radius of a mile by spreading corn and grazing lands, which were

fringed off in the distance by the famous Orodways pine-forests. The massive pile turned its dazzling white façade in a sort of majestic aloofness to the little township huddling abjectly in a hollow some two miles to the south. He owned that township. Three generations of his forefathers had ruled it from this big white house with a patriarchal sway. He was the first of his line who had left it for the wider domain in which his life had since been lived. He had gone to St Petersburg to find an outlet for the great capacities with which he knew himself to be endowed. In no very long time he had made himself an assured position in the very forefront of *la haute finance*. His share in the negotiating of a foreign loan had brought him his patent of nobility.

And yet he was fully aware that all this had been a mere side-issue, almost an accident. It was neither the desire for nor the hope of worldly advancement that had sent him from Tribunalska twenty-three years ago. It was the same reason, too, which had induced him never to return to it during all that time. He had no need to specify that reason to himself. It was summed up in one word, one name—Felix. One could never err by keeping on the side of safety. If he had prevailed on himself to come now, it was because he thought he had allowed a sufficient margin of safety. After all, twenty-three years was not a day. A period long enough to change the map of the world, to pull down old dynasties and set up new ones, was surely long enough to wipe out the danger he wished to guard against, a danger which no doubt had for a good long while existed only in his imagination.

To Felix himself there never had come the shadow of a notion that he was in any way connected with the baron's reluctance to return to his paternal home. His uppermost feeling, from the moment they had arrived, was an exhilarating sense of spaciousness and freedom. He seemed to have shed all that was artificial and exotic in his life. Things had been reduced to their natural value, to their proper perspective. The episodes which only a few days ago had loomed so large in his mind had lost their aspect of tragedy. The incident of the picture and its bearing on his career had become almost farcical. He was afraid that even his relations with Vera Kowalevski did not appear to him so serious as his father perhaps thought or wished. She was a very charming little thing—but only a little thing after all. It was paying her a great compliment to allow her to figure prominently in any large scheme of life. He reminded himself that he was still carrying in his pocket the letter he had written to her yesterday. He would take a stroll down to the town or village, or whatever that nondescript heap of hovels over there chose to call itself, and add a postscript that he had gone to post the missive himself instead of entrusting it to one of the servants. There was no harm in feeding her vanity with trifles.

He set off at a brisk pace, his step elastic on the velvety turf, his blood tingling with the crisp breezes that blew over the heights. It felt good to be alive. If he had his choice he would never go back to the mephitic magnificence of the capital. But of course that was impossible. His father's wishes had some claim to be studied. But he would come here again at the earliest opportunity.

He was half-way through his walk without having paid any particular attention to his surroundings. But the nearer he approached the township the more subject he became to the strange sensation that was stealing over him. He did not know what to make of it. Unconsciously he slackened his step as though to tread warily in his effort to give it shape and meaning. And at last it resolved itself into a curious feeling of homeliness, of vague familiarity. More and more it became impressed on him that he was not setting eyes on these places for the first time in his life.

It was absurd. He knew for a fact that he had never been here before. And yet almost at every turn there came to him subtle intimations as of remembered things. Out of the dim vists of the past there uprose shadowy intuitions that were apparently based on actual facts. His memory seemed to turn into a palimpsest from which the superimposed impressions were being gradually rubbed away, revealing the originals they had concealed. He grew impatient at this hide-and-seek game his fancy was playing with him. He would put himself to a practical test. He paused at a bend of the road. If his imaginings were true, there should be behind that intervening hillock the little Jewish cemetery of the place. As with a vague backwash of reminiscence there recurred to his mind certain white headstones it had contained, and again he experienced a thrill of the childish terror with which the sight of them had filled him at night in that mysterious past to which he was harking back. He held his breath as at some impending catastrophe, and then resolutely he turned the corner. An involuntary cry broke from him. Yes, here—gleaming in the sunlight, but with all their dismal associations stamped upon them—rose the white gravestones of the little burial-ground.

There was no doubt of it, this was not his first visit to Tribunalska. Probably he had been here during his earliest childhood, in the first dawn of his intelligence. He felt more than a passing wonder why his father had never mentioned the fact. But beyond that he gave it no further thought for the time being. There were other things, sights and sounds, that claimed his attention.

As he set foot on the outskirts of the town it was plain to him at first glance that something

unusual was going on in it. An air of gloom hung like a pall over the place. An ominous quiet hushed the narrow, crooked streets with an almost palpable presentiment of disaster. Through the low lattices of the wretched dwellings could be seen wan, grief-stricken faces, and crouching figures flitting about the rooms with a sort of furtive and hunted haste. It seemed as though the indwellers were hiding from the menace of an invading enemy. And indeed quite a military aspect was given to the scene by the presence of a number of soldiers patrolling the streets with fixed bayonets. Another group was standing still, holding several bloodhounds in leash. Puzzled and vaguely uneasy, Felix passed several of the sentries, and then stepping up to a non-commissioned officer, he slipped a silver coin into his hand.

'What has happened here?' he asked.

'Nothing. It won't happen till later,' was the gruff but not ill-humoured reply.

'And what is that?'

'Not much. Only a few Jews to be expelled from here.'

'To be expelled! Why?'

'Because they've been living here without authority. There has been a revision of the list of those who have domiciliary rights; and all those that haven't must go.'

'How many?'

'Just a few—two or three hundred.'

'And where are they going?'

'Back to their kennels, the dogs!—to the Pale of Settlement. There's enough room for all of them there.'

Felix bit his lip, but forbore from making any retort. No doubt the man would have been more polite in his expressions had he known that his interlocutor and his interlocutor's father belonged to the same breed as these so-called dogs, and that nevertheless the local prefect of police had deemed it worth while to call and pay them his respects. Felix was glad that the man did not know. That was why he was now getting at the truth.

'And what's all this parade about?' he resumed.

'A guard of honour,' laughed the sergeant. 'We have to keep a sharp lookout on them, else they'd give us the slip and skulk about in the forest; although I don't think they would be doing themselves much good by that,' he added, swinging his arm with sinister significance in the direction of the straining bloodhounds.

'Is there no chance of their getting a respite?' asked Felix in as off-hand a tone as he could muster.

'Not the least. They have made their petition. They're always making petitions. The answer came back last night that they are not to be shown any leniency. If they resist, they will be driven at the point of the sword. A few of them'—he uttered another ugly laugh—'may have to be carried on ambulances, or possibly in their coffins.'

Felix nodded silently and turned to go, sick at heart. For the first time in his life he had come face to face with the great and grim tragedy into which the life of his people had shaped itself. He saw them hounded like pariahs, uprooted from their homes, and driven into exile. He saw them the sport of gratuitous cruelty, which made a holiday of the pain and heart-break of its unoffending victims. Even the wretched existence they had eked out on this barren spot was grudged to them. And their destination was the Pale of Settlement, which was no more than the Russian equivalent for Leper Island, to swell in its circumscribed area the cry of misery that ascended to heaven, to join in the fratricidal, the almost cannibalistic, struggle for life that went on among its herded millions. Perhaps that was why his father had never allowed him to come here. Perhaps he had wished to spare him the knowledge that the splendours and luxuries of their St Petersburg palace had such a set-off as the horrors he had witnessed to-day. He did not know whether he had reason to be grateful to his father for keeping him in a fool's paradise.

He was in no mood yet to go back to the big white house. He had to think these things over for himself before he faced his father again. He struck out along a disused path. Through an opening in the hedge he caught sight of the figure of an old man toiling painfully up the hill leading to his father's house. Felix stood still, vaguely fascinated by the spectacle. That old man was to him symbolical of the never-ending pilgrimage of his people. He might be the legendary Ahasuerus, whose doom had become perpetuated in that world-wide passion-play on which the curtain never fell. And again, as he watched him, that stoop-shouldered graybeard became to Felix no mere allegorical type. Between the two of them there seemed to undulate some magnetic wave of sympathy connecting them as by a close personal bond.

Felix turned away with a sense of fear. He was letting his imagination run riot with him. He must come back to everyday things and feel the earth solid under his feet once more. He tried to immerse himself in the wild beauty of the surrounding scenery. There was so much here to appeal to the artistic instead of the emotional side of his nature! He would look about and mark out a spot or two to which he would come to-morrow with his sketch-book.

And meanwhile he was forgetting that he still carried Vera Kowalevski's letter unposted in his pocket.

(To be continued.)

THOMAS DE QUINCEY AND THE INDIAN MUTINY.

By the Rev. JOHN LENDRUM, M.A.

IT may appear strange to put these two together. What could the great essayist have to do with the tragic happenings of 1857?

We are accustomed to think of De Quincey as a scholar and recluse, living for the most part in the quiet of his den, 'snowed up' with papers, lost in reverie too often begotten of opium, striving to catch down on paper the gorgeous fabric of his dreams. This popular idea, however, like many another, is but a fraction of the truth. It is true that De Quincey took opium and was usually alone. As Masson says, 'By temperament and habit he was a creature evasive of all publicity, a "fantastical duke of dark corners."' He was always most unwilling to go out to dinner, and no host could be sure of him save by going for and bringing him. He was also a prince among dreamers, and in power of imagination among the very first of our writers. But though a dreamer, he was never out of touch with reality. He avoided society, but no eye was more widely or steadily open on the men and things around it. He took the liveliest interest in all the events of the time. He read the newspapers as carefully as a member of Parliament, and he read the whole of them—not contenting himself with the high events of war or politics, but reading carefully police-court reports and the accounts of criminal trials. He was so keen, indeed, that often he sent out for second editions, and even on his deathbed he was eager to know what was in the paper.

For a short time De Quincey was the editor of a paper, and not a few of his essays deal with current affairs. He wrote on China and the Opium Question, on California and the gold-digging mania. It may not be generally known that he contributed to *Blackwood's Magazine* an article on the Disruption, in which, being himself a staunch Conservative and supporter of the Church of England, he pours out his wrath upon the Free Church and its doings. Again, in a letter to his daughter Emily, we find him giving his views on the Crimean war.

Hence we need not be surprised to find that in 1857–58 he contributed to the *Titan* (a half-crown Edinburgh monthly, into which *Hogg's Instructor* had been transmuted in 1856) three articles on India, entitled, 'Hurried Notices on Indian Affairs,' 'Passing Notices on Indian Affairs,' 'Suggestions upon the Secret of the Mutiny.' His interest in the Mutiny was intense. 'Nothing,' says Masson, 'seems to have interested De Quincey so much or roused him so nearly to a paroxysm of personal excitement as the Indian Mutiny of 1857–58.' The impression of it, Masson adds, was the last great experience of his life. And for this there was a special reason. His interest in the Mutiny was not merely that of a patriot; it was also and above all that of an affectionate father, whose heart was wrung with anxious fear. For he had a daughter in the midst of it.

Though a man of books and letters, De Quincey did not hide himself from his own flesh. Nor is it to be thought that because he indulged, and at times overindulged, in opium, he had anything about him of the heartlessness of the drunkard. He was one of the kindliest of men. He never could refuse a beggar. And his devotion to his children was most tender and touching. He moved among them with doting attention, and looked after their education. His daughter, Mrs Baird-Smith, tells us that sometimes, to still her crying in the nursery, her father would come and fetch her in his arms into his own warm room, place her in a chair for the supreme delight of 'sitting up with papa,' and after petting her with sips of well-sugared coffee, give her a book and paper-cutter to amuse herself while he went on with his writing. In later days the arrival of the post with letters from his daughters was the event of the day, and sometimes he would stop work and push aside his books that he might shut his eyes and think for a while of his three girls and the two grandchildren in Ireland.

Imagine, then, the feelings of such a man as the news came in of the ghastly doings at Meerut, at Delhi, at Cawnpore! For in the year 1855 his second daughter, Florence, had gone out to India to be married to Colonel Baird-Smith, a distinguished engineer officer whose name is well known to every reader of the story of the Mutiny. This is the link between Thomas De Quincey and the Indian Mutiny. One of his daughters was married to one of the heroes of the siege of Delhi.

There are those still among us who remember the awful dread and sickening horror that fell upon the nation in the summer of 1857. If even we shiver as we read the story of the massacre at Cawnpore, how much more must our fathers have shuddered when the first news came of it, not being sure even then that they had heard the worst! And the unhappiest of all were those, like De Quincey and his daughters, who had loved ones in the midst of the murderous Sepoys, who tore open the morning paper, eager to learn, yet almost afraid to read.

Thus on Monday, 29th June 1857, De Quincey writes to his youngest daughter Emily:

'MY DEAR EMILY,—You doubtless are suffering under the same anxiety as myself about our poor dear Florence [Mrs Baird-Smith]. Let me

tell you all that *I* know; then do you write as soon as possible to tell me all that *you* know. Yesterday (that is, Sunday, late in the evening), by pure accident, Miss Stark [the landlady of De Quincey's rooms at 42 Lothian Street, Edinburgh] came and asked me if I knew that late on Saturday there had been an important second or third edition published of the *Scotsman*. The daily *Scotsman* is the particular paper which I take in; and on Saturday before eight in the morning I had received it as usual. At that hour there was no news stirring; but now it seemed something was wrong. *About China*, Miss Stark thought. But I, upon occasion of the still to this hour unexplained and mysterious mutiny in the native 34th Regiment [a Sepoy in this regiment, Mangal Pandy, had attacked and severely wounded the sergeant-major and the adjutant; the regiment was stationed at Barrackpore, and was disbanded on the 6th of May, the outrage here referred to having taken place on the 29th of March], had a misgiving that it would be India. With great difficulty, the day being Sunday, a copy of the Saturday night edition was obtained; and it then appeared that India it was. Three regiments at Meerut had mutinied—1 cavalry, 2 infantry; they had been attacked by our British regiments; beaten, but able to retreat upon Delhi, where (the Marseilles report was) they had massacred all *white* people.'

We thus see that De Quincey's keen ear had caught one of the first mutterings of the coming storm—the outrage at Barrackpore. Whether he had heard the story of the greased cartridges does not appear. He had now learned of the outbreak at Meerut, which took place on Sunday the 10th of May. The mutineers, however, were not, as he says, attacked and beaten by the British troops at Meerut. They might easily have been, for our troops were strong in numbers and in artillery; but they were grossly mishandled by an old, incompetent General. They were called out, indeed, but did nothing, and allowed the Sepoys to get clean away to Delhi.

In the latter part of the same letter De Quincey says: 'It is certain, as in all such cases, that everything will have been dreadfully exaggerated; and, as one example of this, from Delhi the assurance was that the massacre of the British had been universal and undiscriminating; but *now*, though so little time has elapsed, this horrid butchery is reduced to "*eleven*" officers killed.'

In this case, however, the first rumour was as true as the second. Outside Delhi, where the cantonments were, or at the Cashmere Gate, where some fighting took place, not fewer than eleven officers were killed. But inside the city every European found, man or woman, was done to death; only one or two succeeded in hiding themselves and afterwards escaping.

Already, in the first sentences of this letter, we feel the pulsings of keen personal anxiety; but the most poignant paragraph has still to be quoted; it follows immediately after the reference to Meerut and Delhi: 'All this you have heard, no doubt. Now, tell me Colonel Baird-Smith's last station; how is it named? But above all, how is it situated? Surely not on the route from Meerut to Delhi?'

What anxiety and fear lie beneath these simple words, so that we cannot read them without emotion! Was it possible that his beloved daughter and her husband were in the thick of the terror, in the path of maddened Sepoys, who did not scruple to murder helpless women and children? Was it possible?

After the news from Delhi came the still more tragic story from Cawnpore, where, on 27th June, Wheeler and his men were enticed from their entrenchments by the notorious Nana Sahib and treacherously slain at the river-side; and on 15th July the women and children, over two hundred in number, were foully done to death, the bodies of the dead and dying being afterwards thrown into a well. The effect on De Quincey is seen in a letter to his daughter Emily, dated Sunday, November 1, 1857:

'Up to the last mail but one . . . I suffered in my nervous system to an extent that (except once in 1812) had not experimentally been made known to me as a possibility. Every night, oftentimes all night long, I had the same dream—a vision of children, most of them infants, but not all, the *first* rank being girls of five and six years old, who were standing in the air outside, but so as to touch the window; and I heard, or perhaps fancied that I heard, always the same dreadful word, *Delhi*, not then knowing that a word even more dreadful—Cawnpore—was still in arrear. This fierce shake to my nerves caused almost from the beginning a new symptom to expose itself (of which previously I had never had the faintest outline)—namely, somnambulism; and now every night, to my great alarm, I wake up to find myself at the window, which is sixteen feet from the nearest side of the bed. The horror was unspeakable from the hell-dog Nena or Nana; how if this fiend should get hold of Florence and her baby (now within seventeen days of completing her half-year)! What first gave me any relief was a good, firm-toned letter dated *Rourkee* in the public journals, from which it was plain that *Rourkee* had found itself able to act *aggressively*.'

At first, as we have seen, De Quincey could not remember the name of Colonel Baird-Smith's last station, and feared it was on the way from Meerut to Delhi by which the mutineers had passed. In her answer to his letter, however, his daughter Emily had been able to tell him that the Baird-Smiths' last station was Rourkee, which is not on the way from Meerut to Delhi;

and, as we have just seen, his anxiety was further relieved by a letter in the papers which showed that at Rourkee the Sepoys had never been allowed to get out of hand. In a letter from Manchester he tells how things had gone at that station:

'Two years ago my second daughter married Lieut.-Colonel Baird-Smith, who enjoyed considerable reputation in Bengal as an engineer officer, and was also favourably known by his connection with irrigation for the North-West Provinces. The station at which he resided was a small and obscure one—namely, Rourkee; and when first this hideous explosion of malignity began, I heard with great thankfulness that the station had these two vast advantages: first, that it was not a depôt for public treasure; and, secondly, that it lay upon a byroad not leading to any place more important than itself. . . . Meantime, no place could be entirely safe; and one alarming incident, which exposed at the same moment the weakness and strength of the place, occurred at an early stage of the enormities. One evening about six or seven, when the resident British . . . were all gathered together at dinner, a servant whispered to Colonel Baird-Smith that a detachment of about forty native troopers had ridden into the station, and desired to speak with the commandant. Colonel Baird-Smith said nothing to the company, but immediately went out, and naturally in some anxiety; for, though the men had not announced themselves as mutineers, he had little doubt that such they were. He thought it best to try this question by telling them that in his opinion the best course for them was to move off to Meerut. The men replied that such was not *their* way of thinking. "Very well," said the colonel; "come, then, to this open area, where you can feed your horses whilst we discuss the point in question." Naturally, they followed him without suspicion, and in a few seconds found themselves arrayed before a battery unmasked, which could have closed the discussion with an unanswerable syllogism of scenical catastrophe. Under this advantage, he dismounted them and also disarmed them; and for the present the danger had melted away.'

The man who could so act in a crisis was no common officer. It is clear, also, that De Quincey was very proud of his son-in-law, as he had good reason to be; nor can it be doubted that the splendid service Colonel Baird-Smith rendered at the siege of Delhi was one more reason why De Quincey was so deeply interested in the story of the Indian Mutiny. Writing to his daughters on 31st July 1855, De Quincey tells how, at a dinner-party of men at the house of Mr John Ritchie, proprietor of the *Scotsman*, he found that his daughter Florence's engagement to Colonel Baird-Smith had already got abroad. Some one having said, 'We understand, Mr De Quincey, you are going to lose another of your daughters,' he replied, smiling, that such a rumour was certainly current. 'Ay, but it's more than a rumour,' said Mr Russel, the editor of the *Scotsman;* and went on to explain how the news had come out through Sir Ralph Abercromby, a son of Lord Dunfermline, British Minister at Turin, with whom Colonel Baird-Smith had stayed and become intimate while studying the system of irrigation in Piedmont. De Quincey adds: 'On this occasion, by the way, as previously at Mr J. B.'s [Mr John Blackwood the publisher], I found all persons loud in the praise of Colonel Baird-Smith.' Baird-Smith was thus already distinguished as an officer of engineers, and, we gather from a letter of De Quincey's to his daughter Emily, a most flattering notice of his work appeared in the *Athenæum* in October 1856. But his great chance came when, in the beginning of July, he was summoned from the quiet of Rourkee to act as Chief-Engineer to our forces on the Ridge, and direct the assault on Delhi.

In his book, *Forty-one Years in India*, Lord Roberts, who was himself present at the siege of Delhi, speaks of Baird-Smith's work in the very highest terms. He took at once a firm grasp of the difficult situation. It was by his advice that all the bridges over the Western Jumna Canal were destroyed for several miles, so that communication with the Punjab might not be cut off. He was of those who, when Wilson, the officer in command, grew nervous and hesitated to attack, insisted that Delhi must be taken at once.

'Fortunately for the continuance of our rule in India, Wilson had about him men who understood, as he was unable to do, the impossibility of our remaining any longer as we were. They knew that Delhi must either be taken or the army before it withdrawn. The man to whom the commander first looked for counsel under these conditions—Baird-Smith of the Bengal Engineers—proved himself worthy of the high and responsible position in which he was placed. He too was ill. Naturally of a delicate constitution, the climate and exposure had told upon him severely, and the diseases from which he was suffering were aggravated by a wound he had received soon after his arrival in camp. He fully appreciated the tremendous risks which an assault involved, but in his opinion they were less than those of delay. Whether convinced or not by his Chief-Engineer's arguments, Wilson accepted his advice, and directed him to prepare a plan of attack.'

Baird-Smith 'showed his grasp of the situation in attacking from our left;' and, though unable through illness to superintend personally the construction of the breaching-batteries, he was able to report on September 13 that the breaches in the walls of Delhi were practicable, and urged instant attack. 'Before Wilson and

Baird-Smith separated, orders had been issued for the attack to be made at daybreak the next morning, the 14th.

'On that memorable morning our little force made its daring leap upon the great city, led and inspired by the famous John Nicholson, and, after desperate fighting, carried the Cashmere Gate and entered the city. Our men, however, were but a handful, and held but a corner of the city; Nicholson had fallen mortally wounded; the casualties had been heavy; and Wilson again became so nervous and dejected that he proposed to withdraw from the city and thus timidly give up all that had been won.

'He would, I think, have carried out this fatal measure, notwithstanding that every officer on his staff was utterly opposed to any retrograde movement, had it not been his good fortune to have beside him a man sufficiently bold and resolute to stimulate his flagging energies. Baird-Smith's indomitable courage and determined perseverance were never more conspicuous than at that critical moment, when, though suffering intense pain from his wound, and weakened by a wasting disease, he refused to be put upon the sick-list; and on Wilson appealing to him for advice as to whether he should or should not hold on to the position we had gained, the short but decisive answer, "We *must* hold on," was given in such a determined and uncompromising tone that it put an end to all discussion.'

Canning said of John Lawrence, 'Through him Delhi fell.' And that is true. For it was he who sent down the troops and the heavy guns. But the famous words might also be rightly used of Baird-Smith. For it was he who twice over saved the situation. By his ability and courage and strength of character he persuaded a timorous General first to make the attack, and then to stand fast. He well deserves to be regarded as one of the heroes of the Indian Mutiny. And lovers of that thrilling story will care to know that he was the son-in-law of De Quincey.

Nor was this De Quincey's only personal link with the Indian Mutiny. For he had not only a daughter in India at the time, but also a son. This son was Paul Frederick, an officer in the Seventieth Queen's Regiment, who had been present and carried the Queen's colours at the great battle of Sobraon, 10th February 1846. About him, however, De Quincey had not the same anxiety as about his daughter, Mrs Baird-Smith; perhaps because he was a man and an officer, whose duty it was to be in danger, or perhaps because his regiment never came within the zone of greatest danger.

Japp and Masson both assert that Fred De Quincey served all through the Mutiny, and returned home in July 1857, not observing that these two statements are quite inconsistent. In other words, his son Fred served all through the Mutiny, but did not return home till July 1858. De Quincey's son returned to India, and, attracting the notice of Sir Hugh Rose (Lord Strathnairn), was made brigade-major. He afterwards served in New Zealand, and ultimately bought land and settled in that country.

Colonel Richard Baird-Smith died in India in 1861, and there is a memorial to him in Lasswade churchyard, near Edinburgh. Mrs Baird-Smith gave every assistance to Dr Japp ('H. A. Page') in his biography of De Quincey, and her reminiscences of her father are among its most interesting pages.

Such, then, was the link between the 'English Opium-Eater' and the Indian Mutiny. And perhaps nothing fixes it better in our minds than a sentence from a letter written by Colonel Baird-Smith to a friend after the capture of Delhi. It is given in Kaye's *Sepoy War* (vol. iii. p. 547), and is repeated, though not quite accurately, in Sir Evelyn Wood's recent volume, *The Revolt in Hindustan*. After telling of an attack of scurvy, a neglected wound which threatened to mortify, and a bad fall, Baird-Smith continues: 'And, to crown the whole pleasant catalogue, I was worn to a shadow by a constant diarrhœa, and consumed as much opium, with as little effect, as would have done credit to my father-in-law [De Quincey].'

MONDAY.

I often wonder why it is
That Monday's never nice;
Why nursie seems her crossest,
And the pudding's always rice;
Why I always get a pinny
That's not been worn before;
Why such a lot of errand-boys
Come knocking at the door.
For that's the way that Monday goes
From breakfast-time till night.
I wonder what's the reason why
On Monday nothing's right?

I wonder if, when Monday comes,
I'm really, truly worse;
Or if I only seem more bad
To mother and to nurse?
I'd like to know, because, you see,
It doesn't seem quite fair
To say I'm naughty just because
It's Monday in the air.
For that's the way that Monday goes
From breakfast-time till night.
I wonder what's the reason why
On Monday nothing's right?

I often think that if I could
I'd not have Monday first;
I'd put a better day instead,
And not the very worst;
Then mother needn't hurry;
And nursie needn't scold;
I could eat jam roly-poly;
And my pinny could be old.
For that's the way that Monday goes
From breakfast-time till night.
I wonder what's the reason why
On Monday nothing's right?

SEVENTH SERIES

WANTED: WRITTEN LAW FOR TOURISTS.

By F. G. AFLALO.

AT a time when nations strive with more sincerity than guile after a better understanding with each other, with promising talk of arbitration and even the dream of disarmament, can nothing be done to improve the *morale* of the tourist, the sample by which every country judges of its neighbours? Like traders, careful that their travellers' samples shall be of, at least, average quality, cannot we, a nation of shopkeepers, do something to ensure that a more favourable impression may be made abroad by the Englishmen and Englishwomen who spend their holidays in foreign capitals? A century ago the Grand Tour was part and parcel of every young nobleman's education, a progress of pomp and circumstance, with much posting and social amenity, a fine and dignified inspection of cities and scenery. If now and then this high-class travel found its expression in somewhat pedantic literature, like the memoirs of Mrs Piozzi, there was no compulsion to read it, and the Grand Tourists of the eighteenth century were at least worthy to represent in foreign parts the dignity and prestige of the Empire on which the sun never sets.

The same cannot, unfortunately, be said of the Little Tourist of to-day. He is cheaper, like his modes of travel. He moves by favour of the coupon in personally conducted parties, and he leaves such manners as he has on this side of the Channel. Doubtless the work of his improvement is everybody's business, and therefore nobody's business. I shall be told, perhaps, that it is none of mine. Yet I venture, in despite of such criticism, to suggest that if the Foreign Office could so far stoop to a sense of lesser duties as to issue with every passport a printed code of hitherto unwritten law, an epitome of etiquette, such an innovation would contribute even more to the friendship of the nations than the Hague Conference. Much of this mutual distrust among neighbours arises, without a doubt, from trivial misunderstandings, petty differences of standpoint, shades of mentality; in short, from want on both sides of that tact which our late King exercised with such happy results on his travels both within and without his Empire, and which, all said and done, is neither more nor less than a combination of moral perspective and sense of humour.

It is quite impossible to measure the degree in which the bad impression left in foreign minds by the worst type of British tourist may contribute to strained relations between his own country and that in which he forgets his manners. I shall perhaps be told that his boorishness, his contempt for conventions, his indifference to local prejudices, his irreverence in places of worship, his arrogance in eating-houses, all count for very little; that his eccentric dress and want of manners excite mirth and not anger; in short, that I am attaching a quite disproportionate importance to a grievance which has none. This optimistic view of his shortcomings does not, unfortunately, tally with what I have seen and heard in half-a-dozen Continental countries; while to watch English tourists in company with those of other nations during an Easter Week in the Holy Land was to confirm a previous conviction that they need educating.

They are not provided for in the better class of travel handbook. It is to be regretted that there exists no special manual for their behoof, written for them as Galton's *Art of Travel*, or the excellent handbook of the Geographical Society, is written for the academic traveller of more serious pursuits. Those who spend a month in Continental capitals do not need to be told how to pitch a tent, light a camp-fire, or signal for help when lost in the jungle. What they need to be told is how to behave themselves in churches, in railway-carriages, restaurants, or at public entertainments. Pity it is that they should stand in need of such information, but the melancholy fact remains that they do. Should the Foreign Office see its way to supplement its passports with such a code of hints as has been suggested, here are a few of the salient matters which should not be overlooked.

First and foremost, a general instruction to the wandering tourist of ultra-patriotic temperament that there are other countries besides Great Britain. It may seem ridiculous to insist on this; but it is a fact commonly overlooked, and it is a concession that the travelling Englishman may make without disloyalty to his King. There is France, there is Germany, there is Italy—particularly Italy, the beautiful land in which he is seen at his worst. On the strength of a

[*All Rights Reserved.*]

half-remembered smattering of fifth-form Latin, even the more educated tripper sometimes takes possession of Rome as if it were a suburb of Oxford. In so doing he quite ignores that other modern Rome, the princely Rome of the late Marion Crawford's novels, which moves in a world of its own to which the vulgar sightseer has no access. In addition to the counsel to recognise the existence of nations other than his own, the globe-trotter should be exhorted against race-prejudice generally. Those who suffer from this obsession should stay at home, since world-travel will do little to eradicate it if it is in their bones; and the man who roams abroad with a catholic contempt for 'dagos' and 'niggers' will make life a misery to himself and those about him. It is not here suggested that this bigoted prejudice against those of other colour, creed, or language has the same significance in the irresponsible traveller as it would have in those entrusted with the administration of the Empire's affairs overseas. Yet there is no doubt whatever in my mind, after twenty years of travel in Continental capitals, as well as in the country districts, that this vulgar and ignorant contempt for every ideal in dress or manners which does not conform to the conventions of Brixton Hill, thinly veiled where indeed it is not openly expressed, does incalculable harm in disturbing otherwise cordial relations. I do not hesitate to say that even to-day, with all the talk of the *entente cordiale* on the one hand, and the 'Rhine' on the other, a party of German tourists will excite less derision in a boulevard café than one composed of a too familiar type of English people.

The etiquette of the railway-carriage is another matter in which the British tourist might with advantage be guided to a better understanding of his obligations. Railway journeys in this country are for the most part so short that a boor has scarcely time to make himself objectionable. On the Continent, however, or in America, where the journey may last for days and nights, he has endless opportunities, and much greater importance therefore attaches to those little amenities so often neglected at home: the matter of keeping the window up or down during the day, or the light covered or otherwise at night, the arrangement of hand-baggage on the rack, and so on. It is simply a matter of compromise, and the commonest cause of friction with the Englishman is not so much his churlishness as his remarkable ignorance of modern languages. Unable to make himself understood, he blusters. True, there are times when a little knowledge of languages may also be dangerous, in proof of which let me tell a story against myself. Some fifteen years ago, one night in March, I found myself at Madrid in the night express, bound south for Ronda. I had wired from the hotel in the Puerto del Sol for a corner seat in a first-class smoking-carriage; and, knowing that it would be retained, I lingered over an excellent dinner and drove to the station at the last moment. The compartment accommodated eight, and I found the other seven places already occupied by stalwart Spaniards, all of whom had lighted large cigars and removed the boots from off their feet. Both windows were up, and the atmosphere was not to my liking. My reserved seat, in the farther corner, faced the engine, so that at home, at any rate, etiquette would have permitted me to lower it if I had so desired. But I was not at home, and a feeble attempt to open it a few inches while the train was still in the station produced a dissentient grunt from opposite. I hastily shut it again; but sleep was out of the question, and I lay in my corner with a splitting headache. When we had gone about two hours of the journey I could stand it no longer. My acquaintance with the Spanish language was very slight, but I knew something of Italian; and, trusting to the resemblance between the two, I murmured a request to the gentleman opposite that I might be allowed to open the window a trifle '*per lasciar scappare il fumo.*' Alas! my words conveyed a very different meaning to the hidalgo, who without more ado drew from his inner pocket an immense sealskin cigar-case, and insisted on my taking an enormous weed. There was nothing for it but to thank him and light up, though by the time I had smoked a couple of inches of it I was beginning to feel sick; but we fortunately stopped at a station, where I managed to lose it. This reminiscence merely illustrates the danger of a little knowledge. Had I not even known enough Italian to proffer that misunderstood request, but merely lowered the window surreptitiously, all would have been well. After the politeness of my *vis-à-vis*, I obviously could not do that to which he had previously taken exception. Yet a total ignorance of foreign languages is even worse, and I have seen it responsible for more unpleasantness, particularly with officials, than any other cause.

Two minor offences, from which our countrymen who tour abroad might perhaps be dissuaded, are in the matter of dress and tipping. It may be that the outrageous holiday garb affected by the extreme type—the chessboard knickerbockers of the men, and the 'useful' skirts and boots of the ladies—promote only the hilarity that Caran d'Ache managed to convey in his drawings, and cannot give offence. But there is another side to this eccentricity, and it is to be regretted that a few Englishmen should permit themselves to bring ridicule on the race, that they are unable to realise that by dressing like buffoons at a country fair they are lowering the national prestige in the eyes of ignorant folk abroad. This is particularly true of the East, where there is dignity in the robes of even the meanest native. To appreciate the differ-

ence between the sartorial ideals of East and West one need only watch the landing of British or German tourists on the quays of Constantinople.

The chief offender in the matter of extravagant tipping is, as a matter of fact, the American; though the Englishman is not exempt from blame. It may be that the travellers of other nations err in the other direction, and give too sparingly of their bounty; yet, if such be their pleasure, they have a right to be thrifty, and it must be galling to have prodigal foreigners 'spoiling the market' by spending their money broadcast and inspiring in the venal natives a contempt for lesser generosity. Americans fling their dollars to dragomen as they would fling maize to hogs, but the manner of the giver is readily overlooked in the munificence of the gift; and the poorer traveller, offering the more modest gratuity that he is able to afford, is indifferently looked after. Seeing that tips are neither more nor less than a secret commission for services rendered or implied, it is a pity that they cannot be made, if not illegal, at any rate the subject of regulations.

Needless to say, however, by far the most important matter in which most English tourists need very serious instruction is the proper reverence for the holy places of other sects and creeds, in which, though religious in their own country, they are so sadly lacking abroad. Their fine contempt for the 'tinsel' of papist fanes or the mosaic of Moslem mosques may be proof of simple faith, but they should keep it strictly to themselves. Their thoughts are their own, but they need not express them till they get home again. Not long ago a worshipper shot at a party of Europeans in the Mosque of Omar at Jerusalem. That beautiful building, which I know well, stands on the site of Solomon's Temple, and encloses, among other symbols sacred throughout Islam, two adjacent pillars between which very pious Moslems endeavour to squeeze in the hope of thereby adding ten years to their life. This appears, no doubt, a childish superstition to the higher intelligence of the West (which trembles whenever a black cat runs across the road); but that is no reason for laughing at it in the mosque in the presence of worshippers at their prayers. Nor is it seemly to stand gaping in front of the confessionals in St Peter's, as if, forsooth! the whispered admissions of veiled penitents were part of a side-show arranged for the entertainment of the personally conducted. In the Holy Land, so far as I have seen, the Germans were the most conspicuous tourists, behaving with an assurance that was perhaps encouraged by the influence of their countrymen throughout Syria and Palestine, where every seaport of consequence has its German colony, and where, in the interior, all the best hotels (best only by comparison with the worst) are in their hands. The tourists of nations belonging to the Orthodox or Latin Churches are in a marked degree more reverent in both Christian and Moslem places of worship than those of Protestant races, and it was the reverse of edifying to contrast the respectful behaviour of ignorant, long-haired peasants from the Volga with the more boisterous conduct of others from the Thames. The Mohammedans appreciate the distinction too, and it is to be regretted that the thoughtlessness of a handful of tourists should have earned for the English, with their subject population of more than sixty million followers of the Prophet, a reputation for irreverence. These things count for much in the East. How, I wonder, would the worshippers in a village church at home feel if half-a-dozen robed Moslems were to enter the building during divine service and comment in audible whispers on the congregation? And why is such conduct to be condoned on the part of English tourists in a mosque?

PETER AND JANE.

CHAPTER III.

THE following morning Miss Erskine was awakened at the unusual hour of 5 A.M. by having her window broken by a large pebble.

'I tried small ones first, but they were not a bit of good,' said Peter later, with compunction.

Jane stirred sleepily, and flung her heavy brown hair up from the pillow. This was probably some nonsense on the part of a young Wrottesley, and Jane was not going to be taken in by it.

Next, the point of a fishing-rod was tapped against the pane; it was, therefore, probably that particular Wrottesley boy whose passion for fishing in the early hours of the morning was well known. Jane rubbed the sleep from her drowsy eyes, and called out that she knew quite well who it was, and that Cyprian was to go away at once.

'Jane,' said Peter's voice, 'I wish you would wake up and come down. Toffy 's had a horrid smash. He says he 's all right, and he won't go to the doctor; but his hand is badly cut, and he has had a nasty knock on his head.

'Oh Toffy,' said Jane, 'you 've been in the wars again!' She had descended from her bed-

room, and had now unbarred the windows of her own sitting-room and stepped out on to the dewy grass in the clothes which she had hastily put on, her heavy, brown hair, tied loosely with a ribbon, falling down her back. The windows of her boudoir were protected by green wooden jalousies, and were considered a safeguard against thieves.

'This is awfully kind of you, Jane,' said Toffy. 'I don't think there is really much the matter with me.'

He came inside the sitting-room, and Peter made him lie down on the sofa. There was a bruise on one side of his head, and his hand was bound up with a pocket-handkerchief drenched with blood.

'Don't look at it,' said Jane. 'Just stretch out your hand like that, and I'll bathe it.' She had the simple remedies which Miss Abingdon kept in the house—boracic, and lint, and plaster. Nigel Christopherson lay on the sofa and looked up at the ceiling, because somehow Jane had divined that he hated the sight of blood; and he discoursed gravely on his misfortunes while she dressed the ugly wound and bound and slung his hand.

'Talk of sick-nurses!' muttered Peter, and wondered how it was that Jane was able to do everything better than other people could; although, indeed, the bandaging showed more tenderness than skill, and there was something almost pathetically youthful and inconsequent in the manner of both patient and nurse.

The room itself was indicative of the youthful and unlearned character of its owner. A large box of chocolates occupied an important position on the writing-table; some envelopes stuffed with dress patterns lay upon a chair. There was a large collection of novels which Jane did not often read, and a much larger collection of illustrated books and papers which she and Peter thoroughly enjoyed. A favourite parrot, who never could be induced to talk, sulked in a cage, and had a great deal of affection expended upon him. The remains of the Guild work which Mrs Wrottesley had not finished occupied a large part of the sofa, and Jane meant to ask her maid to 'run up' all the little blouses and petticoats, as she herself was too frightfully busy to undertake them. An immense number of photographs ornamented the mantelpiece, and were mixed up, with no attempt at classification, with curious odds and ends which Peter had sent home from South Africa during the war-time. Some riding-whips hung on a rack on the wall, side by side with several strange sketches in oil-colours of Jane's favourite hunters painted by herself. Peter thought the sketches were among the best he had ever seen, and even Jane was rather pleased with them.

'I'll take the Guild work off the sofa,' she said, 'and that will give you more room.' She settled Toffy's head comfortably upon the pillows, and turned to Peter for an explanation or an account of the accident.

'I don't know much about it,' said Peter, giving his head a shake. 'The Wrottesley boy and I were going out fishing early, and we found Toffy sitting in the middle of the road, with a motor-car hung in a tree.'

'You see,' said Toffy in his grave, low voice, 'I have made up my mind for some time past to travel by night because it saves hotel-bills.'

'But it doesn't cost you much to sleep in your own bed, Toffy,' protested Jane.

'No,' said the young man, looking at her with admiration. 'I hadn't thought of that. I have dismissed my chauffeur,' he went on, 'because he was always wanting things. I said to him, "My good man, get anything you like if you can get tick for it." He was a maniac about ready-money. I got on all right for the first forty miles or so after leaving London, and I was going on splendidly, when my motor, to gain some private end, went mad. How do these things happen? Thank'e, Jane,' as Jane fastened a silk handkerchief to serve as a sling for the wounded arm.

'Providentially the thing broke down at the Carstairses' very gates,' he went on. The loss of blood was making him sick, but if he continued talking he would probably not faint. 'And it was then three o'clock in the morning. So I coaxed it up the drive and shoved it into the coach-house, and took their motor, which is rather a nice one.'

'Then it wasn't your own machine that you smashed up?' said Peter.

'No, thank Heaven!' replied Toffy.

'When will the fraud be discovered?' asked Jane. 'Gilbert Carstairs is quite a good sort, but his wife has very little sense of humour.'

'Oh, I left a note all right in the coach-house,' answered Toffy, 'and I pointed out to Gilbert that he had no right to encourage burglaries by having inefficient locks on his coach-house doors. I added that I thought he ought to be very thankful that it was an honest man who had stolen his motor-car.'

'Also, I hope you said that he might have the loan of your disabled one till he had had it thoroughly repaired?' said Peter.

'I said something of that sort,' Toffy replied. 'And I should think Gilbert would do the right thing by the motor. I am only afraid Mrs Carstairs may misunderstand the whole thing.'

'One is liable to be misunderstood by even the best people,' said Peter.

At breakfast-time it appeared that nothing had been done to prepare Miss Abingdon for the news that one of her best spare bedrooms was at this moment occupied by a man with a broken head, for she appeared at the door of the breakfast-room in a serene frame of mind, and

was kissed by Peter, who announced that here he was, you know, and hoped she was not much surprised to see him so early.

'I am never surprised,' said Miss Abingdon with intention.

'I have been thinking,' said the young man presently, in the peculiarly genial voice which was characteristic of him, and helped to make him so likeable, 'that suppose a policeman should come sniffing about here this morning, you had better tell him that there is no such thing as a motor-car in the place, and that there has never been one.'

'That is hardly true, Peter,' said Miss Abingdon in the severe manner which she cultivated, 'considering how often Sir Nigel is here with his.'

'As a matter of fact,' said Peter steadily, 'Toffy is here now. He is—he is in bed, in fact.'

'Something has happened!' exclaimed Miss Abingdon apprehensively. Why was it that youth could never be contented without incidents? To be young seemed to involve action, while acquaintanceship with Jane and Peter brought one, however unwillingly, into a series of events.

'There was a little accident early this morning,' explained Peter. 'Toffy was travelling at night—to save hotel-bills, you know—and there was a breakdown because he didn't quite understand the Carstairses' machine, which he had borrowed; so poor Toffy came off second best; but Jane patched him up most beautifully, and Martin said he had better have the blue room.'

'Do I understand that Sir Nigel Christopherson stole Captain Carstairs's motor-car in the middle of the night, and left his own damaged one in its place,' said Miss Abingdon, 'and that he regards this matter quite lightly?'

'Toffy is a cheery soul,' said Peter.

'You are all cheery souls!' said Miss Abingdon hopelessly. She summoned the butler and sent for the village doctor, and made Peter telegraph to Captain Carstairs.

'You always seem to think of everything, Cousin Mary,' said Peter admiringly.

'Some one has to,' said Miss Abingdon, with a strong touch of superiority in her manner; and then she walked round the breakfast-table to where her niece was sitting, and kissed her, because a few minutes ago she had looked at her severely, and what would happen if Jane were ever to prefer the Erskines' house to hers? What if Jane were to prolong the six months which it had been stipulated she should spend with her father's relations in London? Jane loved General Erskine too well already. Miss Abingdon felt weak as she said, 'Don't worry any more about it, Jane,' for Jane did not look worried. 'And now,' she said, 'I must go and see how Sir Nigel is.'

Sir Nigel Christopherson was lying in bed reading the Bible. When he was not getting into debt, or riding races, or playing polo, or loving Mrs Avory, Toffy generally employed his spare moments in reading the Bible. He was a preternaturally grave young man, with large eyes, and long eyelashes of which he was properly ashamed, being inclined to class them in his own mind with such physical disadvantages as red lips or curling hair. Miss Abingdon thought that he was generally misunderstood. It impressed her very favourably to find him employed in reading Holy Scripture, and she turned away her eyes from the book, which Toffy laid frankly on the outside of the counterpane, feeling that the subject was too sacred to comment upon.

'How do you feel?' she said gently. 'You look very white.'

'Oh, I'm as fit as a fiddle, thanks, Miss Abingdon,' said Toffy.

'You don't look it,' said Miss Abingdon, with a return to her severe manner.

'I'm really a very strong chap,' said Toffy. He had been delicate ever since he was a little boy. School games had often been an agony to him. He had ridden races and had lain awake all night afterwards, unable through sheer exhaustion to sleep; he had played polo under burning suns, and had concealed the fact (as though it had been a crime) that he had fainted in the pavilion afterwards. He very seldom had a good night's sleep; and habitual bad-luck or the effort to conceal his constitutional delicacy had given him a curious gravity of manner, combined with a certain gentleness, which contrasted oddly with his whimsically absurd utterances. No one ever looked more wise than this young man, no one ever acted with more conspicuous foolishness, and no one ever received a larger measure of ill-luck than he. If Toffy hunted, his horse fell or went lame. If he rode in a steeplechase, some accident, the conditions of the ground, or the position of the jumps made the course unusually difficult for the particular horse he was riding. Did he play polo, his most brilliant hits just failed to make the goal. His gravity and his gentleness increased in proportion with his ill-luck. No one ever backed Toffy, and no one believed in his best efforts. But they borrowed his horses and his money, and lived for months as his guests at the huge, ugly house which was his home; and Toffy accepted it all, and philosophised about it in his grave way, and read his Bible, and loved Mrs Avory. No one but Toffy would have loved her; she was quite plain, and she was separated from her husband, a truculent gentleman who employed his leisure moments in making his wife miserable. And she had a daughter of ten years old, towards whose maintenance Mrs Avory made blouses and trimmed parasols for which her friends hardly ever paid her.

'You must have some beef-tea at eleven,' Miss Abingdon said, and felt glad that she was able to do something in a crisis.

'I think I was brought up on beef-tea,' said Toffy. He had accepted with his usual philosophy the fact that whether you broke your back or your heart, a woman's unfailing remedy was a cup of beef-tea.

Miss Abingdon told herself that she was an old woman, and suggested with outward boldness, but with inward diffidence, that Sir Nigel required a wife to look after him.

The young man smiled gratefully at her. 'I think so too,' he said simply; 'but then, you see, she won't have me.'

They were all so amazingly frank! Jane's friend, Kitty Sherard, the girl who smoked cigarettes in her bedroom, had actually told a funny story one day about a flirtation of her father's, and had made everybody except Miss Abingdon laugh at it.

'Perhaps,' she said, 'the lady may change her mind.'

'I don't think she will,' said Toffy slowly. 'You see, she 's married already.'

Miss Abingdon did not discuss such subjects. She glanced at her key-basket, and moved uneasily in her chair.

'I 'm going to revise the marriage service when I 'm in power,' said the gentle, lagging voice from under the heavy canopy of old-fashioned chintz with which Miss Abingdon, who disapproved of draughts, hung all the beds in her house. 'You see, it 's like this,' he went on, 'girls when they are about eighteen or twenty would generally like to improve on their parents a bit, and to have meals at different hours from those which they have grown tired of in their own homes; also, they have an idea that if they haven't a romance some time or other they will be rather out of it, don't you know, so they say "Yes" to some fellow who proposes to them—you must have done it yourself hundreds of times, I dare say, Miss Abingdon; but if you haven't the luck to get out of it, you are jolly well tied for the rest of your natural life.'

'There are some very sad cases, of course,' said Miss Abingdon, drawing down her upper lip.

'And it 's so often the good ones,' said Toffy, from the depths of his profound experience of life, 'who have the hardest lines. And that makes it all the more unfair, doesn't it?'

Miss Abingdon rose now and bade him goodbye, and then she glanced at the open Bible on the counterpane, and decided once more that young people were inexplicable; and she clung to her key-basket with a feeling of security, and holding it carefully in her hand, she went downstairs again.

(To be continued.)

THE TAY BRIDGE CATASTROPHE RECALLED.

A NARROW ESCAPE.

By W. T. Linskill.

What structure, like an airy goss'mer thread
At distance, spans yon noble river's bed;
Whose perfect 'standards,' like a spider's feet,
Seem creeping o'er to make two counties meet?
G. Bruce.

I CAN write with some authority on the subject of this terrible calamity of Sunday, December 28, 1879, as I left Edinburgh that evening and travelled to Leuchars in the very train that met with such an awful doom. I fear that most of my fellow-travellers that night met their sad fate in the submerged train at the bottom of the river Tay. A few, however, got out at St Fort, and one or two, I believe, missed the train there. A friend and myself had been spending a few days in Edinburgh, and had fully intended to return to the old city of St Andrews on the Saturday night; but the weather proved so very inclement and boisterous that we deferred our return journey till that memorable Sunday night. I had wired to Mr Davison, of the Royal Hotel at St Andrews, to send a cab to meet the train at Leuchars. When we started from our hotel to the Waverley Station it was blowing big guns with a vengeance, and a chimney-can crashed down on the roof of our cab, narrowly missing the driver's head. When we arrived at Granton it was blowing a terrible gale, and the walk down to the pier among the trucks was not a very cheering experience, and the state of the Firth of Forth was more than alarming. We scrambled on board the pitching steamer—I really forget whether it was the *John Stirling* or the *William Muir*—and off we went.

The cabin was close and stuffy, and every one was pretty squeamish, so we stayed on deck and hung on somehow or other in the teeth of a tremendous hurricane and flying spindrift. That crossing of the Firth is better imagined than described, and is an experience never to be forgotten. There was no time to think of *mal de mer*. The main thing to do was to hold on tight to anything, so as not to be blown off the saloon-deck. We bumped up at last against Burntisland pier, thankful to get ashore. The old skipper of the steamer told me some time afterwards that had we been half-an-hour later that evening landing would have been

almost an impossibility. The gale was now simply awful, and it was a heavy job to walk up the pier to the waiting train—the same train that went over the Tay Bridge with the high girders an hour or so afterwards.

It was an extremely slow train, a veritable tortoise in fact, and I remember remarking to our guard at one of the numerous stoppages what a fearful night it was. Little did one think then that he, poor fellow, and his van would soon lie at the bottom of the river. The wind increased in violence every minute. Its velocity must have been tremendous, and ever and again terrific blasts struck the train, making the carriages rock, and shaking the windows in such a furious and alarming manner that I fully expected them to burst in at any moment.

At length we reached Leuchars, feeling very sleepy and used-up, and were informed that no cab had arrived for us from St Andrews. I looked out, and saw no appearance of it along the road. Truly a pleasant predicament! Three courses lay open to us: to put up at the village inn at Leuchars (some distance away), to walk to St Andrews (a physical impossibility on such a night), or to go on to Dundee, where I had several standing invitations. This we had almost resolved to do, and the train was about to start, when we descried our tardy cab labouring along the road in the teeth of the hurricane. We got out of that ill-fated train, and stepped very cautiously on to the platform with our bags and rugs. I hope never again to experience such a howling storm, and even then it was not at its very worst.

I was next told that my old friend, the well-known author and critic, Mr Patrick P. Alexander, was asleep in another carriage. We woke him, and told him we had a cab to take us to St Andrews. So we persuaded him to join us. That also was a narrow shave. I well remember, as I crossed the bridge to the cab on the road, watching the crowded and lighted train slowly moving out of the station to its terrible end. I can recollect the cabman's remark, 'If I had known what a night it was going to be I would not have attempted to come out.' One thing is certain, if that cab had been a minute or two later in arriving we would have gone on to Dundee for certain. There was no alternative.

We had the wind behind us as we drove to St Andrews, and nothing of great moment occurred on our homeward way until we arrived at the corner of Strathtyrum Woods, about a mile from the city. Then suddenly the great gale seemed to gather itself together for one mighty and stupendous effort, and tore down upon us with a tremendous, thunderous roar and crash. I never heard the like of it before; it resembled an earthquake. It seemed to surround and get under our cab and lift it across the road. I really thought for a moment that we were over into the ditch. We were all pitched together in a way that reminded me of a railway accident which I had been in, and a few cursory observations were quite audible above the noisy tempest. That awful blast we experienced at Strathtyrum must have struck the ill-fated train when it was at the weakest part of the bridge, and hurled it and the high girders (a trellis-work tunnel) into the seething and greedy Firth of Tay.

We arrived at the old city in due course, and drove Mr Alexander to the Golf Hotel. As he alighted his hat soared away like a bit of paper right over the houses, and for some time afterwards I noticed when I met him that he had his new hat tied on with a bit of rope. On our arrival at my rooms I found my dear and worthy landlady metaphorically tearing her hair, as she feared all sorts of terrible evils had befallen us. The night was enough to terrify the bravest. However, the worn and weary travellers were soon solaced by an excellent dinner, and we felt a sense of comfort in listening to the raging storm outside and the crash of falling slates and chimney-pots at frequent intervals.

Dinner finished, I wended my way to the Royal and Ancient Golf Club, to find it in total darkness, the reason being that the windows of the big room had all been blown in, and I walked through the open space to see if any letters awaited me. One of the members had a rather narrow escape, as he had been writing at a table near the big window, and had only just left the room when the glass came crashing in. This was the great blast that struck us at Strathtyrum.

When I returned to my rooms I found several friends there, some smoking, some singing and playing, all talking of the weather and the gale. I remember one friend calling in to tell me the roof was blown off some house or other; but as we could not put it on again, I told him to make himself comfortable and set his mind at ease. I was very glad to turn in, and went off to sleep to the accompaniment of roaring wind, rattling windows, and crashing tiles.

I was awakened early next morning by a rap at the door and the startling and awful announcement that the Tay Bridge had fallen with the train, and that every soul was lost. I was horrified. My servant, Tom Kidd, the well-known golfer, came in and confirmed the dreadful news. In half-an-hour I was off in a gig to Newport. The scene was terrible, and made one feel very thoughtful after the experience of the previous night.

It was only the high-suspended girders which fell into the Firth of Tay, torn away from the rest, and leaving a great gap in the centre of the bridge—a terrible spectacle. Numerous boats were sailing about looking for the bodies and wreckage. There was a tale told then that one person had been washed ashore alive, and that cries had been heard; but I never knew it to be con-

firmed, and I do not see how it could have been possible. On my return to St Andrews I found numerous telegrams awaiting me that had arrived hours late. I took my replies to the post-office, but was informed that it was impossible to say when they would leave, as it was a question of first come first served, and there were already piles of telegrams awaiting to be despatched. Nearly all the wires were down, and I think I am right in saying only one wire was in action at the time. The devastation caused by that storm was quite phenomenal; and no wonder. I possess photographs of the engine minus its funnel, the tender, the guard's watch (which had stopped at 7.17 P.M.), the fallen girders, and the broken piers; also a photo of the tickets that were collected at St Fort Station—over fifty in number—and pictures of the engine-driver, stoker, and guard. Fragments of the carriages were washed ashore in far-distant places, and for some time I kept as a souvenir a portion of one of these.

Most or all of the mail-bags were recovered. I really must mention here a very curious episode. A few days after the accident I received a large parcel, sodden with water, that contained my theatrical outfit which was coming to St Andrews from Cambridge for a dramatic performance I was about to give at the Town Hall. The contents of the parcel were practically uninjured, and only needed drying; but the wig was in such a limp and disreputable condition that I had to take it to my friend Mr Sturrock, then in his old shop in Market Street, to get it redressed. On the first evening of the entertainment I went in front of the curtain and told the audience that all the things I then wore had been recovered from the bottom of the Tay, and that I had been nearly there with them.

It seems a long time since that ghastly occurrence took place, all so sudden and unexpected. There are great changes everywhere, and most of the old friends have gone from among us. However, as long as I live that night can never be effaced from my memory, nor the many possibilities connected therewith. Only once in a lifetime, let us hope, such a thing is likely to happen as the awful tragedy of the Tay Bridge.

THE PARTING OF THE WAYS.

CHAPTER III.

BARON KOLBERG was awaiting his son's return with some impatience. To this were added several other moods which reduced his mind almost to a chaotic state. He had not long ago been left by a deputation of Tribunalska Jews, headed by the local Rabbi, who had implored him to use his influence at this eleventh hour to have the decree of expulsion revoked. He had sent them away with an evasive and non-committal answer. It was a great nuisance to have come here at this juncture of events. He would even have preferred being seasick on his yacht. In view of the news contained in the cipher telegram he had just received from his friend the Minister of Finance, it would be most awkward for him to identify himself with Jewish interests at this moment.

He took up the telegram and read it again. He felt a distinct resentment that his hour of triumph should be embittered by this disagreeable contretemps. He almost began to see how it was that his co-religionists had succeeded in becoming so unpopular. Why would they insist on obtruding themselves at the wrong time and place? Why would they get themselves into trouble just when it was most difficult to help them? He regretted it had not occurred to him to point out to the deputation that it was in a way impious of them to make such a fuss about the whole thing. Were they not under the care of a special Providence, or in the belief that they were, and did they not somehow manage always to fall on their feet? And even if not, what was the fate of a handful of Jews compared with the epoch-making issue involved in this telegram?

He sat down again at the table and took up the copy of the reply he had despatched to the Minister of Finance, scrutinising carefully every word and every letter to assure himself he had made no mistake in the prearranged code. He turned irritably at the sound of a knock at the door. Sebastian entered.

'What is it now?' asked the baron curtly.

'There's another of them,' replied the old servant.

'Another of whom?'

'Of the Jews, your excellency.'

'Send him away. Say I have no time for anybody.'

'I told him so already, your excellency. And what does he do? He falls down on his knees, and grovels and clutches my coat, and cries that it's a matter of life and death.'

'Of course, everything is a matter of life and death with them,' grunted the baron. 'Very well, then; let him come in.'

He remained at his desk with his back to the door, so that he did not immediately see the scarecrow of a man who presently limped into the room. A sorry sight he made, this old man, as he stood there, bent and haggard and ragged, with the gloom of despair peering out of his red-rimmed eyes. And yet in his very decrepitude and sordid state there was a certain majesty of bearing. He waited patiently for a minute or

so, and then said in his wheezy voice, 'Will you pay me a little attention, Baron Kolberg?'

At the sound of the voice the baron spun round as though at an electric shock, and springing up from his chair, stared at his visitor with wide-open eyes. His face had almost an ashen tint.

'I prostrated myself before your servant,' continued the old man, striving painfully to keep himself erect, 'because he is a Gentile, and we are the vassals of the nations. But to you I am speaking as equal to equal, as the sons of the same father, Abraham the patriarch, and it is fitting you should treat one of your race who is your elder in years with courtesy and respect. Our sages command it so.'

'Nahum Nahumovitch, what is your business with me?' asked the baron, having seemingly recovered himself. 'What do you want?'

'I, thank God, want nothing of you; but I come to you as the messenger of another—to wit, my wife.'

'Well, then, what does she want?'

'Before I tell you, Baron Kolberg, I have to explain one or two things to you.'

'But please be brief.'

'Yes, yes, brief—very brief. God gave us five children, but it pleased Him—blessed be His name!—to afflict me even as he afflicted Job. He took them all away from me again—yes, all. The eldest got drowned in the great flood, another died in the war away in Manchuria, two were snatched from us by the cholera, and the fifth'——

'Hush!' broke in the baron, taking a step forward.

'The fifth, our Ephraim, we gave to you, freely and of our own accord. And my wife says we lost all the others as a punishment for selling our flesh and blood for the gold with which you tempted us. We sold him to you, though we knew full well that in your keeping he would transgress all the ordinances of our holy faith, that he would eat forbidden food and desecrate the Sabbath. Our sin was great, and we do not murmur. But the human heart does not die, though all it cherished as its dearest may long be dead.'

The baron was visibly growing restive.

'Nahum Nahumovitch, I asked you to be brief. Come to the point!' he exclaimed.

'Indeed, I am coming to it in a moment. It happens that we are among those proscribed. We have to leave here to-morrow, or possibly even yet to-day.'

'To-day?' asked the baron quickly.

'And so, when my wife heard you had arrived here, she said—you know there is no accounting for the fancies of women—"Nahum," she said, "there is the hand of God in his coming. He has brought our son with him—my heart tells me so. Now, if you go to him and entreat him kindly, perhaps he will let me look once more on the face of our son—our only living child—before we start off on our long journey into the unknown." You see, your excellency, I am not asking any favour for myself. My wife has sent me.'

Baron Kolberg set his teeth tight. So he had been right after all! His intuition had told him correctly! He knew what might await him any time he came to Tribunalska. They were a hardy race these people, clinging to life, as the old man had said, all the more tenaciously the less they had to live for. He might have guessed that he would not be able to shake himself clear of Nahum Nahumovitch so easily. But fortunately a kindly bureaucracy had come forward in the nick of time to help him. It was only a matter of a few hours. They were going—perhaps to-day. If he could tide over the danger till then, he would be safe for all time. The moment demanded drastic measures.

'I am sorry, my good friend,' he said. 'I should have no objection to granting your wife's request. But, alas! it's impossible. The boy whom I adopted from you is dead.'

The old man tottered back a pace.

'Dead!' he echoed pensively. And then he broke into a mirthless laugh. 'Ah, truly it is said that since death came into the world no man is safe with his life. I thought it was only the children of the poor who died. You must have mismanaged things a little bit, Baron Kolberg. You should have taken better care of—of your son.'

'What could I do?' asked the baron with a shoulder-shrug. 'He never had much stamina. He died when quite a boy.'

'Oh, well, then, that's the end of it,' said the old man, gulping back a dry sob. 'But she will be very disappointed. She was so sure that she would see him again. Every day of her life has she ached to see him. Do you know what she once made us do? She made us go to St Petersburg—half the way we tramped on foot—and we smuggled ourselves into the city by stealth, having no passport. By day we hid ourselves in foul places, and at night we prowled about the streets thinking that we might chance our way to your house, for we dared not ask. But the third night the gendarmes caught us, and put us in chains, and packed us back here in the same gang with a lot of thieves and murderers. But it appears it wouldn't have mattered, anyhow. Then he's really dead, our little Ephraim?'

'I said so,' replied the baron gruffly.

'I'm sorry I troubled your excellency. Dead is dead. May you yourself live yet many happy years! Good-day.'

He was shuffling out, when, on a sudden thought, the baron called him to stop. The old man turned and followed the baron's movements with half-vacant eyes. Baron Kolberg had been fumbling in his pocket-book, and

now came towards him with a handful of paper money.

'You have probably a wearisome journey before you. This may come in useful,' he said rather more kindly.

Instantly, and without hesitation, the old man pushed aside the proffered gift.

'What for, your excellency? I have done nothing to earn it. You don't owe me anything. For what I gave you years ago you paid me amply. As it was, it was a wasted bargain. I have nothing of it, and you have nothing. We are quits. But I thank you all the same.'

'As you please, Nahum Nahumovitch.'

'As God pleases, Baron Kolberg,' the old man corrected him.

The withdrawal of his visitor did nothing to improve the baron's humour. Why had he been subjected to this unnecessary ordeal? His irritation was aggravated by the superstitious dread for the makeshift lie with which he had staved off the old man's importunity. He had said that Felix was dead. The words re-echoed in his heart with a sound of evil augury. He wished he had hit upon some less dismal, less clumsy prevarication. To get out of his dilemma he had consigned to the grave that splendid young life, his Felix, the being whom next to himself he loved best in all the world. What, suppose—his heart stopped beating at the thought—God took him at his word?

He had by no means regained his equanimity when a little while later old Sebastian had occasion to enter the room on some casual errand. The sight of a suitable scapegoat made the baron's anger flare up afresh.

'It's evident that you're going into your dotage, Sebastian,' he said severely. 'How could you be so stupid as to admit that man, of all people in the world?'

'That man—what man, your excellency?' faltered the old servant, taken aback.

'You mean to say you didn't recognise him?' continued his master, working himself up into quite a state of fury. 'Didn't you see him often enough while we were—were negotiating with him? You mean to say you didn't know Nahum Nahumovitch?'

'Was that he?' asked Sebastian with a gasp.

'Of course it was he. However, it doesn't matter. I've been thinking for some time that I had better pension you off. I must have a younger and brisker man about me.'

'But, your excellency'—— stammered poor Sebastian.

'That will do. Don't argue the point. I'm busy.'

Like a beaten dog the old fellow crept from the room. Tears of grief and vexation stood in his eyes. Never before had he been spoken to like that by his master. He could not understand it at all. Half-dazed, he fumbled his way along the corridor, and at the farther end came face to face with Felix, who had just re-entered the house after his morning ramble.

'What on earth is the matter, Basti?' he exclaimed in astonishment, gripping him affectionately by the shoulder, for he loved the faithful old servitor.

'To say that to me! To treat me like that!' said Sebastian, now sobbing outright.

'Who did? Tell me,' Felix urged him.

'Who? Why, his excellency. Is there any one else from whom I should take it so to heart?' exclaimed Sebastian a little wildly. 'To expect me to recognise him after all these years!'

'Recognise whom? Calm yourself, Basti,' said Felix, getting more puzzled. But in the face of his sympathy the old man lost more and more control of himself.

'When I saw him last he was a tall, well-set-up man, with a fine black beard, and now he looked a wizened, shrivelled-up ape. Who would imagine they were one and the same man? Would I have let him in if I had known it was Nahumovitch?'

'Yes, yes, quite so,' said Felix, retaining his patience with difficulty. 'I understand now. Somebody came here, and you admitted him without recognising him. Well, who was it?'

'The man from whom his excellency adopted you,' cried Sebastian, his excitement overpowering his discretion. 'How was I to know'——

Felix had recoiled as from the point of a dagger. Then he stood rigid.

'One moment, Sebastian,' he broke in, tense and quiet. 'You said a man came here from whom his excellency had adopted me. The man, then, you speak of was my father—my real father?'

A frightened cry broke from Sebastian. Frantically he seized Felix by the hands.

'What have I done—what have I said?' he moaned. 'Oh, for Heaven's sake don't let his excellency know I told you! Only the three of us knew—he and I and the baroness. Oh, what will become of me now?'

'You have nothing to fear, Basti. I will take everything on myself,' said Felix, still in the same tense voice as before.

Beyond the initial shock, the tremendous news had left him calm and unaffected. A few days ago the revelation would have come to him with the force of a thunderbolt, or more likely he would have laughed the old man's words to scorn. He would have thought that his wits were wandering. But the knowledge he had gained that morning had prepared his mind for an instant acceptance of the truth. Many things had become clear to him. So that was why the baron had avoided Tribunalska so sedulously! And that was where the risk came in of which he had spoken! He was afraid that Felix might remember, might delve into the past, might ask questions, that his father

might appear on the scene; he had been afraid exactly of all that had come to pass. Felix laughed. Even a great and powerful man like Baron Kolberg was not strong enough to turn the stream of ordained events out of its course. Money, even millions of it, could not fight Fate.

He pulled himself together, and sent the disconsolate Sebastian away with a few more reassuring words. And what now? The knowledge that had come to him was clearly not meant to run to waste. It was intended for the pivot on which his future was to turn. There was no choice, no alternative. There was but one thing to do, and that it was the right thing he felt from the joyous warmth that had begun to thrill through his heart. A gradual exultation came over him, as that of a beggar who is slowly realising that he has come into unsuspected riches. His whole being went out to this unknown father of his as it had surely never gone out to the baron. A new instinct had sprung up in him which was altogether different from the link that had bound him to his foster-father. His soul was hearkening eagerly to that most powerful call of all—the call of the blood.

Yes, he would follow that call wherever it might lead him. His father! Perhaps there was a mother too; perhaps brothers, sisters! He had no idea. He might possibly find out by asking the baron; but that would be stupid, since he would so soon acquire certainty for himself. And altogether it would be better not to go near Baron Kolberg till he could face him with a definite plan of action. A vague resentment stirred him as though at a trick that had been played on him. Kindness, loving care, all the indulgences that wealth could offer, the baron had given him—everything save honesty. But for this mere chance he might have gone about to the end of his days a mystery to himself, trying to reconcile discordant factors, to dovetail puzzling incongruities. Had it depended on the baron, he would have remained that most ignoble and ludicrous thing—an unconscious sham, a self-mistaken identity. He felt that he was not only going forth to find his real father; he was setting off in quest of his own true self.

(To be continued.)

HEALTH IN THE TROPICS.

By F. N. BURN, Rangoon.

A MAN who, like the writer, has spent half a century of his life in the tropics in average good health, and without requiring medicine or medical attendance during the greater part of the time, may be able to offer a few suggestions of value to readers who contemplate going to tropical climates, and save some from committing mistakes, as they would otherwise do.

For over a century my family has been connected with India. My grandfather was in the India House. In 1819 my father obtained a cadetship in the Madras army. He joined the Fourteenth Madras Native Infantry as ensign, and only held that rank for one day, being promoted to a lieutenancy the following day. He retired, after serving forty-one years, with the rank of major-general. I was born in Bangalore in 1843, my father then being absent from India with his regiment in the first China war. We all came to England in 1845, and lived during my father's furlough in Pembridge Villas, Westbourne Grove, London. I remember the Chartist movement, when my father and brother were special constables. My sister and I had a governess until I was about nine years old, when I went to the Westbourne Collegiate School as a weekly boarder. It occupied an extensive site of some ten or twelve acres where Hatherley Terrace now is, and opposite Whiteley's shop, which was not then in existence. I went to India in 1862, and visited my old master when I came to England in 1876. He had then removed to Powis Square. I only stayed five months in England, returning to Burma, where I have been since. Counting my babyhood, I have thus had over half a century's life in the tropics, exceeding my father's stay by a few years. He died at the age of eighty-nine years. I remember as a boy his telling me that he had always enjoyed good health in India, and that he never remembered a single day on which he had not a good appetite for dinner, even in the hot weather. The secret of good health in the East, as in other places, I believe to be moderation and regularity in all things. When I came to India in 1862 I was told by some people that health could not be kept without using a certain amount of stimulants daily. Beer was recommended by some, brandy-and-soda by others. The P. & O. Company, which was then the only direct line of steamers to India, inculcated a liberal use of stimulants by giving liquor free at all meals to its passengers. Many of these consisted of young men leaving their homes for the first time, and it was remarkable that the privilege of free drinks was so seldom abused. Most of them drank beer; not the light ales like Pilsener now popular, but then unknown, but the much more heady Bass or Allsopp. Liquor being given free, every one seemed to consider it his duty to take something. To confine one's self to water, as the majority on board a steamer do nowadays, would have been

thought to be defrauding one's self of one's rights, and enabling the company to make an unfair profit at a passenger's expense. A wiser system was not adopted till the opening of the Suez Canal, when passage fares were lowered, and passengers paid for what they drank themselves, and not for what others drank. For some time after my arrival in India I used to drink beer regularly at meals, and brandy-and-soda occasionally. I always liked beer. Brandy-and-soda was then the universal tipple between meals. One never saw or heard of whisky. It is the other way about now, and brandy is seldom seen or asked for. There is much less spirit-drinking now than there was forty years ago. No doubt that fact has something to do with improved health amongst Europeans. They also take more open air exercise than formerly. Since bicycles were introduced people seem to be less afraid of exposing themselves to the sun than they used to be. Of course exercise, like other things, can be overdone; but with a good head-covering I have never suffered from the sun. I should be sorry, however, to play tennis and cricket, as I have seen many youngsters doing, at 4 P.M. without any head-covering at all. The sun has great power till even within a few minutes of setting, and my experience is that the head should always be protected from it by a good pith head-covering. If one is on a march, putting a piece of plantain-leaf inside the helmet affords additional protection and comfort. I was four years foresting in the sixties of the last century, often marching ten to fifteen miles a day; and though, of course, I found the sun hot, it never seemed to do me any harm, and I enjoyed good health when in the forest, though I used to have attacks of malarial fever, lasting three or four days, when I returned to town.

I have twice made the overland trip between Moulmein and Bangkok, a journey since made often enough by Europeans; though when I first made it I was told by Sir Robert Schomburgk, the British Consul-General in Siam, that he was the first European who accomplished it, and that he took the precaution of taking three grains of quinine every morning before starting. Quinine is a valuable medicine in cases of malarial fever; but like other things its use can be overdone, and I do not think the regular taking of it as a preventive is a practice to be recommended. In the case of one who had been in the habit of taking it daily getting fever, larger doses would be necessary to be effective, and I have been told that when taken in large doses it often brings on headache and deafness. A very healthy practice which I have adopted for many years, and which I would recommend, is to take a tumbler of cold water every morning on rising, with a pinch of ordinary table salt in it. This is always available, and I find it quite as effective as the various effervescing preparations so extensively advertised nowadays.

Early rising was greatly in favour when I was a child, and many people advocate it at the present time. It all depends, I think, on the hour at which people go to bed. A proper quantum of sleep to enable one to keep in good health is of still greater importance, and that depends on most people's inclination. Every adult should get from seven to eight hours' sleep in the twenty-four. If he gets this, and feels inclined to rise early, he will be all the better for doing so, for in the tropics the two hours before sunrise are the pleasantest of all, more especially in warm weather, which, except on hill-stations, may be said to be for nine or ten months of the year. Breakfast is usually taken at nine or ten in the morning, and many people make a substantial meal of it. When younger I used to eat meat or fish at breakfast. I now take bread and butter and jam or marmalade, and ripe fruit in season afterwards. Tea or coffee is the usual drink. If plenty of good milk is used, and the tea is not allowed to stand more than five minutes, I have never found any bad effect follow; but strong tea or coffee with little or no milk should be avoided. For some years I have drunk egg-flip for breakfast, and find it better than either tea or coffee. Two raw eggs are beaten up, and sugar, salt, and nutmeg added, with a spoonful of Jamaica rum. Into this a pint of milk is slowly poured, the beating being continued whilst the pouring is going on. To the bowl containing this mixture a few lumps of ice are added, and after a minute or two the egg-flip is ready for consumption, and is preferable, I think, to either tea or coffee. I have known people who said they could not take either milk or eggs. As milk is the food of children and invalids, and is generally easily digested by old people, one would have thought it would suit every one. I know of nothing that can be substituted for it with equal advantage. Lime-juice made from the fresh fruit also makes an agreeable breakfast or dinner drink, with salt and sugar added to taste, and plenty of ice; there is no better drink in moderation, but it should not be taken oftener than once a day. I knew a young man who, thinking you could not have too much of a good thing, drank nothing else. In about six months his brain was affected, and the doctors sent him to England, where he soon recovered after leaving off lime-juice as his sole tipple. Europeans are usually meat-eaters. In the tropics I think many of them eat too much meat. For myself, I have found that meat once a day is sufficient. I usually take it in the form of curry at an early dinner. Fashion has made the dinner-hour later and later every few years, and for the majority of people nowadays eight-thirty or nine at night is often the hour fixed. The eating of a heavy meal at that hour, if one goes to bed before midnight, is not to be recommended. I have always found having dinner by daylight to be preferable, and I have kept to this practice all my life. At the

change of monsoons there are usually a number of flying insects of all kinds about directly lights are brought on to the table, making eating almost impossible with any comfort. One's plate becomes filled with winged pests, some of them smelling atrociously. In olden days at Madras the usual dining-out dress was white, as I believe it still is at the Straits Settlements and in Dutch India. It is a much more sensible costume than the black dress-coat and black trousers which succeeded it, and much more suitable wear in hot climates.

Sir Robert Schomburgk, who was British Consul-General at Bangkok when I was there some forty years ago, was, I believe, a descendant of William III.'s distinguished general in Ireland, who was killed at the battle of the Boyne in 1690. Sir Robert Schomburgk's assistant was Thomas George Knox, a man of great capacity and experience, who afterwards succeeded him. He was once an officer in India, in the Ninety-eighth Regiment, commanded by Sir Colin Campbell, afterwards Lord Clyde. Knox had applied for a few days' leave to attend some race-meeting, which Sir Colin refused to give. Knox at once sent in his papers, and went to the race-meeting. He afterwards drifted to Siam, where he found employment in drilling and disciplining the Siamese troops. When he gave this up, having studied Siamese, he got into the diplomatic service, and rose to be Consul-General.

When I first arrived in India I was often told that it was necessary to wear flannel if health was to be preserved. I commenced to do so, but, finding it too hot, discarded it, and have found no ill effects as a result. At night I wear nothing on my chest and arms, but the stomach should always be well protected, though not necessarily with flannel. A blanket should always be placed alongside one in bed, so as to be easily pulled on if required. If it is placed at the foot of the bed, a man is often too drowsy or careless to pull it on; and in the rains, when temperature frequently goes suddenly down, it is well to have it easily available for covering the stomach. I would advise every one to use mosquito-curtains. They not only protect from mosquitoes, the bite of some species of which brings fever, but they are a protection from every other kind of insect, and also from snakes and scorpions. Not that I have been very much troubled with the two last-mentioned animals; but they are sometimes met with, and I would advise every one to light a lamp or candle if he rises at night, and never to put his feet down without looking to see that the coast is clear.

When I was in London in 1876 it amused me to hear people insisting on the necessity of taking a yearly trip to the country or seaside for change of air. Many thousands of their fellow-countrymen in the tropics work for years without such so-called 'change of air' or any other holiday than the weekly Sunday and a few gazetted holidays at Easter, Christmas, and New Year. One would think that in hot climates rest and change were more required than in temperate climates, but it appears to be otherwise.

Health in the tropics for any one of good constitution can be kept by moderation in everything. As regards drink, I believe—though I am not a total abstainer—that total abstinence is best. The less one takes the better, especially if out in the sun. To a tropical sun a European can never get acclimatised, and a good head-covering is always a necessity; although one will often see a native with shaved head sitting cooking his rice in the sun, when shade might be obtained under a tree by moving a few yards to right or left. As regards food, a person should eat in moderation what he finds to agree with him. Ripe fruits at breakfast, I think, will agree with any one, and they should be freely eaten. I have not found the old saying about fruit being golden in the morning, silver in the afternoon, and lead at night to be correct. I can always eat and enjoy good fruit, and have occasionally eaten nothing else for dinner at 5 P.M. In this as in most things *experientia docet*, and every one should be the best judge himself. But with moderation and regularity in all things, I believe most people could lead as healthy lives in the tropics as in Europe, and as I have done myself in my half-century in India, Siam, and Burma.

OLD IRONSIDES' OWN.

By C. BENBOW, Author of *A Rising in Embryo* and *The Bridge*.

CHAPTER I.

'EXTRAORDINARY old buffer!' said the senior sub., speaking from his favourite position astride the anteroom hearthrug. 'Been in the regiment about half a century, and clears off without saying good-bye to a soul.'

'Yes,' said the man he addressed, who was of the eyeglass type, and was known in the regiment as the 'Deah Boy.' 'Strange fellah Ironsides; regular old Stoic, yer know; absolutely no feelin's.'

'I wish you wouldn't talk through the back of your neck, Ransome!' snapped a deep voice from a writing-table in the corner. '*You* wouldn't feel very talkative if you had to leave the regiment after living in it for thirty-four years, particularly if you had no home to

go to. The fact is, it was too much for the old man at the last. He couldn't face good-bye.'

'Sorry, majah,' said the man he addressed, turning lazily in his deep chair; 'didn't know you were there.' The senior sub., seeing battle in the major's eye, suddenly remembered his duties as orderly officer for the day, and departed hurriedly.

Fifty miles away, in an express train hurtling towards London, the man they had discussed sat alone in a first-class compartment, his gray head bowed, his deeply bronzed face hidden in his hands. Colonel Cromwell, 'Old Ironsides,' as the men had affectionately dubbed him, felt that his little world was slipping away from him; each minute carried him a mile farther from the regiment which to him had been home and kith and kin in one. He was trying to realise it all, to understand that he could never go back; or, if he did, only on a fleeting visit as a guest. A guest—how strange it seemed! What a failure his career had been; thirty-four years and not a day's active service! If only he could have led that magnificent battalion in the field once before he retired! *His* battalion, the battalion he had laboured for all those years, and had commanded for the last five.

'Nothing could have stood before them,' he muttered, looking up and gazing fiercely at the cushions opposite. What a pity he hadn't married! Perhaps he wouldn't have felt so utterly lonely now. Ah, well, he might have done so twenty-five, thirty, thirty-one years ago, if——

He sat up abruptly as the engine whistled and the brakes began to grind under foot. What a doddering old fool he was! Thank Heaven, there was still the club, and here was Paddington!

The Fates decreed, with their usual irony, that within a year of Old Ironsides' retirement war should come unexpectedly, and that his old regiment, the Blackshires, should be one of the first to be ordered out. The new commanding officer was, however, of the genus known in the service as 'old woman,' and the regiment suffered accordingly. It was inspected on arrival at the base of operations by a certain General, a big man, one of the gods of that war. His verdict, delivered to his chief staff-officer, was characteristically laconic and to the point: 'Useful-looking crowd, but impossible C.O. Put them on L. of C. at present, and side-track C.O. on first opportunity.'

Unfortunately the commanding officer refused to be side-tracked, the most alluring 'fat billets' at the base were offered him in vain, and as a result the Blackshires were kept on the line of communications, in durance vile. One by one their best and keenest officers, realising that the prospects of seeing any fighting were hopeless so long as they remained with the regiment, obtained staff appointments, and departed for the front. Day and night excited train-loads of khaki-clad men passed up the line, cheering lustily as they sped by the disgusted pickets of the Blackshires, who were heard to mutter among themselves that if only Old Ironsides were there he would soon get them out of that blankety, double-blanked 'ole. As the dreary weeks dragged by depression grew into bitter discontent, which soon threatened to give place to something uglier. The officers began to whisper of mutiny, while the weak hand of the colonel trembled as it wrote totally inadequate punishments on daily increasing numbers of 'crime' sheets.

Meanwhile, in far-away England, Old Ironsides, who was posted weekly in the state of affairs by several correspondents in the regiment, gnawed his fierce gray moustache in silent anguish, and after innumerable fruitless visits to the War Office, resigned himself to black despair.

For weeks he spent the greater part of the day and half the night ranging restlessly from room to room in his club, muttering to himself, and it was with intense relief that the members heard one morning that he had departed for the 'shires' to try to forget his woes in the hunting-field.

CHAPTER II.

The battle had raged among the hills since early dawn. All day Death had flown swiftly to and fro across the beautiful sunlit landscape, and had reaped a generous but ghastly harvest.

From the summit of a commanding ridge several miles behind his defensive line the British General directed his operations. Around him were a number of staff-officers, and close by a scattered group of war-correspondents armed with note-books, hand-cameras, and field-glasses. These 'watchers on the hilltop' were all more or less experts, and could therefore follow the developments of the battle taking place in the vast amphitheatre before them; but to the uninitiated onlooker the sight would have been perplexing.

The valley was filled with noise. The booming of big guns, the shrieking and bursting of shells, the peculiar peremptory drumming of pom-poms, the distinctive tapping of Maxims in the distance, and the faint, continuous splutter of musketry told of a fierce conflict; but where were the men? The landscape was to all appearance empty, and save for the continual and rather bewildering appearance, out of apparent nothingness, of beautiful little shrapnel clouds, and the twinkling of several heliographs, there were at first sight no signs of life. A pair of field-glasses disclosed the defenders as irregular lines of little brown dots stretched along the distant crests, where the shrapnel played, or moving up the bare hillsides to support the firing-lines. In the nearer foreground columns of stretcher-bearers could be seen crawl-

ing like ants down the hills towards a clump of trees in a broad valley, where several white dots resolved themselves into ambulance-wagons showing conspicuous red crosses. Of the attackers nothing could be discerned save here and there on a far-distant crest-line a speck which vanished almost as soon as it appeared.

The General's impassive face and quiet manner gave no clue as to how the fight was progressing; but on the faces of several of the younger members of his staff suppressed excitement, mingled with anxiety, was plainly written.

A beautiful and amazingly large star of light sprang up suddenly on a hilltop to the far left, and began twinkling busily.

The General turned eagerly to his signalling staff-officer. 'That's Denbeigh's helio, isn't it? Get me the message as soon as possible; or, stay,' as the officer was moving off to a signalling-station close by; 'read it out to me. Time is precious.'

The message proved to be in cipher, and when decoded read: 'To Chief.—Outflanked and hard pressed. Am retiring on second line of hills.—DENBEIGH.'

In war to be outflanked generally spells disaster; but no one could have guessed that the message he had just received meant possible defeat and ruin to the hawk-faced little man who heard it so calmly. There were, as he knew, only two courses open to him—namely, immediate retreat, or a bold counter-attack in the form of a concentrated and determined assault on the key of the position, a low hill opposite. The latter course, if successful, meant victory complete and decisive; but in the event of failure his forces would be surrounded, and the only alternative would be annihilation or ignominous surrender.

The crisis was at hand; the psychological moment for the employment of the general reserve in that final and decisive counterstroke which is the essence of modern defensive warfare had arrived; but, alas! it had arrived too soon for the defenders, for the reserves were not ready. A battalion which should have arrived during the night had not arrived owing to a break in the line of communications. The force available for the defence was too small for the extended perimeter which it was necessary to hold; and the General had been forced to accept battle at early dawn with an inadequate reserve, the greater part of which had already been expended during the day in supporting the hard-pressed firing-lines. It was a grave risk which the fates had forced upon the British commander; but he had accepted it cheerfully, for the wires had told him that the promised reinforcements were coming up as fast as steam could bring them, and it seemed certain that they would arrive in ample time. Hour after hour, as the long, hot afternoon wore on, the staff had cast anxious glances back to where two shimmering lines of metal wound through the country behind them; but still the landscape was empty, no welcome puff of white smoke appeared to announce the coming of the long-expected troop-train.

On receipt of the fateful message which told of the retreat of the left flank the little group on the ridge turned about simultaneously, and once more scanned the country behind them through their glasses. The excitement was almost too intense for words; but an old war-correspondent was heard to mutter hoarsely, 'Would to God the Blackshires would come, or night!' The dramatic instinct of the journalist was paramount even in this supreme moment, but nevertheless this paraphrase of Wellington's famous exclamation at Waterloo well expressed the despair which gripped at the heart-strings of all.

The din from the left flank seemed to grow louder and nearer each moment. Denbeigh was evidently fighting desperately, and the fact that the firing sounded nearer showed that he was being driven back. It was nearing sunset, and the shadows seemed to lengthen visibly as the motionless group on the ridge strained for what seemed like an eternity into the misty landscape.

'Thank God, there they are at last!' exclaimed some one.

'Where?' 'Where?' 'Where?'

'There, half-left, two fingers right of the red-brick farm,' said the staff-officer who had spoken, holding two fingers up before his face. He was a musketry expert, and gave the correct direction without pointing and in the familiar technical manner from force of habit. All turned and gazed in the direction indicated. Sure enough, a tiny white cloud had emerged suddenly from the blue haze; in another moment it was clearly visible as it moved quickly along a distant hillside, trailing a fairy-like plume behind it.

'Take down this message,' said the General to his signalling-officer: 'To Colonel Denbeigh.—Hold second ridge to last man; reinforcements arriving. Am about to deliver counter-attack.—CHIEF.

The Blackshires leapt out of their trucks almost before the train had stopped at the troop-siding, for the iron-throated guns had been calling them for hours as the train wound its way through the ranges, and now they heard that their comrades over the hill needed them badly.

At this stage the initial mistake was made. The young staff-officer who had been sent to meet the regiment with the General's orders also acted as guide, and in his eagerness and anxiety to bring the reinforcements up quickly, he led the men at the double all the way to the spot where the battalion was to deploy, a distance of nearly three miles. There was, it was true, great need for haste; everywhere the defenders were hard pressed, while the ever-increasing

nearness and volume of the thunderous uproar on the left showed that the gallant Denbeigh was in desperate straits. It is at such a moment that a cool brain may be worth ten thousand men. Unfortunately the colonel of the Blackshires, who was mounted, was too excited to notice that his men were exhausted and had lost cohesion. It is an elementary precept in modern war that without cohesion no attack can succeed.

The Blackshires arrived on the borders of the fight completely blown. They had led a sedentary life, sitting on the line for weeks, and the long double in full marching order—no one thought of ordering them to leave their heavy packs behind—caused a temporary loss in stragglers of nearly two hundred men. Without even a halt long enough to enable these breathless ones to rejoin their companies, the battalion was deployed into three widely extended lines, and launched to the attack.

From the first it became apparent that the regiment was being badly handled. The already distressed men were again advanced at the double, and no time was given them to pull themselves together or to regain their formations. The result was that the straggling units soon became intermixed, and the battalion resolved itself into a formless cloud of skirmishers. At this juncture, to make matters worse, they came for the first time under that most severe of all ordeals for untried troops, a heavy shell-fire. Still no halt was called, and, away back among the watchers on the ridge, the old General for the first time that day showed signs of anxiety.

'Why the devil doesn't the infernal idiot give them a chance?' he was heard to mutter, and he sent off a second galloper with a message to the colonel of the Blackshires—a message which never arrived.

The din of the battle broke forth with renewed fury. The hillside up which the Blackshires advanced was swept with a hail of lead and dappled all over with little white clouds of bursting shrapnel. On every side men fell fast, but still the battalion, leaderless and disorganised, staggered on. It looked as if once again it was to be the private soldiers' battle, as if once more the splendid courage of the British infantry was, in spite of all disadvantages, about to overcome every obstacle and win the day. But now came the supreme moment of trial. The enemy played his last card, and in his turn made a desperate counter-attack. Had the regiment been in hand, with a second line held in reserve for this contingency, all might yet have been well; but, leaderless as they were, this fresh attack proved too much, and the old General, away back on the ridge, dropped his glasses with something which sounded very like a groan as he saw the sparse line waver.

At this moment a trooper, dressed in the uniform of some corps of irregular horse, rode furiously up the hill through the breaking ranks.

'Forward! Follow me, Blackshires!' he roared; and his high-pitched voice rang out over the valley and above the din like the scream of an eagle from the heights.

The men turned in awed amazement; to them it was a miracle, that well-remembered voice and strangely familiar figure on horseback, up there on the great, bare hillside. Regardless of the storm of lead which swept around him, he took off his trooper's hat and waved them forward. Then they were certain. That close-cropped, iron-gray head was unmistakable. A great shout went down the line, 'Old Ironsides!' 'It's Old Ironsides!' His horse, shot in several places, sank suddenly under him, but he was up instantly.

'Follow me, Blackshires! Char-r-ge!' he roared again. With a noise like the angry mutter of a great multitude, a long wave of khaki-clad figures dashed fiercely up the hill.

The charge was so simultaneous, so unexpected, coming as it did in the very moment of apparent defeat, that it was irresistible. It swept the astonished enemy from the crest; they fled from that long, glittering line of steel as chaff before the wind.

The rest is soon told. The key of the position was won, and a general and hasty retirement of the enemy followed as a matter of course.

'Finest bayonet-charge I ever saw in my life,' said the delighted General to his staff for the tenth time. 'And at the very moment I thought they were beat, too! Whoever that fellah on horseback was, he shall have the V.C. if he is still in the land of the living and I can get it for him.'

Up on the distant crest-line, where the enemy had been, the victors, officers and men, pressed round an old, gray trooper to shake him by the hand or to get a smile of recognition from their hero.

Old Ironsides had come to his own at last.

THE GLOAMING.

THOUGH sunlight be merry, though moonlight be sweet,
'Tis the gloaming, the gloaming, where true lovers meet,
With the dusk on their faces, the dark at their feet.

When the gold and the glory have drifted away,
And the evening has kissed her dim hand to the day,
Then the gloaming, the gloaming, steals out of the gray.

A lonely white star flickers, lost in the sky;
A bat flutters over, a beetle drones by,
And speech is a silence, contentment a sigh.

The gloaming, the gloaming, 'tis scented with rose,
And the breath of dear lips as the day-lilies close,
And the perfume of passion the night-wind bestows.

The gloaming, the gloaming, what music it brings,
Though beneath it no bird in its silences sings!
Only Love we can hear, and the beat of his wings!

NAPOLEON'S COOK.

HOW Cipriani—or, to give him his proper name, Cipriani Franceschi—came to be appointed cook to Napoleon at Longwood, St Helena, is one of those mysteries which probably will never be discovered. How, again, Cipriani himself dared to show his face in an island governed by Sir Hudson Lowe is another puzzle hard to understand, for if the faintest inkling as to who Cipriani was had ever come to the governor's ears the cook would have been shot without mercy.

The Emperor was fully aware of Cipriani's history and character, and it may have been thought that this clever and artistic spy—for such was his profession—might be useful should an attempt ever be made to liberate Napoleon from his imprisonment.

How Cipriani acquired his domestic training is not stated; and as the greater part of his time had been passed under Saliceti, the head of the police at Naples, he would scarcely be classed, one would think, as an Imperial *chef de cuisine*. Nevertheless, there he was installed over the kitchen at Longwood, and holding almost daily conversations with Sir Hudson Lowe, whom he had formerly duped and cheated. The only precaution, apparently, that Cipriani took to hide his identity was to drop his second name, Franceschi, on arriving at St Helena.

There may be differences of opinion as to the character of the governor, Sir Hudson Lowe, and his treatment of his great prisoner; but the following story gives a sidelight on his past career which by no means redounds to his credit. In the year 1806 Colonel Lowe, as he then was, was entrusted with the command of the island of Capri, which he held to the great annoyance of King Joachim, now occupying the throne of Naples. Capri was a difficult place to attack, and, in fact, was looked upon as impregnable. Nine-tenths of the circumference of the island consists of steep, perpendicular rocks several hundred feet above the level of the sea. Secure in this fortress, with a garrison consisting of a regiment of Corsicans, the royal regiment of Malta, and some English artillery, Colonel Lowe believed himself perfectly safe. As he was cut off from the mainland, his only chance of getting information of what was going on outside was by means of small boats which, for fishing and trading purposes, came to the island. It was necessary, therefore, to get some one upon whom he could rely for news, and he selected a man named Antonio Suzzarelli, a Corsican, and a man of education, who at one time had been an officer in the English service. A fishing-boat, which went out at night ostensibly to fish, conveyed Suzzarelli to Naples, where he gleaned the latest news, and returned with it to Colonel Lowe.

It was on one of these expeditions, while sitting in a tavern, that Suzzarelli came across Cipriani Franceschi, then in the pay of Saliceti, the head of the Naples police. As both were Corsicans, they fraternised, and Cipriani drew from Suzzarelli the nature of his employment under the governor of Capri. Cipriani suggested that while he was drawing money from the English, it would be perfectly easy to take pay from the French, at the same time intimating that if he refused he might one day be caught and shot. Suzzarelli finally agreed, and Cipriani took him to Saliceti, who gave him instructions. The upshot of all this was, that whenever Suzzarelli received a despatch from Colonel Lowe it was brought at once to Saliceti, who acted upon it as he thought proper. In some cases, when an answer was difficult, Saliceti would imprison for a day or two the spy and his boatmen, and this gave an opportunity for getting some compensation from the colonel on their release. In this manner only such information reached Capri as Saliceti chose to give, and the governor was kept ignorant of matters of the highest importance.

The contrivance adopted by Colonel Lowe for paying those in his employ was ingenious. Loaves of bread were baked in the oven of his own house, and into these he placed the wages of his spies. The loaves had the appearance of food for the boatmen at night, and attracted no notice. Amongst other valuable information acquired by Saliceti for the French Government by means of these spies was the real destination of the army under General M'Kenzie Fraser, and the fleet under Sir J. Duckworth. The perfect success of the plans adopted by these spies emboldened them to play further tricks upon their dupe at Capri. Letters forged by a schoolmaster at Naples, purporting to be written by Colonel Lowe stating that the English wished to get the Royal Family out of the country and send them as prisoners to England, led to differences between Queen Caroline and the governor,

[*All Rights Reserved.*]

while the spies met at night to enjoy themselves, and Saliceti joined them in drinking Colonel Lowe's health with laughter and derision.

On one occasion Suzzarelli almost persuaded Colonel Lowe to come to Naples by night, and go to a small house near the beach, and Saliceti was to be there in disguise. There was no intention of seizing the governor's person, for, as Saliceti said, it would be difficult to get another governor who would allow himself to be so egregiously gulled; and, besides, his spies would be of no further use to him. 'I should like,' said Saliceti, 'to see this colonel of thine. Let me see him. A man may allow himself to be deceived for some months, but he who suffers himself to be humbugged so grossly for so many years must be a beast indeed.' 'Oh,' replied Suzzarelli, 'he is not quite so great a blockhead. It is my cleverness.'

An event took place about this time which very nearly brought Cipriani's career to an end. Queen Caroline, who was residing in Palermo, sent an apothecary named Gherardi to assassinate Saliceti, and he managed his affairs so cleverly that he actually obtained admittance to Saliceti's house, and hired a room in the basement as an apothecary's store. One night, when it was quite late, Saliceti returned from a dinner-party, and passed very quickly up the stairs to a room in which was Cipriani. Hardly had he done so when a fearful explosion took place, and upwards of thirty rooms were either blown to pieces or materially injured; but Cipriani and Saliceti escaped. Immediately afterwards Cipriani thought he heard groans, and proceeded in the direction of the voice, but in doing so fell through a floor into the room below. This brought him nearer to the suffering person, who proved to be Saliceti's daughter, and who was pinned down by some beams, which, happily, had formed a protection over her from the falling débris. She was extricated uninjured after some hours' imprisonment. The conspirators were taken, and Gherardi's two sons shot. Gherardi himself, being an old man, was imprisoned for life.

In the same year Queen Caroline attempted another assassination, of no less a personage than Prince Joseph Bonaparte, brother of the Emperor. Two letters, which were extant in 1820, and were seen and read by Dr O'Meara after he left St Helena, completely proved the guilt of the Queen. They were not written in her handwriting, but in that of her confidante, Princess V. T., addressed to one Mosca, a Neapolitan, instructing him 'to get rid of the usurper,' and giving him every assurance 'that the good Queen, his mistress, would fulfil all her promises to him.' Mosca accordingly left Capri in a felucca, provided with all the neccessary passports, in one of which, signed by an English officer, there were instructions requiring that all British officers should afford every assistance to the bearer, who was proceeding on a secret mission for the good of the service of King Ferdinand. Mosca landed at Molino, near to a country-house of Joseph's, and his intention was to kill him while he was walking in his garden. Mosca happened to meet a pretty Neapolitan girl, to whom he made love, and confided to her the mission he had undertaken. The girl, alarmed, went to Saliceti, and the letters and passports were found on Mosca, who was promptly taken and shot.

In the same year Saliceti became anxious to know when a certain packet from England was expected to arrive in Sicily, and the spies set to work to get the information from Colonel Lowe. They pretended news was wanted to keep up the spirits of the English party in Naples, and the colonel blandly informed them that he was expecting favourable intelligence from an English packet which would arrive in a few days. Saliceti at once sent a privateer, called *L'Ardito*, to cruise off Sardinia and intercept the English boat. The privateer was successful, and captured the ship. The mail was thrown overboard; but in the hurry it hung by one of the cords attached to it, and the privateer's-men kept up such a fire of musketry that the crew dared not cut it away, and it was taken. In it were despatches giving some directions for an attack which was meditated upon Corfu, with some letters from the Admiralty relative to the blockade of the island. Cipriani described the English packet as having been commanded by a young man about twenty, with a crew of fourteen.

About this time Colonel Lowe began to suspect Suzzarelli, who in consequence went over to Capri, where he employed his eloquence so effectually as to convince the governor that he was the most trusty of mankind, and wholly devoted to his service. On his return Suzzarelli went to Saliceti, to whom he related the whole conversation which had taken place between them, accompanying it with strokes of wit at Lowe's expense. Saliceti, when he wanted to amuse himself, used to send for Suzzarelli to make him laugh by recounting the gross way in which he had humbugged the colonel.

The possession of Capri by the English had long been a thorn in the side of the Neapolitan Government, and it was decided to take steps to capture it. It was impossible to make preparations on any large scale at Naples without the news leaking out at Capri, and so the spies set to work to persuade Colonel Lowe that an attack was meditated in another place, the islands of Ponza. Believing this, Colonel Lowe actually sent away the English ships defending Capri to Ponza! There was a difficulty in Naples about scaling-ladders, but this was got over by ordering all the lamplighters to assemble the night before the attack with their ladders, which were taken on board the ships. It was also decided that at the last moment Suzzarelli should land

Naples and tell the truth to Lowe, and so keep in his confidence.

The account of the capture of Capri is thus described by Dr O'Meara, who received it from Cipriani: 'The expedition consisted of some eighteen hundred men, under the command of General Lamarque, and sailed from the Bay of Naples on the 5th of October 1808, and arrived under the rocks at Capri. In spite of all the natural and artificial obstacles, the French landed, being obliged in some places to climb precipices by means of ladders resting on the moving bases of boats below. The regiment of Malta, whether through cowardice or from having been corrupted by Suzzarelli, threw down their arms, and refused to fight, and were made prisoners, in spite of all the exertions of their officers, several of whom, including the commanding officer, were killed in the attempt. In this manner the fort St Barbe, and Anacapri, the summit of the island, were taken. The only way of communicating with Capri itself, the citadel, and the forts, where Colonel Lowe and the rest of the garrison were, was by means of a stair or ladder of four or five hundred steps, down which only one person at a time could descend, and which was commanded by pieces of cannon. Notwithstanding this, the French troops made the attempt, and succeeded in investing the town. Five hundred men were harnessed to some twenty-four-pounder guns, which they dragged up in one night to Mount Salaro, the most elevated part of Anacapri, and commanding the citadel. During his government, Lowe had neglected to fortify this part, on the supposition that it was impracticable to drag heavy cannon up the steep sides of a mountain. Breaching batteries were constructed facing the citadel, and others, furnished with furnaces for red-hot shot, erected along the beach, in order to keep off the English squadron and flotilla which were seen beating up from Ponza. Some reinforcements also pushed off from Naples, and landed near Tiberius' Bath; and in a few days Colonel Lowe capitulated, surrendering to the French the island, forts, artillery, ammunition, and stores.'

It is impossible to read the story of Sir Hudson Lowe's governorship of the island of Capri without feeling that he was a weak man, utterly unfit for the post, and a disgrace to the British army. Yet he was selected as the custodian of the Emperor Napoleon, who, with all his faults, was undoubtedly the greatest military genius the world has ever seen. The Emperor said of him: 'This governor is a man totally unfit to fill the situation he holds. He has a good deal of cunning, but no talent or steadiness. *C'est un homme soupçonneux, astucieux, menteux, et plein d'insinuations*, like the Italians of two or three centuries ago. He ought to be sent to Goa.'

The end of Saliceti was in accordance with the life he had lived. He died a few hours after having dined with an enemy to whom he had been reconciled. The French physicians said he had been poisoned, but the Italian doctors denied it. On hearing of his death Napoleon said, '*Son nom seul me valait une armée de cent mille hommes.*'

Cipriani fell a victim to the climate of St Helena, and died, after a short illness, of internal inflammation. Shortly before his end he confided to Dr O'Meara that an Italian servant of the Emperor's, named Santini, had determined to shoot Sir Hudson Lowe. Cipriani, finding he could not control the man, reported the fact to the Emperor, who sternly ordered him to abandon the idea. Shortly after this Sir Hudson Lowe banished this man and two or three other servants. The matter would hardly be worth mentioning but for the fact that the late Sir Harry Verney, who died at the age of ninety-five, used to tell the story of his walking with Sir Hudson Lowe in an unfrequented part of Hyde Park, and how a man suddenly shot at Sir Hudson with a pistol and bolted. Sir Hudson declared this was Count Las Casas, but it is far more probable that it was Santini.

PETER AND JANE.

CHAPTER IV.

JANE meanwhile had walked over to Bowshott to see Mrs Ogilvie and tell her the news of Toffy's motor-car accident, and to explain why Peter was delayed. She came into the drawing-room, with its long mirrors in their gilded frames, its satin couches and heaped-up flowering plants, and huge windows looking on to the scrupulous gardens and park. She walked in the shortest dress that the present merciful fashion allows, a loose shirt hung boy-like on her slender figure, and a motor-cap with the brim well pulled down over her eyes covered her head. She shook hands, and regretted inwardly that Mrs Ogilvie did not like being kissed, although disclaiming even to herself that her distaste in this respect had anything to do with rouge and powder. She sat down on a low chair by the window with the fearlessness of those whose complexions are not a matter of anxiety, and she told Mrs Ogilvie the story of the disaster.

'Toffy's so awfully unlucky!' said Jane, with genuine sympathy; 'and the doctor says his hand will be bad for a week at least.'

'Is there such a thing as bad luck?' said Mrs Ogilvie, shrugging her shoulders.

'I 'm always sorry for the man who is down,' said Jane.

Mrs Ogilvie smiled and rang for tea.

'You are one of those who can say, "I am sorry." Now, I am never sorry, and I consider that what is called repentance is the function of an idiot. If I do a thing, I intend to do it. Regret is the most weak-minded of all human emotions.'

'I am always regretting things,' said Jane, looking handsome and delightful, and treating even penitence from a fresh, open-air standpoint. 'But, then, I believe that as often as not I do the wrong thing, which is a great bore at times.'

'Right and wrong,' said Mrs Ogilvie, with a shrug, 'loving and not loving, believing and not believing—only very young people ever make use of such ridiculous terms. There is only one law, and that is the law of expediency.'

Jane began to laugh, and exclaimed, 'That 's quite beyond me! I know I'm hopelessly stupid; but whenever people begin to talk about whys and wherefores, and if it is any good saying their prayers, and whether love is the real thing or not, I get fogged directly, and I always want to go for a ride or a walk, or to see the horses, or even to descend to the kitchen and make jam, to get rid of the feeling.'

'If you were in the fashion, Jane,' said Mrs Ogilvie, smiling, 'you would not only know with which portion of gray matter you say your prayers; but you would also be able to show scientifically with which ventricle of your heart you love and hate, or whether, indeed, love and hate are things not of the heart at all, but merely a microbial disease. Will you have some tea?'

'Yes, please,' said Jane; 'and several lumps of sugar.'

'I like people,' said Mrs Ogilvie, 'who still go to church and take sugar in their tea. It is very refreshing.'

'I must go back now,' said Jane presently, 'for I promised not to be long. By the bye, we want to keep Peter to dinner. May we? Or will you mind being alone?'

'I am alone, say, three hundred and thirty nights in the year,' said Mrs Ogilvie dryly.

'I wish we hadn't asked Peter to stay and amuse Toffy!' said Jane with compunction. There was a tired, white look on Mrs Ogilvie's face, and an appearance of fatigue in her movements, which neither her supreme art of dressing nor the careful manipulation of light in the room wholly concealed.

'Ah, now you are beginning to repent!' said Mrs Ogilvie. Only her good manners prevented her remark having a sneer in it. 'That will spoil your evening, you foolish child, and it will not make mine more amusing.'

'But I am thinking of you,' said Jane.

'Do not think of me,' said Mrs Ogilvie, laying her hand for a moment lightly upon the girl's shoulder.

Jane walked down the hillside, and stopped at the edge of the wood to see the young pheasants, and then went on again, swinging a crooked walking-stick, and singing, in a voice clear and sweet but somewhat out of tune, snatches of songs which she had picked up from Peter, humming the ridiculous words in a sort of unconscious happiness. She walked with a raking grace which became her as wings become a bird or a long, swinging stride a racer. The twilit woods held no fears for her; imagination never peopled Jane's world with bogies. The perfect poise of her figure showed a latent energy and physical strength in spite of her slender build, and her bright, clear complexion and abundant brown hair and white, even teeth lent an appearance of something essentially wholesome and faultless to a face that at all times looked handsome and well bred.

She called 'Good-night' to the lodgekeeper as she passed through the gates and found her way back to the high-road, until by a short cut down the hill she reached her aunt's charming gardens, and the wide, low house with its air of repose and comfort, and the long French windows opening on to the quiet, smooth-shaven lawns.

'My mother says she is going to give a ball,' announced Peter at dinner.

'When?' said Jane, breathless with interest. 'Peter, we 'll have both houses as full as they can be, and I 'll ask Aunt Mary to stay here, and you shall ask your mother to stay at Bowshott for it.' She obliterated the menu from the porcelain tablet in front of her by rubbing it with a damask table-napkin; and, having moistened a pencil, she began to write a list of names of those people who were to be asked to stay for the dance. 'Kitty Sherard certainly,' she said, and put the name down on the tablet.

'She 's some one's niece, isn't she?' said Peter.

'She 's every one's niece, I think,' replied Jane.

'Rather rough luck on Miss Sherard,' said Peter.

'It 's a fact, though,' Jane went on. 'Really and truly, Aunt Mary, each of her relations married about ten times, and then the next generation married each other. And they send problems to the puzzle columns of newspapers to find out how they are related to each other. Kitty's father is his own great-grandmother, or something complicated of that sort.'

'It must give one an immense respect for one's self,' said Peter, 'to discover such a relationship. One would always be taking care of one's self, and not allowing one's feet to get wet, and thinking what one owed to one's position, and whether one were being treated with respect.'

'There are fillets of beef coming, and ducks interpolated Miss Abingdon. 'I let you kno

this, Peter, as Jane seems to have erased our only menu. What will Sir Nigel have, do you think?' she went on. 'I don't think he is at all well; he was reading his Bible in bed, and I'm not sure that we ought not to send for some of his people.'

'Poor Toffy never had any people,' said Peter. 'They were all just as unlucky as he is, and most of them died violent deaths when they were young; and one of them, I know, founded some sort of queer religion, so perhaps Toffy takes after him in his biblical researches.'

At this moment Sir Nigel Christopherson walked into the room, looking as white as any ghost.

'Toffy, you lunatic!' said Peter, 'why can't you lie still?'

Sir Nigel apologised for being late, and declined to have anything brought back for him.

'How are the Amalekites and Hittites and Girgashites?' said Peter, making room for his friend at the table.

'I think,' said Miss Abingdon, 'that such discussions are best left for Sundays.'

'We will go on with our dance-list,' said Jane. 'Mrs Wrottesley says she can let us have several rooms at the vicarage, or if the worst comes to the worst we might have tents in the garden.'

'The canon is always so good-natured,' said Miss Abingdon, who believed that a man's house belonged to himself, and whose mind always reverted with a sense of peaceful orthodoxy to thoughts of the vicar. She mentally decided that he must not be asked to receive any of the guests for the Bowshott ball, believing that visitors must be always more or less disturbing to a host. She accepted as part of her gentle creed that a man's writing-table must never be disturbed, that his dinner must never be kept waiting, and that his special arm-chair must not be appropriated by any one else. Canon Wrottesley always read the morning paper before any one else in the house had seen it, and then imparted pieces of intelligence to his relations with a certain air of self-congratulation, as though conveying news which could only possibly be known to himself, and it was in this way that Miss Abingdon loved to have the items of interest retailed to her, with instructive comments upon politics

---

CHAPTER V.

MRS WROTTESLEY had a theory, which she never asked or expected any one to share with her, that all men's mental development ceased at the age of twelve years. She had watched five sons grow up with the hardly concealed conviction that each one of them was destined to be a genius, and that each one would make his mark in the world. But her sons as they attained to the fatal age of twelve years seemed predestined to disappoint their mother's hopes. Most of the men whom she knew, and whom her sons brought to the house, were delightful boys whatever their ages might be. She liked most of them, but she wished sometimes that it were possible to meet a man with a mature mind. The male interest, she determined after giving much study to the subject, centred almost exclusively round playing with a ball. Give them a ball to play with, and they were quite happy. There were football-matches, cricket-matches, polo-matches, tennis, croquet, and golf; but the aim and object of the most strenuous exertions seemed to be the same—namely, to send a ball in a particular direction. She had heard men extolled as grand cricketers and magnificent putters with an enthusiasm which could hardly have been greater if they had saved their country or had died for a cause. And she admitted to herself that the mind of a woman was deficient when she failed to do justice to these performances.

Her reflections on these and kindred subjects this morning had been induced by hearing of the determination of Canon Wrottesley to light the rubbish-heap in the garden. The rubbish-heap had grown high, and Canon Wrottesley had determined to put a match to it. Mrs Wrottesley had been married too long not to know that whatever at the moment engaged her husband's mind required an audience.

'Now, mamma,' the canon said busily, 'let us have plenty of nice dry wood to start the blaze, and then you must come down to the field and watch us put a match to the pile.—Cyprian, my boy, where are the old newspapers kept? Fetch them, like a good son, and then you shall carry a little camp-stool down for mamma to sit upon.—Now, my coat,' he said to his butler.—'And, Cyprian, tell Mary to find papa's old gloves.'

Mrs Wrottesley left her morning's work to go to the meadow, and Canon Wrottesley looked down the road once or twice to see if by some happy chance a friend or neighbour might be passing to whom he could proclaim his boyish jaunt.

Alas! when the corner of the meadow was reached it was found that the rubbish-heap had already been fired, and nothing of it was left but the smouldering ashes. The canon wondered why people could not leave things alone, and was inclined to blame mamma. She surely might have known how much he enjoyed this sort of thing, and have asked the gardeners to leave it to him!

His boyishness, however, could hardly be repressed this morning; and, speaking to his fourteen-year-old son as though his age might be five or six years, he clapped him on the back and bade him 'never mind; we will go for a

merry jaunt to the ruins instead, and have a regular big affair, and you shall boil a kettle, and we 'll have tea.—What do you say, mamma?'

Mrs Wrottesley replied with the enthusiasm that was expected of her, and the canon, with a 'here we are, and here we go' sort of jollity, conducted her indoors to write notes of invitation to friends to join the picnic. The canon dictated the notes himself, and generally finished with a playful word or two suitable to each recipient; and when he failed at first to hit off the perfectly happy phrase, Mrs Wrottesley had to write the note over again.

In the matter of actually arranging the details of the picnic Canon Wrottesley did not interfere; for, in the words of his favourite prototype, 'he never disputed his wife's ability at making goose-pie, but he begged her to leave argument to him.'

Foiled of his morning's occupation, the canon walked up to Bowshott himself with Mrs Ogilvie's card of invitation. Mrs Ogilvie frankly and without a moment's hesitation refused to be one of the party; a picnic was in her eyes one of those barbarous, not to say indecorous, things which she classed with bathing in the open sea or trying on a hat in a shop. Why should one sit on the ground and eat indifferent food out of one's lap? Mrs Ogilvie was too sorry, but it was impossible; she had friends coming, or letters to write, or something; at any rate, she was quite sure she was engaged. Mrs Ogilvie's manner always became doubly polite and charming when she ignored the customary formalities of society or purposely travestied them. No one could ignore social conventions with more perfect good manners. Peter would go, of course, she said. Peter enjoyed eating luncheon in snatches, while he hopped about and waited on people; but Mrs Ogilvie preferred her meals at home.

An invitation to the proposed merry-making was given to Peter, who was ever so much obliged, but thought Canon Wrottesley had forgotten that the 24th was the day of the races. He said that he was going to drive the coach over, and hoped that Canon Wrottesley would join them there when he felt inclined, and that his mother, not feeling disposed to spend the whole day at Sedgwick, would meet them at tea-time. Miss Abingdon and Jane were going to be kind enough to take her place and act as hostesses at lunch.

Canon Wrottesley felt that he could not do better than see Miss Abingdon in person and explain the change of plans, and he arrived, in his friendly way, just as she and some guests who were staying with her were going in to luncheon.

Miss Abingdon occasionally reminded herself that she had not met the vicar until long after his marriage, and she still more frequently assured herself that her feeling for him was one of pure admiration untouched by sentiment such as would have been foolish at her age, and at any age would have been wrong. But there were times like the present, as the canon came in unasked in a friendly way, and hung up his clerical hat in the hall, when Miss Abingdon, without going so far as to make the matter a personal one, could understand why women married.

She ordered another place to be laid, and asked him to say grace almost with a feeling of proprietorship; and she ordered up the particular brand of claret which the canon had more than once assured her would be all the better for being drunk.

Jane came in presently from her morning ride, handsome and charming in a dark habit and a bowler hat; and Toffy appeared, looking white and thin, and protesting that he was perfectly well; and Kitty Sherard came in late as usual, and much hoped that something had been kept hot for her.

Kitty Sherard was a decorative young woman, with a face like one of Greuze's pictures, and a passion for wearing rose-colour. Her father was that rather famous personage Lord Sherard, one of the last of the dandies, and probably one of the few men in England in the present day who had fought a duel. He was still thought irresistible by women, and probably the only sincere love of his life was that for his daughter Kitty, to whom he gave his whole confidence, and whom he found better company than any one else in the world.

(To be continued.)

THE FLYING-MACHINE OF THE FUTURE.

By WALDEMAR KAEMPFFERT.

WHAT will the flying-machine of the future be like? He would be a wise man indeed who could predict with any degree of accuracy the exact form and dimensions of the coming aeroplane. The dreams of the old-time imaginative novelist seem almost to be realised now. Our more modern Kipling, looking back in his mind's eye at our feeble efforts, talks with scorn in the *Night Mail* of 'the days when men flew wooden kites over oil-engines.' Yet it is not likely that we shall graduate from that crude type for many years to come. A scientific forecast of the flying-machine's possibilities and its effect on human affairs must, therefore, be deduced from present aeroplane facts.

The aeroplane of our time is a thing of almos feathery lightness. In its construction th lightest and straightest woods and the smalles possible amount of metal must be used. As result, it is well-nigh as delicate as a watch, an

like a watch, it must be handled with some care. Since the motor is the heaviest part of a flying-machine, it offers the most serious obstacle to the attainment of lightness. Because of the motor's necessarily small size its power is none too generous, and because of its delicate construction it breaks down with awkward ease. Hence it is safe to prophesy that the flying-machine of the future will be equipped with motors of far higher power than those at present in use.

It is probable that the future aeroplane will carry two motors instead of one, each motor independently operative, so that if one fails, the other will still be able to drive the machine safely through the air. For military purposes, at least, such a double-motor aeroplane is absolutely necessary. Imagine a spy in the air being compelled to glide ignominiously down into an enemy's camp because his engine failed him! Mere considerations of safety demand the installation of two motors on a flying-machine. In March 1910 the French aviator Crochon fell to the ground in a cross-country flight from Mourmelon to Châlons because his motor broke down. Le Blon was killed at San Sebastian on April 2, 1910, as a result of a similar motor trouble. During the Nice meeting in April 1910, Chavez and Latham dropped into the Mediterranean, also because of motor trouble. All of these accidents might have been avoided if the aviators could have relied upon a second motor.

The aviator of the present day is somewhat in the position of a bicycle-rider on a slack wire armed with a parasol. He must exercise incessant vigilance lest he lose his balance. The strain upon nerves and muscles, for the beginner at least, is tremendous. Hence, even now, we hear of automatic devices which will prevent a flying-machine from losing its equilibrium, and which will enable the aviator to soar in the sky more blithely than he can at present. When Louis Brennan exhibited to the world a monorail car which was kept on an even keel merely by gyroscopes—in other words, by swiftly revolving flywheels—it seemed obvious that the same device should be applied to the flying-machine. Yet the attempt had been made long before Brennan came to the front. Octave Chanute and Sir Hiram Maxim both made promising experiments with the gyroscope years ago. Paul Regnard, a French experimenter, has secretly been testing a flying-machine which is perfectly controlled by a little wheel measuring only a few inches in diameter, but turning ten thousand times a minute. The success of the gyroscope in preventing the rolling of ships at sea and in guiding Whitehead torpedoes on their course would seem to augur well for the gyroscopically controlled aeroplane.

Balloonists find difficulty in ascertaining their location, particularly after descending from a cloud-bank. It is true that the aviator can swoop down to the earth and find out where he is. Nevertheless it is very likely that in the future he will be provided with charts and instruments which will obviate that necessity—charts which will indicate landmarks, and instruments which will exhibit the angle of the flight-path, and include convenient field-glasses and day and night signalling-devices. Needless to say, the aviator will carry a compass, probably a prismatic compass, from which directions can be taken with great accuracy so long as fixed objects on the earth are visible. No doubt the compass will have a dial covered with luminous material, visible in the dark. At night a trailing-line will be cast overboard, fitted with an electrical indicator, which will ring a bell if some object should be struck, to warn the pilot that he is flying too low. The German Aerial Navy League has proposed that special beacon-lights be erected at certain points. The aviator of the future will certainly need some such guidance if he flies by night, some light which will send a long beam in the direction in which the wind is blowing.

Two men at least will be carried by the aeroplane of the future, one to look after the controlling mechanism, and the other to navigate. The military aeroplane will surely be so manned, for one man alone cannot perform the duties of mechanician and observer.

Explorations into unknown lands will be robbed of their perils by the flying-machine. The hummocks of the Arctic regions, the jungles of Africa, the morasses of a country untrodden by the foot of man, will hide nothing from the exploring aviator. Tasks which formerly occupied years for their achievement will henceforth be accomplished in as many months, weeks, or even days. If Sir Ernest Shackleton found the motor-car of service in Antarctic exploration, what shall be said of the flying-machine which speeds on its journey unimpeded by mountains of snow or grinding pack-ice? The information gathered by the future explorer-aviator will be of greater scientific value than that which is at present so painfully collected. A Livingstone or a Stanley chopping his way through dense tropical vegetation brings back no complete map of the region traversed. All that he can show is his itinerary, a mere fringe of the new country; mountains and rivers he indicates rather than charts. Instead of crawling over the face of our planet, the sky explorer will some day survey it from a height. He will see Africa or Asia or India spread before him like a map. His eye will sweep an area hundreds of square miles in extent. The camera will record those topographical peculiarities which he came to note, and he will be spared the necessity of imperilling his life to discover the source of a river or the secret of some Tibetan forbidden kingdom.

So far, present-day flying experts differ in their opinions as to the flying-machine of the future. Mr R. W. A. Brewer, an English authority, foresees a larger and a heavier machine than we have at present, a kind of air-yacht, weighing at least three tons, and built with a boat-body. The craft of his fancy will be decked in. It will carry several persons conveniently, and will be provided with living and sleeping accommodation. He prophesies that it will fly at a speed of one hundred and fifty to two hundred miles an hour, for the reason that high speeds in flying mean less expenditure of power than lower speeds. Mr F. W. Lancaster entertains similar views on the necessity of high speed. He argues that the speed of the aeroplane must be twice that of the maximum wind in which the machine is to be driven. A certain amount of automatic stability is then obtained; for a machine travelling at one hundred miles an hour is practically uninfluenced by gusts and eddies that might prove disastrous at thirty-five miles an hour. A modern *Lusitania* plunges undaunted through waves that would be perilous to a schooner. If it is ever possible for an aeroplane to travel at such terrific velocities, all Europe will become the playground of the British aviator. Daily trips of one thousand miles would not be extraordinary. It is even conceivable that there will be aeroplane liners which will travel from Europe to America in twenty-four hours.

It seems certain that special starting and alighting grounds will be ultimately provided throughout the world. If tram-cars must have their stables and their yards, it is not unreasonable to demand the provision of suitable aeroplane stations. Depôts or towers will be erected for the storage of fuel and oil—garages on stilts, in a word. The aviator in need of supplies will signal his wants, lower a trailing-line, and pick up gasolene by some such device as we now employ to catch mail-sacks on express trains.

It may well be that the advent of the flying-machine will have a marked effect on our architecture. Some day houses will be provided with landing-stages, assuming that the aeroplane will be able to alight more easily than at present and without the necessity of running along the ground for some distance before its momentum is expended. If that day ever dawns, roofs will disappear in favour of flat terraces suited for launching and landing. A business man, instead of travelling in a lift from the ground floor of a building to his office on the twenty-first floor, will start from the roof and proceed downwards.

Above all things, flying must be made safer than it is now. Although the dangers of a sport will inevitably attract to it adventurous spirits, a flying-machine designed for commercial purposes must satisfy the requirements of the highly nervous man or woman to whom sailing a yacht seems a suicidal pastime.

The early days of the bicycle and the automobile industries offer a close parallel to the present position of the aeroplane industry. The pioneers having shown the way, the machine immediately became an instrument of sport. Speed was the thing most desired, and the speed of anything that moves can best be demonstrated in a competition. Bicycle and automobile races became, and still are to some extent, the manufacturer's opportunity for testing and demonstrating the quality of his machines. Long before the manufacture of either touring bicycles or touring automobiles assumed its present proportions the production of the racing-machine was all-important. The flying-machine is now in this stage. Races and endurance-tests will be the contests from which will emerge the flying-machine of the future, the machine capable of sustained flights, many hours in duration, at speeds of eighty and one hundred miles an hour. The racer will give birth to the touring flier, just as the touring-car of to-day was evolved from the racing-car of five years ago.

Incredible as it may seem, in less than a year from the date when Blériot flew over the English Channel—a feat which set France aeroplane-mad—the actual sales of flying-machines outnumbered those of automobiles in the first year of their commercial development. Here are a few figures showing the number of flying-machines sold by the more prominent manufacturers since July 25, 1909: Santos-Dumont, one hundred machines; Blériot, two hundred and thirty; Farman, one hundred and fifty; Clemenceau-Wright, ninety; Voisin, one hundred and ten; Antoinette, one hundred and twenty.

All these machines are not in actual flight. It is safe to say that over one-half of them have been built to take the place of wrecked and deteriorated fliers.

A flying Frenchman clamours for his Blériot or Farman as impatiently as an automobiling American millionaire for his high-powered car, ordered months in advance. The one is no more inclined to bide his time than the other. Hence agents have sprung up in Paris who order machines from Blériot or Voisin on speculation, and receive as much as one hundred and twenty to two hundred pounds above the factory price for immediate delivery. In Paris, at least, such signs as 'Bouvard et Pecuchet, Agents pour Monoplanes Antoinette,' can be seen even now, the harbinger of a great industry and of a flying-machine quarter of Paris.

Compared with the flying-machine of the future, the motor-car will seem as tame and dull as a cart drawn by a weary nag on a dusty country road. Confined to no route in particular, unhampered by speed restrictions, the speed-maniac will drink his fill in the high-powered monoplane. Even the most leisurely of air-touring machines will travel at speeds that only a racing automobile now attains, while the air-

racer will flit over us a mere blur to the eye and a buzz to the ear. In an hour or two a whole province will be traversed; in a day half a continent. An air-tourist, a few years hence, will breakfast in Paris and sup the same evening in Moscow. His air-charts, the equivalent of our present automobile road-maps, will be an atlas—a book in which the air-routes of all Europe will be laid down. Swifter than any storm will be his flight. If the black, whirling maelstrom of a cyclone looms up before him, he will make a detour or even outspeed it; for the velocity of his machine will be greater than that of the fiercest of howling wintry blasts. At a gale which now drives every aviator timorously to cover he will snap a contemptuous finger, plunge through it with a breathless dash, and emerge again in the sunshine as indifferent to his experience as a locomotive engineer after running through a shower.

The aspect of the heavens will be wonderfully changed when the pleasure-plane of the air has arrived. Black specks will dot the blue sky, more like birds than machines, specks that the practised eye will recognise as impetuous and daring high-fliers. Lower down the less reckless will perform their evolutions, and the whir of their motors will be as the droning of bees, so numerous will they be.

All this deals with the sport. Has the aeroplane no mercantile future? Shall we see flocks of gigantic artificial birds, freighted with heavy cargoes, darkening the sky as they wing their way across the Atlantic or the Continent? Will travelling by steamship and railway give way to the aeroplane?

The most sanguine aeronautic engineer would not venture to predict the supplanting of the freight train or the steamer by the aeroplane. For many, many years to come the flying-machine will remain what it is now, a vehicle of sport and war only. Perhaps it may never be anything more. Why? Because it cannot be made large enough. The carrying capacity of an aeroplane depends on its spread of plane. To increase the load means so great an increase in spread that an unmanageable area of supporting surface would be necessary. In order to secure the necessary strength to uphold this increased area an increased weight per square yard is entailed. Hence it is unlikely that aeroplanes carrying many passengers will be built in our time. Not so very long ago Mr Orville Wright expressed the opinion that aeroplanes 'will never take the place of trains or steamships for the carrying of passengers. My brother and I have never figured on building large passenger-carrying machines. Our idea has been to get one that would carry two, three, or five passengers; but this will be the limit of our endeavours.'

The sizes of aeroplanes for two men are now bordering on the unmanageable. In the future it may be necessary to put the pilot and engineer and the motors on one plane, and the passengers on another without motors, the two planes being coupled together somewhat after the manner of a locomotive engine and its tender, but more rigidly. Such a train of aeroplanes might carry a considerable load at high speed, but not so economically as a railway goods train.

The late Professor Samuel P. Langley discovered in the course of his classic experiments that the higher the speed at which a plane travels through the air the less is the supporting surface required. Hence there is a chance that in the future a machine may be constructed which, if this law is taken advantage of, will be provided with a supporting surface adjustable in area, so that it can start with a large surface, and fold up when travelling at full speed. In such a machine the supporting surface would be ultimately reduced until it was a thin edge. We should then have an aeroplane propelled by great power, and supported largely by the pressure against its body, its wings reduced to mere fins, serving to guide its motion.

As a future commercial possibility, the airship is far more promising than the aeroplane. To the size of the airship there is no limit. Indeed, the larger it can be built the more economically can it be driven, when we measure economy by ratio of carrying-power to cost of operation. Just how large an airship can be constructed is a question of constructive engineering. In considering that question the late Professor Simon Newcomb pointed out that economy is gained only when the dimensions of an airship are so increased that it will carry more than an ocean steamer or a railway train. To attain that end he estimated that it would be necessary to build an airship at least half a mile in length and six hundred feet in diameter. Such an airship might carry a cargo of ten thousand tons or fifteen thousand passengers. The construction of so huge a craft is not an utter engineering absurdity, remote as it may seem to us now. We recently witnessed something like this when Count von Zeppelin's passenger-carrying airship made a voyage that excited the admiration of the world, even though the vessel was wrecked in a storm. Some fourteen passengers were transported on that remarkable trip, for whom adequate seating and dining accommodation was provided. But the cost of operating such a giant of the air is enormous.

After all is said, money will decide the question of the commercial possibilities of the flying-machine and the airship. How much does it cost to build? How much does it cost to maintain? How much does it cost to operate? Not until these questions are answered satisfactorily can we tell whether or not the aeroplane will ever be anything more than a racing-machine for gilded youth, and the dirigible an air-yacht for bankers too old for the more perilous aeroplane.

THE PARTING OF THE WAYS.

CHAPTER IV.

FELIX was half-way back to the town before he remembered that in his haste he had forgotten to ask Sebastian for some indication of his father's address. But he was reluctant to turn back, for fear some untoward incident might interfere with his errand. At any rate, he had caught the name by which his father was known, and he also knew that an all-vigilant Government kept each of the Czar's millions of subjects carefully pigeon-holed and docketed, so that he might give them his individual attention whenever occasion required. It was a system which might be productive of untold good if it were not meant instead to serve the most evil of purposes. Well, for once it should be made to redeem itself by being turned into a blessing.

He found his way to the local police station, and was presently shown into the sanctum of the sub-prefect, having sent in the necessary credentials.

'You are the son of Baron Kolberg?' said the official, coming towards him with an obsequious smile. 'I am delighted to see you. Pray be seated. What can I do for you?'

'Oh, it's quite a trifling matter. About an hour or so ago an old Jew of the name of Nahumovitch called on Baron Kolberg.'

'What! has he been annoying his excellency?'

'No, no,' said Felix hastily, alarmed at this construction put on the object of his visit. 'I merely have a message for him. But I don't know his address.'

'Oh, that's quite a simple matter. I'll see to it for you,' said the sub-prefect.

He rang a bell, and a gendarme entered. The sub-prefect gave him some hurried instructions, and the man saluted and left.

'If you will kindly wait a few minutes? Perhaps you will do me the honour of smoking a cigarette with me meanwhile,' said the officer, turning affably to Felix.

Felix readily assented. The consideration with which he had met seemed to constitute an additional count of indictment against his foster-father. On his own admission, the baron had not used his vast influence in the service of his co-religionists to anything like the extent he might have done. But Felix did not harp on the thought. His mind was bent on a greater issue. With forced attention he listened to the sub-prefect's amiable small-talk—the officer was careful not to touch on any controversial topics—while the minutes crept on, and his heart beat like a muffled drum in trepident expectancy. At last, after the lapse of a quarter of an hour, the gendarme returned and made his report to his superior.

'That's right,' nodded the sub-prefect. 'Now, M. de Kolberg, if you will be good enough to go with my man he will see you to your destination.'

Felix, genuinely grateful, rose to follow his guide. After a walk of only a few minutes, they stopped at the entrance of what appeared to have been a little chandler's shop. The empty window gave it a wretchedly derelict look, and, in view of the cruel ordinance hanging over the town, told its own tale. The owners were on the proscribed list! They had already passed several such empty windows. Felix could easily gather what had happened. The stock had been sold for anything it would fetch. The same, no doubt, had been the case with the fixtures and furniture. Any offer was good enough, for anything was better than nothing. From a remark of his guide he learned that the police authorities did not look kindly on the sales. The less that was sold the more would be left behind. And it was naturally the duty of the police to take care, after their fashion, of all property that had been left ownerless.

Felix dismissed the gendarme, having made him ample recognition for his services. He breathed more freely to know himself rid of the man's inquisitive stare. As he stepped across the threshold of the shop a great wave of pity threatened to sweep him onward with a rush. He held on to the doorpost as though to check himself. He felt he had to husband his strength, to economise his emotions. He did not know to what strain they would be put.

The first glance told him. The floor of the interior was littered with nondescript wreckage, among which two large, clumsy packages stood out. Over one of them stooped an old man, panting audibly as he pulled at one of the cords to make the fastenings more secure. Almost without surprise Felix recognised in him the man he had seen climbing the hill to the baron's mansion earlier in the day. The old man faced round sharply at the sound of approaching footsteps. And over there, in the half-gloom of one of the corners, huddled an old woman frantically clasping and unclasping her hands. Felix's heart almost stood still. Great Heaven, perhaps—nay, assuredly—this woman was the mother who had given him life! Both the old people stumbled to their feet as the tall figure of the stranger appeared in the doorway.

'Is it time?' asked the old man in a tone of sullen fear.

'I wish to know if you are the person who came to see Baron Kolberg this morning,' said Felix, stepping closer to him.

'I am.' And half-turning to the old woman

he whimpered, 'Woe, woe, what new misfortune does this mean?'

'What was your business with him?' continued Felix.

'A private business,' said the old man with rather more spirit.

'I want to know. Answer my question.'

'Answer him, Nahum; in Heaven's name, answer him!' said the old woman in an imploring whisper.

'I went to ask him about a child of mine whom he took from us years ago to be his son. I begged him to let me see him before we went.'

'And his reply?'

'That there was no son. The child had died.'

Felix heard it unmoved. It had become evident to him that the baron had adopted a certain policy with regard to his origin, and that he was carrying it through unswervingly. It was only to be expected of Baron Kolberg. Even his worst enemies did not deny him the virtue of consistency.

The old woman, misinterpreting his silence, wailed aloud, 'Oh, don't punish him for it! He meant no wrong. It was I that sent him. The fault was mine.'

'Is this your wife?' quavered Felix, turning to the old man.

'Yes, young sir. And never was man blessed with a better.'

'Listen,' said Felix, coming to a swift resolution. 'Baron Kolberg has sent me to you with a message. He wants to make amends to you for having told you a falsehood. It is not true that your son is dead. He lives, and you are to see him.'

'Oh God in heaven!' cried the old man, 'what new devilry is this?—Chaya, do you hear? There is some trick behind this message. Oh, why don't they let us go forth to die in peace by the roadside?'

But the old woman had been creeping forward stealthily inch by inch. At his last words she had gripped her husband by the arm and whispered in short, deep gasps, 'Nahum, Nahum, you fool and sinner, blaspheme not! You are wrong. This is no trick. God has put a new light into my half-blind eyes. I see all He wants me to see.' In a moment she had thrown herself on Felix and strained towards him with all the strength of her feeble arms. 'This is the head that lay on my breast when he was a babe; these were the arms that twined round my neck; these were the lips that babbled to me "Mother!" Nahum, as God lives, this is our son Ephraim!'

'Yes, little old mother, I am your son,' said Felix, his tongue shaping naturally to the quaint jargon in which she had spoken and in which he had made his first essays of childish speech. 'I am your son, a hundred times your son. I have stepped back to you across the wide gulf of the years. I am your own again, your very own. Take me, mother—father!'

A quivering silence seemed to hold the room. But before either of the old people could reply a sudden noise made their hearts leap into their mouths. From the streets came the long roll of a drum, which was followed by a deepened hush. And then there rang out the harsh, guttural voice of a man uttering words in tone of command.

'What does he say, Ephraim? You know their language better that we,' said Nahum tremulously.

A thrill of joy shot through Felix. How quickly they had learned to lean on him!

'Nothing to be alarmed at,' he informed them, throwing an arm reassuringly around each. 'It is only what you have been expecting, except that it has come a little sooner. He says that in an hour's time you are all to assemble in the market-place. The transport will start from there. And that doesn't give me much time to get my business done. Wait here till I return.'

'Chaya, Chaya, I told you it was a trick! He is going!' shouted Nahum despairingly.

Chaya, however, uttered a joyous laugh. 'Oh you blind of faith!' she reproved him. 'If God has worked one miracle for us, can He not work another? He has sent him to us once. He will bid him come to us again.'

'Those whom God has sent once need no bidding to return,' said Felix solemnly; and then, with a short but loving backward glance, he made his way out into the open.

Ay, he did not have too much time to get his business done. It was a great, an heroic business, but he felt quite strong enough for it. Nay, his strength seemed to grow giant-like the nearer his hurried steps made him approach the big white house in which his sojourn was to be so brief. The steep incline that brought him into its purview became a symbolic height to which he was rising as on eagle's wings. A few minutes later he stood again in the huge porch and made his way straight to the baron's room.

'My dear Felix, where on earth have you been all this time? And you've had no lunch!' exclaimed the baron, walking towards him with a solicitous air.

'Don't trouble. I won't starve,' replied Felix a little curtly.

'I nearly sent out a search-party for you,' continued the baron, not noticing his strained manner. 'Not because I was afraid you were lost,' he added with a smile, 'but because I was anxious to let you have my wonderful news. Shortly after you left I received a telegram from Dagoutsky. To tell you the truth, my dear Felix, I've not been quite candid with you.'

A quick flush came into the young man's cheeks at the unconscious irony of the words.

'It's quite true that I left St Petersburg for the purpose of—well, of spiritual introspection. But there was also a more material reason for it.

Certain negotiations were going on, and Dagoutsky advised me to disappear for a little while from the arena, so as to leave him more freedom for action. His wire says he has succeeded. Do you know in what?'

'I regret I have no idea.'

'Felix, I have been appointed director of the Imperial Bank! Can you imagine what that means?' he went on, his chest broadening visibly under the swell of his triumph. 'It means that I become practically the financial dictator of Russia. All its international interests, all its widely radiating threads of foreign policy, centre in my hands. I am that greatest power of all—the power behind the throne. I don't suppose it will be a bed of roses—a nation's money-bags are not comfortable to sleep on; but I shall take care not to be troubled by nightmares. Of course, Dagoutsky says it's a *sine quâ non* that I must forthwith join the Greek Orthodox Church. So he takes the choice out of my hands. In fact, I have committed myself to his condition in my reply.'

'Quite so,' said Felix, still holding back, but feeling ready and primed for the attack.

'There's no object now in our staying here longer. I shall order a special train for to-morrow morning.'

'I shall not accompany you.'

'No?' The baron was plainly disappointed. 'Well, if you like you can follow me in a few days.'

'I shall not follow you, Baron Kolberg.'

'Baron Kolberg!' There was no mistaking the baron's utter bewilderment at the unusual form of address. 'What's the matter, Felix? You seem very strange.'

'Several strange things have happened to me since I saw you last. Why did you not take me into your confidence?'

'About Dagoutsky?'

'Not about Dagoutsky. I don't care two straws about the financial dictatorship of Russia. Why have you never told me the truth about my parentage?'

The baron winced as at a physical blow.

Felix did not give him time to recover himself. 'Surely that was a matter about which I had a right to be told. It's some time since I arrived at years of discretion, and I might have been trusted to take my own view of it. You evidently thought that your opinion was good enough to serve for the two of us.'

'Felix!' exclaimed the baron in a tone of alarm.

'That was assuming rather too much, even though you had acquired a certain right to act as the arbiter of my destiny,' went on Felix relentlessly.

'Felix, Felix, I meant it for the best!' cried the baron.

'No doubt, from your own egotistic point of view. You had taken me over body and soul, which, I presume, included everything that was mine before I came to you.'

'I admit it was selfish of me,' said the baron, his arm uplifted as though in dread of a further onslaught. 'But I am not sorry that—through whatever accident it might be—my selfishness has come to light. It will prove to you more than anything else the immeasurable love I bear you, Felix. I wanted you to be all mine, to leave no question in your mind but that you were my own flesh and blood. I was jealous of all who might rob me of a single heart-throb of yours. And what is more, I have made sacrifices for it. I have lived a lonely life. I might have married again. I might have had children of my own. But I would not. You were all-sufficient for me. From the moment you came to me you fulfilled for me all my cravings of fatherhood. The same single-heartedness I felt for you as my child I wanted you to feel for me as your father. In my desire for that it did not occur to me that my egotism might lend itself to another construction.' He sat down, the spent and broken shadow of his proud self.

Felix stood looking at him, his heart full of pity and remorse. Then he came and stood close to him. 'Forgive me,' he said quietly, humbly. 'I don't know which I have been—cruel or foolish. I too thought of only one aspect of the case. Dearest and best of friends—I need not give you any higher title—forget what I said in my thoughtlessness. There is a loftier plane on which we may stand to argue this thing out than that of sordid recrimination. There is a greater, a diviner motive that brings us to the parting of the ways.'

'The parting of the ways?' For a moment the baron looked puzzled, and then an agony of fear came into his eyes. 'Felix, Felix, you are not thinking of leaving me?' he cried.

'I am—I must. I must as surely as if I saw the finger of God outstretched visibly to point me the path I am to take. Let me speak. This'—he picked up the telegram from the baron's writing-table—'is calling you one way. Two quavering voices, hoarse with crying out against the doom that awaits them, are calling me the opposite way. I have seen my father and mother.'

'Felix, it need not be,' broke in the baron quickly.

'I don't see how it can be avoided,' proceeded Felix steadily. 'You dare not take me with you unless you are prepared to foil your ambition. I cannot follow you across the border-line that separates you once and for all time from our—from my people. You dare not harbour under your roof a son, an alleged son, who openly flaunts his heresy while you go about wearing the mask of a true believer. Your enemies, and from your own admission you anticipate many, will lay you by the heels in a moment. And that is the case as far as it concerns you.'

Baron Kolberg made no reply. He sat, his head drooping low on his chest.

'And now for myself,' continued Felix, his voice taking a firmer tone. 'There the matter is quite simple. It means merely coming down to the elementary emotions. I should be no better than any hog feeding at the trough were I to let my poor old mother and father trudge their tottering way along the road of exile without my arm to hold them up, to shield them. To give me credit for going with them would be nothing but the grossest affront.'

Still his listener sat silent.

'But that is not all. It is a great thing for a man to find his kith and kin, but'—his voice rose in a sort of ecstasy—'it is sublime for a man to find his nation. I found mine to-day. A people that is abject, prostrate, trodden in the dust, but therefore all the more glorious to me. A race of martyrs, a race of conquerors! I should never have believed it had I not seen it with my own eyes. Oh, I tell you—though probably you know—there are martyrdoms going on to-day to which the savageries of Torquemada are but an exhibition of brotherly love. But they conquered the Inquisition, and they will conquer again. I too want to bear a small share in their victory.'

'What are your plans, Felix?' asked the baron, looking up with heavy eyes.

'I don't know yet. In the first place, I suppose, to see my parents safely out of this inferno.'

'Where to?'

'Abroad, to the lands of liberty—England, America.'

'But you have no means. You don't even know the language.'

'No; but the palette, I think, talks Esperanto. And besides, I have to-day received Holzmann's cheque for a thousand roubles for my picture. I forgot to mention it to you this morning. It was sent on to me from St Petersburg.'

The baron nodded. He had not had the courage to offer Felix money, and it would not be safe to tell him now at whose commission the dealer had bought the picture. Felix was staring pensively at the ground.

'I thought at first of using it to buy Vera an engagement-ring,' he said slowly. 'But of course there's no occasion for that now. By the way, I'm afraid I must trouble you to apologise to her for—for my eccentric conduct. You may give her any explanation you like. And now'—there was a catch in his voice—'I must go.'

A despairing groan came from the older man.

'Felix, Felix, is this the end?'

'No; the beginning. The end rests solely with Providence.'

'Shall I hear from you?'

'Possibly. If not, you will hear of me. You see, I am going forth into the world with the best of all equipments—confidence in myself. There is just one thing more. Don't be hard on old Sebastian for telling me your secret. You know he was nothing more than God's tool in this.'

The baron shrugged his shoulders wearily. 'I know,' he said, bowing his head. 'This was ordained, or else He would not have let your brothers and sisters die. He would not have lent you to me to save you from sharing their fate. I too was merely His tool.'

A flash of joy overspread the young man's face. 'Ah! at last you are striking the right note,' he cried. 'Do you think it was, after all, so easy for me to part from you? But now my heart will be lighter for the comfort which I know you have put into yours.'

He turned to go, and then, on second thoughts, he stopped and faced the baron once more.

'Perhaps you think me ungrateful,' he continued humbly. 'I have said nothing to you about all that I owe you. I have not said it because I feel it too deep down in my heart for utterance. But I think I can pay you no greater tribute than to say that it was your training that made me take up my duty the moment I saw it. Perhaps'—he gazed earnestly into the grief-stricken face before him—'perhaps one of these days God will let me also taste the joy of suffering for the nobility which I have taught to others. Good-bye.'

. . . . . .

Down in the market-place of the township the transport-gang was mustering for the trudge to the nearest railway station, seven miles off. From there those who had the means might continue their journey by train at first-class fares—in cattle-trucks. All around them the naked swords of their escort flashed in the sunlight. Wild-whooping Cossacks encircled them on nimble horses, savagely whirling their pennoned spears. The mortal fear in the hearts of the outcasts was painted on their ghost-like faces. In all that wretched band there seemed to be only one living man. To his exceedingly great surprise, the sub-prefect, who was superintending their departure, had seen Baron Kolberg's son take his place among the exiles. He was about to address a jesting inquiry to him, but something in the other's mien and manner cowed him, as it were, into silence. With a shoulder-shrug he turned away. They were a strange people these Jews, their millionaires no less than their beggars. It was useless to try to fathom them. He only felt vaguely that there was a time when even a Russian sub-prefect of police must refrain from asking questions.

'Ready, all!' rang out the command.

And the transport moved, shuffled, stumbled forward, urged to a panic haste that was beyond their strength by the threatening shouts of their guards. And towering high above the bent-shouldered throng strode Ephraim Nahumovitch—Felix Kolberg that was—gripping the hands

of his parents on either side of him, his gaze fixed fearlessly upon the distance beyond, his hopes outstripping the tortoise march of the present and speeding towards the joyous future that from far-off seemed welcoming him with outstretched hands.

And long after he had gone, for a span that could not be reckoned by the ordinary measure of time, Baron Kolberg remained seated at his writing-desk, staring with vacant eyes at Dagoutsky's telegram.

THE END.

LINKING UP THE SEAS.

By F. G. AFLALO.

DURING the last few moments of time engineers have contrived to make such changes on the face of the earth as would, through purely natural agencies, have been the work of centuries of centuries. With their steam-shovels and their diamond-drills they divorce continents and marry oceans, upsetting conditions that have ruled almost since the globe cooled down from molten formlessness. The cutting of the Suez Canal is old history, but the effect of that gigantic enterprise on the distribution of fishes in the seas on either side is only now being understood; and the interest of such operations is enhanced by the approaching completion of that other great canal conceived by the same brain, but left for realisation to other hands than his.

In either case, oceans that hitherto only met thousands of miles away must mingle their waters under the control of dams and locks—which, however, are no bar to the passage of fishes anxious to extend their range. Yet the two canals differ widely in the circumstances of their construction. When your steamer, forging slowly between the coal-dust of Port Said and the white roofs of Suez, throwing great beams from its searchlight on the low-lying shores of two continents, has done the hundred miles of artificial waterway that lie between the Atlantic (or its inlet, the Mediterranean) and the Indian Ocean, you are conscious of crowded impressions of uninteresting scenery, of roosting cranes and other ghostly fowl startled in the night-watches, and next day of lean Arabs stalking over the burning sand, or little French children blowing kisses from the *gares* built at intervals along the route. Those who navigate the Panamá Canal, or so much as I know of it, will have little chance of seeing the more beautiful tropical vegetation, the lofty mountains, and the luxuriant ferns, for the decks will be below the level of the surrounding country. They will see little, also, of native life; for the interior of the isthmus, though not half the width of that at Suez, is not such as invites settlement. Near the Bitter Lakes of Menzaleh the eye rests on the elegant forms of rose-coloured flamingoes, on the heavier bodies of greedy pelicans, and the graceful figures of snowy ibis. In Panamá there will be little evidence of bird-life, with all its jungle, and Nature hides all but a few gaudy parrots and an occasional hovering hawk. The vegetation, on the other hand, will be superb, but is best seen from the train, whereas the banks of the older canal are bare of all but cactus, save where, at each signalling-station, loving hands have planted mimosa, tamarisk, or parkinsonia.

It is, however, in the changes wrought among the fishes that these links between the oceans are of first interest to the naturalist. Leaning over the bow of the steamer that passes slowly on its way to Suez, so that its wash shall not by erosion destroy the sandy banks, the traveller sees many porpoises using the canal without paying dues, and speculates on all the unseen natives of the Red Sea or Mediterranean that must likewise be seeking new homes on either side. Not altogether favourable to such vagrancy is the Suez Canal. A mean depth of four or five fathoms must, for instance, be prohibitive to many of the deep-water forms that might otherwise have made use of it to satisfy their curiosity. Its bed is muddy, its currents strong, its waters at all depths too disturbed by the passage of heavy craft to make it anything like an ideal route for nervous or delicate forms of sea-life. Chiefly will the larger forms, the porpoises and sharks, which habitually follow in the wake of ships, use its short cut; and, in fact, sharks have alarmingly increased at many of the Mediterranean bathing-resorts during the past twenty years. More deterrent even than any of these obstacles is the exceeding saltness in the neighbourhood of the Bitter Lakes, which, involving as it does a great increase in the density of the water, would prove an effectual barricade to fishes sensitive to such abnormal conditions.

As a matter of fact, though further research will no doubt from time to time strengthen the list, the actual results are meagre. The bass, the sole, the oyster, and the cockle (or a species of each) are among those which have found their way to the Red Sea. On the other side of the account, as migrants to European from Asiatic waters, stand two kinds of horse-mackerel, a sea scorpion, and a coffer-fish. These, so far, are the only known scaly beneficiaries by French genius British capital, and fellaheen labour.

Since much water must run under the bridge ere Colonel Goethals sees the cutting of the last sod between Colon and Panamá, it is prematur to speculate on the effects which a union

Atlantic and Pacific may have on the fishes of either; but our knowledge of their faunas points to equally slight changes. It so happens that at that narrow neck the fishes of the two oceans—I have fished in both within a single morning—do not differ so widely as might have been the case had they not in all probability been one at a much later date than those reunited by that other canal farther east. For example, it was once held that that interesting little four-eyed fish, the *quatro ojo* (Anableps), which can see both in and out of water, was confined to the Atlantic seaboard, but it has long been recognised as common to both oceans. The most interesting immigrant for the Pacific would be the splendid tarpon, and my Californian friends might well possess their disappointed souls in patience if there were any promise of such compensation at compound interest for the loss of the tuna. It is, however, a very remote possibility, for, although I have hooked fine tarpon off Colon, the giant herring is not the kind of fish to find its way through a narrow cutting full of traffic. Time alone can show the results of cutting the Panamá Canal; but, as another ten years must pass before even ships are free of its locks, and as fishes take longer to find out new routes and to overcome their fears of hidden dangers, the passing of the tarpon or less interesting creatures from east to west may not be in our time.

A GRUESOME TALE.

By Lady NAPIER.

IT was a wild winter night on one of the outer islands of the west coast of Scotland. Three men sat over a peat-fire in a small inn, smoking their pipes and awaiting the belated steamer that was to take them south. They were all three workers of sorts, and fast friends, despite difficulties owing to differences of conditions. There was a big Irishman employed in the Foreign Office, a horse-artillery man, and a secretary to a scientific association; and now their holiday was at an end, they told each other discontentedly that they must go back and begin 'rotting' in towns again.

They had been shooting, and had thoroughly enjoyed themselves. The long tramps after wildfowl, the out-of-door life, the sweet winds that blew in their faces, even the rain, had been enjoyable; and, 'Thank goodness, there were no ladies!' they said ungallantly to each other as they changed one old shooting-coat for another, and sat them down to their well-earned dinner of Scotch broth, stiff with barley; Highland mutton, dark as hare, close and fine in the grain; and the inevitable 'shape,' with thick cream from the Highland cows, and luscious jam made from the gooseberries that grew so plenteously in the garden of the little inn.

There is much of the savage underlying the surface of the polished man of society even yet, and I think it is safe to say that it is in the best kind of man that the strain runs strongest.

The wind howled outside; the ill-fitting window-sashes rattled and shook; the rain dashed in sheets against the window-panes.

'What a night! The Walkyrie must be enjoying themselves to-night,' said the secretary. 'I wonder whether Wagner was ever in the Outer Hebrides; they would have been an inspiration to him with their sights and their sounds—the wailing of the wildfowl, or the thunder of the surf on the rock-bound shores, or the murmur of the sea in the caves on calm days, when the whales come up to the surface and sigh heavily, and the puffins say *aarh!*'

'All the same, I would rather hear all that than any of Wagner's beastly old operas,' said the soldier moodily.

'It is a night for ghosts to be abroad, for dead faces to be pressed against black window-panes, for runaway knocks at doors, and so on,' said the Irishman with a grin, knocking out the ashes of his pipe against a peat.

'Did you ever see a ghost, Pat?' said the gunner curiously.

The Irishman was silent, and slowly refilled his pipe. 'No,' he said; 'but I have heard one, and it was about the most horrible experience I have ever come through.'

'Do let us have it,' said the other man.

'Well, it is truth I am telling you; but I don't expect you will believe me. However, here it is:

'There was once an old house—I won't say when, and I won't say where—but it had gathered to itself a most evil name. A scientific man had had it on lease, and they said that he had carried on secret experiments too gruesome to describe on human beings and on animals—of course in the interests of science, he would have said; but I believe myself that he was one of those abnormal devils of cruelty and vice who spring up sometimes, and who ought to be killed off as you would kill a cobra, and that it was not altogether in the interests of science that he worked. However, the fact remains that he lived in that house for years, and was shunned by every one.

'The village children shrieked with terror when he appeared; the women shut their doors close when he passed. He was usually accompanied by a huge dog, which lurched after him, its head hanging down, its tail between its legs.

'Howls were said to be heard at midnight, and shrieks strangely human proceeded from the house; but, of course, one must take all such things with a grain of salt. The neighbourhood was remote, the people ignorant and superstitious.

'But to cut a long story short, one morning the man was found dead on the floor of his workroom or laboratory, with the dog lying on his chest, its teeth fixed in his throat. They said the dog was a mass of wounds, some healed, some open, and that part of its skull had been removed and a silver plate put in.

'Well, the house was dismantled, and ghastly things were found — frightful drawings, and models, and bones. There was a great furnace built into the room, and I cannot tell you what besides.

'It was a beautiful old house—indeed, perfect in its way as to architecture and surroundings; and after a time it was let, they said, for a song to some people from a distance who had seen a picture of it in a sporting paper, and had promptly fallen in love with it, and they rushed down and took it, asking no questions, ecstatically delighted with their bargain. They very soon cleared out, however, giving no reason; and they never came near the place again.

'It was then taken by some other people, and the same thing happened with them; and, of course, as time went on the evil fame of the house became an established fact, and it remained empty, and promised to fall to pieces from neglect.

'I was fishing in those parts, and tried to find out all about it. You know how those things interest me. They said it was haunted, and that no one could live in it. Some young men had gone there to try to see the ghost; but they left pretty quickly, the innkeeper said; and they looked like ashes, and were in such a hurry to get away that they did not wait for the change due to them when they paid their bill.

'I have a pretty good nerve, you know, so I determined that I would run this ghost to ground if I could. The innkeeper strongly advised me not to do so. "It is a bad place," he said, shaking his head. I was determined however. "I shall take my Irish terrier Con with me," I said; "he will make short work of the ghost. But if I hear or see anything disagreeable I shall just clear out and come down here. Leave the door on the latch, like a good chap, and I will take the key."

'It appeared that the scientist's laboratory was the spot to be shunned. I strolled up after dinner. A fire had been lighted. I had a good stock of candles, a box of cigars, and a novel. I smiled and made myself very comfortable in a deck-chair, locking the door, and seeing that there was no other means of ingress. Con went sniffing about with his bristles up. He evidently did not like his quarters a bit, poor dear little dog.

'Well, I smoked and dozed, and the candles guttered. It must have been towards morning when I started, broad awake. A soft, heavy, dragging footstep was coming down the stair, and then it stopped outside the door; and there was a sound as of some great beast snuffing and breathing heavily under the door. Then whatever it was pushed itself against the door, and I distinctly saw the panels bulge as though some heavy body were pressing against them.

'Con was shivering with terror behind my chair, and I cannot say that I liked it. I took a candle, and my revolver at hand in my pocket. I flung the door wide open. There was absolutely nothing to be seen but the dim grayness of the summer night and the sickly light from the candle—not a sight or a sound of anything living.

'I told myself that I must have been dreaming. I locked and double-locked the door. The panels were quite intact, but the woodwork was old and thin. I lit fresh candles and waited, and, I think, dozed; but again I started, broad awake, and the same thing recurred—the heavy footfall, the pause at the door; but this time the snuffing was louder and angry, and there was a sort of hoarse growl behind it. It was perfectly horrible. I cannot describe it. I sat transfixed, watching the bulging of the panels, and I think that I must have fainted, for daylight was streaming into the room when I recovered.

'Con was dead.'

AT THE WORLD'S EDGE.

On the edge of the world and the sea and the sky—
Where the gray mists are spun and the white clouds are woven
To the beat of the waves and the winds' ceaseless cry,
By the rays of the sun to be scattered and cloven—
Here plain and made known all such mysteries are
As the scent of the violet, the birth of a star,
How day ends, night begins, where is gathered the rain. . . . .
Strange secrets like these by the wild winds are hurled,
Secrets of life and death, pleasure and pain,
On the edge of the world.

On the edge of the world, where wild harmonies surge,
Mystic voices are heard and soft-winged spirits hover,
Bringing perfume or passion, the moan of a dirge,
The song of a bird, or the dream of a lover;
Out from the vastness here gather and meet
All things that are powerful, all things that are sweet—
Strange things that madden and gladden the spheres
'Mid colour and shade through the foam-drifts are swirled—
Music and sorrow, love, laughter, and tears,
On the edge of the world.

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, Yesterday.

A LONG stretch of time is needed for the changing of all outward tokens of the reign of a monarch that is ended. There is a proclamation, an accession, and a coronation, and the reign of the previous king soon seems to dip its way down into history; but certain official signs of it remain, and sometimes, as we contemplate them, a curious reality appears to be given to the constitutional idea or principle that though there may be a 'demise of the Crown,' the Crown is yet perpetual and is deathless. We have George the Fifth upon the throne; but we may tender a coin with the figure of George the Fourth upon it for some purchase, though it is eighty years since such money was exactly correct for the time. Some days ago I walked through Regent's Park, which in a way we might call Georgian ground—and in many respects it bears less sign of modern artificiality about it, and is more natural and charming, than any of the other parks—and noticed that iron stumps set by the sides of paths to protect them or to guide the traffic, and certain lamp-posts too, have 'G.R.' moulded on them. All through three reigns—of a William, a Victoria, and an Edward—these markings have thrust themselves upon the attention of passers-by for their inaccuracy; but now, by the accidents of time and coincidence, they are good again, and will stir no more attention. Each time we take a postage-stamp we see an error, and not until the next month of May, so we are told, can it be properly remedied. Then the new stamps of King George will be placed in circulation, and will be printed, as the information goes, at the rate of one million in every hour. They will be much the same in looks and colours, it is said, as the Edward stamps; but for the new coinage that is being got ready at the Mint, the kingly head is to face the other way from that in which the effigy of the late King was made to look; that is to say, we revert now to the look towards the left which obtained in the Victorian coinage. There are little rules in these matters which are necessary and unalterable, but are not commonly understood by the people. Thus the direction in which the head of the monarch faces must be changed with every reign; and those who wonder why penny stamps are always red and halfpenny stamps always green, without change in other values, forget, or do not reflect, that some system is necessary in these days for facilitating the passage of letters abroad, that stamps of the same value should be of the same colour in all or most countries, and so there must be no changes, an abiding agreement having been made. In many other ways all haste is being made in substituting the tokens of the reigning King for those of his dead royal father, but scarcely any is of such curious interest, little enough as it may seem to concern the people at large, as the changing of the Great Seal of the United Kingdom, for there is something a little awe-inspiring about this seal, which is the official mark of Britain, the sign of its authority and the token of its force. And then we heard lately that the commission for executing the designs of the new Great Seal that is now required had been given to one of the most brilliant of the younger British sculptors in Mr Gilbert Bayes. He is making a Great Seal that will be different from all the others that we have had for many centuries past. It has been the custom to show on the obverse side the sovereign in royal robes sitting on the throne, while on the other side the sovereign has been on horseback. What will be the exact nature of the changes is one of the things that remain to be seen. When a drawing is at last approved a model will be made of it in wax, and from that a plaster cast will be made, and then a steel cast from the plaster one. The steel cast will be about eighteen inches across, but the actual seal which is reproduced from it, and reduced at the same time, is only about one-third of that diameter. But a seal that measures six inches across is an imposing thing, as such a seal should be.

* * *

The Great Seal! When they hear it spoken of there comes into the minds of many people an echo of their schooldays, the remembrance of a slight but picturesque incident of a tremendous period in English history—James the Second throwing the Great Seal into the Thames at the beginning of his flight. Such was the end of one Great Seal, and perhaps this is all that some

[*All Rights Reserved.*]

of you have ever heard or remembered about these tokens of the authority of our country. It is not often that they come by an end so untoward or accidental. Generally their extinction, when they are extinguished, is a formal thing. Three times during the long reign of Queen Victoria a new seal was required, and on each occasion the old one was solemnly broken. But disused seals are not always destroyed. The Lord Chancellor, as we know, is the Keeper of the Great Seal, and it is an understanding that it becomes his perquisite when it goes out of commission—an understanding that on at least one occasion has led to some dispute. That was when William the Fourth came to the throne and a new seal was ordered. Lord Lyndhurst was Chancellor at that time, but Lord Brougham had succeeded to the office when the seal was actually delivered. Whose, then, was the old one, Lord Lyndhurst's or Lord Brougham's? Each of them claimed it, and there was a hot dispute—so hot, indeed, that the king himself had to intervene at last, and he settled the matter in a simple way by cutting the seal in two and giving to each of them a half. It is the general thing for a Lord Chancellor, when by a turn of happenings he has come into possession of a disused seal, to have it made into an ornamental cup, and it is, of course, handed down to his family in succeeding generations as an heirloom, and a very valuable one at that. It is a little singular, then, to think that one of our old seals, one that was once in the possession of Lord Thurlow, now belongs to an American millionaire in Mr Pierpont Morgan, who gave no less a sum than three thousand one hundred guineas for it. Here it may be mentioned that the original cost of making is generally between four and five hundred pounds. The Lord Chancellor, Keeper of the Great Seal that is in use, needs, of course, to take the greatest precautions for its safety while he has it, and does so. When he sits upon the woolsack he has it in his sachet behind him on that crimson lounge, and it is a tradition that he should carry it with him when he goes to bed. Lord Loreburn, as he has shown on many occasions since he rose to his present high dignity, is an extremely sensible and practical man, a veritable prince of Chancellors; and there is within him a fine sentiment and a strong respect for traditions, and one may sometimes wonder whether it does carry him so far that at night when he steps his way upstairs he has this seal tucked away under his arm, and preserves it for the night in some very safe place from which, with him alive, it could not be removed. Yes, if the idea seems a little odd, there is some good sense in the practice. Iron safes are vulnerable things in these days of advanced science in burglary, a thought that was impressed upon us with some sharpness the other day when we read of a party of skilful London burglars having removed a substantial safe from the place where it generally stood to some private apartment where they could conduct their operations upon it without being seen from the outside, while in the meantime they fixed up a dummy cardboard safe, an exact facsimile, in the place that the real one had but lately occupied. However, no matter what the custom of modern Lord Chancellors may be, we do know that Lord Eldon for one certainly carried the Great Seal up to bed with him when he retired for the night, and very careful he was in the conveyance of it, and very particular in the manner in which he put it away before he laid himself in the sheets. And then, when, alas! his house at Encombe was once on fire, it was not his private valuables that he first thought of when danger and panic seemed to be setting in, but it was his precious Great Seal, and he seized upon it and hurried off with it to a place of safety. Flames and flames were all about the house and in it, and there seemed to be no place above the ground at Encombe that was safe from them; and that being so, this good and wise Lord Chancellor went out into his garden and dug a deep hole, and there buried his Great Seal. When the fire was out, the danger over, and the general effort towards restoration was being made, Lord Eldon went back to his garden to look for the place where he had buried his precious seal; but he had forgotten entirely the whereabouts of the particular spot, and it was long before he could find it. Here was a pretty predicament—the Great Seal of England buried in a garden and nobody able to find it; and a great explanation would it be to the House of Lords that there was no Great Seal because the Lord Chancellor had so buried it among his geraniums and his chrysanthemums, and it was no more to be found! But it was regained at last; and describing the search for it, some years later, Lord Eldon wrote: 'You never saw anything so ridiculous as the whole family down that garden, walking, probing, and digging until we found it.'

* * *

We were saying to ourselves the other day that the kindly understanding that was brought about some years ago between France and ourselves—now well established so that as friends of old we have come to see that our intimacy is able to bear, if need be, some strains and shocks—had led to some interesting results from the desire of each country to know more of the other. One of these results is the increasing knowledge and appreciation of the best French literature in England. There is scarcely one of us who is too young to remember the time when prejudice and ignorance were so strong together that there was a feeling among persons who made some pretence to culture and education that modern French literature was mostly poor

and that such as was not poor was otherwise unsuitable for general reading. From such a darkness the people who thought in this way have now for the most part emerged, to their considerable intellectual advantage. They are coming by a familiar acquaintance with the best of the modern French writers, whose works are being sold extensively in cheap and most excellent translations. They even come to know a little of the lives and the ways, the ideas and the styles, of such as Alphonse Daudet, Paul Bourget, Georges Ohnet, and certain others; while, when they dip into the works of some of the writers of another day who have a less general and extensive public than Alexandre Dumas—such as, for example, Gustave Flaubert, with his masterly expositions of human feeling, motives, impulses—they come to realise the extent of their misfortune in their earlier neglect. The French are the most splendid story-tellers! There has been practically no sympathy and no collusion between the art of their fiction and ours, and the two have developed along different lines with different ideals set before them, so that at the present time the results are very different indeed. In some ways the greater art would appear to be displayed by our own best writers—the very best, one must be particular to stipulate; but there is an economy and selection of words, a point and a precision, about the best work of the French that stamp it with an artistic merit all its own. It is probable that in the future English and French writers will influence each other more than they have done in the past, and for their mutual good. There are, indeed, evidences of such mutual influence already. Fiction, one of the greatest of the arts, and that commanding most popular attention—though it is one of the newest, and even now has hardly any maturity—is different from all others, and at a great disadvantage for development compared with them in that it speaks a language, and one only, and has not a tongue that speaks to all the world. It is one of the great forces of art that it is cosmopolitan. The picture, the figures in stone or bronze, the sonata in music, speak with equal clarity to the cultivated people of all nations; but the novel of words is local to its own country except for those of foreign ones who read its language, and among themselves they are too few to make a custom. The objections that have been urged against translations, even when well done, in their inability to repeat the richness and the subtleties of language and style that are borne in the original, have been much overdone and have savoured largely of pedantry. A thoroughly good translation from French prose to English, done by a translator who knows his French subject well and is in close sympathy with it, need lose little or nothing in the conversion. This is coming to be well understood at the present time. And of all living writers Anatole France is one who ought to be translated, but only on the condition that he is translated well. Surely one would not be exaggerating, or be over-forgetful of the excellences of the writers of one's own country, if the suggestion were put forth that there is no other living man expressing his thoughts and fancies in written words of prose who does so to such fine effect, with such grace and beauty of style, with such perfectly cut and polished sentences, displaying such high erudition and such nice philosophy, having a charm that thrills and stirs the senses as modern prose not often does. Flighty readers who may be unaware of their own qualities of taste, and spend their time mostly in devouring countless volumes of modern fiction, caring, as they think, for nothing else, will be caught by the fascination of Anatole France. But how many of them have even so much as heard of the titles of his works? We like him in his prose philosophy and his criticisms, and there is a great genius in some of his shorter stories.

* * *

M. France is now sixty-six years of age, and perhaps his best work has been done. His perfect measure, the harmony of his grouping of words, his beauty of expression, and the simplicity and lucidity of it all make his prose a thing that is rather different from and rather better than most of the best of others. You may find it at its best in the critical essays which make up the four volumes to which were given the title of *La Vie Littéraire;* and there is a portion of this work in a volume, entitled *On Life and Letters*, just printed in English, with the imprint of the Bodley Head on it, the remainder being to follow. The work of translation has been so well done by Mr A. W. Evans, the right English words and the rhythm of sentences and phrases so well gained and preserved, that it is difficult to believe that the original has lost anything at all in translation, and there is really no excuse for the affectation of people that unless you can read a foreign author in his native language it is better not to read him at all. The short chapters or articles of which these volumes consist deal critically with all manner of subjects that interest worthy minds, but chiefly with literature in its different phases; and they were for the most part contributed by invitation of the editor of *Le Temps* to that journal, wherefore M. France prefaced them, when they were collected into book-form, with an address to that editor, M. Hébrard, which has probably become more famous than any other preface of its kind. There is more than one sentence in it which will live always and be often quoted; as, for instance, the author's definition of a critic: 'The good critic is he who relates the adventures of his own soul among masterpieces.' And a couple

of pages farther on he defines a book in his own way thus: 'A book, according to Littré's dictionary, is a collection of several sections of manuscript or of printed pages. That definition does not satisfy me. I would define a book as a work of witchcraft from which there escape all sorts of images which disturb people's minds and change their hearts. I will put it better still: a book is a small magical apparatus which transports us into the midst of images of the past or among supernatural shades. Those who read much are like hasheesh-eaters. They live in a dream. The subtle poison which penetrates their brains renders them insensible to the real world, and throws them as a prey to terrible or to delightful phantoms. Books are the opium of the West. They devour us. A day will come when we shall all be librarians, and that will end it all.' Sceptic as he is, pessimist as some will call him, Anatole France is insisting always on the perpetuation of the beautiful and the rejection of the vulgar and the ugly, and in every chapter, when the opportunity is given him, he urges that true art is beautiful only. He considers George Sand, and then he says: 'Beauty depends upon ourselves; it is the sensible form of all that we love. It is a mistake to contrast the realist novelists with the idealists. People oppose the real to the ideal as if the ideal were not the only form of the real which we can grasp. The truth is, the realists want to render life odious, while the idealists seek to beautify it. And how right they are! What an excellent task they perform! There is in mankind an incessant desire, a perpetual need, for ornamenting life.' Again: 'Let us not be deceived by high-sounding words about art and truth. The secret of the beautiful is within the reach of little children. The humble sometimes divine it more quickly than the proud. To love is to beautify; to beautify is to love.' Then, when he has been considering the case of a certain French novel dealing with military life in France, and not making a wholesome picture of it—the general commanding a regiment that was maltreated in its pages ordered it to be burnt on a dungheap, and all soldiers found in possession of it to be sent to prison—he says, in condemning it: 'It is claimed that naturalist fiction is literature founded on science. In reality it is disowned by science, which only knows the true, and by art, which only knows the beautiful. In vain does it drag its dull deformity from the one to the other. Both reject it. It is not useful, and it is ugly. It is a monstrosity, and soon we shall be astonished at it. . . . To say everything is to say nothing. To show everything is to make us see nothing. The duty of literature is to note what counts, and to light up what is suited to the light. If it ceases to choose and to love, it becomes like a woman who gives herself without preference. There is a literary truth as well as a scientific truth, and do you know the name of that literary truth? It is called poetry.' This book is one which makes you, as you pass along its pages, think even better than you did of the modern France that has such a writer in it. Better than that, it makes you think sweeter things of life, and the good and beauty and greatness that there are in it, and a humble reader can say no more in testimony to the power of Anatole France.

* * *

This appreciation of the writings of Anatole France may lead many people to consider again the full meaning of the admirable address that Mr Asquith delivered to the students of Aberdeen a few weeks since, when he made a good plea for the recovery of the lost art of style in speaking and in writing. We have some good orators, but oratory is not now the art that it used to be. Public men make speeches; they do not deliver orations. It is because they make so many speeches that so little artistic value is attached to any of them. They may tell you in their own defence that this is a practical age, and that they make speeches in order to recite facts and express opinions, not for the purpose that they shall be read in volumes and admired in ages after they have left all earthly platforms. They may be right; but sometimes when we come upon the file of an old newspaper and read what was spoken in the early Victorian times, and earlier than those, and see the richness of some of the old parliamentary oratory—the fine choice of words, the dramatic effects of sentences, the cadence of the chosen language, and the aptness of the frequent classical allusion — we come to think that there will not be such fine addresses made in the new Parliament that will soon be opening. In literature, style has had some special hardships to contend against. There has been such an overflooding of printed matter in recent years that the best work has had extreme difficulty in gaining recognition, and there are many writers who might ultimately have gained it who have been too weak of heart for the long-sustained effort, and have yielded to temptations. In different ways literature has suffered keenly in modern times from the plague of too many newspapers and too many new periodicals. The demand everywhere has been for facts and not fancies and fine writing; articles and not essays have been the things that have been best paid for. But there are signs of a coming change in this respect. The public is showing a better education and a better literary taste. There has lately been a distinct revival of the essay. New volumes that a very few years since would have been scorned from the booksellers' shelves now make a brave and established appearance there and one is told that they are selling well. Th

public is clearly improving, and when one discusses its bettered state with some others who probe for causes, and have exceptional skill in and means for finding them, their belief for the most part seems to settle round upon the effect of the cheap reprints of classical works that have been so much the vogue in recent years. For all that, we have few authors in these days with any great pretence to a style that is at once fine, artistic, and serious. The writers whose manner of writing seems to have most effect on the readers are the serio-comics. But here and there we have English writers who are doing great work. Those who would know of what they are capable may very well be recommended to take up some of the volumes of Mr R. B. Cunninghame Graham. Here really you have a master of style. Of course he is not being put forward for comparison with M. France, of whom we have been writing at such length and praising as a stylist, because the two do not compare at all. Mr Cunninghame Graham is not a critic, but the describer and the story-teller, and he does not gain his effect, to any extent at all, from delicately chiselled detail, as does M. France, but from broad impressionist effects. I have just been looking through a collection of his pieces which Messrs Duckworth have published in a volume with the title of *Hope*. They are half-stories, half-descriptions, just impressionist effects of incidents and scenes. But each one is a most perfect piece of literary art. The scenes are for the most part laid in sunnier and wilder lands than ours, and you have the hot sunlight, the baking desert, and all the colour and the fierceness and intensity of life in them represented vividly by the most artistic and subtle suggestion. I doubt if anything so good as this has been done in English prose for a long time past; and I would like to show some specimens of it, but it will not bear small quotations. The effect that is gained comes from the whole, and not from the parts.

PETER AND JANE.

CHAPTER V.—*continued.*

MISS SHERARD was in a wilful mood this morning, a mood which, let it be said at once, was one to which she was often subject, but it had been more than usually apparent in her for the last few days. She began by hoping in the politest way, after she had sat about five minutes at the luncheon-table, that Miss Abingdon did not mind the window being opened, although it was a well-known fact that Miss Abingdon held the old-fashioned theory that only the furniture should enjoy fresh air, and that windows should be opened when rooms were unoccupied. So many people rose to do Miss Sherard's bidding that Miss Abingdon, of course, found it quite hopeless to try to assert herself. And later, the servants having left the room, the gentlemen waited so assiduously on Kitty that Miss Abingdon began to fidget and to wish that everybody would not constantly jump up and down. Kitty further had a ridiculous way of eating which Miss Abingdon could not approve of. She ate mere morsels of everything, and talked the whole time, very often with the air of a gourmet, and she would lay down her knife and fork after having made a meal such as a healthy blackbird might have enjoyed as though she had finished an aldermanic feast. She accepted a glass of Miss Abingdon's very special claret, and never even touched it; and later, in one of the pauses of her elaborate trifling at luncheon, she told a funny story which made every one laugh, and caused even Canon Wrottesley to wipe his lips with his dinner-napkin several times in a hopeless attempt to conceal the fact that he saw the point of the story.

The worst of it was that Sir Nigel encouraged her in everything she said and did. These two had met in London this year, and had stayed at the same house for Ascot, and it must be admitted by a faithful historian that, in her own wilful and provoking way, Kitty had flirted outrageously with him. To-day she offered to cut up his food for him, because his right hand was still in a sling; and when Miss Abingdon suggested, with deliberate intention in her voice, that a footman should do it for him, Kitty pretended that the wounded man could not possibly feed himself, and gave him pine-apple to eat on the end of her fork.

When she sat in the veranda drinking coffee after lunch, she showed Canon Wrottesley how to blow wedding-rings with the smoke of her own favourite cigarettes; and she talked to him as though his early youth might have been spent in a racing stable, and with the air of one expert to another.

'I hear,' said Canon Wrottesley when Miss Sherard had begun to play a left-handed game of croquet with the crippled young man, 'that Sir Nigel is going to ride at the Sedgwick races. I was a fearless horseman myself at one time, so I cannot quarrel with him for his decision; but I only hope that his hand will be healed by the 24th.'

'He has a good mount,' said Peter, 'and I don't think it is much good trying to persuade Toffy not to ride.'

'Kitty Sherard says she has laid the whole of her fortune on him,' said Jane, 'so let's hope that will bring him luck.'

'I believe,' said the canon in a manner distinctly beatific towards the subject of his remarks, 'that I enjoy that little race-meeting at Sedgwick as much as anything in the year. We must all have our little outings once in a way.'

The inhabitants of Sedgwick put on sporting airs and curiously cut overcoats on two days in each year, and carriage-hirers and owners of one-horse wagonettes are supposed, by less fortunate persons, to make their fortunes during the race-meeting. The weather for the occasion is nearly always cloudless, and has been so for so many years that the townsfolk have begun to think that either they are very clever in arranging the date of their local function, or that the clerk of the weather is deeply interested in Sedgwick races.

In the paddock there was an unusual number of horses being led round and round in a ring, and some well-known bookmakers—not often seen at the little provincial meeting—were present with their hoarse cries and their money-bags. Kitty Sherard carried a pair of field-glasses on a long strap, and consulted from time to time a little gold-bound pocket-book, in which she added up figures with a business-like air. She believed in Ormiston, which Sir Nigel Christopherson was riding, and she had something on Lamplighter as well. She knew every bookmaker on the course by sight, and had as much knowledge of the field as any one in the ring. And she looked exactly like some very beautiful child, and carried a parasol of rose-coloured chiffon beneath which her complexion and eyes appeared to great advantage. She smiled whether winning or losing, and ate luncheon with an epicurean air.

Mrs Ogilvie arrived at the racecourse, as she had promised to do, about tea-time. She hardly ever cared to watch the races; but she stood amongst her friends for a little time in the pleasant shade of the wood, and looked on at the little gathering with that air of detached and hardly concealed weariness which she always felt on such occasions. She congratulated Peter, who had won a rather closely finished race earlier in the day; but her voice betrayed little interest in the event, and an onlooker might have been surprised at the almost distant way in which she spoke to him. She was sumptuously dressed, as usual, and wore her clothes with extravagant carelessness. She found herself at tea-time sitting next Canon Wrottesley, whose patriarchal mood seemed to her unnecessarily affected, and she requested him, without a moment's hesitation and in her perfectly courteous manner, to ask Miss Sherard to come and speak to her. 'Kitty amuses me,' she said, with one of her characteristic shrugs, 'and most people are so dull, are they not?'

Canon Wrottesley felt that mixed sensation which acquaintanceship with Mrs Ogilvie always gave him, a feeling of resentment combined with a desire to please. He rather hastily let the mantle of the seer drop from him, and said, 'I wish our little party were not so much dispersed. Mr Laurence from Frisby brought two charming friends with him, and they much hoped to be here to meet you. Falconer is their name —Sir John and Lady Falconer. He has just been made Minister at Buenos Ayres, as I dare say you know, and he told me they once had the pleasure of meeting you in Spain years and years ago.'

'I never remember people whom I have met years and years ago,' said Mrs Ogilvie. Her near-sighted eyes, with their trick of contracting slightly when she looked fixedly at anything, narrowed as she spoke, and the heavy lids closed lazily upon them.

Lady Falconer meanwhile had arrived at the tea-table, and greeted Mrs Ogilvie with evident pleasure. 'I am afraid you will hardly remember me, as it is a very long time since we met,' she said; 'but my husband and I always remember how good you were to me when I was ill at Juarez.'

Mrs Ogilvie rose and shook hands with a cordiality that was charmingly expressed. Her eyes were no longer half-closed, and her colour never varied. 'You were ill, were you not?' she said in a manner that was a little vague but polite and sympathetic.

'Yes,' said Sir John; 'and you let your maid come and nurse her. My wife always said she would have died if it had not been for you.'

'The climate was abominable,' said Mrs Ogilvie; 'every one felt ill there. Why does one go to these out-of-the-way places?'

'It is very absurd,' said Lady Falconer in a friendly way, 'to be surprised at people growing up; yet I can hardly realise that Captain Ogilvie, whom we met to-day, is the little boy who was with you at Juarez. How time flies!'

'It more often crawls, I think,' said Mrs Ogilvie, smiling, with her mouth a little twisted to one side. And then she rose to go, because she never stayed long at any party, and not even the fact that Sir Nigel Christopherson was going to ride in the last race altered her decision. At parting she was too glad to have met Lady Falconer, trusted that if ever she cared to see a collection of tiresome pictures she would come to Bowshott, and hoped that if the gardens would be of any interest to her she would drive over some afternoon, when it was not too hot, and have tea with her—any afternoon would do. Had Mrs Ogilvie been giving an invitation to tea in a barn it is probable that her manner would have been as distant, as casual, and as superb as when she suggested with a queer sort of diffidence that people might care to see the famous galleries and gardens of her magnificent house.

'How very interesting,' said Canon Wrottesley to Lady Falconer when the carriage ha

driven away, 'your meeting like this!' The vicar's acquaintance was not extensive, and that people should re-encounter each other or have mutual friends always struck him in the light of a strange coincidence.

'She has not altered much,' said Sir John Falconer, 'and yet it must be many years since we met. I suppose she never was good-looking. Somehow one seems unaware of it when one is speaking to her.'

'I could do nothing but look at her dress,' said Lady Falconer good-naturedly. 'How is it that everything she wears seems to be in such perfect taste?'

'Mrs Ogilvie is a rich woman,' said Canon Wrottesley, enjoying a proprietary way of talking of his neighbour, 'and she is able to gratify her love of beautiful raiment. I do not understand these things myself,' he went on with a masculine air, 'but the ladies tell me that her dresses are all that they should be.'

'I don't know what we should have done without her at Juarez,' said Lady Falconer in her peculiarly kind manner. 'Sir John and I were on our honeymoon, and like many other newly married people we wanted to be alone.'

'Dudley the artist told us about Juarez, I remember,' interpolated Sir John, 'otherwise I do not suppose we should ever have heard of the place. Dudley had been sketching there.'

'I had not a maid with me,' went on Lady Falconer, 'and Mrs Ogilvie in the kindest way allowed a Spanish woman she had with her to do everything for me.'

'Mrs Ogilvie is always devoted to everything Spanish,' said Mrs Wrottesley. 'Her mother was Spanish, and I dare say you know she made her home in Spain for six years after the eldest boy's death.'

'I did not even know that she had lost a son,' said Lady Falconer. 'How very sad!'

The crowds of gaily dressed people about them, the shouts of the bookmakers, and the pleasant sense of being on an enjoyable picnic contrasted oddly with any reference to such banished topics as death and sorrow.

'I consider that Mrs Ogilvie is one of the most reserved women I ever met,' said the canon, proceeding to give an epitome of a character which he thought he—and perhaps only he—understood. 'She is impulsive yet cautious, clever yet light-minded; for a woman, her intelligence is quite above the ordinary run, and yet she is often hopelessly difficult to convince.' He leaned forward on the table, looking handsome and dignified, and his clean-shaven face had an appearance more clever than was quite justified by his attainments.

'I am sure that Mrs Ogilvie is a woman of deep affections,' said Lady Falconer, whose tongue seemed framed for nothing but kind speeches.

'I remember,' said Sir John, 'how struck my wife and I were by her devotion to her son that year we met her in Spain. It seemed to us to have almost a touch of tragedy in it; but that, of course, is now explained by hearing that she had just lost her only other child.'

Lady Falconer turned in an explanatory manner to Mrs Wrottesley. 'My husband and I were having a discussion, on this marriage journey of ours,' she said, 'on the subject of how much one would do for any one whom one loved. Sir John was horribly disappointing, and seemed doubtful whether he would tell a lie for any one. Mrs Ogilvie, if I recollect rightly, said that even a crime was justifiable for the sake of one whom one loved.'

'Poor Mrs Ogilvie!' said Mrs Wrottesley.

The words seemed incongruous. Mrs Ogilvie, with her contempt for pity, her sumptuous manner of living and of dressing, was hardly an object for pity; and Canon Wrottesley felt that his wife's remark was out of place, although he was far too kind to say so in public.

There was a sudden lull in the noise of the racecourse; the bookmakers' harsh shouts ceased, and even conversation stopped for a moment, for the last race must have begun.

The last race was an interesting event. It was a steeplechase for gentlemen-riders only, and friends of the riders were standing up in the grand stand with field-glasses to their eyes watching with absorbed attention the horses, which were still a great distance off on the other side of the course. Jane was standing by Peter. Kitty Sherard was quite near; she was not looking through field-glasses as the others were doing, but stood leaning lightly on the balcony of the grand stand, with her two hands clasped on the wooden rail in front of her.

'Can you see who is leading?' said Jane, and received no answer to her question; and then she saw that Miss Sherard was not looking at the racecourse at all. Her face was white, and her hands, which were clasped on the wooden rail before her, had a strained look about them, and showed patches of white where the slender fingers were tightly pressed on the back of her hands.

The last race involved some big fences, it is true; but then Kitty of all people in the world was the last to be afraid of a stiff course. It was not like her to keep her eyes turned away from the horses until some one quite close to her said, 'Well, they're over the water-jump, anyway,' when she suddenly raised her field-glasses, with hands that were trembling a little, and kept her eyes fixed on the race. It was going to be a close finish, most people thought, and as the horses came round the farther corner you could have spread a tablecloth over them. Toffy's horse closely hugged the rails and was kept well in hand; while, of the two in front of him, one was showing signs of the pace, and the other had not much running left in him. These two soon tailed off, when the favourite

(dark-green and yellow hoops) came through the other horses, and rode neck to neck with Toffy's brown jacket. It became a race between these two, and it was evident that the finish was going to be a close one.

'Toffy 's not fit to ride,' said the voice of a young man who would have liked Toffy to win the race, although he knew better than to back him. 'He is as mad as ten hatters to ride to-day.'

'I wish to goodness they wouldn't talk!' said Kitty suddenly under her breath.

The two horses came on neck to neck to the last fence but one.

'By Gad, he knows how to ride!' went on the masculine voice; 'but Spinach-and-Eggs is the better horse of the two.'

The ground was in splendid going condition, and the two horses raced over it. They could see Nigel Christopherson's face now, and Toffy was smiling slightly, while the other man's teeth were firmly set. Their two stirrups clanged together as their horses rose to the rails and galloped on to the last fence.

And there, of course, Toffy's horse fell. It was not his fault; there was a bit of soft ground just where he landed, his horse blundered and fell, and the favourite rode past the winning-post an easy winner.

The spectators in the grand stand could see Christopherson pick himself up a moment later and lead his horse home; but there was one moment, as the rider behind him took the last jump, when for a fraction of time it seemed more than possible that he might land on the top of Sir Nigel. For a breathless space there was that dramatic silence which may be felt when a concourse of people literally hold their breath. Miss Abingdon covered her face for a moment; and Jane heard Peter say, 'Good God!'

The next moment the danger was over, and Jane was surreptitiously handing Miss Sherard a handkerchief drenched in eau de Cologne; for Kitty had sat down suddenly and her face was white. She did not speak, but she looked up into Jane's face for a moment; and the look said as plainly as possible, 'I can't help it. Don't tell any one.'

'It was a horribly near thing,' Jane said, in order to explain Kitty's pallor to herself, 'and I'm afraid it has given you rather a turn.'

Miss Sherard's feeling of faintness was only momentary, and already the bright colour was in her cheeks again, and she laughed and said, 'It was not the last jump really, Jane; but I'm a horrible gambler, and I put my very last shilling on Toffy.'

(To be continued.)

A FORGOTTEN ISLE.

By MARY STUART BOYD, Author of *Our Stolen Summer*.

WITH regard to Iviza, the third in importance of the Balearic Isles, which lie midway between Spain and Africa, even the usually omniscient Baedeker maintains a dignified reserve. And, indeed, Iviza is so little visited that, while the Isleña Marítima Steamship Company convey passengers thither from Majorca for fifteen pesetas first class, or eleven pesetas second, they charge eighteen and thirteen pesetas respectively to convey them back to Majorca; which looks as though they thought voyagers might require to be cajoled into going to Iviza, but would need no inducement to return.

The complete history of Iviza has never been, and never will be, written. From the fragmentary records existent, one gathers that from earliest days occupation of the lovely and fertile island was hotly contested. Chaldeans, Egyptians, Phœnicians, Romans, Greeks, Vandals, Saracens, and Moors fought for its possession. Since the Aragonese invasion of the thirteenth century Iviza has belonged to Spain.

During our winter in Majorca we had heard strange tales of the Ivizans—told, it must be admitted, by people who avowedly had never set foot on their island—grim stories of ferocity, of the crack of the ready pistol, of the slash of the handy knife. We had also heard that these fierce islanders were invariably kind to strangers. Now we were on the way to judge for ourselves.

We had left Palma on a bright April noon; but as the heliotrope mountains of Majorca receded into the distance the brilliance faded. From azure the Mediterranean changed to purple, from purple to gray, and the wind blew keenly against us.

Before the land we left had faded from sight two little clouds, low on the western horizon, were recognised as outlying islets of the Ivizan group. Then, as we gradually approached, hills upon hills, promontories, and more islets appeared. The sun sank in golds and grays behind the heights, and still we steamed on through the gloom, past a rocky, indented coast, on which we saw no sign of habitation.

Then, as the *Lulio* entered a narrow passage, out of the darkness rose a town, piled on an eminence—a town of unexpected beauty; for from the tranquil waters of the almost landlocked bay to the highest point it was sparkling with lights. It was Iviza, the one important town of the island.

Having secured rooms and supped at the *fonda*, which is in the newer town that clus ters about the harbour, we set out to explore Mounting a slope, we found ourselves confronte

by the Roman walls that encircle the steep rock on which perches the ancient, tower-crowned city. Passing through the gate, in a niche on either side of which stands a massive headless marble statue, we encountered a medley of dark, secretive streets, in whose recesses something of the atmosphere of the Middle Ages seemed still to linger. But the Ivizans go early to bed. The lights that illumined our landing had already been extinguished, and finding our progress over these tortuous steeps a protracted stumble, we groped our way back to the *fonda*, resigned to leaving further exploration to the morrow.

A clerical friend in Palma had given us an introduction to his chosen friend, who was a *beneficiado* of the cathedral at Iviza, so when we had drunk our coffee we climbed to the cathedral on the heights to find the *padre*.

Service was proceeding as we waited, enjoying the music and the tuneful clamour of the curious wheel of bells that mingled so harmoniously with the sound of the organ. Though the cathedral, in common with all the Ivizan churches, belongs to no known school of architecture, it is very beautiful; and the interior, with its canopied Virgin, gives an inspiring sense of light.

The *padre* had been forewarned of our coming. When Mass was over he joined us on the *mirador* outside, and, ignoring the differences in our nationality, language, and religion, promptly took us under his kindly wing. With his guidance we saw the treasures of the cathedral, climbed the tower to enjoy the comprehensive view, and visited the adjacent strongly fortified castle, now used as a military barracks. Leaving the heights, we walked down to the church of Santo Domingo, an antique building with curious red-tiled domes.

The priceless possession of the old Dominican convent is a certain image of Christ that for ages has been the object of great devotion. Until the last century all ships, on entering or leaving the harbour, were in the custom of saluting it with flags and a shot from their cannon.

As we neared the church we saw approaching a peasant family attired in the quaintly attractive gala-dress of the island. The sun-tanned peasant father had a complete suit of old-gold embossed velvet, and a purple scarf was wound about his waist. The mother wore the immoderately wide skirt gathered into a plain, high-waisted bodice, the short, full silk apron, the little shoulder-shawl with its prettily flowered border and long fringe, and the gaily embroidered head-wrap that make up the distinctive Ivizan costume. From the tip of her pigtail a brightly coloured ribbon hung down to the hem of her spreading skirts. A girl of eight or nine was a diminutive facsimile of her mother. The elder boy wore a man's suit in miniature of very light blue, and a wide-brimmed yellow hat. The group tapered off with a wee boy in an oddly cut long frock and a white Carlist cap, and a baby in bunchy petticoats and a muslin cap with wings. The father, who smiled pleasantly when he saw us notice the children, carried with evident care a liqueur-bottle. Moving decorously, as though conscious of being bound on some important mission, they passed into the church.

We had paused to examine an antique painting, and when we reached the chapel that contained the venerated image we found the little family already kneeling before the altar, even the youngest apparently impressed by the solemnity of the occasion.

After a few moments, the father, still holding the bottle, approached the *padre* to crave a private word with him, and they left the chapel together, leaving the mother and children still on their knees.

A great silver lamp, suspended from the roof, burned before the Christo, and all round the walls were votive offerings. While we lingered, a female attendant entered the chapel, carrying the liqueur-bottle. Drawing down the lamp, she proceeded to fill its reservoir from the bottle; the peasant family, who still maintained their devotional attitude, half-turning to watch her movements.

Returning to the body of the church, we found the *padre* and the rustic in earnest converse. During a recent serious illness, the *padre* explained, the husbandman had vowed the gift of a bottle of olive-oil for the sacred lamp. Now on his recovery his first action had been to make a little pilgrimage to the chapel, bringing his entire family, to give thanks for his restoration to health, and to deliver the promised gift. The incident was typical of the simple and sincere devotion of the Ivizans, and our hearts melted and were glad with the little household.

As we walked along the ramparts, a portly figure, joyously arrayed in a suit of maize-coloured corduroy, a lilac-checked shirt, and a green hat, gladdened our vision.

'That is the English Consul,' said the *padre*, who was on good terms with all the parishioners. 'I shall introduce him.'

The British Vice-Consul blushed—nay, even twittered—when presented to genuine natives of the country he represented; but his knowledge of its language was rudimentary. After a few tentative efforts the conversation lapsed into Spanish. As the youngest member of our party said, it was quicker.

A few years ago a lucky chance revealed the existence of a Phœnician necropolis on a rocky slope just without the old Roman walls, and there, after lunch, the untiring *padre* escorted us. There was nothing in the appearance of the scene of the excavations to suggest catacombs underneath our feet. Tall asphodels were blooming all around; and two men in wide felt-hats and abbreviated blouses, who were standing by some

heaps of tumbled soil, were the only visible sign of the explorations that were going on beneath. When we neared them we saw that their labour consisted in passing the earth through a fine sifter, and that close by yawned a hole overhung by a rope running on a wheel attached to a rough tripod.

The youngest of our company was the only one daring enough to accept the invitation to descend. Sliding down the rope, he vanished into the bowels of the earth. One of the workmen followed, and while we awaited their reappearance we noticed that many brown bones, light in weight and brittle to the touch, mingled with the mounds of refuse, and that bits of broken pottery and fragments of iridescent glass leavened the heaps.

The adventurer's account was that after passing through an outer hall they entered a narrow chamber, where a ghoulish being was sitting on the edge of a long stone coffin, grubbing in the dust and ashes that filled it. Resting on the rim of the coffin were the relics that had just been recovered from the débris — portions of shattered pottery and a beautiful, but mutilated, five-inch-high statuette of terra-cotta. Descending farther, they reached a large chamber where there were many stone coffins and a plenitude of bones.

At some unknown date the Moors, discovering the catacombs, had despoiled them of treasure, in the process leaving trace of their own presence in the form of broken water-jars and other worthless belongings. Fortunately these early marauders valued only gold; so that, in spite of the irremediable damage caused by their rough handling, a mine of precious things still remains to enrich archæology.

By the windmill on the crest of the hill was the house where the treasures are temporarily housed before being removed to the museum, which is close by the cathedral. There also the *padre* was a welcome guest; and there, in a small, dark room, wonderful things were shown us—tiny jars delicately decorated; perfect vases of iridescent glass; strange bas-relief recumbent figures, with stiffly extended hands; antique coins; scarabs, from which the Moors had reft the setting; golden ornaments that had escaped their rapacity; and old lamps enough to have satisfied even the covetous Abanazar.

Sunday morning dawned so calm and beautiful that we rose early, and went out to the Alameda to watch the country-folk coming in to town to Mass and to market; and as we sat on the stone seats under the trees we chirruped with irrepressible enjoyment, so unexpectedly and deliciously odd were the figures that streamed past.

Some of the women rode mules, sitting perched high on a pile of sheepskins, their multicoloured petticoats billowing about their neat ankles; others were packed closely into open carts that had cushions placed low on either side of their sagging floor-matting.

With its flippant hues and staid cut, the native dress was a bewildering combination of garishness and sobriety.

They say there are ten men for every woman in Iviza, and the aspect of the roads on that sunny April morning inclined us to believe the report, for from every direction came fine, strapping fellows moving in droves. In striking contrast to the expansive attire of the women, the men's dress appeared designed to accentuate their natural slimness. The trousers of richly coloured velvet or plush fitted closely to the limbs, except at the ankles, where they spread widely; while their further adornments were gaily hued shirts or short, full blouse-jackets and bright sashes. The popular large felt-hats were lavishly adorned with gold cords; and in addition to one necktie for use, it was customary to add a second, and even a third, for show.

As the morning advanced, a moving throng, resplendent in colour, crowded the market-place. Girls temporarily freed from their chaperons were parading in decorous rows, their hands, holding pocket-handkerchiefs heavily edged with crochet lace, sedately crossed over their short but voluminous green silk aprons.

It was perhaps only to be expected that wherever we saw a bevy of girls a corresponding cluster of men would be at hand. Yet we rarely saw them address one another. The modern etiquette of a rustic courtship in Iviza is clearly defined. A plenitude of suitors being assured, it is the maiden who makes the selection. The admirers of a marriageable girl wait for her outside the church door on Sunday, and when she leaves Mass the one who has the prior claim presents himself and walks beside her for the first portion of the homeward journey. Then at a given point, or within a stated time-limit, he yields place to the second, and the second to a third, until the number is exhausted. If any suitor seeks to transgress the unwritten law, pistols may flash and knives are apt to spring. In all other matters the people of Iviza are peaceable, and on all points moral and virtuous. It must be admitted that certain of the more frolicsome spirits still keep up the custom of saluting the maidens of their choice with a charge of rock-salt aimed at the ankles, and it is devoutly to be hoped that the unwieldy masses of petticoats serve at least one useful purpose by shielding the wearers from the saline missiles of love's artillery.

After breakfast we visited the museum, a rich treasure-house, from whose top shelves skulls of vanished races grinned down as though the owners found food for secret amusement in the idea of a special building being set apart in which to guard with ceaseless care what to them had been but everyday possessions.

Then the *padre*, with kindly thought and

subtle intuition of what is interesting to the stranger in a foreign land, took us a-visiting. Our first call was upon the only professional artist on the island, who, like everybody else, seemed on affectionate terms with our sponsor. And in the artist of that forgotten isle we rejoiced to meet the romantic painter of fiction, the picturesque hero one reads about, but rarely has the good fortune to see in the flesh.

Don Narciso—his very name seemed in harmony—was young, buoyant of spirit, charming in manner, and an enthusiast regarding art. He had a thick, curly, black beard and abundant wavy black hair. He wore a becoming blouse, and his loosely knotted tie was of *amarillo* silk.

Don Narciso welcomed us cordially. He was working at a full-length portrait of a bishop, who was a native of Iviza; and around the walls of his studio were brilliant studies in figure and landscape. It was refreshing to breathe the artistic atmosphere, and when we parted from the painter it was with a speedy reunion in prospect.

Next day, with the *padre* as guide, we drove across the island to San Antonio, the town that ranks second in importance to the capital. And here I may remark parenthetically that in this land of simple delights a whole day's hire of a man, horse, and conveyance costs four shillings; and that country *fondas* volunteer to board and lodge visitors for two pesetas a day (about ten shillings a week), wine, of course, being included in the fixed price. The *fonda* at Iviza, which enjoys a monopoly and ranks as fashionable, charges six pesetas a day for its best rooms, with full board.

At first sight we found San Antonio disappointing. What we had expected I do not know. What we found was a whitewashed village set on a rocky slope by an enclosed bay. The situation was delightful; yet, after the grandly characteristic city of Iviza, this zealously whitewashed little town, in spite of its undoubted antiquity, seemed insignificant and new.

Though our time was limited, we saw many things—the curious old church that was once a fortress against the raids of piratical Moors; the modern lighthouse; and the famous Cave of Santa Ines, with its unique subterranean chapel and the Holy Well, that on San Bartolomé's Day (which occurs in January) is the object of annual pilgrimage, when people from all parts of the island visit the cave to picnic, drink the waters of the Holy Well, and dance decorously—in those voluminous skirts it were impossible to frisk—until sunset.

The cave is about a mile from the village, and the way to it is a track over solid rock. Thither we were escorted by Señor Antonio, yet another comrade of our good *padre*.

In the thirteenth century, before the fortress was converted into a church, the inner chamber of the cave was used as a place of worship. And there are curious legends of a supernatural image of the martyred Santa Ines, that on the day of San Bartolomé made its appearance before the underground shrine—an image that, no matter by whom it was removed or in what consecrated building it was housed, miraculously found its way back to the cave.

Carrying a lighted candle, the valiant Antonio entered the cavern; and close on his heels we followed, doubled up, down an uneven burrow that led by devious angles to the inner chapel, where we could stand upright, and where, despite the passage of centuries and the falling of much débris, the arch of the roof masonry and the place of the altar were still discernible.

The climax of our visit to the little white town was an introduction to Señorita Antonia, the beloved of Antonio, whom we met in the house of her mother in the steep street near the church.

The concluding day of our fleeting visit had rushed upon us. In the morning we went in the company of the British Vice-Consul to the Salinas, the great lagoons whose utilitarian existence dates back to long before the Conquest, and from which nine thousand tons of salt are annually shipped to various parts of the world.

The weather was magnificent, and as we drove along by the wide, shallow pools the scene was one of unexpected brilliance. The strong sunshine glittered on the sharp-faceted crystals of pyramids of rough salt, that were reflected in the still blue water. Twice a year, when the lagoons are dry, a thousand men find employment in recovering the sun-dried salt crystals and building them into miniature icebergs. It was the quiet season at the Salinas. The sun had not attained its summer heat, and the pools were full of water. Yet a succession of trucks were conveying salt over the movable lines of rails to the wharf, where streams of salt, like sparkling white torrents, were falling from the shoots of the pulverising-machines into the flat-bottomed barges that were supplying a large Italian barque.

Don Narciso was our companion that radiant afternoon, and it was through a fair, green world that he led us, by pleasant country byways, towards the little village of Jesus, to see a noted picture in the church there. Our way thither led first by the watercourses—the *feixas* that are so quaint a feature of so delightfully quaint a country. On either side of the raised centre path ran broad ditches full of clear water, where shoals of little fish, like vivified marks of exclamation, darted out and in among the rushes; and where on every floating leaf a tiny frog, green or golden, bronze or chocolate, sat and croaked like a little king on an island throne. It was with lamentable lack of monarchical dignity that each in turn, as he got hint of our

approach, took an agile header into the water and vanished.

Vines trained to trellises bordered the *feixas;* and at frequent intervals tall, whitewashed gateposts, reached by narrow bridges, but quite unsupported by walls, reared their arched bulk with something of the self-conscious air of whited sepulchres. A few of the tall gateways led to sheds from which issued the grunts of unseen animals; but most of them seemed to have singularly little reason for existence.

Our path led under trees heavy with green velvet almonds, and past fields knee-deep in full-bearded grain and rich in blood-red poppies and crimson gladioli, among which wide-hatted women, the upper of their many skirts tucked up pannier-fashion, were busy weeding.

The church belonged to that informal, almost casual, style of architecture peculiar to Iviza. The roof was red-tiled, and within and without the building was severely whitewashed. The special picture, which formed the centre of the great altar-piece, was the work of an unknown painter of the early Valencian school. It was a simple and refined composition, obscure in detail—even after Don Narciso had thrown open the big door of the church to allow more light to enter—but remarkably rich and full in colour.

The *cura* of the little church was not at home; but his parents, a dear old rustic couple who lived with him, knew Don Narciso, and welcomed us warmly, offering that spontaneous and insistent hospitality that struck us as being a special feature of the Ivizans. A winter passed in Majorca had accustomed us to the polite but purely perfunctory fashion in which, like the Spaniard, the Majorcan offers food to all comers, secure in the knowledge that it will be declined. A very few days spent in Iviza had taught us that when the Ivizan offers refreshment to the visitor he means it to be accepted.

The moment we were all seated on chairs set round the walls of the large, airy room, into which the wide, outer door directly opened, the good old father hastened to bring out a tray of liqueur-glasses and a decanter of amber-hued Ivizan wine—wine that had been pressed from grapes ripened close by; and the mother ran to fetch a plate of sweet biscuits and large goblets of clear water. Then, standing before us, they watched with genuine pleasure while we sipped the wine, and, having praised it in all sincerity, followed the custom of the country by drinking the water.

The sole offspring of the worthy couple had been two sons, both of whom had shown a vocation for the Church. The son in whose house they lived was now *cura* of Jesus, while his brother was *vicario* of San Raphael, a parish only a short walk distant.

Our casual visit to the little hamlet left us an unfading impression of rural sweetness of atmosphere and of modest pride that had attained its ideal.

So ended our stay in Iviza; for when dinner at the *fonda* was over and our farewells said, the steamer was waiting to take us back to Majorca. The visit had been a short one, yet our thoughts held precious memories of a sincere and kindly people, of the gentle *padre* and his affectionate care for his flock, of Narciso and his pictures, of the Consul and his flamboyant taste in dress, of the loves of Antonio and Antonia, and of the dear old father and mother of the *cura* of Jesus.

Though it lacks the savage grandeur of some parts of Majorca, Iviza has beautiful and romantic scenery; and life in the remote island is sweet and simple and wholesome. There is little money in circulation, but more is not needed. Fish may be had for the catching, the ground is fertile, the climate gracious, and the water-supply unfailing, so food is abundant and cheap. We had thought house-rent low in Majorca, but in Iviza it surely reaches its minimum.

This, then, was our impression of the forgotten isle, about which such highly coloured tales were circulated. As we found the Ivizans—honest, courteous, generous, and hospitable, quaint of dress and soft of voice—so have I written of them.

THE MONTH: SCIENCE AND ARTS.

A NEW AND NOVEL DECORATIVE PROCESS.

'M' LADY' is ever on the lookout for some quaint novelty capable of fulfilling the purpose of personal adornment, and now the feminine world of western America has certainly secured something which is distinctly unique in this particular field. By means of a secret process, the discovery of Professor Louis Delamothe, a prominent American electro-metallurgist, fruit, flowers, insects—indeed, all plant and animal life—can be converted into metal without any depreciation of the natural beauty. 'Metallising' it is called, and its application appears to be illimitable. Thus, for instance, the rose, no matter how delicate and beautifully tinted it may be, is taken from the garden, and within a short while every petal, leaf, and stalk is transformed into solid metal about twice as tough as copper. It is not a plating process, but an actual metamorphosis from the organic into the inorganic condition. The process is entirely electrical; and so skilfully and completely are the natural characteristics of the articles under treatment preserved that it is not until they are taken in the hand that their metallic nature is detected

by the weight. The writer has seen bunches of grapes, with every vein in the leaf, every hair-like tracing, tint, and even bloom on the fruit, fully and imperishably preserved. Leaves, insects, flowers, and so forth have been treated in this manner, and make an attractive pin, brooch, buckle, or what not. One of the most fashionable objects of this character is the 'Chanticleer' hat-pin—a fowl's foot completely changed into metal—which forms one of the most quaint means of securing a lady's headgear that has yet been devised. The process is also utilised for the production of articles for the boudoir and dining-table, the thornless cactus (with the interior removed and the rind subjected to the art) forming an excellent pepper-box or sugar-dredge. The perfection of the process has taken Professor Delamothe some twenty years, and it was only a few months ago that success was at last achieved. The metallising factory is now in full swing. The novelties have not yet made their appearance in this country; but it is safe to assert that when they at last reach these shores they will command as big a vogue as they do in America to-day.

THE EDISON ELECTRIC STORAGE-BATTERY.

Much has been written from time to time about the electrical battery that the American wizard has perfected, and the remarkable performances that have attended its utilisation. That there is a great future for the electrically propelled vehicle in the busy streets of our large cities no one can gainsay, since it is smoother in running, more silent, and more convenient to handle than the petrol-bus, while the liability to breakdown is more remote. But the great disadvantage has been its comparatively brief period of activity, only some fifty miles or so being run on one charge. With the Edison battery, however, the radius of action on a single charge is at least doubled, and without any increase in weight. A motor-bus seating thirty people has been built on these lines, with no outside deck; and its total weight in running order, with the driver and conductor, is about twenty-one hundredweight. This vehicle has completed a number of runs made in the country around Orange, New Jersey, in order to demonstrate its possibilities. On a single charge its average running distance at fourteen miles an hour was about one hundred and twenty miles; the shortest day's run, in very hilly country, being one hundred and two miles. The car measures twenty-eight feet in length; and, in addition to the eight-cylinder battery with which it is fitted, it is heated with hot water and lighted by electricity. The average running cost—that is, for electrical energy—comes out at about a half-penny per mile, and the motor can develop fifty horse-power, which is adequate to drive a fully laden vehicle up the steepest public road. The system has got far beyond the experimental stage, for one American railway has nine motor-cars of this type operating on its system, while another, forty feet in length and built of steel, has been constructed for a Chicago railway.

A NEW TYPE OF OPEN-AIR DWELLING FOR CONSUMPTIVES.

The battle against the 'white scourge,' as tuberculosis has come to be called, is waged to-day with unremitting vigour. It is now generally realised that the most efficient means of combating its ravages is pure air, and plenty of it. For this purpose open-air sanatoria have been established in various parts of the country, and the course of treatment is in the great majority of cases highly successful. The style of buildings adopted at these institutions, in the opinion of a close observer, is not all that could be desired, and accordingly he has evolved a new type of open-air shed which has the advantage of being much cheaper than the conventional class of building, so that such treatment is brought within reach of a far larger number of the community, while existing disadvantages are overcome. The inventor has patented his idea, and has set forth the reasons which led him to perfect it, and the essential features of his system, with plans of the improved dwellings, in a small brochure which is well worth perusal by all those interested in this campaign. The essential point, he urges, apart from the improvements in the design of the building, is the erection of small and inexpensive sanatoria, instead of setting up here and there extensive and costly establishments. In this way not only would the isolation hospitals be more widely distributed over the country, but the open-air treatment would be rendered cheaper than it is at present. Following up the extension of the same treatment to delicate and backward children, which is now being actively pursued, he has elaborated an interesting open-air 'camp' system which should certainly arouse the interest of those concerned in the solution of this problem.

THE CULTIVATION OF THE PEA-NUT.

We in this country are rather apt to regard the little pea-nut—or, to quote its popular cognomen, the 'monkey-nut'—with disdain. As a matter of fact, however, it is one of the most valuable food products which we possess, and the cultivation of the humble little 'goober' is an extensive industry. In North America it is held in much higher estimation, owing to its dietetic value, and pea-nut groves as extensive as peach-orchards, and nursed with just as much care, can be found in places where the natural conditions are adapted to its cultivation, since the little tree is somewhat particular in regard to situation. Last year the United States raised over two million and a quarter pounds' worth of these nuts. They enter very extensively into the

vegetarian menu and the confectionery trade; while as butter they are in great demand, especially for camping-out parties, and for yachting, motor-car, and other excursions. The manufacture of the butter is a very simple process. The nuts are first shelled, and then slightly roasted. The thin outer skin is removed by fanning, being rendered easily detachable by the roasting operation, and the kernels are then ground to a pulp, which, as it exudes from the machine in an oleaginous mass, is fed into tins or bottles, and tightly sealed. Certainly this butter is more tasty than the ordinary commodity, and it is far more nourishing. In this country the nut is extensively used as a substitute for the almond, especially with the addition of a little essence of the latter nut to disguise the fraud, in the composition of fancy cakes, macaroons, and icing. In the Southern states many planters who formerly raised cotton are now devoting their attention to the cultivation of the pea-nut. The crop is far more certain, owing to the ravages of the boll-weevil in connection with the cotton, and the enterprise is being attended with conspicuous financial success. Under ordinary cultivation, one acre will yield thirty-four bushels of nuts; but the Government authorities believe that if the seed is carefully selected and cultivation carried out on more scientific lines, the yield can be increased to about sixty bushels per acre. Indeed, top notch has been obtained with one hundred and sixty bushels to the acre. The industry has another attractive feature: the nuts represent absolute profit, since the vegetation is a valuable forage, and, aggregating two tons per acre, provides sufficient to defray the whole cost of cultivation of the staple article.

GOLD-BACKED MIRRORS.

The utilisation of gold for backing mirrors as devised by Mr Sherard Cowper-Coles has proved eminently successful, and is entering into extensive commercial application, since the advantages over the ordinary silvering method are so great. It has been found that not only is the gold unaffected by conditions which invariably set up deterioration in silvered mirrors, but the light reflected is more penetrating and less dazzling. The gold-backed mirrors are thus eminently adapted for use in motor-car headlights and similar applications where a powerful beam of light is desired. The invention has also been adapted to general house lighting, decoration, and other purposes. One of the drawbacks of the metallic filament electric incandescent light is its powerful glare, which is so trying to the eyes. This drawback can be entirely overcome without any sacrifice of illumination if a thin gold film is deposited on the lower half of the lamp-bulb, though a more satisfactory effect is secured if a glass reflector coated with a thin film of gold is suspended immediately beneath the lamp. The reflector throws the greater part of the light back on to the ceiling, where it becomes diffused; but a certain quantity of the light passes through the reflector. This, being of a pleasing green tint and mingling with the diffused illumination, produces a soft light, which is very restful to the eyes.

A NEW NON-CORROSIVE DISINFECTANT AND SHEEP-DIP.

Sheep-farmers who realise the great difficulty attending the use of arsenic and sulphur in their dipping operations will doubtless be interested in a new dip which has been recently evolved. Many efforts have been made to secure an efficient means of dissolving crude arsenic and sulphur in the deodorising liquid, but without success, with the result that dipping could only be carried out in an irregular manner. Recently, however, a process has been invented whereby the arsenic and sulphur are readily dissolved, and in such a manner that when they are mixed with the tar acids a very powerful non-corrosive disinfectant is obtained. It is stated that, this speciality being much stronger than any other type of non-corrosive deodoriser—it is from four to five times as powerful as the disinfectant usually employed—only a much smaller quantity need be used at a time, so that the dipping operation can be carried out far more cheaply as well as successfully.

STUDYING THE MAP OF THE HEAVENS.

During the past few years the study of the stars has become far more popular among the masses, and this trend towards a keener appreciation of a fascinating branch of science is one to be fostered. While several popular books on astronomy have been published, and have an extensive vogue, they are somewhat beyond the grasp of the average observer. What he particularly requires is some simple means whereby he can readily identify the prominent features of celestial phenomena. This desire is now fully met by means of the *New Star Calendar* and *The Stars from Year to Year*, the editions of which for 1911 are now obtainable. The general arrangement is distinctly ingenious, as the heavens are mapped out in a circle, with the 'landmarks of the sky' drawn and titled in white, and with the centre as the zenith. They give a vivid and intelligible representation of the heavens at ten in the evening, about the middle of the month, with instructions as to how to determine the exact location of any particular stellar point on any other day of the month by means of a simple mental calculation. In the *Star Calendar* the rim of the map representing the horizon is divided into twelve equal segments, each of which corresponds to a month in the year. All that is necessary is to turn the circular map round until it assumes the form of a star, keeping the name of the current season

at the bottom. This chart is undoubtedly the simplest and most efficient means of reading the sky that has yet been devised. In *The Stars from Year to Year* a chart of the sky for every month is provided, and together with the notes and explanations that are given, it forms a handy guide, philosopher, and friend to the vast unfathomable overhead. The publishers are the *Beds. Times* Publishing Company, Ltd., Bedford.

A NEW STAMP-AFFIXING MACHINE.

Another simple appliance for affixing stamps by mechanical agency to general postal matter has made its appearance. This machine is designed to carry five rolls of stamps of one thousand each, and of different values. The letter is inserted and stamped, afterwards falling into a locked receptacle. By this arrangement it will be seen that a business house can detect whether its stamps are being legitimately used or otherwise, and can easily determine its postal expenditure by reading the register. The machine is so designed that stamps from any of the five different value rolls can be affixed as desired, or one from each, placed side by side, on the document. Special means are provided for moistening the gum for affixing at the instant the latter operation is about to take place; and, in order to prevent the adhesive becoming moist from humidity within the closed box, the supply of water for damping purposes is carried in a sealed vessel.

A REMARKABLE ELECTRIC SIGN.

The American has an inordinate taste for doing things on a large scale, and the latest outburst in this direction is a mammoth electric overhead sign that is being erected in the largest cities throughout the country. At the same time, however, it must be admitted that this latest specimen of advertising in the sky is striking, vividly real, and picturesque. When the writer was in New York recently it had just been completed, and a dense crowd of people packed all the streets giving a view of this latest wonder. It is a vast reproduction in electric lamps of the chariot scene from *Ben Hur*, the 'tale of the Christ,' by General Lew Wallace, with all the hustle and rush of frantic movement and excitement faithfully portrayed. The picture is carried within a frame ninety feet in length, presenting the proscenium of a theatre, with the curtain, lit in red, just pulled up. At each side is a huge pillar, outlined in electricity, capped with a bowl of flame which is produced by a huge gas-jet, and the waving of the fire in the wind is produced by the rapid moving in and out of switches governing the lighting of the electric lamps. Right in the centre of the picture is a broadside view of the chariot, forty feet in length, the driver and horses of which are twenty feet in height, while the wheels are eight feet in diameter. Behind is seen a second chariot, and in front one gets a glimpse of the huge arena, with its crowded tiers of seats. The whole picture is mounted on a colossal framework of steel erected on the roof of an hotel, above which it rises to a height of seventy-two feet. Behind the picture are two large houses built into the framework carrying the electric mechanism. Every minute detail in the composition is worked out in a lamp corresponding to the colour desired, the white road-bed and the clouds of dust alone requiring over one thousand lamps. The race is shown in every detail. The motor devices move in and out so rapidly and punctually that you see the horses' legs leaping backward and forward in long strides in their frantic dash; the chariot rolls; the wheels fly round so rapidly that the spokes cannot be seen; the track appears to rush beneath the horses' feet with terrific rapidity; clouds of dust roll into the air; the charioteer is seen urging his horses on in their mad career, with the next chariot in hot pursuit; the manes and tails of the horses appear to flutter in the wind; the gaily coloured robe of the driver waves in the breeze; and the outline lamps of the arena are so manipulated that it seems to fly past you. The illusion is so complete that one has the impression of actually being in the Roman amphitheatre and gazing upon one of the most terrific races that ever took place. The Americans pride themselves that this is the most realistic piece of work in electric lighting that has ever been produced, and they are certainly entitled to every credit for what is undoubtedly a masterpiece in advertising. But the expense must be tremendous. The race is repeated about every ten minutes from dusk to midnight. Altogether twenty thousand electric lamps are employed in the picture, and they are controlled by two thousand seven hundred and fifty switches. For the rapid extinguishing and lighting of the lamps, by means of which the vraisemblance of rapid movement is produced, a special type of switch called a 'flasher' is used, and they are so arranged as to give no less than two thousand five hundred flashes of light per minute. The lamps vary in intensity from two to thirty candle-power each, and six hundred horse-power is consumed in the operation of the sign.

AN AUTOMATIC DEVICE FOR SELF-PORTRAITURE.

The desire for taking a portrait of one's self is one that no amateur photographer can quell. Sooner or later he makes the attempt, with a length of string, tubing, or so forth for the manipulation of the shutter, but rarely scores a success. An inventor has now come forward with a new bulb-pressing device which works automatically, and which renders self-portraiture a simple and easy matter. The device is small, and comprises a frame in which are placed bellows which are fitted with a spiral spring of outward tension. The upper part of the frame

is triangular in shape, and houses the bulb operating the shutter of the camera. The base of this triangle is movable, and when the bulb is inserted within, the base is forced somewhat downwards. The bellows in opening out to the full tension of the spring come into contact with this movable section, forcing it upwards, thereby compressing the bulb which actuates the shutter. In taking a self-portrait the operator focuses his camera in the usual manner, and then sets the automatic device by compressing the bellows and setting the catch-bolt by which it is held in the closed position. He then releases the bolt and moves to take up his own position in front of the lens. As the bellows distend very slowly he has ample time to assume his pose, and by watching the action of the apparatus can tell the moment the exposure is to be made. The apparatus is very simple and positive in its action, so that the number of failures in self-portraiture should be reduced by its employment to a negligible quantity.

THE CONTINENTAL HOTEL INDUSTRY.

There have been many grumbles in the newspapers and elsewhere as to the decadence of British inns. Mr T. E. Kebbel has contributed to *Blackwood* a paper on 'Country Inns,' in which he draws a sharp distinction between the old English inn as described by Dickens and the ordinary public-house, which will not usually bear comparison with the Continental *restauration*. A motorist of experience has pointed out the absurdity of imitation French dishes under French names in Highland hotels, and suggests that in Yorkshire, as in the Highlands, there should be more dishes which recall the really excellent native products. A motoring correspondent of the *Times* compares French and English inns much to the disadvantage of the latter both in price and quality. In France the total cost worked out at eight and fourpence a day, exclusive of tips. In England for a less appetising bill of fare the cost was from eleven shillings to fifteen shillings a day. He concludes that for the motorist the English charges are likely to prove almost double those of the French. Dickens's refreshment-bar described in 'Mugby Junction' is not a thing of the past; for this correspondent, on his return from Normandy, when the steamboat landed him in England at six-forty-five A.M., with no prospect of being in London before ten, found a train without a breakfast-car, and the sole place of refreshment a bar measuring about ten feet by four feet, containing nothing but tea bitter as the waters of Marah, four small, stale buns, six bananas, and thirty-six large biscuit-tins—all empty as himself. Other people besides Mark Twain have termed Switzerland one big hotel. In a recent book on Switzerland it is stated that in the Grisons, in which even the larger towns rarely have a population of more than fifteen thousand, there are not less than three hundred and fifty-eight hotels; while the canton of Berne boasts of over four hundred hotels. The total for the twenty-two cantons is given as about two thousand, with accommodation for one hundred and thirty-five thousand tourists; but this does not include the 'irregular beds' which supplement these in the height of the season, on the billiard-table or in the bathroom. One group of hotels in a single centre entertains over seventeen thousand guests, while one hotel has about seven hundred men and women on its staff. A waitress has been known to take home twenty pounds in tips; a porter may receive for the season twenty-eight to thirty-two pounds, the luggage-master fifty pounds. In one big hotel the tips amount to about seven hundred and fifty pounds in a season. Altogether, the tourist is credited with spending about six millions sterling annually in Switzerland.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

A SEA-SYMPHONY.

All day the sea made a song for you, singing
Of brown rocks jewelled by opal spray,
Of wild sea-chargers, their white manes swinging,
And fair sea-maidens as wild as they:
The sea made a song for you thus, all day.

The wind that listened, joined too; his sighing
Is but the burthen of song too sweet
To waste on the sails of the ships far flying
Toward strange horizons where dim worlds meet:
The wind made a song for you, blent with sighing.

All night the sea and the wind together
Call to you, searching the moonlit beach,
Past the yellow gorse and the scented heather
To the cliff's white edge where the shadows reach:
All night the sea and the wind beseech.

But I? I listen and watch and wonder,
Silent, cold at the lips and heart,
For the wind may sigh and the great waves thunder,
They never can reach you, afar and apart:
You lie asleep, and I watch and wonder!

CONSTANCE FARMAR.

*** TO CONTRIBUTORS.

1st. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2nd. For its return in case of ineligibility, postage-stamp should accompany every manuscript.

3rd. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4th. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

NOT WHOLLY BAD.

By T. W. SPEIGHT.

IN THREE CHAPTERS.—CHAPTER I.

FROM the dawn of a certain September day, a few years ago, till past luncheon-time, a dense white fog had enveloped the country for miles around the little town of Dunstan's Cross. Then the sun's rays had succeeded in dispersing it, and a bright afternoon was now merging into a serene and unclouded evening.

At an easel in a room devoted to her own pursuits—she hated the word 'boudoir'—which fronted the west, and the open French window of which glinted in the yellow sunshine, stood Vera Willoughby, painting. It was a very pretty room, its furniture and fittings, in the main picked up piecemeal at sundry places abroad, displaying evidences of taste beyond the common; and Vera was a very pretty young woman. As she paused now and again to contemplate her work, with her head held a little on one side, she whistled a few bars softly to herself. It was an accomplishment she had picked up from her brother Max. She was engaged in putting the finishing touches to the background of a portrait of her mother. Once she spoke aloud. 'It's a wretched daub, and I've a great mind to burn it;' adding a moment later, 'and I would, too, only mamma would be so dreadfully vexed.'

In the pauses of Vera's whistling the only sound that broke the afternoon stillness—yet seeming not to break it, but rather as if it were whispering into 'the ear of Silence'—was the faint, complaining murmur of the river Boone as it tumbled over the weir, half a mile away down the valley. There had been heavy rain among the hills, and the river was in flood.

Save for two or three domestics, Vera was alone in the house. As soon as the fog had cleared off, Mrs Willoughby had gone in the victoria to visit a sick friend a dozen miles away, and was not expected back till after dark. Max was away in London for a few days in connection with certain business for his mother.

Over the lintel of the main entrance to Mallow Dene, the home of the Willoughbys, was a slab bearing the date 1688. It was a rambling, strongly built two-storied domicile, heavily roofed to withstand the fierce winter storms of these parts. It had lozenge-paned windows, huge fireplaces, and a considerable amount of substantial panelling—such a house, in short, as nobody thinks of erecting nowadays, when we no longer build for our posterity. It had been the home of several generations of well-to-do yeomen-farmers. When the last of them died, without issue, the Dene stood empty for some years. Then Arabin Willoughby, a prosperous London merchant, saw it, took a fancy to it, and bought it. Although there were more rooms in the Dene already than he and his small family were ever likely to need, he added a dining-room, together with a room in the rear for his daughter's especial use, to the existing accommodation. When that was done he retired in a great measure from business and its worries, and made the Dene his permanent home, running up to London for an occasional day or two. But he only lived for a few years to enjoy his well-earned leisure.

Vera went on painting and whistling while the afternoon deepened towards evening. Suddenly she put down her palette and brush, and turned her easel with its face to the wall. Her expectant ears had caught the click of the gate which opened from the garden in the rear of the Dene on a winding lane, and on the instant the love-light sprang to her eyes. Up the pathway between the flower-beds came swinging a tall, personable, young fellow, wearing a Norfolk suit, who paused for a moment on the veranda to disburden himself of a fishing-rod and sundry tackle before entering the room. A kiss—more than one—followed, as a matter of course, for Fred Marsden and Vera were engaged lovers.

'I've brought Max's rod and tackle back,' said Fred, 'because the river won't be fit for fishing during the short remainder of my stay.'

He had come down from London for a fortnight in order to be with his beloved, and had taken up his quarters at the Red Lion Inn in the neighbouring village. It was now Wednesday, and his brief holiday would come to an end on Friday.

'What a disappointment for you!' remarked Vera sympathetically.

'I don't feel it as such, because it will furnish

[*All Rights Reserved.*]

me with an excellent excuse for seeing more of you than I might otherwise have done.'

'Oh, indeed!' was the sole reply vouchsafed him.

'How are you progressing with the portrait? May I not have a glance at it?'

'Certainly not. It's just horrid, and I'm ashamed of it. Don't say another word about it, but come to the piano. I want you to try over a new duet with me. I don't think you'll find it too difficult.'

Accordingly they sat down side by side at the instrument, and had just struck the opening chords when the grotesquely distorted shadow of a human form, as projected by the rays of the setting sun, sprang into visibility upon the wall above the piano. Vera and Marsden jumped to their feet simultaneously, and turned to confront the intruder, and as they did so a low cry broke from the girl.

On the threshold stood a man in the hideous garb of the convicts whom Vera had seen at work outside the walls of the penal prison some half-a-dozen miles away. His right hand was grasping the framework of the French window, while his left was pressed to his side as if he were labouring for breath. His bare head left visible his close-cropped chestnut hair, streaked with gray about the temples. He was tall, and thin almost to the point of emaciation, and was sun-embrowned through much labour in the open air. He had a thin-lipped mouth and coldly watchful, blue-gray eyes. Conventionally attired, he would have been accounted by most persons a strikingly handsome man. One might guess his age at forty or a few years over.

After staring at him for a few seconds in silence, Marsden, as if mechanically, moved towards the bell-pull.

'Don't do that,' said the convict, taking a stride forward and holding up a protesting hand. 'Don't do that, or Miss Willoughby will be sorry ever after.'

Fred paused and looked at Vera, who could only give utterance to a gasping 'Oh!' Both were struck by the convict's cultured intonation.

He advanced another step. 'Permit me to explain,' he said to Vera with a courteous bow, which, as coming from a being so garbed, smacked of the bizarre. 'In my unhappy self you behold none other than Edward Delane, your mother's brother and your uncle. After telling you this, you will not, I am sure, wish to give me up to my pursuers, who may be here at any moment.'

He spoke with the air of one forced into a painful confession, and he now stood before her, with his head slightly bowed and his eyes bent on the ground, awaiting her decision.

It took Miss Willoughby some seconds to recover her power of speech, so utterly taken aback was she. 'But—but I was always given to understand,' at length she contrived to stammer, 'that my uncle Edward died abroad many years ago.'

'That I did not do so is proved by my presence here to-day,' replied Delane, with a lifting of his eyebrows and a whimsical smile. 'I admit that I was the black sheep of the family,' he went on, speaking rapidly. 'When a very young man I was fleeced by gamblers, and was unable to meet my liabilities, which were liquidated by my father. After that I was shipped off to the Colonies with two hundred pounds in my pocket, and from that time was disowned by all my relatives save by my sister Laura, your mother. No doubt they were pleased to hear that I had shuffled off this mortal coil. But how do such reports get about?'

He darted to the window and threw a searching glance down the lane and along the visible stretch of high-road leading to the village. Then he went back.

'So much I tell you now,' he said, still speaking rapidly, 'but there is no time for more at present. The question is, now that you know my relationship to you, are you prepared to do whatever lies in your power to save me from recapture?' He looked appealingly at Vera.

'What is there that I can do?' she asked in a strained voice. Her mind was in a turmoil. The strangeness of the revelation thus flung at her, as it were, had deprived her for a little space of the power of coherent thought.

'Cannot you find me some clothes other than the cursed togs I'm wearing? Cannot you spare me enough money to enable me to get out of the country? Surely that's not too much to ask of you!'

Vera looked at her lover as if asking him to counsel her. Thereupon he whispered a few words rapidly, and on the instant her face brightened.

Turning to Delane, she said, 'My brother is from home just now; but in his room, which Mr Marsden will show you, you will find a quantity of his clothes, out of which you can take your pick.'

'A thousand thanks, my dear niece. You have made me your debtor for ever,' replied Delane; and to Marsden it seemed as if the hunted expression his features had hitherto worn faded out of them as he spoke.

Half-a-minute later Vera was left alone. For a short while she stood motionless, as if lost in thought; then she tottered to the nearest chair and sank into it, saying aloud as she did so, 'It must be. There is no other way—none.' Her face had paled, and she sat with an air of utter abandonment, her cheek pressed against the cushioned back of the chair. Again her lips murmured the words, 'No other way.'

She straightened herself as Marsden entered two minutes later. She was seated with her

back to the waning light, and he noticed nothing unusual in her.

'I've left him changing into some of Max's things, which ought to fit him fairly well, seeing that they are both about of a height. I hope to goodness he 'll succeed in getting safely away. So far, he has not explained how it happens that Mr Edward Delane is, or was till this morning, an inmate of a convict prison. But he may yet do so.'

'Oh Fred, do you really think he is the person he says he is—that he is mamma's brother and my uncle? Is it not possible that he may be nothing more than a vile impostor?'

'Possible, but not probable, as it seems to me. After his escape, why should he have made his way to the Dene, instead of going elsewhere, unless he knew it was the home of his relatives? If he were an impostor, how should he be aware that you ever had an uncle named Edward Delane, and how should it be within his knowledge that your mother's baptismal name is Laura? No. Till some cogent proof to the contrary comes to light, I, for one, shall continue to accept him as Mr Edward Delane.'

Vera sighed, but apparently found nothing to say.

'And now as regards some pecuniary help for him,' resumed Fred. 'I've only a few pounds on me just now; but'——

'My dear Fred, what are you thinking about?' interrupted Vera. 'That part of the affair is mine entirely. Mamma has about thirty pounds put aside for a certain purpose, which I can get at; besides which, nearly half of my last quarter's allowance is still unspent, to all of which he is welcome. But before he returns I have something very particular to say to you. Dearest, in view of what has happened within the last hour, I freely and fully release you from your engagement, and beg of you to forget the vows we made to each other that happy day three months ago.' Her voice broke, and she turned aside to hide the emotion she could no longer control.

Fred looked dumfounded, and as if he feared Vera were taking leave of her senses.

'I can't in the least comprehend what you are talking about,' he said.

'Oh, cannot you understand? After this afternoon's dreadful revelation you must see how impossible it is that I should ever become your wife.'

'I see nothing of the sort. You seem bent on mystifying me.'

Vera tapped the ground with her foot. Her colour was coming and going fitfully. 'You must comprehend how out of the question it is that you should marry into a family one member of which is an escaped convict.'

Fred broke into laughter. 'Is that all, you foolish darling? How absurdly you talk! What would it, or could it, matter to me if half your relatives were escaped convicts? What do you imagine my love is made of that it should fail you before it has ever been put to any real proof? How little you know me!'

'But think—think, Fred! Your father would never forgive you were you so far to demean yourself as to'——

'Don't talk like that, darling. My father need never know of the existence of such a person as your uncle. But all the opposition in the world would not affect my engagement to you. I love you too much for that. Besides'—— He stopped at the opening of the door.

They were standing by the window, and on the instant they turned, to find themselves confronted by a man whom neither of them recognised as having ever seen before. He halted on the threshold, regarding them gravely. He was habited in a suit of boating-flannels, with shoes to match, and a straw hat—conspicuous by its club ribbon — which he removed on coming forward. He was clean-shaven save for a small moustache, which, like his hair, was jet-black. A monocle was stuck in his left eye.

Vera's first thought was, 'He must be one of Max's friends to whom I've not been introduced.' But if such were the case, he could not have timed his call more inopportunely.

Advancing a few steps, she said, 'May I ask the nature of your business, sir?'

A laugh broke from Delane. 'Is it possible, my dear niece, that you fail to recognise me?' he said, as he shut the door behind him.

Vera sank into the nearest chair with a gasp of amazement, and Marsden fell back a couple of steps in sheer surprise.

(To be continued.)

THE BRITISH RAILWAY SYSTEM.

THOSE who talk glibly about the nationalisation of our railways, as if it were as simple a matter as the purchase of the telephone system, may receive a little instruction from the interesting paper contributed to the Engineering Section of the British Association by the President, Professor W. E. Dalby. This remarkable contribution opens with the reminder that the capital invested in the railway companies of the United Kingdom is nearly twice the amount of the National Debt, that the gross income of the railway companies is within measurable distance of the national income, that to produce this income every inhabitant of the British Islands would have to

pay annually £3 per head, that they employed over 600,000 people, and that about 8,000,000 tons of coal were burnt annually in the fire-boxes of their locomotives.

The paid-up capital of the railways in 1908 was £1,310,900,000, in comparison with £240,000,000 in 1850. The increase up to 1896 was at the rate of nearly £100,000,000 per annum. After that the increase was greater; but in 1900 the rate showed 'a tendency to a gradually decreasing value.' Part of the increase immediately after 1896 was due to nominal additions to capital. The gross receipts amounted to £120,000,000 in 1908; and the net revenue, after deducting from the total receipts the working expenditure for 1908, was £43,500,000, corresponding to 3·32 per cent. of the total paid-up capital.'

At the end of 1908 there were 23,205 miles open, corresponding to 53,669 miles of single track, including sidings. In that year the railways of the United Kingdom carried 1,278,000,000 passengers, exclusive of season-ticket holders, and 491,000,000 tons of goods; the quantity of the latter in 1907 being nearly 515,000,000 tons. It was curious, remarked Professor Dalby, that very approximately the companies carried per annum one passenger and about 0·4 ton of goods for every pound sterling of paid-up capital. The proportion of the gross receipts absorbed in carrying out this service had increased from 47 per cent. in 1860 to 64 per cent. in 1908. 'The net receipts reckoned on the paid-up capital, exclusive of the nominal additions, had not declined more than ½ per cent. since 1870, notwithstanding the increase in working expenditure. The cost of working the traffic, calculated in terms of the train-mile, remained fairly constant over a series of years. The average working costs per train-mile over the years 1905 to 1908 were 41·63d. Locomotive power absorbed an amount equal to the traffic expenses; and the companies actually paid in rates and taxes a sum nearly equal to the whole amount required to maintain the rolling-stock in an efficient state. If the whole of the locomotive power could be obtained for nothing, the average dividend would be increased only by 1¾ per cent. Reckoned on the ordinary stock alone, the increase would be about three times this amount.

Amongst other very interesting information supplied by Professor Dalby are some old statistics relating to British railways, in which the financial position and the cost of the working of the railways in those earlier days is compared with the present state of matters. Professor Dalby compares the position of the old London and Birmingham Railway with that of the London and North-Western Railway, the system into which the former has grown, the years selected being 1840 and 1908. The number of train-miles on the old system for the year 1839 was 714,998. The cost per train-mile for that year worked out at 93·3d. The receipts amounted to 231d. per train-mile. Hence the working expenditure was 40 per cent. of the gross receipts. The gross receipts for the year were £687,104, which, after deducting the necessary charges for loans, rents, and depreciation, enabled a dividend of 9¼ per cent. to be paid on the ordinary stock. There were two noteworthy facts in these old accounts —first, the allowance for depreciation on the rolling-stock was nearly 4 per cent. of the receipts; and, second, the cost of working the traffic was given per ton-mile. The actual figures given by Mr Bury, the locomotive-engineer, for the year 1839 were: for passenger trains, 21,159,796 ton-miles, giving an average of 542,533 ton-miles per engine, at 0·86 lb. of coke per ton-mile, costing 0·17d.; and for goods trains, 17,527,439 ton-miles, giving an average of 584,247 per engine, at 0·57 lb. of coke per ton-mile, costing 0·11d. per ton-mile. If we compare the capital receipts, miles open, train-miles, and working cost of the old system in 1840 with that of the London and North-Western in 1908 we get some curious facts. The gross receipts of the London and North-Western in the year mentioned were twenty-two and a half times as much as those of the old system in 1840, and the track-mileage open was about twenty-two times as great. The money earned per mile of track open was thus practically the same after a lapse of seventy years. To earn the same amount per mile of track open, however, the trains of the London and North-Western had in 1908 to run 63·3 times the number of train-miles that the trains of the London and Birmingham Railway ran in 1840. 'That was to say, in order to earn a sovereign a London and North-Western train had now to run three times the distance which it was necessary for a London and Birmingham train to run to earn the same amount. Another point was that although the mileage and the receipts per mile of track open had each increased in the same proportion, yet the capital had increased at a greater rate, being as the total amount twenty-four times as much as in 1840, and the stock and share capital had increased twenty-eight times. So that with the necessity of running three times the train-mileage to obtain the same return per mile of track open, there was the obligation to pay interest on an ordinary stock which had increased in a greater proportion than the mileage and in greater proportion than the earning power of the line. Lowe dividends were therefore inevitable.'

Professor Dalby concludes this section of h paper as follows: 'The cost of working p train-mile had decreased gradually to about ha its value in 1840, but at the same time th receipts per train-mile had dwindled to one-thi of the amount in 1840. These figures show that a more conservative system of financing t railways might have been adopted in the earl

days with advantage. If, when the receipts per train-mile were larger, a proportion of the revenue had been used annually for the construction of new works and for the provision of new rolling-stock, instead of raising fresh capital for everything in the nature of an addition to the railway, the companies would to-day have been in a position to regard with equanimity the increasing cost of working. It was too late in the day to recover such a strong financial position; but even now on many lines a large proportion of the revenue could be sunk in the line with great ultimate advantage to the financial position.'

It is interesting to observe an optimistic note in Professor Dalby's remarks: 'The mileage, passengers, and goods carried increased regularly with the increase of capital, indicating that up to the present time the possibility of remunerative return on capital invested in railway enterprise in this country was not exhausted. It was true that there was a *maximum* of goods carried in the year 1907; but the sudden drop in the curve between 1907–8 suggested that the drop was only of a temporary character, and there was every reason to believe that the curve would resume its upward tendency in time.'

PETER AND JANE.

By S. MACNAUGHTAN, Author of *The Andersons, The Fortunes of Christina Macnab*, &c.

CHAPTER VI.

MRS OGILVIE'S ball, according to an old-established custom, followed closely on the races. The proximity of the two events had gained for the quiet countryside the name of being a gay neighbourhood. Country houses were filled with guests, and the ballroom and the famous picture-gallery at Bowshott received an even larger number of guests than usual. There was something impressive in the great space and width of the ballroom, with its polished floor. The palm-houses had been emptied to form an avenue of green up the middle of the room, at the extreme end of which an altar-piece representing a scene from the Book of Revelation showed a company of the heavenly host as a background to a buffet-table crowded with refreshments. The constant movements and the brilliant lights provided a fitting air of gaiety to the scene. It was Mrs Ogilvie's whim to have her rooms illuminated in a manner as nearly as possible to represent the effect of tempered sunlight. 'No woman cares to see,' she used to say; 'she wants to be seen.' And so the lights at Bowshott were always arranged in such a way that the beauty of women should be enhanced by them. Plain faces softened under the warm glow which had no hard shadows in it, and beautiful faces were lighted up in a manner that was almost extravagantly becoming.

'It is only on such an occasion as this,' said Miss Abingdon, 'that one really seems to think that Bowshott is put to its proper use.'

She was talking to a young man who called old furniture delicious and Spanish brocade sweetly pretty.

'The modern Englishman,' said Mr Lawrence, 'was made to live in barracks or in a stable. Probably he is only in his right place when he is on a horse. Could any one but he live at Bowshott and dress in shabby shooting-clothes, and smoke cigarettes in a room where Charles I. made love, and wear hobnailed boots to go up and down a grand staircase?'

Miss Abingdon sat on a convenient large couch where a chaperon might close her eyes for a moment towards the end of a long evening without being accused of being sleepy. She was the recipient of many wise nods and hints and questions.

'How well they look together!' said a lady, as Peter Ogilvie and Jane came down the line of palms together, and she left a blank at the end of her speech to be filled in, if possible, by Miss Abingdon.

'Jane makes Peter look rather short,' said another. 'She should have chosen some one taller.'

'I suppose it really will be settled some day,' said Mr Lawrence.

'They went for a ride this morning,' said Miss Abingdon dryly, 'and they were positively disappointed because Sir Nigel Christopherson could not go with them. I do not profess to understand love-affairs of the present day.'

Mr Lawrence was a portly, red-faced young man with a high-pitched voice like a woman's. He throve on scandal, and gossiped like a housekeeper. Miss Abingdon liked him, and thoroughly approved of him; his views were sound, his opinions were orthodox, and he always took her in to supper at any dance where they met.

Peter and Jane meanwhile had strolled into the picture-gallery, with its softly shaded lights and long vistas of flowering plants and palms. There was about them to-night something which seemed to set them apart. Few persons cared to disturb them even by a greeting as they sat side by side in the corridor or walked together down the long gallery. Jane Erskine had put off that air which suited her so admirably of seeming to be always under an open sky; she had left it behind with her short skirt and the motor-cap which she loved to pull down over her eyes. This evening, in shimmering

white satin, and with a string of pearls round her throat, she looked what she was—a very beautiful and very distinguished young woman. The tempered light of the room seemed to deepen the colour in her cheeks and to bring out the bright tints of her hair. Her lips were parted in a radiant smile.

She and Peter mingled with the throng of dancers again, and then, not waiting until the music had finished, they left the ballroom by the farther door, where Mrs Ogilvie was standing.

Peter stopped when he saw her, and looked a little anxiously at her. 'You should not be standing, should you?' he said in his kindly way. 'You look tired.'

Mrs Ogilvie gave one of her enigmatic smiles. 'Who would not be tired?' she said. 'Was there ever such an extraordinary way of amusing one's self as to stand in a draughty doorway in the middle of the night shaking hands with some hundreds of people whom one doesn't want to see?'

She sat down on a couch and watched the two figures as they passed down the long corridor. The mechanical smile of welcome with which she had greeted half the county this evening had not died away from her face; she sat upright on the satin-covered sofa. There was about her an air of strength, of eminence almost, which seemed to place her genuine ugliness above criticism. Her dress was of some heavy purple stuff which few women would have had the courage to wear, and the diamonds in her hair, with their sharp points of radiating light, accentuated something that was magnificent and almost defiant about Mrs Ogilvie to-night. Her short-sighted eyes contracted in their usual fashion as she watched the couple disappear down the vista of the corridor. 'If only it could be soon! If only their marriage could be soon!' she murmured to herself, her lips moving in an inward cry that in another woman might have been a prayer.

'How do you think she is looking?' said Peter as, without conscious intention, they drifted away from the dancers into a more distant part of the house. 'Surely she gets tired too easily? I wish she would see a doctor; but she hates being fussed over, and one can never persuade her to take care of herself.'

'What is one to do with so wilful a woman?' said Jane.

They paused and looked at the dim crowd of dancers through one of the entrances to the ballroom, and passed down the corridor, where misty figures sat on sofas and chairs enjoying the cool. Every one looked misty and far away to-night, and almost as though they had not sufficiently materialised to be perfectly distinct.

With definite intention, Peter led his partner towards a little room, hung with miniatures and plaques, at the farther end of the long corridor. Here they found Sir Nigel Christopherson in conversation with Miss Sherard. Kitty was talking as lightly as usual, deliberately misunderstanding everything that was said to her, and being as provoking as she always was; and Toffy was so much in earnest that he never saw Peter and Jane, but continued to talk to the girl beside him. So the two intruders never entered the room at all; but as they pursued their way still farther, Peter was thinking about Mrs Avory, and wishing to goodness that Toffy had never met her.

The big house seemed too full of people for his taste to-night. Every room and corridor was occupied, and Peter said, 'Let 's go to my mother's sitting-room. Do you mind, Jane? We can get cool on the bridge.'

Bowshott is a very old house, so old that if it had not been for archæologists who came there sometimes, and read the old stones as though they had been printed paper, no one would ever have known when the earliest part of it was built. Antiquaries agreed that it dated from Norman days; but the only portion of the building of that period which was standing at this time was a tower at the eastward end of the house. It had been almost in ruins at one time, but Colonel Ogilvie's father had restored it, and with a considerable amount of skill had connected it with the more modern part of the house by a stone bridge on a single arch. The whole thing was excellently contrived; the archway lent a frame to one of the most beautiful parts of the garden; and the tower, which was entered by a strong oak door from the bridge, now contained three curious, romantic-looking rooms, with quaint, uneven walls six feet thick, and deep, narrow windows, and heavy oak ceilings.

The largest of the rooms to which admittance was gained by the oak door was Mrs Ogilvie's sitting-room. She had a curious love of being alone for hours at a time, and she enjoyed the sense of isolation which was afforded her by being cut off from the rest of the building by the stone bridge on its high arch. Here she would spend whole days by herself, reading or writing. Above this room, which was full of her own particular possessions, was a smaller apartment containing a valuable library of philosophical works. Here were muniment-chests, and a large writing-table where she wrote all the business letters relating to the estate; and here it was that she was wont to see her steward and her agent from time to time. No one but Mrs Ogilvie and her son ever entered the room without some special reason, and it was too far away from the rest of the house for casual visitors to intrude themselves. The short passage within the more modern house which led to the bridge was reached by a door hung with a leather curtain securely arranged to prevent draughts,

and no one ever lifted this curtain except those who had a right to the rooms beyond.

To-night, however, the house was open to all comers, and it afforded no surprise to Captain Ogilvie and his companion, when they had quitted the corridor and the reception-rooms, and had left the guests and servants behind them, to find a man's figure before them in the short passage leading to the leather-covered door.

'Who's that, do you know?' said Peter when they had passed under the curtain and were crossing the bridge.

'I have no idea,' said Jane; 'some stranger, I suppose, whom some one has brought.'

'They don't seem to be looking after him very well,' said Peter, 'leaving him to prowl about alone and get lost in a great barrack like this. I don't suppose I ought to have asked him if he wanted partners, or anything of that sort? Some one is sure to look after him.'

'Oh, sure to!' said Jane, and they passed over the bridge together and went into Mrs Ogilvie's morning-room.

When they had arrived there and secured two comfortable chairs, the power of speech seemed suddenly to have deserted two persons whose conversation was never brilliant, but who at least were seldom at a loss for anything to say. It appeared as though Peter Ogilvie had brought Miss Erskine to this distant room for no other purpose than to say to her in an absent-minded way, 'Are they all enjoying themselves, do you think; and have all the girls got partners?'

The Bowshott ball was a red-letter day in the calendar of a quiet and somewhat parsimonious county society, and young ladies organised their dress allowances with a view to purchasing at least one good gown should Mrs Ogilvie give a dance as usual.

'I think they are all enjoying themselves,' said Jane, and added with characteristic frankness, 'I know I am!'

Peter gave her a quick glance, turning his eyes full upon her for a moment as though to read something in the face beside him; then he began with absorbed attention to twist the silk ring of his ball-programme round and round his finger. The room where they sat was singularly unlike those rose-shaded bowers which are considered suitable to the needs of dancers who pause and rest in them. Its austere furnishing had something almost solemn and mysterious about it; and the stone walls hung with tapestry, on which quaint figures moved restlessly with the draught from an open window, would have given an eerie feeling to a man, for instance, sitting alone there at twelve o'clock at night. But in the gloom and austerity of the still and distant chamber sat Jane in white satin, with pearls about her neck, and the room was illumined by her.

'So you are enjoying yourself?' said Peter at last—Peter, who never made fatuous conversational remarks of this sort. The words, for no reason in themselves, fell oddly, and were followed by a silence which was disturbing and made for sudden self-consciousness wholly to be condemned and banished, if possible, directly.

Jane, who did not fidget aimlessly with things, began diligently to pluck a long white feather out of her fan, and said in a voice that was deliberately commonplace, 'We ought to go back now, oughtn't we? Let me see who your next partner is, Peter, that I may send you back to dance with her.' She stretched out her hand for the young man's ball-programme.

But Peter sat absorbed, twisting its silk cord round his finger. 'Don't let 's go yet,' he said, and the constrained silence fell between them again. 'I want to ask you something, Jane,' he said presently.

'Yes,' said Jane. Her hands lay idle now in her lap, and she no longer tried to extract the white ostrich feather from her fan.

'I want to know if you think you can care for me a little.'

Probably when a man feels most deeply his utterances are the most commonplace, and an Englishman is proverbially incapable of expressing his feelings. In the supreme moments of their lives, it is true, a few men, and those not always the most sincere, may speak eloquently; but for the most part a proposal from an Englishman is—as it should be—a clumsy thing. Peter Ogilvie could only speak in such limited language as he always used. Yet the world seemed to stand still for him just then; for he knew that everything in his heaven or upon earth depended for him upon what Jane's answer would be.

'Don't let me bother you,' he said at last, 'or rush you into giving an answer now if you would rather wait.'

Perhaps a declaration of love from an old comrade is the most dear as well as the most embarrassing of all such avowals. A heart that has already given itself in loyalty and affection to another finds that it is not a deepening of this loyalty and affection that is asked, but that a complete reordering of things is demanded. The lover's petition, therefore, either comes to the woman as a revelation, betraying to her in a flash that she has loved always, and has merely been calling the thing by another name, or else it finds her impatient at the disturbance of an old comradeship, a cherished friendship, which nothing but this foolish, exacting thing called love could ever shake.

Peter was not versed in introspective questions or hair-splittings; he loved with his whole heart, and he had tried to say so, without very much success, he was afraid. Just then he would have given anything he possessed to be endowed with a little more eloquence, though deep down in

his heart he had a lingering hope that perhaps Jane would understand. 'It's neck or nothing,' he was saying to himself in the homely jargon in which he usually formed his thoughts. 'God knows, I may have been a fool to speak!'

'Peter'—— began Jane shyly. And Peter ceased twisting the silk cord of the programme round his finger, and they turned and looked at each other.

'Is it true?' he said at last with a queer kind of wonder in his voice. He kneeled down suddenly on the floor beside her and gravely kissed her hand.

'Let us go into the garden,' he said. His instincts remained primitive, and just then this room was too narrow for all he felt, and it seemed to him that the large things of the night and the distant glory of the stars were the only environment that he could bear just then.

Passers-by, had they been mean enough to pause and listen outside the sheltering yew-hedge where they sat, might have questioned the poetry of their love-making, and have condemned an avowal of devotion that was punctuated by barbarous slang; but the silence that fell between them was full of tenderness and more easily understood than speech; and perhaps the moon—an inquisitive person at the best of times—as she peeped over the gray turrets of the house, saw the dawn of a love as single-hearted and as genuine as many which have been more carefully analysed and described.

These were two happy, light-hearted persons, without very much to recommend them except a certain straightforwardness of vision which abhorred, as by a natural instinct, circuitous or crooked things, a transparent honesty, and a simple acceptation of those obligations which race and good-breeding demand.

At the present moment, out in the garden on the stone seat set in the embrasure of the high yew-hedge, they were oblivious of everything in the world except each other and the absorbing discovery of love.

They were the last to hear the cry of 'Fire!' which rang out from the house, and they were still sitting undisturbed while men ran with hose and buckets, and a clamour arose in the stable-yard for more water, and a clatter of horse's hoofs could be heard as a groom galloped off for the nearest fire-engine. The yew-hedged garden where they sat was distant a long way from the house, and it was not until a heavy cloud of smoke rose up against the sky that Peter's attention was attracted, and he realised that the Norman tower was on fire.

He started up and ran to the place where grooms and helpers, gardeners and strangers' coachmen, and waiters and guests were standing with hose and buckets pouring a ridiculously little stream of water against the burning pile. The fire had begun in the roof, and the smoke was pouring from the narrow windows in the tower. No flames had shot up yet, and the fire-engine from Sedgwick, prompt and well served as it always was, might be here any minute. The oak roof would burn slowly, and the walls were secure; but the tapestry in the lower room was dry and old, and would fire like a bundle of shavings. An effort was made by a body of men to force an entrance into the lower room and save what they could; but they were beaten back by the smoke which came in volumes down the turret staircase, and by the flames which now began to shoot up here and there against the darkness of the night. There was nothing for it but to safeguard the main building. The wind was setting towards it from the tower, and a party of men were up on the roof treading out burning sparks and playing water where slates were hottest or ashes might burst into flames.

Mrs Ogilvie stood on the terrace in her magnificent purple gown, her red hair with flashing diamonds in it, and her long-handled glasses held up to her near-sighted eyes.

'So that goes!' she said, shrugging her shoulders. 'Well, it will give me a good deal of trouble. Or is it fate, I wonder?'

Peter was directing a body of men to play water on the bridge; and garden and stable hose were turned full upon it by relays of helpers, and some long ladders were placed against the windows to see if it were possible in that way to effect an entrance and save some of the valuables in the room. The guests—women in light ball-dresses and bare shoulders, and men in evening-clothes—had surged out on to the terrace, and were watching with that curious mixture of fascination and regret which comes to the eyes of those who watch destruction going on, and know that they are powerless to prevent it. Every ear was strained to catch the first sound of the fire-engine on the road from Sedgwick, and some twenty or thirty couples, more impatient than the rest, had run to a distant knoll from whence the road was visible, to peer through the darkness and see if anything was coming. The stars shone serenely overhead, and the moon was turning the water in the fountains to cascades of silver; while from turret and roof the volumes of gray smoke belched forth, and the ineffectual fire-appliances played upon the bridge.

It was just then that what seemed almost like an apparition appeared upon the bridge. A man, not above medium height, with a cloak hastily thrown about his head to protect him from the smoke, dashed across the bridge, was drenched by the fall of water, and entered the turret room. People asked each other fearfully who he was. Many, strangely enough, had not seen the figure; the sudden dash through the smoke had not occupied a moment of time, and most eyes were directed towards the roof

the building, while others were turned towards the Sedgwick road. Those who had seen him turned amazed eyes upon each other; women clutched hold of the persons nearest them; and Jane Erskine, seeking half-wildly for some one in the crowd, found Peter, and said to him, 'What is it? Who went in there just now? Oh Peter, for a moment I thought it was you!'

There was a shout of warning; but it was too late for the man, whoever he was, to turn back. He was inside the tower now, and no shouting could hold him. Some prayed as they stood there, murmuring half-mechanically, 'Save him! save him!' as instinctively men and women will pray even when the life for which they plead may carry with it such sorrow as they never dreamed of.

Suddenly some young men who had climbed to the top of the knoll gave a cheer, and the fire-engine from Sedgwick turned the corner of the road with a fine dash; for Tom Ellis, a good whip, was driving, and the white horse on the near side knew as well as any Christian how to save an inch of the road. The fire-engine, all gleaming with brass fittings and flaming red paint, clattered up to the door, and pulled up with admirable precision on the spot from which hose could be played. Eight bearded men in helmets leaped from their seats and got their gear in order with the coolness of blue-jackets in a storm. But for its quietness and controlled, workman-like effect, the whole scene had distinctly a dramatic touch about it. Possibly the firemen would have shouted louder had they been upon the stage, and fainting women, it is generally assumed, give a realistic touch to well-staged melodrama. No doubt the crowd on the terrace at Bowshott would have disappointed an Adelphi audience. But the old white horse stood to attention like a soldier on a field-day; and Tom Ellis, wiping his brow as though he himself had run in the shafts all the way from Sedgwick, lent a touch of stage realism to the scene.

Nothing could save the interior of the tower—that was past praying for; and a shout went up that there was a man inside, and the firemen threw their ladders against the walls and prepared their scaling-irons and life-saving apparatus. The smoke rolled out in dense volumes now, and through the gloom a voice shouted, 'It's all right! He's crossed the bridge again.'

'Oh, are you sure—are you sure?' said Jane, her fear almost amounting to a panic, and it haunted her for long afterwards that perhaps the man had not actually escaped the fire; for nothing was heard of him again, and it was only after Peter had ordered a fruitless search to be made amongst the débris in the tower that she felt satisfied of the stranger's safety.

A newspaper reporter tried to prove that a gallant attempt had been made to save some valuables in the tower, and went so far as to head one of his paragraphs, 'A Gallant Act.' But there was nothing of value in the tower rooms except the old furniture and books and the tapestry on the walls, and these had all been destroyed. A lady's writing-table was not worth plundering; and in the confusion attendant on the fire, and while silver and jewels were unguarded, it was a creditable fact that nothing was missing from the house.

The ruined interior of the tower smouldered the whole of the next day; but the walls still stood, gaunt and grim, windowless and gutted by the fire. Fortunately the building was covered by insurance, and even the loss of the tapestries was more than compensated for by the fact that an absorbing topic of general interest had been provided in a quiet and uneventful neighbourhood.

(To be continued.)

ROB ROY AND THE MACLARENS.

By FREDERICK WATSON.

BALQUHIDDER, a little glen in the neighbourhood of Strathyre, can record as wild a history as any in Scotland, unless it be Glencoe. To the English reader it is linked with the name of Rob Roy, of whose prowess he is familiar through the immortal work of Scott, and with the name of Rob Roy's sons through the wonderful character-drawing of Stevenson. It also draws the admiration of Tannahill in his 'Braes of Balquhidder,' and has won the love of many a writer since.

In the course of this article, which must of necessity be condensed, it would be unwise to cover old ground in the footsteps of Rob Roy, entertaining though that would be; for there is no end to the traditions and anecdotes surrounding a personality so romantic, and those of any importance are very familiar to the ordinary reader.

Whether Rob Roy was the melodramatic hero Scott conceived is open to question, and certainly as regards his wife there is some evidence to prove that Helen was a more decent, respectable body than her warlike harangues would lead one to suppose. There are really only two occasions recorded on which she appears to have acted with overmuch spirit—one when she collected her husband's blackmail in person owing to his

absence in England, and the other when she incited her son Robin Oig to expel Maclaren from the farm of Invernenty, with fatal consequences, for which she has received the condemnation of history. But although she was brutally ill-used by that scoundrel Graham of Killearn, factor to Montrose, and rendered homeless by the bitter persecution of the times, she does not appear to have egged on her husband to avenge his wrongs, as one would expect from the assumption that she had planned Maclaren's death.

The first incident in the eighteenth century which deserves mention is the part Rob Roy took in the Rising of 1715. He certainly gathered the clan Macgregor for the Stuart cause, and acted in co-operation with his nephew, Gregor Macgregor of Glengyle. They marched into Monteith and the surrounding country, disarmed all suspected of loyalty to the Hanoverian Government, and even assumed the offensive in the district of Loch Lomond. Rob Roy was somewhat perplexed at this stage to know what steps to take for his future welfare, and, like his sons after him, was not anxious to break irretrievably with either side. But he possessed a greater diplomacy than James or Robin Oig, for he was never without a powerful friend, and realised that if he had, for instance, two such powerful chieftains as Argyll and Montrose against him, his life was as good as lost. For this reason his policy had been to seek the protection of Argyll and harass Montrose. Now he found Montrose fighting on the side which held his sympathy, and his patron, Argyll, supporting the Government. A prey to indecision, and anxious above all not to oppose the forces of the exiled king, he decided to remain a neutral spectator; and so equally matched were the two armies that there is certainly some ground for the belief that if he had cast in his lot with the Earl of Mar, and flung his fierce and well-armed clan upon the confused Hanoverian troops, the scale might have been turned, and the cause of the Stuarts been victorious. At any rate, it was not for the reason which the old ballad gives in the lines:

> Rob Roy he stood watch
> On a hill for to catch
> The booty for aught that I saw, man.
> For he ne'er advanced
> From the place where he stanced
> Till nae mair was to do there at a', man.

After the battle Rob Roy and his men marched in orderly fashion to Falkland, and exacted much plunder from the king's supporters—which was probably the reason why, in the subsequent free pardon of rebels, the clan which had actually taken no active part in the battle was excluded, and the name of Rob Roy attainted.

The next few years after the Fifteen were full of desperate adventures for Rob Roy, and miraculous escapes from the soldiery; and it is recorded in Macleay's interesting memoir that Macgregor at this depressing season sought consolation in religion, and for this praiseworthy end decided that Roman Catholicism was more soothing and helpful than the harsh, exacting creed of Presbyterianism. He interviewed a certain Father Drummond, who in consequence of his misdeeds exacted a heavy tax; but, as the penitent remarked afterwards, 'It is a convenient religion which for a little money can put asleep the conscience and clear the soul from sin.'

Shortly after this Rob Roy returned again to Balquhidder, and resumed his former occupation of farming; though this pursuit had always been capitalised to a considerable degree by the recognised profession of blackmail.

Balquhidder at this time was as wild and inaccessible a glen as any in Scotland. Its proximity to the Lowlands encouraged the natives to execute sudden marauding descents with frequency, and the remoteness of its mountain fastnesses rendered pursuit well-nigh impossible. The clans of this district were known as 'broken men,' not only remnants of other septs, but composed of criminals and banditti who had fled from less hospitable parts. The Highland character has perhaps been much idealised in ballad and verse, and as regards the western isles one would not gainsay so happy an opinion. But the dark woods and corries of Balquhidder harboured a lawless and barbaric people, embittered by continual hostility and injustice, against whom countryman and stranger were alike opposed. It was in Balquhidder, in the old castle at the foot of the loch, that Walter Buchanan, a dissolute robber of some education and social standing, at this time headed some desperate rogues, and here the unfortunate Lady Grange spent a miserable night in sheltering from a storm in the autumn of 1732. One can best realise the barbarity of the Highlands on reading how this unhappy lady, owing to suspicions that she might betray her husband, Erskine of Grange, and his fellow-Jacobite conspirators to the Government, was abducted in Edinburgh, conveyed to the hills with the utmost brutality and cruelty, exposed to the greatest privations, and eventually, after seventeen years of isolation and hardship, set free, a hopeless imbecile, to wander in the distant Isle of Skye. No one attempted to rescue her; even her children and her relatives who were numbered amongst the nobility never raised a hand to succour her. A man who certainly would have come to her help was Rob Roy, but he never knew that she was so near him in the ruined castle on the loch. One would have expected the ministers of the various parishes in which she was confined, or through which she was conveyed, to do something, however futile, in the name of Christianity and common humanity; but there is little to be admired in

the clergy of the eighteenth century, many of whom unfortunately were drunken and ignorant men. It is an arresting fact that both Burns and Scott are unsparing in their shafts of ridicule aimed at the clergy, and one recalls the just satire of Lyndsay when the only thing which could pierce the corruption of the Church was the poet's scorn. So harshly did one minister regard Lady Grange that he wrote to his fellow-cleric at St Kilda, where she was then confined, who was more kindly intentioned, accusing him of 'too much attention and care for the wicked incendiary Lady Grange, whose soul is rotten and unworthy of being reclaimed, and who wishes evil to the whole race of Highlanders.'

In Balquhidder the minister of the parish, Ferguson by name, an unscrupulous, irreverent man, was evidently despised by Rob Roy, who, when an increase of salary was suggested, refused with much firmness; and after persuading the minister to drink a great quantity of whisky at the inn, promised him an annual present of half-a-score of sheep and a fat cow, which was at once accepted.

Rob Roy had several sons, but little is known of them, with the exception of James and Robin. While their father lived, his wise judgment restrained their lawless instincts; but after his death they cast discretion to the winds, and, openly joining company with Buchanan and his band, became a constant menace to the surrounding country.

At this point—that is to say, shortly before the death of Rob Roy in 1734—it is necessary to trace the first signs of the quarrel between the Macgregors and Maclarens which caused the tragic death of John Maclaren in 1736. The Maclarens had for long years been on indifferent terms with the Macgregors, and had in recent times rather declined in power. This ill-feeling broke into open conflict regarding the farm of Invernenty, the property of Stewart of Appin. Stewart had let it out on tack to one of the Maclarens while it was still in the possession of the Macgregors, who had resided there for many generations. The incensed Macgregors—and one cannot but sympathise with them—refused to move, and on this the Maclarens called in the aid of Appin to support his claim. He marched into Balquhidder with a company of some two hundred men, and Rob Roy assembled his clan to oppose him. Rob, perceiving that he was outnumbered, surrendered his position and agreed to hand over Invernenty to the Maclarens. After this pleasant conclusion to a threatening situation, he further suggested a friendly contest between himself and any of the Appin gentry. It is said that Charles Stewart of Ardshiel accepted, and not only defeated Rob Roy but cut his arm.

Shortly after this, Rob Roy, now well advanced in years, lay dying in his house at Inverlochlarig-beg, at the head of Balquhidder; and, according to tradition, the Maclaren with whom he had been at enmity so lately called to inquire for his health. Rob Roy summoned his servants, and said, 'Raise me up; dress me in my best clothes; tie on my arms; place me in the great chair. That fellow shall never see me on a deathbed.' Maclaren was received with great coldness, and took his departure after some conversation.

Shortly afterwards Rob Roy said, 'It is all over now; put me to bed. Call in the piper. Let him play, "I will never return" ["*Cha teill mi tuille*"] as long as I breathe.' He died, according to the *Caledonian Mercury*, on the 28th December 1734, and was buried in Balquhidder Kirkyard, where a flat stone covers his remains. This stone, by the way, belongs to a far earlier date, and was possibly placed over his grave to protect the body. The writer has it on good authority that so fearful were the relatives of Rob Roy on this score that two coffins left the house, and that there is still doubt as to where the body of Rob Roy actually lies; but whether this tradition is reliable he cannot say.

Meanwhile the hatred to the Maclarens of Invernenty was really unchanged, and it reached a climax when John Maclaren actually proposed to turn the widow of Rob Roy out of her farm, Inverlochlarig-beg, by offering a bigger rent. Whether this added insult is authentic or not is open to dispute; but there is reason to suppose that Robin Oig for that reason was so infuriated that he planned the murder of Maclaren forthwith, a plot very likely not unwelcome to his mother.

On March 4, 1736, Rob, with several clansmen, started for Invernenty, armed with a Spanish-barrelled gun, a former possession of his father's. John Maclaren was engaged in ploughing at the time, and the words he uttered when he saw Rob approaching have been handed down, and are repeated in Balquhidder to this day. He looked at him with rising suspicion, and, no doubt also perceiving his companions in the distance, remarked, 'What is that snake doing round here to-day?' Then Rob fired, and Maclaren fell mortally wounded between the plough-stilts. At this time Robin was little more than a boy, but he was in no way aghast at the deed, but rather gloried in it; though his biographer, evidently determined to take a brighter view, refers to the incident as 'the unhappy discharge of a gun.'

Rob's fellow-clansmen immediately after the murder ran to the farmhouse of Invernenty and mutilated thirty-seven head of cattle belonging to the Maclarens. This affair caused the utmost indignation throughout the neighbouring country, and added to the prevailing hatred of the Macgregors. Rob fled to France and enlisted in the Forty-second Highlanders. He fought at

Fontenoy, was in a French prison for some time, and eventually returned to England when the Rebellion of 1745 broke out, and was posted with his regiment to defend the coast of Kent in case of foreign invasion. Meanwhile James had joined Prince Charles, and fought with great gallantry at Culloden, where he was wounded, and reached Balquhidder in a litter. Rob returned soon after, although the murder of Maclaren still rankled in the minds of his kinsmen, and walked about Balquhidder as though there were nothing amiss. He even determined to settle down, and married the daughter of Graham of Drunkie, a man of some property. But she died soon after, and it was this misfortune which suggested to the astute mind of James the idea of a second union with an attractive financial basis.

Regarding the person of Rob, it must be at once admitted that Stevenson shut his eyes to the true likeness of the man, and preferred to conceive a more romantic person than was authorised by facts. The piping is a small matter, and there is no reason why he should not have been a great player; though there is no tradition that he could play at all. But even James, his brother, realised how unprepossessing Rob was when, in view of his matrimonial scheme, it was deemed absolutely essential that the bride must be forced to the altar. One must also remember that in the description circulated for his apprehension after the murder of Maclaren, Rob is stated to be 'a tall lad, aged about twenty, thin, pale-coloured, squint-eyed, brown hair, pock-pitted, ill-legged, inkneed, and broad-footed'—altogether quite an ordinary criminal type, and difficult to associate with high romance.

When the Forty-five broke out the Maclarens rallied their clan for the Jacobite cause, and Maclaren of Invernenty, a relative of the murdered man, had charge of the historic piece of cannon of which the Highland army was so inordinately proud. There is an interesting anecdote connecting this cannon with our own day. Invernenty was the ancestor of the late Rev. John Watson of Liverpool, better known as 'Ian Maclaren,' who was a Maclaren on his mother's side, and used the *nom de plume* in memory of her. When the Maclarens passed Stirling Castle, a couple of shots were fired at the walls before the party marched on towards the south. One of the balls entered a private room on the castle front belonging to a family also named Maclaren.

One night, at a public dinner, Ian Maclaren recounted this incident, and when he had finished a fellow-guest near him who had paid close attention, evidently somewhat surprised, remarked, 'But do you know you are speaking of my people? My ancestor occupied that room, and I possess the identical cannon-ball which your ancestor fired in 1745.' The speaker was the late Rev. Alexander Maclaren, D.D., of Manchester.

This Maclaren of Invernenty had many adventures during the Forty-five, and figures in *Redgauntlet* as Pate-in-Peril, the Laird of Summertrees. He was taken prisoner at Culloden, and was marched towards Carlisle for trial. While crossing the 'Devil's Beef-Tub,' near Moffat, Invernenty attempted an escape. He darted over the steep side of the precipice, and managed to conceal himself at the foot with a turf on his head till search was abandoned. He then returned to Balquhidder, and escaped detection, dressed as a woman, for a year, when the Act of Indemnity relieved him from further danger. He was evidently a man of some culture, for Ian Maclaren says somewhere with reference to him: 'In my possession I have a Theophrastus printed in Greek and Latin in the seventeenth century, which came down to me through the eighteenth century, when it was carried to the Rebellion in the pocket of a Highland chief, so that on his march to restore Prince Charlie he might read the chapter "De Desperatione;" and I am bound to say there has also come down to me with the Theophrastus a silver quaich, or drinking-cup, with which the worthy chief would refresh himself when weary without stopping to drink at the brook.'

The terrible penalties which followed hard on Culloden dealt a death-blow to the clan system in its more important centres, and even in Balquhidder, which was overlooked in the suppression of more dangerous places, the raiding spirit was virtually crushed, and the clansmen began to realise for the first time the fatal danger should the attention of the Government be drawn upon them. If the sons of Rob Roy had possessed a modicum of common-sense they would have submitted to the inevitable march of civilisation so dreaded among the Highland gentry, and accepted the mild pleasures of a pastoral life; but, as was suggested already, the scheming proclivities of James could not let him rest till Rob was married to an heiress, and in 1750 the whole country was awakened to the fact that, despite the harsh measures following the Forty-five, and the fact that the Macgregors were under the displeasure of the Government, a most audacious deed had been perpetrated which quite outdid the reckless escapades of Rob Roy.

The country had changed since the abduction of Lady Grange, and this fact seems to have escaped the notice of the Macgregors. The incident of the abduction of Jean Key, a young widow of means, is too well known to require more than the bare mention of the facts. But there is this curious point to be considered—namely, the Macgregors' apparent innocency of any remarkable flagrancy in their act. It is an amazing story from our standpoin

to-day, or from the English standpoint of the time for that matter; but in Scottish history similar occurrences are common, and usually not without romance. For instance, Scott mentions that a respectable woman spoke with great warmth to him on his attitude with regard to this same abduction of Jean Key, and averred 'that her own mother had never seen her father till the night he brought her up from Lennox with ten head of black cattle, and there had not been a happier couple in the country.' In fact, there is no reason to suppose that the affair would have been regarded as anything but a romantic frolic had there not been various circumstances to awaken the sympathies of Scotland. In the first place, Jean Key was a young widow of only six weeks' standing. Then she was dragged off by force and treated without a spark of consideration or kindness. Lastly, the act was associated with the hated name of Macgregor; with James, a notorious Jacobite; and with Rob, a murderer who had fled the country. It shows remarkable coolness on the part of James that he actually tried to bluff matters out by taking Jean Key to Edinburgh with the hope of proving her a willing participator in the abduction. But she died in 1751, and shortly afterwards James was caught and brought a prisoner to Edinburgh.

Stevenson has told how he escaped through his daughter's wit, and once clear of Edinburgh, he took the road to England. Wearied out one night in the Cumberland district, he sat down to rest, when the sound of voices reached his ears. He started to his feet, and by good fortune fell in with a notable tinker, Billy Marshall by name, who saw him embarked in safety for the Isle of Man. From thence he sailed to Ireland, and eventually to France. His melancholy end in Paris in 1754 readers of *Catriona* will recall, and his request for a set of pipers to while away his hours of sickness is the final and most pathetic passage in the life of James More Macgregor.

In the meantime Robin Oig had preferred to remain in retirement in Balquhidder; but in May 1753 he was arrested at a fair at Gartmore, and the gun which had fired the fatal bullet at Maclaren was found in his hands. He was taken to Edinburgh, and his trial took place on the 24th December 1753, when he was condemned to death for the abduction of Jean Key. On February 6, 1754, he was hung in the Grassmarket; and, to quote the *Caledonian Mercury* of the 7th, 'he was very genteelly dressed, . . . behaved with great decency, and declared he died an unworthy member of the Church of Rome; and further still, that he attributed all his misfortunes to his swerving two or three years ago from that communion.' His body was handed over to a few Macgregors, and was met at a safe distance from the city by a larger company, and carried to the kirkyard of Balquhidder, to the melancholy wailing of the coronach.

His brother, Ronald Macgregor, lived to a great age in Balquhidder, and appears to have been a man of considerable influence amongst his fellow-countrymen, and was described within living memory by the old people in the district. There is a tradition that when the soldiery stationed to watch the neighbourhood after the Forty-five became intoxicated and set fire to some houses, the people wished to rise and make an end of them. But Ronald, foreseeing the consequences, implored them for their lives to do nothing that would bring on them the fury of the Government; and so influential was he that they instantly relinquished their intention.

As for the Maclarens, little is heard of them till the concluding years of the century. After the Forty-five and the Act of Indemnity, they resumed their work on the farm-lands of Invernenty; and as the miserable end of James and Rob Macgregor had freed them of continual anxiety, they pursued their placid avocation without opposition. It has been remarked that the severe measures after the Forty-five did not greatly affect Balquhidder; and even in 1790, or thereabouts, so uncertain was the force of the law in that isolated district that when a summons of removal was executed against the Maclarens of Invernenty the king's messenger dared not undertake the duty unless accompanied by soldiers.

The circumstances of this incident are doubly interesting, since the official in charge of the expedition was none other than Walter Scott, to whose family money was owing by Stewart of Appin, the Maclarens' landlord. Accompanied by an escort of a sergeant and six men, Scott entered the romantic district which he afterwards made familiar to the English-speaking world. Fully armed, the little party rode along the edge of the loch and approached Invernenty, only to find it deserted. They stayed there for the night, and returned in safety the next day. As for the Maclarens, they accepted money in compensation, and the majority of them departed for America. The remainder crossed to the Braemar district, and in the middle of last century the uncles of the late Ian Maclaren farmed their own land in the neighbourhood of Blairgowrie.

So changes have slowly worked their will. Balquhidder is still as beautiful, and has a peace to-day which it never could have possessed in those wild times of the claymore and targe. The old castle which harboured Lady Grange and the sons of Rob Roy, and many others long before their day, still stands, a gray ruin, at the foot of the loch. Some miles higher up there is the remnant of Rob Roy's home, and a few stones mark the historic farmhouse of Invernenty. The

very village has deserted the seclusion of the glen, and has settled near the high-road and the station. Some day, perhaps, the last clansman will go, and few are named Maclaren or Macgregor there to-day; and then there will be nothing heard but the sighing of wind and the sudden quavering call of curlew from the mist-hung Braes of Balquhidder.

A FATHER'S RUSE.

AN INCIDENT IN THE CUBAN WAR OF INDEPENDENCE.

IT was in the days, not yet a score of years gone by, when that enchanting island, which Columbus in his letters home described as 'the most lovely land that ever eyes beheld,' was being deluged with the blood and tears of a people striving to be free. The feelings of our American colonists in 1775 were mild and tame in comparison with the intense hatred of the mother-country engendered by gross misgovernment and cruel injustice to the creole of Cuba, the pure-blooded descendant of the Spanish adventurers who took possession four centuries ago. During the long years of bitter warfare which preceded the American occupation, when troops continued to be drafted from the home-land in their tens of thousands, it was a common saying that the Spanish soldier possessed only the ground he stood on. Every hand was against him; and every non-combatant—man, woman, and child—was a Cuban spy. Persecution was met with patriotic resignation, force of numbers with guerilla tactics, Weyler's strategy with the still deeper craft and cunning inspired by the determination to win complete independence.

In none was this determination more deeply fixed than in Señor Rafael Tenorio y Pichardo, a wealthy sugar-planter in the neighbourhood of Santiago. He was now over sixty years of age; but his short, stout, thick-set frame was vigorous as ever, while the flashing black eye and the aggressive nose and mouth bespoke the man of action. Nevertheless, the entreaties of a motherless daughter, added to the fact that his two sons were already in the field, had hitherto kept him at home; though his brain had planned many a successful raid, and his purse-strings had been opened in aid of the insurgents with no niggard or stinted hand. Naturally, he was a suspect; the first false move, he well knew, meant confiscation of his estates, with a long imprisonment, perhaps death.

There was reason, then, for the quick nervousness of his step as he paced the flat roof of the *patio* that ran round two sides of his solidly constructed house, stopping every now and then to gaze anxiously over the stone balustrade in the direction from which rifle-shots, now in volleys, now in single cracks, had been proceeding all afternoon. It still wanted an hour of sunset when a solitary horseman sprang into view on some rising ground half a mile away, spurring madly. The cause of his haste was soon apparent. Scarcely had he disappeared in the hollow at the foot of the ridge than a score of pursuers flashed up to the sky-line, emptying their rifles in mid-gallop at the flickering target. They were coming straight towards the house. A minute more and Señor Pichardo saw the head and shoulders of the fugitive just before he made a wild dash into a huge field of sugar-cane two hundred yards away. The cane, though fully seven feet high, was still green and pliable, and the watcher, from his elevated position, could clearly follow, in the still air, the waving path of reeds as the oncomer cleft his way through. The pursuers, in a straggling line, burst after their quarry. Pichardo, still, tense, saw the course of the fugitive suddenly swerve to the right, away from the house. He was trying to mark the line in the now fast-widening distance when a low whistle made him turn his gaze downward. What he saw there caused him to hurry downstairs, rush to the low gate in the high wall that surrounded house and garden, and gasp, 'You, Henrico!'

'I wouldn't have come here, father, but'—— and the young man pointed to his left leg, which seemed to be bleeding profusely.

'It was you they were after, then?'

'Yes. I slipped off my horse's back, and crawled through the cane. He'll give them a run before they find the saddle's empty.'

'Then we may have time yet,' said Pichardo, 'to give them another hunt when they come back. Take your clothes off at once—every stitch.'

The old man went inside the house, to reappear in a minute with bandages and a suit of his own clothes.

'Only a flesh-wound, I think, Henrico,' he remarked, applying the bandages with the utmost speed and dexterity.

'I knew the bone wasn't touched,' was the reply; 'but I was beginning to feel the loss of blood.'

'You'd have fallen off before you'd gone another mile. Slip on that suit. Take a bottle of wine and some bread. You know where to go. *Ligero!*'

The value of time was as apparent to the young man as to the old. Without further words the former disappeared.

Making a bundle of the blood-stained garments, Pichardo opened the garden door, tied a stone round the clothes, and threw them into

the middle of a small but deep stream that flowed swiftly past about thirty yards from the wall. Then he sauntered slowly along towards the main entrance.

'Stop!' cried a harsh voice.

A Spanish officer, with three troopers in close attendance, appeared round the corner of the wall, their horses foam-flecked and mud-bespattered.

'Where is your son?'

Pichardo lazily regarded his interrogator.

'Where is your son?' repeated the officer insistently, with a rising note of anger.

'My sons are both of age, señor,' responded Pichardo calmly. 'They do not always consider it necessary to tell me of their whereabouts.'

'Search the garden; search the house!' cried the officer. He could not afford to waste time in talk when even now his prey might be slipping from his grasp.

'Look, colonel!' called one of the men, pointing to a small blood-stained patch on the spot where Henrico's wound had been dressed.

'Good! This time he won't escape us.—And you, señor, too long the Government has allowed you to hatch schemes of rebellion. You had better prepare to accompany us.'

'Would it not be as well to wait till you can take proofs with you?' drawled Pichardo, coolly lighting a cigarette.

'The proofs will stay here,' was the grim response. 'My orders are to give rebels in arms short shrift.'

'Ah, surely one of my boys has been annoying you, señor! I was beginning to suspect, from their frequent absences, that they were taking some share in the rebellion of which accounts have reached me even here. But what can I do, señor?' with a deprecatory wave of the arms. 'As I've told you, they're of age.'

'One of them, at least, is as old as he will ever be,' retorted the officer angrily.—'Well,' he continued, turning towards a number of his men, 'have you secured the rebel hound?'

'We can find no more trace of him, colonel,' replied a youthful officer, evidently fresh from Spain. 'But he can't have gone far, dripping pools of blood.'

By this time the short tropical twilight was looming swiftly down. Any further search outside before morning would have been futile.

'He is certainly concealed about the house or outbuildings,' said the colonel. 'Put every one about the place under arrest. Place double sentries all round, and let a patrol keep on the move outside. We shall make our quarters here for to-night.—And, señor, I would desire the pleasure of supping with you.'

'The pleasure is mine, colonel,' immediately responded Pichardo, who forthwith proceeded to do the honours in no grudging or hesitating fashion.

The officers, who had been in the saddle since dawn, attacked the soups, *ollas*, fowls, and fruits with gusto. The excellent fare, in conjunction with the fine old wine which Pichardo put before them, gradually thawed the colonel.

'Listen, Señor Pichardo,' he began, in a more affable tone than he had so far shown himself capable of adopting; 'let me give you a little advice towards securing your own safety. We know, though you have been sufficiently clever to evade detection till now, that this house of yours has for long been a rebel rendezvous. You must be well aware of the penalty exacted from those who give help to the insurgents. Give up your son without more ado—we recognised him, we tracked him here, and his capture in any case is certain—and I promise you to do my utmost to secure lenient treatment for yourself.'

'It is very good of you, señor colonel,' replied Pichardo in his suavest manner, 'to allow me the privilege of bartering my son's life for my own safety. It is an opportunity that no father could fail to take advantage of; and had the one of my sons whom you appear to be seeking only been thoughtful enough to make me acquainted with his hiding-place—*quien sabe?*'

'So you think he'll escape us?' returned the irascible Spaniard. 'Do not deceive yourself, Señor Pichardo. Rather than go away without your son, I shall send for a supply of gunpowder and give your house to the winds of heaven. No doubt we'll find some trace of him amongst the ruins.'

'And if you don't, señor, how will you account to the Government for such an outrage on a peaceful, law-abiding citizen?'

'Enough! You will change your tone to-morrow. Meantime, you may retire. If you value your life, don't attempt to communicate with any one during the night.'

Pichardo went to his room, but not to sleep. Alone, with the tension relaxed, he could not but realise how very slight were his son's chances of escape from a man of so determined and penetrating a character as this Spaniard appeared to be.

No sooner had the glorious Cuban dawn illumined the landscape than preparations were made for a systematic search. The officer summoned Pichardo to his presence.

'You will accompany us,' he said. 'We may have need of you.'

Then began a thorough investigation of every corner of the old rambling building. If the colonel thought to draw inspiration from any momentary display of emotion on the part of his host, he was doomed to disappointment. Pichardo, with perfect composure, led the way through corridors, explained the purpose of various outlets, sent a black servant for crow-bars to raise the wooden flooring where it

seemed to ring hollow, all as if he were the person most interested in the search, as, in truth—with one exception—he really was.

Measurements were taken of every apartment both inside and out. Still no result. There remained only the roof of the *patio*. Every foot of it was tested with crowbars. One would have thought that not even a cat could have escaped such a search undiscovered. The colonel, in perplexity, leant over the balustrade, looking down towards that part of the garden where the blood-trail had led, vainly endeavouring to read from it the fugitive's probable movements, his brow getting ever blacker as the puzzle refused to be answered.

Had he known it, the solution was literally within his grasp. Barely six inches separated him from his quarry. A single unpremeditated movement on his part might easily have brought discovery. Pichardo meanwhile stood by, his square face as expressionless as ever; not a hair of his gray beard quivered.

'Imbecile!' muttered the officer, thus apostrophising himself. 'The dogs!'

A sharp command to a trooper followed; the soldier saluted, and quickly disappeared.

Pichardo allowed a faint smile to flit across his saturnine features. It did not escape the colonel's sharp eye.

'They laugh best, Señor Pichardo,' he said menacingly, 'who laugh last. In an hour we shall see.'

In less than an hour the trooper reappeared with a couple of dogs in leash. They belonged to the famous Cuban breed—a cross between a bloodhound and a mastiff, uniting the power of scent of the former with the strength and ferocity of the latter. These dogs were used in the days of slavery—barely ten years before the date of this incident, for the black remained long in servitude in Cuba—to hunt down fugitive slaves. During the rebellion two or more of these dogs were attached to every Spanish post.

The officer descended to the garden and met the trooper at the gate.

'Bring them here,' he said, pointing towards the spot where the bloodstains lay still quite fresh in the dew of morning.

Immediately the dogs yelped and howled at the smell of blood, tugging furiously at the leash. Given free-play, they made straight for the gate in the wall, down a little path leading past a clump of trees, and thence unswervingly to the spot where Henrico's clothes lay embedded in the stream. Here the hounds paused, sniffed the air, whined, and showed all the symptoms of a lost scent.

The Spanish colonel's face darkened. 'So that was how the rebel scoundrel gave us the slip!' he muttered in disgust to his lieutenant. 'He simply dropped into the water and let the current do the rest, while we were wasting time searching the house. To horse!' And without deigning to bestow a word or a glance upon Pichardo, he mounted and rode away, followed by his men.

Pichardo, having reascended the staircase to the top of the *patio*, gazed after them till every Spanish soldier was out of sight. Then he approached the balustrade and knocked on a stone. 'You may come out, Henrico,' he said.

Immediately the apparent stone revolved, and Henrico rose stiffly to his feet. Several of the stones that formed the balustrade had been taken out and replaced by slabs of wood covered with a thin layer of stone, a hollow quite large enough to secrete a man being thus formed, with small air-holes to the outside wall. It was impossible for the eye to detect the deception, while few would have thought of testing the soundness of a seemingly stout stone balustrade.

For the first time since the appearance of danger did the old man show any trace of emotion.

'The good God is on our side, Henrico,' he solemnly observed. 'Even of your wound He has made a path to safety.'

THE KNIGHTS OF THE WEATHER.

THE road winds up on a long brown hill,
Then dips on the farther side,
And ends in a fearsome, dull, gray copse,
Where the Knights of the Weather ride.

Now yellow, now blue, now gray, now green,
They flash in among the trees;
They only come at the break of day,
And pass like a summer's breeze.

A flash—a moment—they've gone, they've passed;
A blur of golden and blue;
Out of the copse they've ridden away,
Blowing a ghastly halloo.

Blue are their coats, and loud is their blast!
Heigho, for a golden day!
They ride to the plains of a sunlit sky,
Fluting a tune by the way.

Again they pass, like a dull gray mist,
Their music turned to a moan;
They see afar in the gray-green waves
Men sinking—afraid—alone.

They make their way to the ocean deeps;
Sadly and slowly they ride;
Blowing a dirge as they scatter the foam
Twisted to wreaths by the tide.

Again it is dawn, and again they go,
In green and yellow and white;
And the song they blow has a fairy sound,
Like the song of a bird at night.

It's the song of springtime, the song of love,
And they ride by like men afire,
Fast for the meadows of Paradise,
Fluting a song for the choir.

TSUSHIMA.

By 'TAFFRAIL.'

THERE is a stiff breeze from the south-west, and the tops of the short, choppy seas are being blown along to leeward over the surface of the water. The sky is a deep blue towards the horizon; but in the zenith the well-known 'mares' tails' tell us plainly enough that the wind is not likely to abate for some little time.

We are steering about due north; and as I write this the island of Tsushima, partly hidden by whiffs of low-lying fog, is visible on our port beam. The island itself, a low-lying strip of gray land, punctuated here and there with small conical hills, looks ordinary and commonplace enough; and even with the beautiful colour of the sea itself, the sun shining through the curling tops of the waves, and turning them into a vivid green, forms a picture that is quite familiar to most people who earn their living on the sea. Away on our port quarter there is a low-lying belt of white fog coming up with the wind, the clear-cut edge of this bank of vapour standing out sharply against the blue of the sky above it.

There is nothing particularly attractive in this picture; but we are nearing the spot where the opening phases of the modern Trafalgar, the battle of the Sea of Japan, were fought. By shutting one's eyes one can almost see the dull shapes of the Russian men-of-war looming through the fog-bank up to windward; the Japanese fleet in a long, single line, black smoke curling from their funnel-tops, and the seas breaking over their forecastles as they plough their way into the heart of the wind, steaming down from the northward to meet them. It was on such a day as this that the historic battle began—a battle which held for Japan the same stakes as Trafalgar held for us.

Steaming on, and altering course to about N.N.E., when the north point of the island of Tsushima is on our port beam, we shall soon be on the spot where the *Osliabya*, one of the Russian battleships, was set on fire and driven out of the line of battle in less than half-an-hour after it had commenced, to sink thirty minutes later, the majority of her crew perishing as she did so. The bottom of the Sea of Japan is strewn with the rusty hulls of the Russian ships, and the remains of once brave men are now being slowly washed to and fro by the icy under-currents.

Besides the *Osliabya*, the *Kniaz Suvaroff*, *Alexander III.*, *Borodino*, *Sissoi Veliky*, *Navarin*, *Admiral Nachimoff*, *Admiral Ouchakoff*, *Dimitri Donskoi*, *Vladimir Monomach*, *Svietlana*, six repair-ships, and auxiliary cruisers, together with five destroyers, were sunk between the hours of 2 P.M. on May 27, 1905, and the following midnight. Their crews have for their sepulchre the battered hulls of what were once fine ships, the gaping holes in their sides telling plainly of the fate which has overtaken them. They are washed by the clear water of the Sea of Japan; and, winter and summer alike, when the ice-floes from the north are being borne southward on the bosom of the current, and when the summer breezes are playing in cats'-paws over the glassy surface of the water, those rusty hulls will still be there, each one manned by its complement of grisly remains, as an everlasting tribute to the triumphal victory of the Japanese, and to the pathetic but useless efforts of the Russians to uphold the glory and tradition of their country and Czar.

Thousands of men have met their fate in the dark-green depths of the water through which we are now steaming, while many more have died horrible lingering deaths, with lacerated and torn bodies, breathing through their gurgling throats the same fresh air that we are now inhaling. If ever a sea has been painted red with the blood of men who have died for their country, it is the Sea of Japan, and it is no wonder that, when one is steaming through it, one's thoughts must necessarily turn to the terrible events of which that same sea has been a silent witness. No remains are actually visible, as they are on battlefields on land; but still one cannot help feeling that the clear green water is impregnated with the presence of the men who have died in its depths.

One must feel an intense admiration for the gallant Japanese, and for their no less gallant opponents; but, being in the immediate vicinity of the place where all this seemingly useless sacrifice of life took place, one cannot fail to be impressed with war in all its awful reality. One can feel, to a certain extent, the grim despair

[*All Rights Reserved.*]

that must have filled the hearts of the Russian sailors when they saw that the Japanese fleet, manned by battle-worn veterans, stood between them and their haven of refuge, Vladivostok. One can imagine their awful feeling of suspense as they saw one ship after another driven out of their line, a blazing and battered wreck, knowing that their own turn could not be far off.

One can also imagine the feeling of elation that must have permeated the men of the Japanese fleet when they realised that the defeat of the Russians was an accomplished fact, and when they took possession of the battered remnant of the Russian fleet, and saw their flag, the Rising Sun, floating over the blue St Andrew's Cross of their enemy. Every single Japanese present must have realised that he had helped to render the defeat of his country a thing of the past, and that the termination of the war that had cost Japan many thousands of lives was now only a matter of months.

These veteran seamen, who had braved the snow, ice, and gales off Port Arthur, who had never known fear, who had encountered danger every day during the blockade, from the enemy's mines, and in their desperate endeavours to seal the entrance to the harbour of Port Arthur, must, with this final defeat of the Russian fleet, have realised that all their efforts had not been useless, and that the blood they had shed had not been in vain. Their years of training were not wasted, and the lessons of patriotism and devotion to their Emperor that had been instilled into them from their birth had culminated in this glorious triumph.

At the same time, however, while one fully sympathises with the elation of the Japanese in the hour of victory, one cannot but feel an intense sympathy for the heroic behaviour of the Russian seamen, who, through no choice of their own, were called upon to face the might and power of their battle-tried opponents.

The Japanese also, although they realised that the battle of the Sea of Japan was the last blow to the power and prestige of Russia in the Far East, did not allow this fact to lessen their endeavours in working together to perfect the efficiency of their navy. Their attitude was well expressed by Admiral Togo, who in his farewell words to the fleet on the conclusion of the war addressed them thus: 'Victors, tighten your helmet-straps;' thereby impressing upon them that although the war was over, they must not relax their efforts to perfect their efficiency on behalf of their country.

In conclusion, the lesson that is borne in upon us is that it is only by patriotism and devotion to our country that it is possible to win in such a titanic struggle as that upon which the Japanese and Russians were engaged. Once again the truth of the old adage, '*Si vis pacem, para bellum*,' is fully proved; and we British would do well to take it to heart, so that we may not be wanting in the hour when we have to go forth to defend the land of our birth.

PETER AND JANE.

CHAPTER VII.

IT was a matter of necessity with Mrs Ogilvie to purchase a new dress for the wedding. Wherefore, in the week following the night of the ball, she went to London for the day, while builders and carpenters were already at work repairing the ruined tower. 'It will be inconvenient,' she said, 'to go up and see my dressmaker later when the house is full. Is it absolutely incumbent upon me, as the mother of the bridegroom, to dress in gray satin; or have I sufficiently scandalised my neighbours all my life to be able to wear what I like?'

Usually her maid accompanied Mrs Ogilvie when she went up to London for the day; but in her wilful way she had decided to-day that maids were useless, and that her present maid had round eyes that stared at her from the opposite side of the carriage when they travelled together. In short, Mrs Ogilvie intended to go to London alone.

She departed with some sort of idea of enjoying the expedition; the purchase of clothes was a real æsthetic pleasure to her, and even the feel of the pavements in the world-forsaken London of September had something friendly about it that spoke to her with an intimacy and a kindliness such as she never experienced among country sights and sounds. A morning at Paquin's revived her, as sea-breezes revive other women. Lunch followed in a room pleasantly shaded from the sun, and decorated with a fair amount of taste. But the food was uneatable, of course. Mrs Ogilvie could never get a thing to eat that she liked.

It was nearly four o'clock before the brougham which had met her at the station in the morning drew up before a door in deserted Harley Street. An elderly man-servant showed her into the doctor's waiting-room, and Mrs Ogilvie sat down and began turning over with interest the pages of a fashion magazine.

'I think I know the worst,' she said to the famous surgeon whom she had come to consult when he led her into his room. 'What I want to know is, can you put off this tiresome business until after my son's wedding?'

He asked her quietly her reason for the delay. Few people argued with Mrs Ogilvie; there was

an inflexibility about her which made protest impossible. He knew that the case was a hopeless one, but life might certainly be prolonged if she would submit to treatment without delay.

'Why should you put it off?' he said. 'Even five or six weeks may make an enormous difference.'

'I always put off disagreeable things,' said Mrs Ogilvie lightly.

A London doctor probably knows many cases of delicate and sensitive women who will fret over a crumpled rose-leaf and die with the calm courage of a martyr; but the woman who would deliberately throw away her chances of life was unknown to the famous specialist. He looked keenly at his patient for a moment out of his deep eyes.

'I have never known a case of this sort in which there was not an immediate effort at concealment,' he said to himself; 'and women conceal most of their sicknesses as if they were crimes.' Aloud, he asked her what was the earliest date at which she could put herself into his hands.

'It is a great bore coming at all,' said Mrs Ogilvie with that sort of superb impertinence which distinguished her, and was hardly ever offensive; 'but let us say in a month's time. The wedding was not to have been till late in November; but my son and Miss Erskine are quite absurdly in love with each other, and it will not be difficult to persuade them to alter that date for an earlier one.'

'If you have positively decided to postpone treatment,' said the surgeon, 'I can say nothing more except to tell you that you are minimising your chances of recovery.'

Mrs Ogilvie gave one of her twisted smiles. 'I don't feel in the least bit like dying yet,' she said.

'Were you to put yourself into my hands at once,' he urged, 'it is possible that you might be sufficiently recovered to go to the wedding in November.'

'No one is to know anything about it,' said Mrs Ogilvie quickly and decisively. 'If my son is married in October, I can come up to town, as I always do in November, and go into one of your tiresome nursing-homes. Probably the wall-papers will offend me; but at least I shall not have the whole of a countryside discussing my helplessness and the various stages of my illness. Ye gods! they would like to ask for details from one's very footman at the hall door!'

It was useless to say more. The surgeon recommended diet and made out a prescription. 'Everything is talked about in these days, I admit,' he said, 'and I think no one regrets the decline of reserve more than we doctors do; but you are carrying a desire for concealment too far.'

Mrs Ogilvie was drawing on her gloves and buttoning them with an air much more grave and intent than she had bestowed upon her doctor during the discussion of her health. 'Even an animal,' she said lightly, 'is allowed to creep away into the denseness of a thicket and nurse its wounds unseen; but we superior human beings are like the beggars who expose a mutilated arm to the pitiful, and would fain show their wounds to every passer-by.'

'Perhaps you will allow me to write to your son?' said the surgeon.

Mrs Ogilvie replied by a quick and unequivocal answer in the negative; then, relaxing a little, she said more lightly, but with intent, 'I have always triumphed over difficulties all my life; I have always overcome.'

'That is quite possible,' said the physician gravely.

Mrs Ogilvie stood up and began to arrange her veil before the mirror which hung above the mantelpiece, and as she did so she glanced critically at her face under her large, fashionable-looking hat, with its bizarre trimmings.

'I am very plain,' she said with a sort of sensuous enjoyment in her frankness, 'and yet I have passed successfully for a beautiful woman most of my life. I am also what is ridiculously called a power in society, and I owe everything to my own will. I detest unsuccess!'

'You are talking of the success which lies in the hands of every clever woman,' said the doctor; 'but your health is another matter.'

'I believe in my good luck; it has never failed me,' said Mrs Ogilvie as she shook hands and said good-bye.

When she reached home she dressed in one of her sumptuous gowns, for a score of country neighbours were coming to meet Jane Erskine as the fiancée of her son. Her maid bore the brunt of my lady's sarcasm during the time of dressing, and was given a curt notice of dismissal before the toilet was complete. The woman's big round eyes, which were so obnoxious to her mistress, filled with tears as she accepted her discharge. And Mrs Ogilvie, descending the broad staircase of the house with her air of magnificence, her jewels, and her red hair, rapped her fan suddenly and sharply on the palm of her hand so that the delicate tortoise-shell sticks were broken. 'Why does she look at me like that?' she said fiercely below her breath. 'I am glad I dismissed her, and I am glad she cried! Why should not some one else suffer as well as I?'

'You are not really tiresome, Jane,' she said after dinner, as the two sat together on a couch. 'I have never known another engaged young lady whom I did not avoid; but you are bothering your head quite unnecessarily about me. When I look tired, for instance, you may take it as a sure sign that I am bored; nothing ever really makes me feel ill except dullness.'

'Still,' urged Jane, 'Peter and I want it so much. We think if you were to get advice from a doctor it would make us feel so much happier about you.'

'I never allow any one to discuss my health with me,' said Mrs Ogilvie coldly; 'it is only a polite way of pointing out to one that one is looking plain.'

Jane took one of Mrs Ogilvie's hands in hers with an impulsive gesture, and printed a kiss upon it.

'Do sit upon me when I begin to bore you or to say the wrong thing! I believe, for a woman, I am quite unpardonably clumsy and tactless.'

'Have you ever discovered,' said Mrs Ogilvie, 'that tact is becoming a little overdone, and that it generally succeeds in accentuating a difficult situation, or in making it impossible? Women are horribly tactful as a rule, and that is why men's society is preferable to theirs. If you tread on a man's foot he will no doubt forgive you, while admitting that it was painful; but a woman smiles and tries to look as though she really enjoyed it.'

'Promise never to endure me in silence,' said Jane, laughing, 'even when I am most tactless!'

'Silent endurance is hardly a characteristic of mine,' said Mrs Ogilvie, screwing up her eyes. 'I dismissed Forder before dinner because she annoyed me.'

'Please take Forder to your heart again tomorrow morning,' said Jane; 'she keeps Martin in such a good temper.'

'No,' said Mrs Ogilvie; 'I shall get a new maid when I go up to London in November. Forder has had round eyes for such a long time, and she is hopelessly stupid about doing my hair.'

Mrs Ogilvie always spoke about her hair with a touch of defiance in her voice. It was so undisguisedly auburn that probably only Jane Erskine and Peter ever believed that it was not dyed.

'What were we talking about?' she said presently. 'Oh yes, I was saying that you were not tiresome, although you are engaged to be married. You are not even quite uninteresting, although you are healthy and happy! All the same, I am going to try to persuade you and Peter to have the wedding sooner than you intended.'

'Why?' said Jane simply.

'I am sick of Bowshott,' said Mrs Ogilvie lightly. 'By the bye, I believe I am going to make it over to you and Peter when you marry. Why should I act as custodian to a lot of grimy pictures which don't amuse me the least bit in the world, or walk in these formal gardens, where I don't even meet a gardener after ten o'clock? A prison life would really be a pleasant change! I shall go to London when you are married; it is the only place—except Paris—where one lives. I must have the house in Berkeley Square painted. And, oh! there are heaps of things I want to do. Must I really go into them all?'

'When is the wedding to be?' asked old Lord Sherard, sinking on to the sofa beside Miss Erskine, when he and the other gentlemen returned from the dining-room.

'Jane and I have just been deciding that the wedding is to take place in the middle of October,' replied Mrs Ogilvie in her cool, decisive voice.

Jane laughed and caught Peter's eye, and he drew her aside when he could, and asked for further confirmation of a change of plans of which he thoroughly approved.

Jane nodded her head. There was no reason for delay; the building and repairing of the tower would hardly interfere with the other parts of the vast house. She, like Peter, was quite satisfied that their wedding should be at an earlier date than was at first suggested. They had known each other all their lives; why postpone the happy time when they should be married?

So wedding invitations were written and despatched, and wedding-gowns were ordered, and wedding presents came in. Tenants presented silver bowls and trays, and servants gave clocks and illuminated addresses; and the Ogilvie family lawyer came down to stay, with his clerk, and was hidden away somewhere in the big house, where he wrote busily all day, and made wills and transferred deeds, and wanted signatures for this thing and for that through half the autumn mornings.

'I see nothing for it,' said Jane, 'but to postpone getting my trousseau until after I am married. If I succeed in getting a wedding-dress and something to go away in by the 26th I shall consider myself lucky!'

Miss Abingdon, to whose early Victorian mind a wedding was still an occasion for tears, sighed over her niece's engagement, because Jane never came to her room at night and watered her couch with tears, or had doubts or presentiments or misgivings.

'She seems to have so little sense of responsibility,' she sighed to Mrs Wrottesley, whose visits at this trying and responsible time were a cause of nothing but comfort to her.

'I know,' said Mrs Wrottesley, in the hesitating manner of the woman who might have been 'advanced' had she not married a clergyman—'I know it may seem to you irreverent to say so, but I sometimes think that marriage is not undertaken lightly and unadvisedly enough. It seems to me that nowadays the tendency is to consider the matter almost too seriously, and that a certain light-hearted impulse is really what is required before taking what is called the plunge.'

Miss Abingdon—not by any means for the first time—felt regret that Canon Wrottesley's influence upon his wife had not made her a more orthodox thinker. A woman who criticised the Prayer-Book was surely not fitted to be the wife of a clergyman. Miss Abingdon liked to lean on a spiritual guide, and she thought that this was the graceful and becoming attitude for all women.

'I am afraid we must not tamper with the Prayer-Book,' she said reprovingly; and Mrs Wrottesley, who for twenty years had been silent under reproof, relapsed into silence again.

Jane meanwhile was saying good-bye to every tenant on Miss Abingdon's small estate. To her hunters she confided the good news that they were going with her when she married, and that they would hunt with her as before. And the stable cat, whom she took up in her arms and kissed affectionately, was told that he really must not mind saying good-bye, for that she, Jane, would only be two miles off, so that the stable cat needn't look quite so disconsolate. The proverbial old nurse in the village had to be visited, and the school children asked to tea, and tenants and gardeners to dinner; and every one was in a highly nervous state of preparation and in a still more delightful state of anticipation.

Miss Abingdon enjoyed the dear fussiness of the wedding preparations, and thought in her secret heart that Mrs Ogilvie missed all the pleasure of the thing by giving a few brief, emphatic orders to her steward, instead of personally superintending every detail of the servants' ball and the tenants' dinner.

Mrs Ogilvie's directions were probably made in less than an hour, and transmitted to Mr Miller's capacious pocket-book when he came to her boudoir to receive instructions one autumn morning. When he had left, Mrs Ogilvie quitted her writing-table, by which she had been sitting, and walked to the window of her room and stood idly by it, her graceful figure outlined against the pane. Before her stretched the great gardens in an aching formality of borders and devices. Viewed from a height, and with her near-sighted eyes, they presented an appearance of a piece of elaborate stitchwork on a green worsted ground. The fountains, with their punctual fall of spray, might have been a device in shells and beads in the centre of each design. Beyond the gardens there was a mass of woods, all dim greens and bright golds; but even the woods were touched with formality, and the foresters of the place had lopped away every unsightly branch from the beeches and oaks. Probably there may have been homely corners in the gardens and grounds which Peter had discovered as a child; but Mrs Ogilvie, when she walked, kept to the trim paths of the terrace and the garden where every pebble seemed to have its proper place, in full view of the lines of windows of the house.

'It has always been a prison to me—always,' she murmured to herself, oblivious of the fact that no one would have missed more than she a luxurious environment and a stately setting to her own personality. Mrs Ogilvie often imagined that she would have liked a small house; but there is no doubt she would have quitted it in disgust the first time that the odour of dinner came up the back stairs. She believed that a large staff of servants was merely a burden; but she would have felt at a loss had she been obliged to wait on herself even for an hour. As she looked now at the gardens in front of her, and away to the woods beyond, and to the great stretches of greenhouses and conservatories southward, she thought how irksome they were, how unnecessary, and how little pleasure they gave.

'Magnificence is always dull,' she thought, 'and yet people are impressed by it! They not only value themselves by what they have; they actually value others according to their possessions, and respect a man for his ownership of things of which they cannot even hope to rob him.'

She supposed the tenants and servants would have to be fed on the occasion of a marriage. She believed it was their one idea of enjoying themselves; but she begged her steward not to bother her with details when he had gone into the question of roasting an ox whole. Having dismissed him with a few brief orders, Mrs Ogilvie went to her writing-table. 'I may as well get over all the disagreeable and odious things in one morning,' she said to herself.

(To be continued.)

WATCHING THE BIRDS.

MUCH time, money, and ingenious effort are at present being expended in studying birds, both at home and abroad. The result is apparent in newspapers and periodicals, and in the wonderfully clever pictures of birds in their native haunts so frequently reproduced in cheap as well as most expensive books. No such romance of natural history as Goldsmith's *Animated Nature* is now possible, although animals showing almost human attributes appear in narratives of a different kind, with their haunts and habits perfectly delineated. Modern bird-books are legion, wonderfully accurate in description, full of loving, patient work by the artist or photographer, who may have spent hours or days in obtaining snapshots of rare and curious subjects

in their native haunts. Seton-Thompson and others have made animal biography as interesting as that of human kind. His *Wild Animals I Have Known* went through ten editions in one year; and his outdoor life movement has had thousands of followers. Big game has always had its exponents, and the popularity of Mr Roosevelt's African hunting-book is apparent from the fact that something like a million copies were ordered in advance. As in anything of a practical kind, the hunter or ornithologist gets more than he went out to seek. He has adventures, gains an acquaintance with strange peoples, and if tree-climbing and cliff-climbing are thrown in, he may have a very thrilling time. Certainly Mr R. B. Lodge, in his record of *Bird Hunting through Wild Europe*, and Colonel Willoughby Verner in his *My Life among the Wild Birds in Spain* (John Bale, Sons, & Danielson), about the latter of which we wish to say something, show what an enormous amount of hard work and enthusiasm are required in the pursuit, in which they frequently risked their lives in their expeditions for bird and egg collecting. This is no child's-play, and requires, besides enthusiasm, fitness of condition to stand the bodily and mental strain and fatigue.

For many people the study of birds has become an interesting hobby, and even a ruling passion. Mr John G. Millais, one of our foremost living ornithologists, the fourth son of the famous artist Sir John Millais, now finds his chief recreation in natural-history pursuits all the world over. He has written many valuable and original works on his favourite subjects. He relates in his father's Life how the painter found the subject of his picture 'The Ruling Passion, or the Ornithologist.' Along with his father, he had called one day on John Gould, the great naturalist, who had a fine collection of birds-of-paradise, many of them rare and valuable. Propped up on a couch, Gould called in his two daughters to help him to show the visitors his latest gems from New Guinea, and his unique collection of humming-birds, afterwards sold to the Natural History Museum for five thousand pounds. Sir John Millais was delighted with his visit, and remarked to his son, 'That's a fine subject, a very fine subject. I shall paint it when I have time.' And he painted what Ruskin said was one of the finest pictures of its kind in modern times, in sentiment and management of colour. In it we see the old ornithologist examining his specimen birds with loving care, ministered to by his family, who bend round, seemingly quite as interested as he is. We have seen two masterly pen-and-ink sketches by Mr J. G. Millais for a proposed collection of birds, including birds of prey, from the golden eagle downwards, gulls, and others; these sketches were presented to a friend, the late Mr Macleay, an Inverness taxidermist.

Some people have a hereditary tendency to love all kinds of living things, like Tom Edward, the Scottish naturalist, who also wished to live among them. He would come to school with his favourite 'beasts' in his pockets. Edmund Gosse tells us that his aunt, Eliza Brightwen, author of *Wild Nature Won by Kindness*, was in her dying moments attended by those wild creatures who had long been accustomed to her presence. When he took a last farewell of her, two squirrels were gambolling and struggling on the toilet-table, and a robin was seated on the edge of her cup. The death of her husband and lifelong delicacy of constitution caused her to turn her attention to the living things in her lawn and shrubbery. By addresses in village schools, she urged boys and girls to cultivate a truer knowledge of native birds, so that in time they might be led to observe rather than to destroy them. When she was feeding the birds in winter, a large collection of them were to be seen in front of the windows of her home, near Stanmore, in size ranging from a pheasant to the tiny tits. Thomas Aird, the poet, had a robin-redbreast which fed from his hand, and a pet chaffinch took crumbs of bread from his mouth. Asked for the secret of his powers, he said, 'A pure conscience and a steady eye are the only lures; they will know at once if you mean to harm, and disguises are useless.' For the purpose of writing a book on bird-migration, Mr W. Eagle Clarke, of the Royal Scottish Museum, Edinburgh, has spent much time on the Eddystone Lighthouse, Fair Isle, St Kilda, and elsewhere.

Bird-photography is a new art, and has marked a new era in natural history. The photographing in 1892 of the nest and eggs of a song-thrush in the neighbourhood of London by Mr Cherry Kearton suggested to his brother, Mr Richard Kearton, the idea of writing a book on British birds' nests. This he did, and so successfully that it has had many successors and imitators. The brothers, up to 1907, had travelled by railroad and steamboat upwards of thirty thousand miles, and in pursuit of bird-photography had exposed over ten thousand plates. Mr Charles Reid, of Wishaw, whose charming animal-studies are well known, was even earlier in the field. As an illustration of the patient methods necessary, Mr Reid has kindly furnished us with an account of his dealings with that rare and shy bird the kingfisher, a picture of which he at last secured, at the entrance to its nest, with a fish in its mouth.

'A friend at a distance did me the favour of telling me that he knew of such a nest, and took me to the secluded spot where it was built. It was not to be seen, of course, as it was at the far end of a burrow of the bird's own tunnelling. From the appearance of the opening, and the faint chirping of voices inside, it was plain there were young present. At first a dummy camera was placed a few feet from the opening, where it remained for days to familiarise the old ones

with the unusual object. On the day that I meant to try to get a photo of the bird at the entrance I left home early, and placed the real camera in the same position, and covered it with the same material. It was placed so that it commanded a view of a twig on which the bird sometimes lighted before entering. The focus being adjusted, and the shutter drawn, I retired to a distance of seventy or eighty feet and hid behind a screen of ferns, at a point where I had a peep of the nest and the space between it and the river whence supplies were drawn. Attached to the shutter was a tube, the ball end of which reached to my hiding-place. Here on a cold morning in early June I waited for hours, the bird not venturing near the nest. I am satisfied it had seen me making preparations. It would come in sight occasionally, and rapidly disappear. About noon it mustered courage, rushed forward, and darted into the nest. On a subsequent visit it delayed a short time on the twig, when I made an exposure. About the result I was not at all hopeful; I feared it had moved at the critical moment. My visit to the camera to insert another plate would further disconcert the bird, and it kept out of sight for a long time. At three o'clock a friend came to keep me company on my lonely watch. When at four there was no appearance of the bird, I said I would wait one half-hour, but no longer. It is said that "everything comes to him who waits." About five minutes before the expiry of the allotted time the kingfisher flew up from the river with a fish in its bill and took up its position on the twig. Before making the accustomed forward movement, it turned its head, as if making sure that no danger lurked in that eye of glass that kept staring all the while. At this moment the shutter was released, and we both felt certain that patience had had its reward.'

Mr George Rankin, the artist of *Britain's Birds and their Nests*, just issued by Messrs W. & R. Chambers, Ltd., furnishes us with these notes as to his methods of studying birds: 'Birds have always had a fascination for me. When quite a small boy I used to spend hours watching them and studying their ways and habits. In the evenings I found great pleasure in reading books on the subject, which, of course, are now somewhat out of date. The pets of my boyhood were almost always birds—bullfinches, goldfinches, pigeons, jackdaws, &c.; and all were so tame that they flew to me and perched on my head or shoulders. I have still got bird pets, and lose no opportunity of studying them in their wild state as well as in captivity. I make a slight note or a sketch of most birds I meet with, and being blessed with a very retentive memory for bird or animal, I can always fill in details when required. I may mention that none of the birds represented in the one hundred and thirty or so plates done for *Britain's Birds* are from museum specimens, but from those belonging to myself, and are the result of constant observation.' Mr A. Landsborough Thomson, who has written the descriptions in *Britain's Birds*, is the son of the Regius Professor of Natural History, Aberdeen University, and has had exceptional opportunities in the way of books, observation, and the friendship of scientific workers to aid him in his great task. In his studies on migration he has visited the German station at Heligoland, and also that of Rossitten on the Baltic. From thence he borrowed the idea of marking young birds with aluminium foot-rings, in the hope of hearing of their subsequent movements. This is the method of study of the Aberdeen University Bird Migration Inquiry set on foot under his father's supervision. Professor Thomson is responsible for the Introduction to the book. The series represented includes nearly all the species which nest in the British Isles in appreciable numbers, and a few rarer birds of special interest. Each plate by Mr Rankin shows the adult male in full plumage. In addition to the bird the nest and eggs are portrayed. We quite agree with Professor Thomson that the study of birds is one of the most wholesome, educative, and enjoyable of studies.

Bird-nesting as pursued by Colonel Verner is an art. Wandering about a wild country had a great attraction for him. When he failed with birds he might see something new in butterflies, beetles, or reptiles, or gain some fresh interest in botany or geology. He almost congratulated himself, despite the cruel fortune of war which abruptly closed the profession of arms for him, that he was spared to be what one of his comrades called 'reduced to bird-nesting.' By way of equipment, when absent for a time, he had a light camp-bed and blankets, a portable cooking-canteen, a small luncheon-basket with aluminium plates and forks and spoons, and supplies. He also had an aneroid, watch, silk rope, whistle, hunting-belt, swivels and knives, notebook and pencil, field-glasses, telescope and compass, sketch-book, hand-camera, ropes, canvas-sling, casting-line and weight, egg-boxes, cotton-wool, and egg-blowing implements. Rope-soled boots he found invaluable for climbing. In cliff-climbing he learned that a man must depend upon his own nerve, eye, and skill to carry him through. With the best of equipment, however, or without it altogether, the main factor of success in bird-watching is time.

Spain has been called the Mecca of European ornithologists, whither naturalists and collectors turn with eager and covetous eyes, and there can hardly have been any more eager and adventurous scrambler after birds than Colonel Willoughby Verner, whose book is full of fresh observation from first to last, and thrills with interest. Colonel Verner's father and grandfather were both devoted to the study of birds.

His father discouraged him in the pursuit all too late, and once, when examining a jackdaw's nest, he fell and squashed in the crown of his parent's tall hat. An enthusiast from early years, he kept a journal, and illustrated it with pen-and-ink drawings and water-colours, evidence of his gift in the execution of the latter being seen in the book. Since 1874 he has been interested in the fauna of southern Spain; and, compelled to leave the army owing to injuries received in South Africa, he has been a good deal in that region, where he could indulge in his favourite hobby. He early learned that only by living amongst wild creatures could he gain a true idea of them; and he agrees with Mrs Brightwen that the more they are studied the less will they be destroyed.

In the mountain plains and marshes of southern Spain still thrive many interesting birds long ago driven out or killed off in Britain and other thickly peopled European centres. The most striking feature of bird-life in Spain is the large numbers of raptorial birds, the numerous genera which make the list of vultures, eagles, falcons, and owls so attractive to the naturalist. Colonel Verner devotes more than half the book to his adventures on cliffs and tall trees in search of the nests of birds of prey. Some of the illustrations show the author dangling in mid-air as he is let down by a rope to a projecting cliff to inspect a vulture's nest, or moving along a narrow ledge on the face of a precipice, where a false step would be certain death, while the vulture with outstretched neck and wings flies from her nest. To Colonel Verner the whole fascination of the art of nest-finding is the personal experience of the seeker. Locating a wild bird, studying its habits, following it to its nesting-haunts, and discovering its secrets all give zest and interest to the pursuit. If photographs or sketches are secured, so much the better for the permanency of the discoveries. And if 'the quest of a certain species leads a man to climb mountains, explore remote marshes, or make adventurous sea-trips, there is literally no limit to the variety of experiences which are comprised in the single word bird-nesting.' Verner journeyed two thousand miles to take the egg of the black vulture.

Colonel Verner has no sympathy with the indiscriminate slaughter of eagles and hawks, which, he found, habitually preyed upon the larger reptiles. The lynx, fox, and wild-cat are greater enemies to game. Every spring he noticed large numbers of black kites passing northwards across the Strait of Gibraltar. Once he swarmed up the trunk of a tall pine, without branches, for thirty-five feet, and found a red kite's nest with two eggs. The nest was lined with old rags and goat's hair. In another nest he found a fragment of a Spanish newspaper in which the assassination of General Prim was announced, a delicate cambric handkerchief, some coloured rags, and brocade. The kites' powers of flight impressed him much. 'Besides the quick lateral alteration of the position of the tail, there is another movement whereby the height of the flight is regulated, and yet again another, the sudden expansion of the tail like an open fan, whereby the speed is instantly checked. It is after watching the kites thus gliding seemingly without effort, at all angles and in all directions, that one despairs of the audacity of man's attempts to convert himself into a flying-machine.' He saw them at their best in Morocco: 'After a few easy strokes of its wings, no laboured flapping, one would glide slowly past on motionless pinions, with head inclined and bright yellow eye closely examining all below, and as it passed between us and the sun the delicately coloured forked tail seemed almost transparent and assumed a bright rufous tint. Suddenly, with a quick but well-defined motion, the angle of the tail would be altered, and, obedient to this movement, the course of the bird would be changed with mechanical precision, until a second quick turn of the tail brought it back to its former course or caused it to sweep round.'

We find in the book much that is interesting about the great and little bustard, the booted eagle, the white-shouldered eagle, and the vultures. The absolute silence at the top of some great cliff was impressive. The vultures glide overhead, or sweep past hundreds of feet below, but never utter a sound, as also do the eagles and the startled rock-doves. Landseer's famous picture of 'Eagles attacking Swans' he calls a monumental work of mischievous misrepresentation. It gave him unspeakable pleasure, unrepentant bird-nester that he was, to gaze at last, after dangerous and toilsome effort, at the nest of a golden eagle, a great structure of sticks, four or even six feet across, with its lining of fresh green leaves, in the centre of which lie two splendid eggs, white in ground-colour, with every shade of rich brown and rufous marking. He says: 'Such moments repay the true lover of nature for all the labour and risk. Contrast his feelings with those of the collector who pays a man to take both the risks and the eggs for him! But whether the object of the quest be to take the eggs, to obtain photographs of the nests, or to see the birds in their wild state, it brings a man in touch with one of the most fascinating of studies. The mere watching of these glorious birds in their haunts is a revelation. The marvellous ease of their flight and the rapid adaptation of their great wings to effect every turn and wheel in mid-air are a never-failing joy to witness.' The Egyptian vulture is called the most unsavoury of birds, and the griffon vulture one of the most magnificent birds on the wing. To obtain the eggs and photograph the nest of a bearded vulture or lämmergeyer, Verner made five expeditions to a remote spot in three successive years, and narrowly escaped disaster in

three of them. We must refer the reader to the book for these thrilling narratives of feats as daring as that of Count Arco recorded in Boner's *Forest Creatures*, when he climbed between four hundred and five hundred feet to an eagle's eyrie. The bearded vulture is little better than its Egyptian friend in the matter of feeding; the nests are unspeakably foul. They show marvellous ease in flight, and have a fierce-looking head, silvered crown, and black mustachios and bristly black beard, contrasting with the rich red throat and breast, and sweeping black pinions.

Ospreys seem fairly common in the Strait of Gibraltar, and their nests are a mass of big sticks about five feet across. The nests in the cliffs Verner found difficult of access. They have the cry of the falcon or hawk type. The osprey will remain out fishing long after sundown. While fishing it flies with motionless wings, about two hundred feet above the sea, until it detects a fish below. Then it momentarily checks its pace and flaps its wings, drops like a stone into the water, disappears altogether, and returns with a fish in its talons.

NOT WHOLLY BAD.

CHAPTER II.

IN the silence that ensued, Delane stepped out on to the veranda and scanned carefully as much of the countryside as was visible therefrom. Then he went back and sat down in a wicker chair near the window.

Turning to Vera, he said, 'As you doubtless observe, I have drawn largely on my unknown nephew's wardrobe. But I have changed more than my garments. I am no longer the same being I was a quarter of an hour ago. I breathe, I live! Nay, I could dance and sing as if I were again a child. Among your brother's belongings I lighted on a box of theatrical trappings, of which this wig and this moustache formed part. Oh, what a lucky find it was! Yes, I am indeed high in Fortune's favour to-day.'

'My brother is engaged to take part in some amateur theatricals in the course of next week,' remarked Vera by way of explanation. 'But surely you must be hungry! Shall I have a luncheon-tray brought in for you, or—or will you dine with us at seven, by which time mamma will almost surely be back?' How long did he intend to stay? she wondered.

'*Merci;* but I could not touch food just now. For all that, a tot of neat cognac or whisky would earn my gratitude. As soon as it is fairly dusk I shall clear out and trouble you no more.'

Vera spoke to Fred, who left the room, to return two minutes later carrying a tumbler half-filled with neat spirit, which he handed to Delane.

The latter stood up to take it, and drew a long breath as he inhaled its fragrance. Then slowly and lovingly he drained the glass, nor took it from his lips till the last drop had been imbibed.

'Nectar!—nothing less. Fit for mighty Jove himself!' he said as he put down the glass. 'To think that for four long years nothing stronger than cocoa has passed my lips! Cocoa! I shudder at the recollection. Already I am conscious of a new life permeating my veins. My brain is throwing off its torpidity. I am no longer "Number-four-nine-seven," but Edward Delane, gentleman.'

He laughed lightly and resumed his seat by the window. Again his gaze traversed the landscape outside.

'Possibly you would not object to a cigarette,' said Vera, whose kind heart could not help compassionating Delane, although there was an indefinable something about him which repelled her in her own despite. 'If so, you have my full permission to smoke.'

'"Princess, this is too much! You have rendered me your slave for ever,"' he exclaimed effusively, apparently quoting from some play or other.

Fred handed him his cigarette-case and match-box, and presently he was exhaling thin spirals of smoke through his nostrils, with half-shut eyes and an air of supreme enjoyment.

Vera and Fred, seated near the piano, conversed in low tones.

Suddenly Delane spoke. 'I have told you a part of my history, but not so much as it is only right that you should be made acquainted with. For instance, you don't yet know to what unhappy circumstance it was owing that for the last four years I have been an inmate of a convict prison—of a veritable hell upon earth. I will now enlighten you.' He paused while he indulged in a few more delectable whiffs.

'It was not till I had been fifteen years abroad that, after many ups and downs and many adventures, I returned to England, thoroughly homesick. I had not made my fortune in the interim—far from it. I had left the Old Country with two hundred pounds in my pocket; I came back with three hundred, mostly in Bank of England notes. A few days after landing I had occasion to make certain purchases, and I was arrested some hours later, charged with passing a forged note. I and my baggage were searched. My other notes were, of course, found, and they also proved to be

forgeries. The only conclusion I could come to at the time—and I have come to none other since—was that I had been drugged on shipboard, and false notes substituted for my genuine ones. But this I was unable to substantiate at my trial, the result being that I was sentenced to five years' penal servitude.'

He had spoken gravely and not without a certain impressiveness. Neither of his hearers saw the least reason for doubting the truth of his statement. Vera felt profoundly sorry for him.

He selected another cigarette and lighted it. Presently he resumed. 'I can see now how rashly and foolishly I acted this morning. After enduring four years of purgatory, it was nothing less than madness, with the end of my term so close at hand, to make a wild dash for liberty. When I rose this morning I had no more notion of doing such a thing than I had of attempting to fly. It was all owing to the fog, which came on suddenly and swiftly, as it has a way of doing in these parts. With a number of others, I was at work outside the prison walls, when in less than a couple of minutes a dense white haze swallowed us up, and hid each of us from the others, warders and prisoners alike. All in a moment a mad desire to make a dash for freedom seized me and gripped me hard. Vainly I struggled against it. My brain surged; I staggered as I stood. I seemed to hear a voice calling me out of the fog. "Come! come!" it said. All fancy, of course. On the instant my brain steadied. I flung down my spade and fled, unseen by a soul. I knew already that my widowed sister's home was at Mallow Dene, within a few miles of the prison, and when, about an hour ago, from my hiding-place in a thick clump of brushwood close to the high-road, I saw her drive past in her carriage—how well she carries her years!—I made up my mind there and then to seek a temporary refuge under her roof, which I had not before thought of doing.' He tossed away the fag-end of his cigarette. 'And now my tale is told. I trust I have not bored you overmuch.'

A gay, cynical smile lighted up his features as he proceeded to select another cigarette.

'With all my heart I hope they won't succeed in recapturing you,' said Vera; 'but should they unfortunately do so, what would be the penalty?'

'Another year added to my term, so that I should have to serve two years instead of one; besides certain minor inflictions.'

'How shocking!'

At this juncture Delane, who had not ceased to keep a wary eye on the approaches to the house, so far as they were visible to him, started to his feet with an exclamation of 'Yonder they come!'

Vera and Fred crossed quickly to the window, and, following Delane's indication, near the point where the lane debouched into the high-road they beheld a group of men in uniform, one of whom was evidently questioning a smock-frocked labourer, who presently pointed to the Dene with outstretched arm and then went on his way.

'That fellow spotted me as I sprinted across yonder field on my way here,' muttered Delane.

At once the men on the road divided, two of them advancing up the lane, while the others kept along the high-road. A sharp turn to the right three hundred yards farther on would bring them to the main entrance to the Dene.

'What is to be done?' asked Vera, with clasped hands and colourless cheeks.

A short, sardonic laugh broke from Delane. 'It rests with you, my dear niece, to screw your courage to the sticking-place—if you can,' he said. 'It's evident that the clodhopper who watched me making for the grounds of the Dene has given me away to my pursuers. The object of the two warders coming up the lane is to ensure that their quarry does not escape by the rear. The others are going round to the front. Doubtless some of them will beat the grounds about the house, while the leader of the squad, in your mother's absence, will probably ask to see you; and, if I may advise, I would let him interview you here.'

'In this room!' exclaimed the amazed girl. 'But where will you conceal yourself?'

'I don't purpose attempting anything so foolish as to conceal myself. But leave that to me. All your unwelcome visitor will or can do will be to apologise for his intrusion, inquire whether you have seen anything of an escaped convict, and then ask leave to search the premises—which, of course, you will graciously permit him to do. But the point is, have you sufficient nerve to go through such an ordeal?' He looked questioningly at her with his piercing blue-gray eyes.

Vera returned his gaze, and drew herself up, as if involuntarily, to her full height, while her bosom rose and fell quickly. 'You may trust me,' was all she said.

An imperative summons at the front entrance reached them, softened by distance. The crucial moment was at hand.

Vera turned her easel from the wall and took up her palette and brush. Marsden seated himself at the piano, stuck a piece of music in front of him, and struck a minor chord now and again absently. Delane lighted a fresh cigarette, drew his wicker chair on to the veranda, sat down, and proceeded to busy himself with the fishing-tackle left there by Fred. The rays of the autumn sun, now only just above the horizon, shone full upon him.

There was a tap at the door, followed by the appearance of Mrs Dobbs, the housekeeper.

'If you please, miss,' said the latter, 'Mrs Willoughby being from home, here are two—er

—persons who would like to have a word with you.'

'Show them in,' said Vera, turning from the easel.

Hardly had the words left her lips ere the men pushed past Mrs Dobbs into the room. One of them showed by his uniform that he was a prison official; in the other, Fred, who had turned on his music-stool, recognised Mr Snape, the chief constable of Dunstan's Cross, and a nod passed between them. Both men removed their headgear on entering.

'We must crave your pardon, Miss Willoughby, for this intrusion,' said Snape; 'but we have no option in the matter. Taking advantage of the fog, a convict at work outside the prison made his escape this morning. We have information that a little while ago the fellow was seen to enter the grounds of Mallow Dene, where he is being sought for at this moment. But, as we think it not unlikely that he may have made his way into the house itself by means of one or other of the doors or windows in the unoccupied wing, we want your permission to search the premises in order to satisfy ourselves that either he is or is not concealed on them.'

'Gracious goodness, Mr Snape! you have set me all a-tremble!' exclaimed Vera with an air of well-simulated dismay. 'I hope the wretch has not sought refuge here. Search the premises, by all means; and the more thoroughly the better. Mrs Dobbs shall conduct you over the house.' Thereupon she rang the bell.

In the meantime the head-warder's eyes had not been idle. He had bowed to Vera, and had not failed to note what a remarkably pretty young woman she was; and he had seen the nod of recognition which passed between the chief constable and Marsden. Then his eyes took in casually, and as a matter of no moment, the artistic furniture and adornments of the little room, and so reached, last of all, the figure in the wicker chair on the veranda; a tall, thin man, well past his thirties, with black hair, a small moustache with upcurled ends, and a complexion as bronzed as the warder's own, dressed in white flannels, with one leg crossed carelessly over the other, thereby displaying an inch of black sock, placidly smoking a cigarette, his straw hat tilted over his eyes while deftly tying a fly on the fishing-line tangled about his knees.

All these details the head-warder took in almost at a glance, as his training had educated him into doing; but they left no impression on his brain. His thoughts were full of the escaped convict, and had no room just then for other concerns. He was impatient to begin his perquisition.

Three minutes at the most had elapsed since the entry of the men when Mrs Dobbs appeared in response to the bell. Vera gave her certain instructions, and then the officers bowed and followed the housekeeper. As the door closed behind them Vera sank into a chair white and trembling. The nervous tension which had upheld her so far had suddenly given way.

'You acted that little scene amazingly well, my dear niece,' said Delane approvingly. 'It is evident that you possess no small measure of the histrionic gift.'

Vera did not reply. Marsden gave her hand a surreptitious squeeze, and, turning again to the piano, began to play one of Schubert's nocturnes in a minor key.

For all three the next ten minutes seemed to stretch out to a full hour; but at the end of that time Mrs Dobbs made a welcome appearance. The officers had gone, their errand having proved a fruitless one; while the men who had been searching the grounds had taken their departure in a hurry, some on bicycles, others on foot, news of some sort having apparently reached them from a fresh quarter.

Delane rose, stretched himself, and stifled a yawn. '"Now to fresh woods and pastures new,"' he quoted. 'The time has come for me to make my exit.'

'Surely not till you have partaken of some refreshment,' said Vera with gentle insistence. 'I will myself go to the kitchen and arrange for a tray to be brought in for you. Your pursuers have gone. Why need you hurry?' Without waiting for a reply, she went.

Delane shrugged his shoulders. 'Woman's sweet tyranny,' he remarked with a caustic smile. 'The dear creatures lead us by a silken thread, and do with us as they will.'

'Have you formed any plans for the future, if I may ask without being considered impertinent?' queried Marsden. 'If I can further your views in any way I trust you won't hesitate to tell me.'

'My dear fellow, it's awfully kind of you to say so; but I hope to manage "on my own." My aim will be to get out to South America, where I have friends—well-to-do friends—who will hardly cold-shoulder their old-time *amigo*. No, they could not afford to do that!'

Here Vera returned.

'A little *déjeuner*, so to call it, will be ready for you in five minutes,' she said. 'And here is a trifle of money to help you on your way.' Into Delane's extended palm she put two or three sovereigns, and then handed him a small pocket-book containing notes to the value of thirty pounds. 'If this is not enough for your requirements,' she said, 'write to mamma when you are in safety, and I feel sure that you won't have to wait long for an answer.'

Holding the gold in one hand and the pocket-book in the other, he said, with what seemed a ring of genuine pathos in his voice, 'My dear niece, I believed that my heart, seared by misfortune and the manifold hardships I have undergone, had been rendered impervious to all the softer feelings and emotions of ordinary

humanity; but to-day has proved that in so thinking I was mistaken. It has proved that'——

He broke off abruptly. A woman's shriek, which evidently came from a distance, and yet had a piercing note in it, cut the luminous twilight like a knife, to be followed by an agonised cry of 'Help! Help! Oh, my child! my child!'

Our trio stared at each other with startled eyes.

'The river is in flood, and there must have been an accident!' exclaimed Vera.

Again the cry for help rang out.

Without a word to the others, Delane clapped his hat on his head, sprang through the open window, vaulted over the garden gate, and began to sprint down the lane which led in the direction of the river.

'I'm off too!' exclaimed Marsden.

'Yes, yes! and I will follow,' cried Vera.

(To be continued.)

A FLOATING PUBLIC SCHOOL.

By Donald Newton.

'THE battle of Waterloo was won on the playing-fields of Eton.' Such was the dictum of England's greatest soldier, whose thoughts naturally turned to his own school and his own greatest achievement. His saying, without departing from his meaning, is, however, capable of a wider interpretation; his thoughts analysed, doubtless, would have been translated into, 'The battles of England are won on the playing-fields of our public schools.' Nothing could be truer. No sphere is too wide to merit inclusion in the tribute paid to our great educational institutions by one whose whole life amongst men of action made his opinion one to be treasured by all people who love their country. Indeed, the influence of our public schools is world-wide, and alone has made possible the anomalous position of England to-day—the position which forces all countries to watch and wonder while one-fifth of the habitable globe and one-fifth of the peoples of the world are governed by the forty odd millions of inhabitants that call Great Britain 'Home.' We are told, and I believe truly, that the German boy knows more and has been taught more scientifically than his British *confrère*. But the position was clearly expressed by a German father who, when asked why he contemplated sending his son to an English public school, replied, 'They teach something there which we have not learned; they are taught to govern themselves, and in so doing gain the knowledge of how to govern others. That is why our boys—who know more of science, history, mathematics—what you will—when they go abroad keep the books, while the English boys govern them.' Indeed, while the English public schools turn out many brilliant scholars, their staple product is essentially men.

Amongst the great schools that play so large a part in the national life of Great Britain, none can rank higher—though many are larger—than H.M.S. *Conway*, a training-school for embryo officers in the Royal Navy and mercantile marine.

In 1859 a number of Liverpool shipowners, realising that the old rule-of-thumb methods were giving place to a navigation that was a science, approached the Government with a plan to establish on the Mersey an old warship to be used as a school for the training of merchant service officers. The Government, after due deliberation, realised the national benefit that might be derived from such an institution, and lent the sloop *Conway* to the self-appointed committee of management, and the first nautical school to be devoted to the interests of the mercantile marine came into being.

Its success was immediate and phenomenal. In 1861 the committee informed the Government that the *Conway* was too small to meet future requirements; and, the national usefulness of the institution having been proved beyond all doubt, the frigate *Winchester*—taking, however, the old and now famous name *Conway*—replaced the smaller vessel. In 1875 the second ship had also to be replaced by a larger vessel, and the magnificent old line-of-battle ship *Nile* became the *Conway*, and still swings to her moorings in the Mersey, doing finer service to-day than any vessel in the most brilliant engagement of any naval war has ever been able to boast. The *Conway* is making men—real, sturdy, self-reliant men—to uphold the honour of the grand old flag all over the civilised world.

The *Conway* is indeed one of the sights of Liverpool, and one not to be missed by those who, through the courtesy of her commander, may gain permission to inspect her. To reach the ship one is taken in a smart steam-pinnace, or, if fortunate, is carried on a man-of-war's cutter propelled by oars handled by ten pairs of sturdy cadet arms. Here one has the first glimpse of the healthful exercise that makes the ex-Conway youth what he usually is. Arrived at the gangway, the visitor is received by the officer of the watch, a petty officer whose position is similar to that of a prefect in one of the public schools on land. Coming on to the deck, one's first impression is that of surprise at the spaciousness of the old ship. The visitor is told that he is on the lower deck, and wonders

how many such areas this veteran possesses. Looking round, the visitor sees evidences of her original occupation, two ancient muzzle-loading cannon presenting an almost ludicrous contrast to the smart, highly polished, and wicked-looking modern four-inch breechloading machine at which the cadets are taught gunnery. On this deck a peculiar-looking instrument of warfare is exhibited, which an inscription tells us is a gun captured during the Boxer rebellion in China, and presented to the *Conway* by an old cadet. On this deck are the lavatories and bathrooms, the cabins of the first and second officers, the library, the doctor's dispensary, and a light, airy, and perfectly equipped hospital. All other features on this deck, however, are dwarfed in interest by the unique ornamentation of the walls, or in sailor parlance bulkheads. Row upon row of prize-lists, names in gold upon a background of blue, show the prize-winners in the senior class for each year since the school was inaugurated. Here on visiting-days can be seen grizzled parents proudly exhibiting to their offspring the family name inscribed decades ago; here can be seen the ambitious cadet wistfully looking, and hoping that next prize-day will see his name on the list. Such an undying record is a greater incentive to zeal than any prizes, however valuable, could be. But the prizes themselves are valuable. Few of the books so rarely read by their winners are given; but nautical instruments of everyday use, watches, and medals (one of which is presented by His Majesty the King) are here the fruits of study and perseverance.

On our descending to the deck below, which is known as the orlop, our eye is caught by a row of chests similar to those possessed by midshipmen in the navy, two hundred in number, each marked in white paint with the name of the cadet to whom it belongs. Down again, and we are informed that we are in the hold, where huge racks are filled with what look like enormous white sausages. These are the portable beds or hammocks in which the cadets sleep. They are taken, each by its possessor, to the orlop deck, there slung to bars which are held overhead by hooks during the day, unlashed, and the mattress, blankets, sheets, and counterpane arranged for the night. Incidentally it may be stated that no one knows what real comfort is until he has slept in a hammock. We retrace our steps again to the orlop, past the lower deck, and up to the main deck, the dining-room and schoolroom of the ship. Forms and desks stand against the sides ready to be placed in position for school. Canvas screens are neatly rolled up overhead; one minute's work, and the screens are dropped and the deck is transformed into six class-rooms. Overhead are some fourteen tables clamped in position ready to be lowered at meal-times, each table—or mess, as the technical term is—being presided over by a cadet petty officer, who wears the distinguishing mark of his rank, a stripe on each sleeve.

On this deck are various trophies—a huge silver shield competed for yearly in the ship's boats by the two great divisions of cadets, the port and starboard watches; a silver cup rowed for and won by old Conways against old Worcesters (members of a nautical school on the Thames) in Calcutta; and several cups and shields rowed for and played for at cricket and football by the subdivisions or 'tops'—these correspond to the 'houses' of other public schools. Lastly, there is an emblem of victory that fills Conways past and present with feelings of mingled exultation and regret—exultation that success and possession are theirs, regret that an aquatic event unique in the school-world should have been abandoned. In 1890 an annual boat-race, to be rowed alternately on the Thames and Mersey, was inaugurated between the cadets of the two great rival nautical colleges, H.M.S. *Conway* and *Worcester*. The possession of the magnificent silver cup, held by the winning ship, testifies to the prowess of the *Conway* oarsmen. The race took place, with varying success, for seventeen years, when the *Worcester*, to the dismay and regret of past and present cadets of both ships, abandoned the race, leaving the cup and a margin of two victories to the *Conway*. All true sportsmen must hope that some day the *Worcester* authorities will see their way to reconsider their decision and revive this great annual sporting event.

A brass plate on this deck, screwed to the mainmast in a prominent position, makes one involuntarily bare his head. It is a monument, due to the thought of Captain Broadbent, sacred to the memory of those old boys who have lost their lives at sea. One cannot help believing that Captain Broadbent, who takes a great interest in all matters pertaining to public school life, had in mind that part of the famous Rugby anthem for Founder's Day which runs:

> And some there be which have no memorial,
> Who are perished as though they had never been,
> And have become as though they had never been born,

and determined that, as far as could be, there should live some record of the ex-Conways who lost their lives in the execution of their duty. Wisely, he did not call upon the committee of management to pay the expenses of this tablet; well he knew how such a privilege should be for old boys, and eagerly was the privilege claimed and paid for. Few of us but can think, with tears in our eyes, of some bright-faced, eager boy-friend of our *Conway* days who sailed but never returned.

On this deck are also the ward-room and dining-room of the officers and masters, the petty officers' room, and the galley or kitchen. Up once more, and at last the upper or top deck is reached. Tapering masts with great square

yards show that here the cadets are taught to be real sailors—to make and shorten sail, to send yards aloft, to splice and repair rigging, to learn the thousand and one things a seaman must know. Here also is the playground—such a playground, open and spacious, as few schools can boast; the open deck, free to the health-giving breezes of the great river, spotlessly clean, and filled with the sound of the merry voices of the future empire-builders. It is with regret that one leaves this deck, with its wholesome sounds and associations, to visit other places of interest—the comfortable quarters of the captain, the workshop, carpenter's shop, electric-power house, and many other wonders which, from consideration of space, cannot be mentioned.

But one doubt remains in the mind of the visitor: what of the games—cricket, football, hockey—that form so large a part of the life of the public schoolboy? No need for anxiety, however. Within ten minutes of the landing-place, the *Conway* owns one of the finest recreation-grounds possessed by any school in the north of England. Four fifteens at football, four elevens at cricket, and three hockey teams represent the old ship, and it is rarely indeed that the broad backs and sturdy arms of the cadets fail to give a good account of themselves; while the annual *Conway* sports is one of the school-events of Cheshire. The love of sport gained on the *Conway* is shown by the fact that, witnessing a cricket-match last year in New York between an American county team and an eleven representing the shipping, I counted five old *Conway* blazers amongst the seafaring eleven. Incidentally it may be stated that Captain Webb, the finest swimmer the world has ever seen, and the only man who has succeeded in swimming the English Channel, was taught to keep himself afloat by the instructor in the art of natation on the *Conway*.

What this grand old school has done for the mercantile marine is evidenced by the positions held by ex-cadets. In the premier line of the world, the Cunard, fully 20 per cent. of the captains and officers are ex-Conways; the marine superintendent, Commander George H. Dodd, R.N.R., claims the same distinction; and, significant fact, in the old ship itself the men who have been chosen for captain and chief and second officers are all ex-cadets. Amongst many others occupying high positions one distinguished Atlantic captain might justly be mentioned, because of his reputation as a highly scientific member of a profession the standard of capacity of whose followers is very high. Captain Haddock, R.N.R., C.B., of the White Star liner *Oceanic*, one of the very few members of the seafaring community who have been decorated by King Edward, owes his early training to the *Conway*.

Old boys in all walks of life, eminent doctors, lawyers, engineers, business men, reflect credit on and take pride in their old school. Many distinguished naval officers call the *Conway* '*alma mater*,' for cadets are trained for the Royal Navy as well as for the merchant service, and in this the wisdom of the committee of management and of Commander Broadbent is clearly exemplified. In addition to commissions in the Royal Naval Reserve, each year six nominations for cadetships in the Royal Navy are competed for. Surely no better means for drawing closer the bonds of friendship between the sister services could be devised. All those who go into the Royal Navy from the *Conway* have friends in the mercantile marine, and *vice versâ*. Few save those 'who go down to the sea in ships,' certainly none who have not devoted thought and study to the subject, realise what a national necessity a better understanding between the navy and the merchant service is. If the *Conway* were not providing the splendid training she is doing, her existence would be amply justified by this one great fact—she is serving to draw together the two services by the triple bonds of friendship, understanding, and appreciation.

Any description of this floating school, however brief, would be incomplete without a few words about the two men who have done so much to raise it to its present state of efficiency—Lieutenant A. T. Miller, R.N., and Commander Harvey Broadbent, R.N.R.

Captain Miller, who had served both in the Royal Navy and the mercantile marine, reflecting credit on both services, accepted command of the *Conway* in 1878, and spent the latter part of his life in promoting the usefulness of the ship and in endeavouring to raise the standard of the mercantile marine. He was both feared and loved by the cadets, a disciplinarian with surely one of the kindest hearts that ever beat, a life-long friend to every old boy who deserved his friendship. When he died in 1903, deeply regretted by hundreds of boys who had heard his kindly words of farewell and God-speed, the committee of management were fortunate indeed to have a chief officer fit and ready to fill the breach. The present head of the school, Commander Broadbent, has served in every kind of vessel, from the sailing-ship to the liner, from the tramp steamer to one of His Majesty's battleships. That he is the right man in the right place is proved by the success of the school. To-day the *Conway* has its full complement of two hundred cadets, athletics have prospered wonderfully under Captain Broadbent's régime, and the standard of scholarship has never been so high.

Conway boys have a great responsibility, good for all men, in coming from a grand old school whose reputation, added to during all the years of its existence, is in their hands. It is true that there is plenty of good silver in the world that is not marked, doubtless some metal that is

not silver is falsely marked, but we would all prefer to see the lion on that which we possess. There are, thank God, plenty of able officers who have been educated all over the country; but a *Conway* training is the hall-mark of a merchant service officer.

However, pages of panegyric cannot speak so eloquently as the general opinion of ex-cadets. The real reputation of the *Conway* rests on the lives, successes, and opinions of its old boys; and in every corner of the globe where the red ensign of England proclaims the nationality of liner, tramp, or sailing-ship one hears, 'God bless the dear old school, OUR *Conway*!'

THE REAL CANADA.

By NORMAN MURRAY, Montreal.

A British subject I was born, and a British subject I will die.—SIR J. A. M'DONALD.

MR JEFFERSON'S article on 'The Americanisation of Canada' in *Chambers's Journal* for July 1910 is interesting, but it appears to me that it needs some correcting and supplementing. To a British-born or native-born Canadian the title sounds something like the old joke about the Dutch taking Holland. A more appropriate title would be 'The Yankeefication of Canada.' There are, of course, some people in the United States who think that their country is practically America, as the other places scarcely count in their opinion. This, however, is very far from being the opinion of natives of either Canada or the southern republics. I have lived twenty-eight years in Scotland and twenty-nine in Canada; and as I have travelled over a large part of the Dominion in that time, and mixed with all sorts and conditions of people of all nationalities, white, black, red, and yellow, I think I know something about the country and its cosmopolitan people. I believe there was some annexation talk in Canada at one time; but that was before I left Scotland, so I cannot say much about it from personal knowledge. I know, however, that it would be political suicide for any public man in Canada to talk now of annexation. The aspiration of Canada, when in the distant future it hopes to be able to paddle its own canoe, is to be 'a nation,' and not a state of the Union. If you ask any boy or girl from five years old and upwards in Canada what is his or her nationality, the answer always is, 'Canadian.'

In the theatres and concert-halls the song that gets the most applause is always 'The Maple Leaf,' and next to that is the Union-jack, flag and song. The Stars and Stripes scarcely counts here. I am very much inclined to question the statement that the average thinking American who has travelled much in Canada is convinced that it will come under the dominion of the United States, in his lifetime at least. Sensible people don't worry much about what may or may not happen in future generations. Canada is even larger than the United States, and if the average Canadian 'does not blow' quite as much as the average Yankee, he has every bit as much conceit. The only thing that the young Canadian takes seriously is what he calls sport. The prize-fight between Jefferies and Johnson interested him much more than does a General Election in the United States, and nearly as much as a General Election in Canada.

Mr Jefferson makes a mistake when he states that Canadians imitate the Yankee accent. I have never come across a British or a native-born Canadian who expressed any desire to copy that accent, which he calls talking through the nose. The only people who can be distinguished by that accent in Canada are either visitors, of whom there are vast numbers during the summer season, or people who were born south of line forty-five. Mr Jefferson is again mistaken when he states that Canadians copy Yankee slang wholesale. Every locality in the British Isles, United States, and Canada has more or less its local slang. Sometimes a word may become popular after a successful play has made the round of the country, and yet be entirely forgotten in less than a year. To study Canada properly one would need to get in touch with some of the national and county societies, of which there are many in Canada. In Montreal there are four different Scotch societies—the Caledonian, the Highland Society, the Sons of Scotland, and the Clans. Then there are purely English societies, such as St George's and the Sons of England; besides many county societies, such as the Yorkshire Society. And here I may mention that Yorkshire men are very partial to *Chambers's Journal*. Four brothers from Yorkshire each took *Chambers's Journal* from me for nearly twenty years. Montreal being built between Mount Royal and the river St Lawrence, it is quite natural to call the lower part of the city 'down town;' but this expression has nothing to do with outside expressions. Though I have lived in Montreal for twenty-five years, I have not yet discovered the partiality for the New York styles above those of London and Paris that Mr Jefferson speaks of; in fact, I think it is quite the other way. Canadians do not look up to the people south of the line in anything whatsoever; indeed, I believe they think themselves much superior. This may be the case, but the point does not admit of argument. In the matter of 'soft' drinks the chemist or druggist is not in it, in recent years at least, as that trade

is practically now controlled by Greeks. Tipping is not done at each service by those who understand human nature; it is generally done when a guest leaves, and depends largely on the generosity of the guest and the nature of the service rendered.

The Canadian newspapers are not a bit more sensational than British newspapers. There is not the great demand for United States newspapers and magazines that Mr Jefferson imagines. There are, of course, a great number of United States business men in such places as Montreal and Toronto at all seasons of the year, but particularly from the 5th of July to October, and it is quite natural for them to wish for their home papers while away from home. All the important happenings in the British Isles are now reported in the local newspapers here within twenty-four hours after the event, and fuller details are copied within a week, when the home papers come to hand. In the matter of weekly and monthly periodicals, British publications hold their own well, and have been gaining ground since the recent introduction of more favourable postal rates. The postage for the United States weeklies and monthlies is now four cents (twopence) per pound, and two cents (a penny) per pound for British periodicals. There is one feature in the sale of periodicals in the United States that makes the sales often seem a great deal larger than they really are. The periodicals are mostly sent out on sale to make a great show, so that a newsagent can lay in a big stock without any risk; but a large number of them are afterwards returned, and finally find their way to the junk-store and thence to the paper-mills. United States periodical literature has an ebb and flow. A newsagent may sell twenty-five copies of a periodical one year; the next year the number may be reduced to five. With British periodicals it is entirely different. Take *Chambers's Journal* itself, for instance. I now get thirty-two copies monthly. The sales have always been going up since I started here over twenty-five years ago, and have never gone back. The *Strand* and *Windsor Magazine* have also kept a steady pace since the start. There are no periodicals that I know of in the United States of which the same can be said except the *Ladies' Home Journal*. When the Christmas trade sets in there are no publications in the United States that can at all compare with the British illustrated papers.

French Canadians, who form four-fifths of the population of the old province of Quebec, have not got the least inclination towards a union with the United States. In fact, I believe that they would resent such a movement more strongly than any other section of the population. I do not suppose Irish Catholics would object much to a union of Canada and the United States, as no doubt they think this would accomplish their double purpose of getting away from under the Union-jack, and getting the upper hand of the French Canadian Catholics in the language question, which is now becoming acute between them. There are many other questions on which Canadians do not feel at all disposed to acknowledge United States supremacy. The negro question, the looseness of the marriage tie (one-tenth of the marriages ending in the divorce court), and the open violations of the law by lynching, which are a disgrace to modern civilisation, make British Canadians often feel that they are glad that they do not belong to that country.

No, there is no movement in Canada towards annexation to the United States, and we do not look up to the people in any respect whatsoever, though we feel quite friendly towards them, and wish to continue so; but we have no desire to seek protection under the wings of the Eagle, and we much prefer the Union-jack to the Stars and Stripes. If it were put to the vote to-morrow, I feel confident that the vote in favour of annexation would be so small that it would hardly be worth recording. We prefer to be as we are—a part of the British Empire.

UPON THE HILLS.

Upon the hills the shadows closely cling.
By darkly drifting winds in early spring,
The fleecy clouds are wafted to and fro;
The shadows quickly come and quickly go,
Until fair sun enfolds them 'neath its wing.

Upon the hills the curlew calls at night
Unto its mate. They linger till the light,
And wing their way, to wilds removed afar,
Unto the frozen North, the polar star,
Where fair Aurora shines both clear and bright.

Upon the hills we scan the distant maze,
And look upon the valley in our gaze,
Where, down below, the people live and dream
That life is like a slowly flowing stream,
Now clear, now limpid, now obscure in phase.

Upon the hills our liberty we find,
And freedom to those realms is most confined.
When we have climbed the path, the 'pilgrim's way,'
Unto the heights where wisdom holds its sway,
Then light and grace and beauty clothe the mind.

Upon the hills, where all is free and true,
Beneath the clouds which smile with heavenly blue,
We long to dwell amidst the souls of fame,
Where joy and love alike declare their name,
Where naught doth harm but good alone accrue.

A GREAT AMERICAN HOTEL.

By Day Allen Willey.

THE great hotels of America, especially those in New York, have so many rooms that the largest of all, and the largest in the world, can accommodate a throng of two thousand guests. It shelters, besides, over a hundred servants, and these are only a small part of the 'helps,' such as chamber-maids, call-boys, clerks, and porters, who must be within call both day and night. It is a fact that the number of servants is often equal to the number of guests, so many are the duties to be performed.

In this hotel the term 'manager' is not a proper title. He is really the director. The only actual work he performs is to see that each department is doing what it is organised to do. He gets reports from his staff of assistant-managers giving in detail all this information. Each report is vouched for by its writer as truthful and accurate, and he is responsible for any error in it. Thus the director is given ample time to think of plans for improving the service in this or that respect, and has an opportunity to go to any part of the hotel, from the kitchen to the roof-garden, if he wants to look into matters.

The assistants who report to him are in charge of the sleeping-apartments, the heating and lighting, the kitchen, and the bridal and other suites which the wealthier guests take; another being in charge of the numerous parlours, the lobbies, and the reception-rooms; while there is, of course, a head-waiter in charge of each dining-room.

This hotel has what has been jestingly called a 'figurehead.' The director gets the tallest and best-proportioned man he can find, and dresses him in a gorgeous uniform that might bring to mind the dress of the higher European nobility. He is always near the main entrance, where he can be seen by every one; and his duties are merely to walk up and down with arms folded or hands clasped behind him, chest thrown out, and head erect. If a guest dares to address this magnificent personage, he bends immediately with a ceremonious bow, slight or profound as he gauges the importance of the speaker. He is a living hotel encyclopædia. He can tell you anything, from the time the express departs to the last trip of the roof-garden elevator. This hotel *impresario* is about the latest idea in the plan of attracting the patronage of the public—the public who have the money to spend. He is a walking advertisement of the splendour, luxury, and gorgeousness that are characteristic of the New York 'inns' of the better class to-day. He is usually the first and last object you see, and you associate him with the resort long after you have departed.

In a hostelry of this class, the scheme for getting at the contents of the purse has been studied and studied until it has become a fine art. From the time a man or woman enters the place there is something that suggests paying out money. The boy who carries your luggage to your room has a wistful look that only changes when he gets his tip. The porter brings in your box, and then stands expectantly until he gets what would be equal to the English shilling. You go down to dinner, and the dining-room usher takes your measure with a keen glance as you approach him. Whether the seat is at a window with a bouquet of flowers on the table, or whether it is in a dark corner with no bouquet and one waiter, depends upon the thought inspired by the usher's glance. If you look wealthy, the table is where you can see around, with a waiter to take off and put on the silver and dishes, and another to cut your meat, serve your vegetables, and pour out your tea or coffee. He may even beg to stir in the sugar with your permission. At last comes the dip in the finger-bowl, and the waiter who offers it stands in an expectant attitude. A shilling in American money—a quarter-dollar! He can't keep the contempt from his face. He doesn't even pull back your chair. Actually a dollar tip is not considered generous, but nothing less will make him bow. The pitcher of water sent to the room may cost a halfpenny, but you pay the carrier at least fourpence. The elevator-boy shows he wants a tip, the lackey in uniform who closes the entrance-door behind you has an 'itching palm;' and if a guest does as most of the others do when they leave the dining-room and the coat or wrap is put on, here's another chance to become separated from one's small change.

All this is, of course, in addition to the charges for food and rooms. At the big hotel, royalty can be accommodated in a suite which brings to mind the palace, furnished, decorated, and

[*All Rights Reserved.*]

adorned, as it is, after some home of a monarch of the past. A hundred dollars a day, a thousand a week, is not considered extravagant for such apartments; but if you would live like a king and pay like a king, they are yours for the price. As the elevator goes up and up, the cost of the rooms diminishes. Though in the upper chambers the air is purer, the sun shines through the window, the whirl and hum of the city cease, and you can rest in quiet, the fad is to live as far down as possible; so that, while an inside room on the top floor costs two dollars for every twenty-four hours, a room on a lower floor which looks on the street costs over ten times as much, not including food.

The great hotels and the 'lobster-palace restaurants' in the American metropolis are rivals in dinner-giving. Dining at any time between dusk and midnight at a 'swell place' is one of the recreations of the rich American, whether he lives in New York or has come on business or pleasure. He has the choice of spending his money at one of half-a-dozen 'palaces' and possibly twice as many hotels, where he meets other spenders with fat pocket-books. Suppose he and his wife dine at the hotel we have referred to. The cost of a dinner there is not a third of what must be paid at one of the so-called French cafés which have been named because of the lobster dishes on their menu. Three dollars pays for a course dinner, with no wine, in the world's finest hotel. If the next night he goes to a noted café, ten dollars a cover may be the amount of the bill for food and wine. If he orders a tender-loin steak for two, it costs from three to four and a half dollars. Any vegetable is a half-dollar a plate. Delicacies such as terrapin and turtle soup average a dollar a plate each, lobster or chicken salad a dollar. You can have a plate of strawberries and cream any night in the year, but on some nights the price is one dollar.

The bill of fare at the café has not so many dishes, and they are no better in quality or better prepared than at the hotel, but it is a resort which the men of millions frequent—Americans by whom a twenty-dollar note is valued as much as one of the public would value a dollar-note. Every night in the year tens of thousands of such dinners are eaten in these cafés, the largest of which will seat a thousand diners at one time. These figures are not exaggerated in the least, as is shown by the records of the restaurants, whose managers are pleased to make them public as an advertisement of the popularity of the resort. One pays not merely for food and drink, but to see the display of extravagance, to be one of the 'riotous livers.'

The system of conducting a big American hotel is changing in some very unique ways. There are several in New York where the management has nothing to do with operating the elevators or paying the call-boys and porters, and where the coats, hats, and wraps of the guests are cared for during the meal-hours by a corps of servants who are not on the pay-roll of the hotel. So enormous have become the receipts from tips that the amount a waiter receives in a year may be twice his salary; and the other attendants are equally fortunate. The hotel-proprietors have taken advantage of this fact by 'renting out' or leasing what they call privileges for six months or a year. A *concessionnaire* makes an agreement to supply all the dining-room service, for instance, for a certain sum and the tips the waiters receive. He binds himself to supply effieient waiters, and to be responsible for them. The hotel-owners calculate the amount of tip-money, as they know what is the average fee and the average number of guests who patronise the dining-room, and if the *concessionnaire* signs the agreement they are relieved of the necessity of hiring waiters and watching them; while in some instances the tip-money reaches such a sum that the hotel-proprietors lease the privilege for this amount alone, and thus actually pay nothing for the serving of meals, the guests doing so. Under this plan the waiters give all their tips to their employers, and weekly or monthly the money is divided equally among them, after the *concessionnaire* has taken his portion, which may amount in a year to as much as ten thousand dollars.

The same plan is being followed in leasing privileges for 'checking' and hanging up outer garments, and in the other services mentioned. As yet but few hotel-owners have adopted it, but many of the large restaurants have done so. If we consider the millions who dine in the hotels and restaurants, it is evident that a large sum of money is paid to the attendants in the coat and cloak rooms. This money in New York slang is termed 'peg-rent,' because the garments are hung on pegs. The claim is made that in the whole of the city a sum amounting to two hundred thousand dollars is paid in a year for this service alone.

The way in which this curious scheme works in connection with the restaurants is worth describing. A boy bustles up and takes the man's hat and overcoat. The lady goes into the dressing-room, and a maid relieves her of her wraps. The tip must be handed over to the *concessionnaire* who has the coat and cloak room privilege, for which he may have to pay the restaurant a large sum. The *concessionnaire* is usually a man of European birth and training, who, beginning life in a very small way in America, has learned the great lesson that Americans will pay more or less cheerfully for things that are useless, or at least unnecessary. Sometimes the *concessionnaire* has begun his career as a boot-black or a bell-boy, or in some occupation where the money received is out of proportion to the work done as judged by what is obtained at other occupations. He sees the money to be made by renting hat-pegs, and he is willing to offer for the privilege of renting them

out for the profits of the tips. There are still restaurants in existence in New York in which you are allowed to take your hat and coat into the dining-room and hang them on a hook overhead, if you don't mind the signs that warn you to watch them; but the man who likes to eat a meal without worry lest somebody should exchange hats with him must not only pay more for his meal, he must pay peg-rent as well. In the older hotels and some of the newer ones the custom still obtains of giving everybody who works in the cloak-room a chance to receive the tips. Certain hotels where the restaurant business is large assign different employés to duty in the cloak-room on different days. In others the sum collected is divided among those employed in the cloak-room. But it is a fact that in at least four New York hotels and in many restaurants the cloak-room privilege is 'farmed out' either to an employé of the hotel, like the head-porter or the head-bellman, or to an outsider, and in some cases for a large sum.

In Broadway the coat-room *concessionnaire* pays from two thousand five hundred to three thousand five hundred dollars, the dollar equalling four shillings. In the case of one *concessionnaire*, the sum of five thousand dollars or one thousand pounds sterling is paid. Another paid three thousand five hundred dollars the first year; but when the proprietor of the establishment realised how much money the *concessionnaire* was taking, he gradually raised the price until it is said that the *concessionnaire* is now paying twelve thousand dollars a year for the privilege. Some experts who calculated the matter said that this rental means that the gross receipts of the *concessionnaire* must be close upon thirty thousand dollars a year, and that his net profits will be between twelve thousand and fifteen thousand dollars a year. To get an accurate proportion of the people who tip is not easy. One man who has a cloak-room concession says that not more than one person in three tips for his hat and coat being taken care of. A hotel-man of experience ventured the opinion that of the patrons of New York restaurants, 95 per cent. are either residents of New York or persons who are stopping in hotels, and of these fully 90 per cent. tip for the care of their hats and coats. A man who breakfasts, lunches, and dines out every day in the year, even if he gives ten-cent tips, will pay over a hundred dollars a year for peg-rent. If he simply sups out with a companion every theatre-night, he will pay in a year for the care of hat and wraps twenty dollars more than that sum.

To refer again to the hotels. In the theatrical district of New York is one which pays a large proportion of its expense for maintenance out of tips from its patrons. The revenue it receives includes the peg-rent, amounting to about five thousand dollars annually, and the lavatory privilege, which brings in three thousand dollars. The man who rents the latter has to keep the room clean, and the combs and brushes in a sanitary condition. The shoe-polishing stands are his, and the hotel furnishes the brushes and combs, soap and towels. The head-porter pays seven thousand five hundred dollars a year for his privilege; he employs about twenty-five men, furnishes a messenger service, and has a monopoly carrying the express business. The barber pays ten thousand dollars a year for his privilege. The house-valet pays about three thousand dollars a year. Thus the hotel has a yearly revenue of nearly thirty thousand dollars from its concessions; but the receipts of the *concessionnaires* are far more than this sum, all merely the pocket-money of the guests.

PETER AND JANE.

CHAPTER VII.—*continued.*

MRS OGILVIE'S writing-table was placed against a wall on which hung a mirror, and she sat down opposite it. According to a custom she had, she directed the envelopes first, before beginning to write her letters. Her writing-table was always littered with addressed envelopes of notes which she meant to write some day when she felt in the mood for writing.

She paused now when she had written the words, 'To be given to my son at my death;' and, screwing up her face into her twisted smile, she said to herself, 'How absurd and melodramatic it sounds!' Then she took a sheet of note-paper and began to write. The first few lines flowed easily enough, and then Mrs Ogilvie's pen traced the letters more slowly on the page. Once she paused altogether, and said aloud to her image in the mirror opposite her escritoire, 'What a fool I am!' and then stooped again over her task. The sprawling writing had hardly covered half a sheet of note-paper when the red-gold head with its crown of plaits was raised again, and the woman in the mirror looked at her with a face that was suddenly livid. Her lips were white, and drawn back somewhat from her teeth; and Mrs Ogilvie, in the midst of pain, recognised first of all how hideous she looked.

The pen dropped from her fingers, and she pushed her chair back from the writing-table and went over to the fireplace and lay down on the sofa. The day was cold, and she shivered and drew a cover over her feet. 'When this is over,' she thought, 'I will ring and have the fire lighted.'

She looked at the clock on the mantelpiece

and calculated deliberately how long the paroxysm would probably last. She had always regarded pain as an animate thing which had to be fought with, and she had never failed in courage when she had suffered it, nor moaned when, as now for the first time, she was beaten by it. The clock seemed to tick more leisurely to-day, and the time passed very slowly; there is a loneliness about suffering which makes the hours drag heavily. Once she buried her face for a moment in the sofa-cushions; her hands clenched the cover and crumpled the delicate satin between her fingers. Her head sank lower, like a wounded bird that ruffles up the dust; her head moved convulsively amongst the cushions. It was a grim fight with pain that she was making; she did not give in easily, but the odds were unequal. Mrs Ogilive was in the hands of an unsparing foe. She was conquered; but afterwards, when she lay quite still, there was a look of defiance in her attitude.

Her maid, coming in and finding her sleeping, glanced at the blinds, and wondered if she dared lower them, for the sun was shining brilliantly into the room now, and its beams were resting full and strong on the figure on the sofa.

It was something about the position of the auburn head, something twisted and unnatural in the attitude of the recumbent form, that caused the woman to cry out suddenly and sharply with a vibrating cry that seemed to set everything in the room jingling. No one heard her at first, and she opened the window and called aloud for help; for there was a sound of horses' hoofs upon the gravel, and Peter rode up with Jane to the door.

'Mrs Ogilvie must have been dead an hour,' the village doctor said when he came; and then he sent the weeping girl and poor, white-faced, broken-hearted Peter out of the room. Neither of them could believe the horrible news; they turned to each other, taking hands as children do in their grief; and Jane went back from the door of the morning-room, and with a sob she stooped down and imprinted a long kiss on the dead woman's brow.

'She must have died just as she was writing her morning letters,' said Peter, as he glanced at the writing-table with its litter of notes and papers.

'Perhaps it would be as well to lock up anything that is lying about,' said the doctor; 'it is customary to do so. Or your lawyer—who, I understand, is in the house—could come in, I suppose, and put away jewels, &c.' He handed Peter the litter of notes and papers on the writing-table.

'Thank you,' said Peter. 'I don't suppose there is anything very important, but I will look through them presently.' He glanced at the addresses of the topmost notes, and decided that they were probably belated wedding invitations to people who had been forgotten, and he put an india-rubber band about them and thrust them into his pocket.

The guests in the house departed hurriedly within two hours of Mrs Ogilvie's death. There was all the confusion of hasty packing and carriages ordered for this person and for that, footmen hastening downstairs with luggage, and luncheon prepared hurriedly and eaten almost surreptitiously by those who wished to catch an early train. There was a horrible stir in the house under the hush and awe that death brings. No one wished to intrude upon Peter; yet a dozen friends wanted to see him, to hear, if possible, more details of his mother's sudden end. Others, with a sort of animal instinct of forsaking at once the place where death reigned, betrayed an almost contemptible haste in quitting the house; but they too must know further details. They had never noticed that Mrs Ogilvie did not seem well, nor had they remarked that of late she had spent much time in her room; or they said, 'She had seemed so bright and cheerful;' and, again, 'They had noticed how tired she had been at night sometimes.'

To no one had Peter any special news to give. Some one had heard, he believed, that she had been to see Sir Edward Croft, the great surgeon in London, and to-day had telegraphed to him. Peter himself had not really been anxious about his mother, although he had imagined for some time past that she did not really look well. He gave what attention he could to his guests, bade them a conventional good-bye, and maintained that reserve which an Englishman is supposed to be able to maintain in times of sorrow. But it is not too much to say that, warm-hearted, deeply affectionate man that he was, his grief for his mother's death had something bewildering in it. He had loved her faithfully and admired her loyally during the whole of his life; there had never been a quarrel between them; and, if he had not received many outward marks of affection from her, there was not a single occasion in his life that he could remember when she had failed him. He had come first always; he realised this with the sinking of heart which even the most dutiful son may feel when he sees with absolute clearness, perhaps for the first time, that he must have accepted almost unknowingly many sacrifices from his mother. He hoped with a boyish remorse and a boyish simple-heartedness that she understood everything now, and that somewhere, not very far off, she would be able to see into his heart and know positively how much he had loved her. He had always accepted in simple faithfulness the statement that those who were gone 'knew now,' as the phrase runs; and it comforted him to think that all he might have said to her when she was alive was clearly understood by his mother at last.

By two o'clock the big house was empty of guests and given over to silence, or to the sound

of hushed footsteps about the stairs, or to the weeping of maids as they assembled in little groups in the corridors and spoke with sobs of the dear mistress whom they had loved faithfully. Each room that had lately given up its tenant showed a disordered interior, with paper strewn here and there; or some maid, left behind to pack her mistress's heavier luggage, could be seen kneeling before an open trunk and deftly arranging its contents.

A gray-haired butler approached his master when the last of the carriages had driven away, and begged him to eat some luncheon, and informed him that Miss Erskine was still in the library.

'Send something there,' said Peter briefly.

For a moment Jane could only weep, and they clung to each other, saying with the helplessness of the suddenly bereaved, 'Isn't it awful?' Then, as they began to grow calmer, Peter administered what comfort he could, and tried in his kindly way to induce the girl to eat something.

'You must eat, you know,' he said, 'and it will do you good. It has been a terrible time for you. And then I think you ought to go back and lie down for a bit.'

If it is true that a woman suggests beef-tea as a universal panacea for all ills, it is certain, on the other hand, that a man believes that a woman always feels better for lying down.

'I should like to wait,' Jane said, 'until Sir Edward arrives, and hear what he has to say.'

A footman came in to clear away lunch, and then the two lovers went and sat together on the library sofa, and looked out on the long stretches of gardens with their cold precision and want of sympathy. A luggage-cart piled high with dress-baskets and portmanteaus passed down the drive towards the station-gates, and a motor-car returned from a neighbouring house for something that had been forgotten. After that there was silence both within and without the house; even the maids had gone downstairs to sit together and whisper. It was one of those gray days in early autumn which have an almost weird sense of stillness about them. Hardly a leaf stirred, and even the flight of the birds was noiseless and touched with the universal feeling of hush. The begonias and dahlias and flaming autumn flowers in the broad border below the southern terrace-wall had lost half their colour in the gray afternoon, and a robin alighted softly on the window-sill, and, putting its head on one side, looked into the library at the pair sitting on the sofa.

Neither had spoken for a time. To-morrow there would probably be lawyers to see, and the funeral to arrange for, and a hundred things to do; but to-day there was a lull in which time itself seemed to have stood still. Years had passed since this morning, and yet the clocks only marked a few hours on their dials. Mrs Ogilvie had died at twelve o'clock, and the very flowers which she had placed by her table still bloomed freshly, and a book she had been reading lay open where she had left it; yet it seemed a lifetime since she had died.

During the interminable afternoon, and in the stillness of the big library, with its ordered rows of books and solemn-looking, carved cupboards, Peter and Jane Erskine sat together, feeling oppressively this great lapse of time that had passed. Their understanding of one another had always been a strong bond between them; and now they felt not like the lovers of yesterday, but like those whose lives have been linked for years, and for whom loyalty and faith have grown deeper and stronger as troubles and storms came. They looked across to the ruined tower, where not very long ago, as we count time, they had told their love to each other; and, so looking, had drawn close to each other through their common sorrow. It seemed to them in the hush of the library that this time of grief and dependence had something arresting in it. Life had not demanded very much of them so far. To-day there was a strange sense that its demands, perhaps even for them, would not always be small.

The doctor and the lawyer summoned Peter presently, and afterwards he and Jane were told particulars of Mrs Ogilvie's fatal illness.

'But she must have suffered—she must have suffered so!' said Jane, with all the resentfulness that youth feels towards pain. 'Why did she tell none of us? Why did none of us know?'

'I ought to have guessed something,' said Peter miserably. 'I must have been a fool not to see that something was wrong.' And together they wondered what would have happened if this had been done, or that, and were inclined to reproach themselves for much for which they were in no measure to blame. They walked home through the dim, still woods; and at the white gates of Jane's pleasant home Peter turned back, and she went on alone to meet Miss Abingdon.

It was late that night before the two sorrowful women went to bed; and hardly was breakfast over in the morning before, with the restlessness born of recent grief, Miss Abingdon was seeking distractedly to know what she could do or what ought to be done.

'If,' she said, 'I felt that I could even be of use by going up to town and choosing the servants' mourning, I should feel that I was doing something.'

There were piles of patterns of black stuffs, which Miss Abingdon had telegraphed for on the previous evening, lying in neat bundles on the breakfast-table, and stamped with their several prices and the width of the materials. Such things have often kept a woman sane in the first despair of grief.

'How would it do,' she said, 'to have a little crape on the body and not on the skirt?'

Jane replied that she thought that would do very nicely.

Poor Jane! Her eyes were big with weeping, and she had lain awake the greater part of the night mourning for her dearest friend who was gone. Now, as she tried to give her attention to her aunt and to the vexed question of the propriety of *crêpe* on the body, she thought with girlish ingenuousness that she wanted Peter more than she had ever wanted him before, and that she could do nothing until she had seen him. And across her grief came one great flash of joy as she realised that in all her troubles and sorrows she would have him with her.

'There he is now,' said Miss Abingdon, 'coming up the drive! Jane, my dear, how awfully ill Peter looks! Oh, my dear, you should have told me how ill he looked!'

Jane went out to the hall door without speaking. 'What is wrong?' she said briefly. 'Come into my sitting-room, Peter, and tell me what is wrong.'

'I'd rather be outside, if you don't mind,' said Peter, the primitive man strong in him again.

There had been a storm in the night after the unusual stillness of the afternoon, accompanied by heavy rain. Now the sun shone fitfully, and the disordered gardens and lawns were strewn with branches and countless leaves which chased each other, bowling along on their edges and dancing in mad eddies and circles.

'Let's get out of sight of the house,' said Peter; and they went into the high walled garden, and sat down on one of Miss Abingdon's cheerful-looking white seats.

There were long borders of dripping, storm-dashed flowers in front of them, and mignonette run to seed, and dahlias filled with moisture to their brims. Some gardeners were busy tying up saplings which had been detached from their stakes, and the beech-trees on the other side of the high walls of the garden tossed their branches together and sighed a little.

Peter waited for a minute or two until the gardeners had moved out of hearing, and then said abruptly and with difficulty, 'You know those papers that the doctor gave me yesterday?'

'Those notes and things which were on your mother's writing-table?' Jane asked.

Peter nodded his head, and then with an effort began again—this time with an attempt at formality—'I'm sorry to have to tell you that there is something in one of them that I shall have to speak to you about.'

'Something in one of your mother's notes?' asked Jane, her level eyes turned questioningly upon him.

'I'm telling it all wrong,' said Peter distractedly, 'and making it worse for you.'

'Are you quite sure that you need tell me anything at all?' asked Jane, and she laid her hand in his.

'I am quite sure,' he said; and then a very surprising thing happened, for he put Jane's hand aside and stood up before her.

'I'm not even going to take your hand,' he said, 'until I have told you all about it. You see, there was a letter addressed to me amongst those on her writing-table yesterday. I've shown it to the lawyer, but neither he nor I can make anything of it. It is directed to me, to be given to me at her death; but she must have died while she was writing it. It leaves off in the middle of a sentence.'

'I think,' said Jane slowly, 'that nothing matters in the whole world as long as we have each other.'

'Ah, my dear!' said Peter, and he sat down on the bench and took her hand again. 'I'll show you the letter,' he said suddenly, and brought the sheet of note-paper out of his pocket.

'May I read it?' said Jane.

'Yes, if you will,' he replied.

Afterwards they could tell every word of the unfinished letter by heart; but at the first reading the words seemed merely to puzzle Jane Erskine, and conveyed very little sense to her.

'When you get this letter I shall be dead,' wrote the woman who had meant to live for many years, 'and before I die I think there is something which I had better tell you. I am not haunted by remorse or indulging in a deathbed repentance, and I shall merely ask you not to hate me more than you can help when you have finished reading this letter. You must often have heard of your elder brother who died when I was in Spain, the year after your father's death. He did not die'——

'There must be something more,' said Jane. She turned the page this way and that, as though to read some writing not decipherable by other eyes.

'I've looked everywhere,' said Peter; 'there's nothing more. Besides, you see she stops in the middle of a sheet of note-paper. Why should she have written anything else on another piece?'

They read the letter again together, scanning the words line by line.

'What can it mean?' she said at last.

'I have evidently got an elder brother,' said Peter briefly, 'to whom everything belongs. Most people remember that my mother took a curious antipathy to the other little chap when I was born. I can't make it out in any possible way—no one can, of course. But it seems pretty plain that no will can be proved, nor can I touch anything, until my brother is known to be either dead or alive.'

'What can we do?' said Jane. Their two hands were locked together, and the trouble was the trouble of both.

'I can go out to Spain, where he is supposed to have died,' said Peter, 'and make inquiries.'

'I want to ask you something,' said Jane after a pause. 'Let us be married quietly, first of all, and then we can do everything together.'

'I'm probably a pauper,' he said simply, 'without the right to a single stone of Bowshott. I went fully into my father's will with the lawyer last night, and he leaves nearly everything to the elder son.'

'Dear Peter!' protested Jane, accepting the honesty of Peter's statement, but brushing aside the purport.

They talked on far into the morning, at one time half-distrusting the evidence of their eyes which read the letter, at another looking far into the future to try to pierce the veil of darkness that at present shrouded it. Then—for there were many things to do—the young man turned his face homeward again, and Jane sat on alone in the garden, looking with eyes that hardly were conscious of seeing what they rested on, while the wet branches of the beech-trees rocked themselves together, and the tearful autumn sunshine flickered on the disordered beds of mignonette. She sat there until the stable clock struck one, then rose and went indoors. One important decision had been made. They would be married quietly on the day Mrs Ogilvie had fixed for the wedding; and then together they would seek the brother who, if he were still alive, would be brother to them both.

But the Court of Chancery took that reasonable view of the case which, as it frequently happens, is directly opposed to the view-sentimental. The Court of Chancery, in fact, refused to sanction the marriage of a minor with a man without settled prospects, and one whose position in the world was not confirmed by the possession either of money or of lands. At the age of twenty-five Miss Erskine might do as she liked; until then the Court of Chancery decided that she should divide her time each year between her two guardians, with whom she had always lived. No protests were of any avail, and wise relations and friends were agreed in thinking that it was better to postpone the marriage, at least for a time.

The autumn passed miserably. Peter went to Juarez first of all, and found to be substantially true what at first he had supposed might have been the disordered fancy of a sick woman's mind: there was no record of the death of Edward Ogilvie, nor did any entry in registers show the name of an English child in the year when he was supposed to have died. No little grave in the cemetery marked his resting-place. One fact, at least, seemed established, and that was that Peter's elder brother had not died in infancy at Juarez.

Not much more than this could be proved, and Peter returned home, to find that for the present nothing was legally his. Pending inquiries, Bowshott was closed. Those who were in ignorance of the real state of affairs talked glibly of enormous death-duties which had crippled for a time even the immense Ogilvie estates, and had rendered it necessary for Peter to shut up the house and live economically. The countryside, which called itself gay, met at many little parties, and talked charitably of the woman who was gone, saying, with an unconscious sense of patronage, that they had always liked Mrs Ogilvie in spite of her faults. Death, the great leveller, had brought their unapproachable neighbour nearer to them; they were not afraid of her now. It was strange to think that she was really less than one of themselves in the cold isolation and the pathetic impotence of the grave. They could hardly picture her yet as a powerless thing, the keen, narrowing eyes closed, the sharp-edged poniard of her speech for ever sheathed. She was poor Mrs Ogilvie now!

Meanwhile papers were examined and every box and chest which contained written matter was searched for a clue to the missing child. Peter was engaged in long consultations with detectives, and lawyers were running up goodly bills, and British Consuls were making investigations abroad. A whole train of inquiries was set in motion, and pens and tongues were busy. The powerful hand of the law stretched out its long arm in secret to this country and to that, only to be met with a baffling sense of failure to hold or to discover anything. Money was spent lavishly, and great brains tried to solve the mystery; and Mrs Ogilvie lay in her grave in a silence that could not be broken, and her hand which had traced the few lines on one sheet of note-paper was cold and still for ever.

(To be continued.)

THE PASSING OF THE SAILING-SHIP.

IN these days of revolutionary changes in travel, when the automobile has ousted the horse, only in its turn to be succeeded by the aeroplane, the land-traveller has continually to adapt his perspective to an age of hurry. The haste of yesterday will be stagnation to-morrow; and since the race is to the swift, and since also the beaten track is narrow, the slow must needs go to the wall. On the high seas there is not this question of the narrow way; there is room for all. Yet the decrees of commerce are inexorable, and here too the old order of things has given way to the new.

The extraordinary revolution effected in sea-life by the advent of steam is best appreciated by reference to the conditions that have passed.

Dampier, asked how long an autumn voyage from London to Madagascar might last, answered three and a half months, a time in which a modern liner such as the *Empress of Ireland* would all but circumnavigate the globe. Those were the days before man had devised the fetich and machinery of hurry. Time was no object, hurry no gain; and vessels, provisioned for a voyage of indefinite duration, would gaily put to sea and so pass out of human ken without an even approximate notion of when they might expect to reach their journey's end.

All this is altered, and the captain of a transatlantic liner steers his course from the Mersey to the St Lawrence or the Hudson as unconcernedly as a London taxicab would steer from Park Lane to St Pancras. Such machine-made travel is a boon not only to those who are so constituted as to hate the sea, but also to the men whose mainspring of life is in Wall Street or Throgmorton Avenue.

Yet there are still unbusiness-like folk who echo the regret of Mr Clark Russell when they think 'of the shapes of beauty which have gone beyond the horizon to their graves, and haunt the ocean only as phantoms.'

It may be a fine thing, as it is certainly necessary, to be able to rely on reaching New York in five days, some hours, some minutes, and a few seconds; but the whole aspect of sea-travel is changed with such precision. The modern liner or battleship going full speed is a majestic symbol of progress, never a doubt of it. Nevertheless, though there is splendour in the sky-scrapers of San Francisco, quiet eyes rest more gladly on the humbler beauty of a moorland cottage.

From the standpoint of utility, it cannot be denied that the story of navigation is one long pæan of triumph of mind over matter—not, indeed, without terrible reverses, but winning nearer to victory with the passing of each century. The puny ship defies the pitiless waves, confident of its triumph. As the Italian has it, '*Tu sei immenso, ma sei un bruto; io son piccolo, ma sono un genio.*'

All over the western seas the new order has driven out the old. Galley and caravel, argosy and galleon, are all gone. Only the lateen sail of the historic Mediterranean is left us as a reminder of the darker days when Arabs ruled the waves. Those, however, who adventure a little off the highways of commerce may still find quaint relics of the dawn of shipbuilding, the art which links the Patriarch's Ark with the *Majestic* and *Lucania*. The coracle, which still drifts on Welsh salmon-rivers, has not appreciably changed since the day on which Cæsar landed in Britain. The vanishing Indian still paddles his dugout and birchbark on Canadian backwaters, and the *kayak* of the Esquimaux is as it was when the Vikings first sighted America. Even the high seas are not quite bare of these anachronisms. The Chinese junk appears to have retained its hull and rig these thousand years, and on the beach of Trebizond may yet be seen such high-prowed shore-boats as may have been there when Xenophon and his Ten Thousand passed through Trapezium on their way to Scutari.

Curiously enough, the introduction of steam into sea-fights involves some semblance of return to the antiquated conditions of the trireme, which never lost an opportunity of ramming her adversary. Yet the analogy must not be pressed too far. The modern cruiser and the Phœnician warship of the Nineveh monuments have no doubt something in common as regards their independence of the wind, which meant so much to Nelson's fighting-line. But the galley-slaves at their best were never inexhaustible, nor could they move, even for a short time, as swiftly as the battleship. The sailing-ship, the chronological link between the two, must have been a more efficient fighting-craft than the trireme and galley, else it would not have supplanted them. Now it too is gone for ever from the pageant of war.

Iron, not oak, is our bulwark of Empire to-day, and there is no longer any present meaning in the story told of Collingwood, that he used when at home to scatter acorns in likely spots, with a fervent prayer that, long after he was dust, they might furnish oak for the defeat of the French, then his country's enemies, though to-day her friends.

NOT WHOLLY BAD.

CHAPTER III.

DELANE ran as seldom, or perhaps never, before. Less than five minutes had passed after the first cry for help reached those at the Dene before he came to a halt on the brink of the river, where he found an agonised woman, together with a small crowd of wailing children. They had been engaged in gathering blackberries when the accident happened. At sight of Delane the woman rushed up to him and grasped him by the sleeve. She could no longer speak save in a hoarse whisper; her last cry for help seemed to have cracked her voice.

'There!—there!' she exclaimed, pointing to the river. 'My Kitty—she got too close to the edge, and fell in. Oh, for the love of Heaven, save her—save her!'

Delane's keen eyes had already caught sight of the child, whom the wash of the flood had

now swept out into mid-channel. Her stiffly starched frock and petticoats had served to buoy her up for a little while; but even before the woman had finished her appeal he saw the child go under. Now that she was in the full current she was being borne rapidly in the direction of the weir, the low roar of which, although it was still a quarter of a mile away, sounded full of menace.

Without answering the woman, Delane thrust her aside and hurried to a point opposite where the child had disappeared. Here the bank shelved steeply to a depth of between twenty and thirty feet, which was increased by a dozen more feet when the river was not in flood. Down this bank Delane, after stripping off his jacket, scrambled, helped by some bushes, and landed on a rough boulder, from which, after steadying himself for a moment, he dived.

He came to the surface several yards lower down, but without the child. A moment's breathing-space, and then he disappeared again, to emerge once more, still farther down, and this time with the child's inanimate body clasped in his left arm.

Before this Marsden, followed a couple of minutes later by Vera, had appeared on the scene. In the child's mother the latter recognised the wife of John Dill, a jobbing gardener well known at the Dene.

The three on the bank kept pace with Delane. No word was spoken; but a low, sobbing cry broke from the mother when she saw that her child was so far safe.

Moment by moment Delane and his burden were drawing nearer the weir. A few yards below the point where he had rescued the child the river suddenly contracted, thenceforward till it reached the fall rushing in ever-growing fume and anger between sheer banks of shale, where it was an impossibility for any one to land. Beyond the weir the channel widened again, and the banks fell swiftly away, till a hundred yards farther on they became merged in the flat meadows which stretched widely on either hand.

When Marsden recognised that any present help was out of the question, he left Vera and Mrs Dill, and hurried off at top speed, still keeping to the river-bank, nor halted till he had left the weir behind and had reached a spot on the level ground where, a couple of hours earlier, he had tied to a tree the boat in which he had pulled up-stream on his way to the Dene. Into this boat he now got, and, having unfastened the painter, he drew out from the bank, and then began to work his way back towards the weir.

On the bank, Vera and Mrs Dill kept pace with Delane and his burden as the flood bore them irresistibly along. Delane was a strong and expert swimmer, but it was as much as he could do to keep his own and the child's head above water with only his right arm at liberty; the narrowed channel sucked them in, as if hungry to claim them, and bore them still more swiftly onward to their inevitable doom, as it seemed to the two women, whose straining gaze never left the swimmer for an instant as they stumbled forward, mute with terror. Louder and louder in their ears sounded the dread challenge of the weir.

When within a dozen yards of the fall, Mrs Dill suddenly sank on her knees and covered her face with her hands. She could no longer bear to look. Vera halted with her, and whispered some words of hope into her ear; but the girl's eyes never turned from the two figures in the seething flood who were being inexorably sucked forward to their fate. Another minute, and she rose quickly to her feet. For the next few seconds her heart seemed to suspend its beating. At the last moment Delane flung up his right arm as if waving a mute farewell, and then he and his charge were swept as lightly as a feather might have been over the edge of the liquid precipice into the wild turmoil below.

Vera drew a gasping breath and waited, her gaze now bent on the lower reach of the river —waited, hoping almost against hope, for the figures to reappear. 'The worst has happened to them,' she had just whispered to herself with a shudder, when suddenly her pulses gave a bound. There they were, man and child, the latter clasped as closely as before. The current had carried them down to where the river, spreading out in ample measure, no longer fretted and fumed. And there, too, was Marsden rowing swiftly to their rescue.

Laying a hand on Mrs Dill's shoulder, Vera said, 'Your child is safe. Come, let us hasten to her.'

The woman rose heavily to her feet, stared in a half-dazed fashion at the girl, murmured something which her dry lips could not articulate, and then began to hurry down the shelving bank towards the meadow-flats.

Five minutes later her child, unconscious, but alive, was clasped to her bosom, wrapped warmly in Marsden's Norfolk jacket.

'You must come back with me to the Dene,' said Vera to her. 'It is nearer than the village and Kitty can be better attended to there.'

'What's the order of the programme now?' queried Delane, with one of his crooked smiles, when he and Marsden had been left alone. His face was streaked with blood, and there was an ugly cut above his left eye. His head had come into contact with the timbers of the weir.

'The first item is this: that you go with me to my diggings at the "Red Lion," and there exchange your soaked togs for dry ones. We will go by water, because there will be less likelihood of encountering any one than if we went by road. Afterwards we will perpend.'

'*Très bien, mon ami.* I am in your hands to do with as you will.'

So into the boat they got. Fred took the oars and Delane the tiller-ropes. The latter looked a sufficiently singular object, for he had lost his wig and hat in the water, leaving exposed to view his prison-cropped, light-brown hair with its streaks of gray; but the black moustache still clung to his upper lip. Before they started Fred took off his deerstalker and clapped it on Delane's head. There was no knowing who might chance to spy them.

A clear twilight still lingered in the west, in which all near objects stood out distinctly. The moon, a silver shallop, was sailing slowly up the eastern sky.

A pull of twenty minutes brought the two men to the landing-stage at the foot of the lawn in the rear of the 'Red Lion,' where they alighted. They had not encountered a creature by the way, and the benches in the inn garden were now deserted by the village topers for warmer quarters indoors. Marsden led the way to his upstairs sitting-room, and thence into his bedroom, followed by Delane.

'You will find a lounge-suit of mine in that closet,' he said when he had lighted the gas, 'and the sooner you change into it the better for your health. I'll order a steaming glass of toddy to be brought up to you at once; while by the time you've changed there will be ready for you the biggest steak in the "Red Lion" larder. In the meantime the inn fly shall trundle me up to the Dene, for it may be as well to ascertain how matters are progressing there; but I sha'n't stay longer than a few minutes, so you may look to see me back by eight o'clock at the latest.' With that he nodded in friendly fashion and went.

The fly landed him at the Dene twenty minutes later. Mrs Willoughby, a well-preserved, middle-aged lady of shrewd common-sense and kindly manners, had reached home a quarter of an hour earlier. When Frank entered the drawing-room Vera was just finishing her account of the afternoon's adventures.

Mrs Willoughby, having shaken hands with her prospective son-in-law and motioned him to a chair, said impressively, reverting to Vera's narrative, 'The man who had the almost inconceivable audacity to pass himself off to you this afternoon as my late brother Edward is a vile impostor. On that point I am convinced, for I have in my possession indisputable evidence that my poor brother really died in Australia—a letter written to me on his deathbed, when he was almost too weak to hold the pen; together with two certificates—one of his decease, the other of his burial in the cemetery at Adelaide. That he died a number of years ago there can be no doubt whatever. Who, then, can this man be who apparently knows so much about me and our family affairs?'

She was silent, and for the next few minutes sat in a sort of puzzled abstraction, evidently groping in the recesses of her memory for a clue to the mystery.

Vera and Fred neither stirred nor spoke.

At length a gleam of enlightenment came into Mrs Willoughby's eyes, and her expression changed. 'The man who escaped from prison this morning and who found his way here can be none other than Claud Vannel,' she said with an air of conviction. 'Yes, it must be he.'

Vera looked at her mother questioningly, as much as to imply, 'And, pray, who is Claud Vannel?'

Mrs Willoughby, as if in answer to the look, said, 'But it is due to you to explain. Claud Vannel was my brother's closest friend. They had been schoolmates, and when, as young men, they were launched on the world they kept up their intimacy, and thus it happened that they were both involved in the same gambling scandal which in the case of poor Ned resulted in his banishment from home; for our father was of a stern and unforgiving disposition. Well, Ned went to Australia, and thence from time to time he wrote me a few lines, and from time to time I sent him a little money without anybody being the wiser; for he was ill-fitted to cope with the hard, rough life of the Colonies. But to come to Claud Vannel. In a letter I received from Ned a few months before his death he mentioned that he and his old chum had come across each other by accident, and how pleased they were at having met again. That was all; and I had no further news of Vannel till about five years ago—indeed, I had almost forgotten his existence—when in a newspaper which I casually picked up I found an account of his trial and sentence for forgery.'

'He told us about that, mamma,' said Vera. 'He had been drugged, and fictitious notes substituted for his genuine ones; only, he was unable to prove it at his trial.'

Mrs Willoughby shook her head. 'When he told that to you and Fred he was bamboozling the pair of you. Claud Vannel's trial and sentence had nothing to do with forged bank-notes, but with the forgery by him of a trust-deed for ten thousand pounds.'

For a little while there was silence. Mrs Willoughby's statement had nonplussed the young folk.

At length Vera said, 'Whatever he may have been guilty of in the past, his action of this afternoon proves beyond cavil that he is a very brave man. Any one who would risk his life as he did cannot be wholly bad.'

'There I agree with you, my dear.'

'You don't blame me, I hope, for giving him that money?'

'You did quite right, and I'm glad you told him to apply to me should he need further help. I cannot forget that he was poor Ned's dearest friend. What a bright, handsome lad he was when he used to come visiting at our

house in the holidays! Poor Claud! Poor Claud!'

'By the way, how is the child by this time?' asked Fred of Vera.

'I left her a little while ago in charge of Mrs Dobbs, wrapped up in a blanket and munching a slice of bread-and-jam with evident relish.'

When, half-an-hour later, Marsden got back to the 'Red Lion,' Vannel was no longer there. He had gone out into the night without any one at the inn being aware of his departure, leaving behind him a note addressed to Fred. The note in question was to the following purport:

'My dear Mr Marsden—if, for the first and the last time, an ex-convict may be permitted so to address you—by the time you read these lines your eyes will doubtless have been opened by Mrs Willoughby with respect to certain circumstances of which you were ignorant before, and you will return here fully convinced that my temporary assumption of the personality of my dear old chum, Ned Delane, was the act of a wretched impostor.

'That so perspicacious a lady as Mrs Willoughby will fail in fixing the onus of the imposture on the right shoulders is what I cannot credit. There is only one person, as she must be aware, who could successfully have carried out so audacious a scheme, and that is myself.

'Yes, I am Claud Vannel. It is a statement to which I have nothing to add. In such a case as mine, where no absolute denial is possible, the less said the better. The circumstances were peculiar, the temptation was overwhelming, and I succumbed. *Voilà tout.*

'To Miss Willoughby and yourself my heartiest thanks are due. That I hoodwinked you both is true; but that you will forgive me, unless I have misread you strangely, I am convinced.

'And so farewell. In a few minutes I shall be gone, and you need be under no apprehension that I shall ever rise above the horizon of your lives in time to come. Claud Vannel.'

He was as good as his word. In the course of the years that have since elapsed no tidings of him have ever reached the inmates of Mallow Dene.

THE END.

AN OLD HOUSE IN LONDON.

By J. Roland Evans.

A casual wanderer through Fleet Street would, in all probability, fail to notice the old house that stands at the corner of an Inn. For over a hundred years it has stood there, and still watches impassively Fleet Street and its many comedies and tragedies.

It will be remembered that Charles Lamb, writing to Manning in 1802, said he could spend a year or two on Skiddaw; and added, 'But I must have the prospect of seeing Fleet Street at the end of that time, or I should mope and pine away.'

Oh Street of Fascinations! How the Masters have loved thee!

The old house has seen the great men of Fleet Street begin their greater work, and in turn has heard the hum of machinery printing the records of their finished lives. For a hundred years it has listened to the sound of City bells, and looked on at the hundred pageants in scarlet and gold that have passed its doors with the brazen sound of trumpets.

Now the old house trembles! The pressing need of a congested City demands a wider street. House-breakers are on their way, and the sounds of pick and spade at work are already heard at the corner of the Inn. During the day thousands of people hurry by, newsboys shout hoarsely, huge motor-omnibuses shake its old walls as they thunder past. Lawyers' clerks run up and down the well-worn stairs, whistling airs from comic operas.

The old house is seen to better advantage when the City shadows lengthen and the workers have gone away to their homes. Then the houses turn to a grayish blue in the fading light of day, and the Inn is quiet. Press-men pass to and fro hurriedly, but the only noise is the faint echo of mighty machines in the neighbourhood of Fleet Street.

To reach the house you leave Saint Dunstan's Church, standing out like a giant against the darkening sky, and pass under a frowning arch near by, which leads to the Inn. Here the evening light transmutes the shadows into a soft purple colour.

Tread lightly! There are the shades of great literary men who once in the flesh were wont to stroll over the uneven cobbles of the Inn yard, discoursing on books and men, and praising the fare at the 'Cheshire Cheese' or the 'Half-Moon.' You may see the shade of a buxom girl, dressed in gay attire and the latest French hat, jesting with a Fleet Street shopkeeper about blind-man's buff at a party the previous evening. Look closely! A sedan-chair passes the crumbling gateway of the Inn. Seated within is a dainty little lady clad in a gown of rich brocade. Going to a dance perhaps! By the side of the chair, and quizzing through a glass at his beautiful charge, a young blade walks, handsomely dressed and in full-bottomed wig.

Leaving the shades of former inhabitants to their wanderings, pass into the old house. The

key that opens the door is a cumbersome one, and probably as old as the house itself. With a twist here and a turn there, the staircase winds its way up to a suite of rooms on the top floor, where one is almost on a level with the crown-like tower of Saint Dunstan's. The rooms are tenanted by a literary man, a well-known essayist, who is also a collector of curios. The room he uses as a study is a delightful one, lined with dark oak wainscoting. The windows, 'all diamonded with panes of quaint device,' look out over the weather-worn red tiles of adjacent roofs on to the great City. On the window-ledges are flower-boxes in which grow clusters of bright geraniums and fuchsias, and a giant musk climbs up to the eaves. A gentle breeze blows across from the Thames, that mighty highway to the sea, and enters the chamber, carrying with it a delightful fragrance from the flowers; black patches drift slowly across the blue of the sky; the bell of St Paul's sends its deep notes over the City, and the stately spires of numerous churches look ghostly in the evening light.

The literary tenant is not fond of up-to-date methods of lighting, and, in keeping with the old house, he uses antique candlesticks. When the quaint snuffers are raised and the candles lighted, one sees some of the treasures the collector prizes so much. On a Jacobean table there are Japanese figures beautifully carved, and a French thirteenth-century sword, its keen blade glinting in the candle-light. A large Roman vase stands in a corner of the room; it was discovered some hundreds of years ago. Behind the vase some pikes are stacked, and a crested helm (decorated with the features of a snarling wolf) rests on a bracket near by. Standing out against the panels are many prints of worthies, among which are the familiar faces of Dr Johnson, David Garrick, and Congreve with his flowing wig. There is a charming picture by Wheatley of a girl selling cherries, and between the bureau and the door hangs a choice specimen of Bartolozzi of a maiden bathing in a stream. On the mantelpiece rests an old German clock and some pewter dishes and mugs, each of which could tell its own story of strange times.

A charming room for a study! An ideal room in which to lift the lid from one's box of happy memories and dream again 'of summer days and of delightful years.'

Once upon a time, before the man of letters came along and made it his study, an old gentleman used to live in this room. He was very old—so old, in fact, that he seemed part of the house. He seldom went abroad, except occasionally for a quiet walk after dusk. The old gentleman was very feeble, his hair was thin and gray, and on his white face there was always a tender, wistful expression. His one delight was to watch the ever-changing pageantry of the skies.

Nobody knew much about him, only that he was always expecting a visitor. Did he hear the crazy old bell ring down below, he would walk slowly to the door of his room and listen, only to go back wearily to the window-seat, until he heard the cracked bell again. He would remain at the window for hours, his hands clasped tightly over his knees—waiting, no one knew for whom; dreaming, of whom he never said!

When, on a Sabbath evening, he heard the bells echoing across the City a peaceful smile illumed his aged features, and the white hands trembled a little as he wiped the tears from his kindly eyes.

And then one morning they found him asleep in his chair by the window. A visitor—maybe the long-expected one—had come, and the quaint old gentleman's period of waiting was ended. A serene smile rested on his face, and the withered hands held a photograph of an old lady, sweet and comely looking. The old gentleman had gone to meet her in the Garden of Eternal Peace and Sunshine.

So I love this old house, and like to sit in the window-seat by the geraniums and musk to look across London. There is a dull-red glare over the West End of London, where, in vast, smoke-filled halls, men and women are listening to the rattle of castanets and watching the pirouetting beauties of the ballet. In the opposite direction, somewhere in the darkness beyond St Paul's Cathedral, hundreds of starving families are herded together in slum tenements. Within a stone's-throw of this old house printers, with nimble fingers, are 'setting-up' particulars of divorces, of racing, news of the Churches and their missions to heathen lands, of the passing of monarchs and the births of princes, of the prosperity of some and the ruination of others. A thousand pounds or more is spent in tracking a criminal; an honest man dies of starvation. Such are life's contrasts! But in the old house, situate in the heart of a mighty City, there is a wondrous peace.

I love this old house. I like to watch from its windows the dawn spreading across the skies, and breathe the soft air, laden with the scent of musk, as it floats through the casement.

Grand old house! For many years your windows have looked on to the simple courtyard. Voices long since silent have echoed within your peaceful rooms. Now are your venerable walls to be demolished. All too soon the scaffolding of the wrecker will creep along and engulf you, and another of Old London's houses will have passed away. Then will my heart be heavy with a touch of regret; the old house will be nought but a cherished memory.

THE LAST OF THE TRESSIDERS.

By J. Morton Lewis.

FOR generations the Tressiders had been soldiers. Their dining-room walls were covered with paintings of illustrious members of the family who had borne a sword for king and country, from the famous Sir Alan, who had helped to chase the Cavaliers from Marston Moor and lost an arm at Naseby, to the present reigning head, Sir Hugh Tressider, a name writ large in the history of India. They were a race of hardy giants, who knew not the meaning of fear; *sans peur, sans reproche*, they served their monarch like true, honourable gentlemen of England.

Sir Hugh had married an Irish girl, and the union was blessed with one son, who inherited all the Celtic imagination of his mother's race. Nature ordained him for a literary life; tradition held it that he must be a soldier like his sires. His was a nature incomprehensible to his father, a nature which in early childhood drew fancy forms from amidst the shadows, and trembled at the figures his imagination had called forth. To cure him of it and his timorous disposition his father used sternness, the worst measure he could have adopted.

So Alan, the last of the Tressiders, grew to manhood a man apart from his forebears; by nature perhaps as brave as they, but possessed of a haunting fear that when the moment of trial arrived he would show cowardice.

It was the custom of the Tressiders to have the portrait of each son painted when first he donned a uniform, so that it might hang in the dining-room in company with those who had gone before.

This fact Sir Hugh told his son upon his fourteenth birthday, relating to him at the same time the history of each of the stern-visaged men who looked down upon them night and day.

'There,' he said, pointing to an empty place, 'your portrait shall hang.'

The words remained firmly fixed in the boy's mind; he dreamed of them by night, waking up in a cold perspiration, fearful how he would act when first he heard the shells whistling their message of death around him—whether he would break away, a coward, a disgrace to the name he bore, or add still further honour to its great fame. Yet he was not a coward, for no man can be until he is tried.

His twenty-first birthday saw the portrait complete and hanging in the vacant place upon the wall.

Looking at it, Sir Hugh raised his glass at the commemoration dinner. 'My son,' he said, then personally addressed the boy. 'Alan, you come of a noble race, a race which has borne the sword for generations, and borne it honourably. May you add further lustre to the scroll, and prove worthy of the forebear whose name you hold.'

The speech cut Alan like a knife, and filled him with a grave misgiving as he sat there resplendent in his new uniform. Was he worthy to bear that name? He looked at the portrait of the great Alan for sympathy, wondering how he had felt upon his first battlefield. But the Roundhead, armour-clad and stern, looked down upon him in grim exhortation, as if despising him for the bare thought.

All that night as he lay in bed he tossed from side to side, his mind racked by the one thought. Months afterwards, when he faced fire for the first time, it stood out before him, writ large in letters of red.

Within six months of his taking up his commission the regiment he had joined was ordered out to India to take the place of one homeward bound.

'No better place for you to learn soldiering,' said Sir Hugh when he heard of it; 'that was where I served my apprenticeship.'

Lady Tressider received the news with anxiety. She did not share her husband's belief in the suitability of the career which had been chosen for their son. As a mother she understood the boy's feelings better, and realised that he was not fitted for the life. Moreover, not being a Tressider by birth, she did not appreciate the fact that, as every generation had sent a son to the wars, every generation must needs do so for all time. Her remonstrances had been unavailing. 'What better career could he have?' said Sir Hugh. 'Not fitted for it? It will make a man of him.'

And so she had yielded. But when the marching orders came she wrote to the colonel in charge of the regiment, an old friend of the family, and asked him to call and see her.

Three days later he arrived.

'Madam,' he said, holding her hand for a second, 'I am proud to have a Tressider in my regiment.'

'It was about Alan I wished to see you,' said Lady Tressider, and she discreetly rang for tea.

'One lump, or two?' she asked as they sat before the fire, the table between them.

'Now, Colonel Davant,' she said, 'I want you to promise me you will keep a watch upon Alan as far as you can. It was his father's wish that he should join the army, not mine. I do not think he is fitted for the life.'

'He will be the first Tressider who has not been,' said the colonel, wishing to please.

Lady Tressider smiled. 'Perhaps he has a lot of his mother in him. I may be wrong, but

I think he is too highly strung, too imaginative, to make a good soldier.'

'Life in camp will soon cure him of that,' said Colonel Davant. 'And you can rest assured that I will do all I can to help him. I have no sons of my own—I wish I had; but so long as he is in my regiment I will be father to him.'

'Thank you,' said Lady Tressider. She rose to her feet. 'I know that people who are as highly strung as he is often lose their heads in time of danger. And I would rather see him dead at my feet now than know he had played the part of coward.'

Colonel Davant realised the truth of what she said. 'And they often make the finest soldiers,' he replied.

And so six weeks later Tressider left Southampton, amidst the fanfare, the enthusiasm which speeds each parting regiment, to take up his position in a career for which he felt he was unfit, for which he had no liking, having in his heart a great fear that when the moment came he might be found wanting.

From the hour they embarked Colonel Davant kept a watchful eye upon him. Having spent his life entirely among soldiers and seen service in all parts of the world, the colonel knew from past experience that Tressider might either turn out a hero or from his haunting fear sacrifice the lives of those under his command.

Disembarking at Bombay, within twenty-four hours of their landing the regiment was entrained and hurried off on the first stage to Peshawur, where they were to be stationed.

India was then in a state of turmoil. Like a huge volcano for ever erupting and breaking out in some new place, trouble was brewing amongst the hill-tribes. Rumour said it spelt the commencement of a European war, and that behind the seeming insurrection of a few thousand natives menaced the arms of a great nation.

A week amidst the sun-dried plains of Peshawur, beneath the shadows of the hills, and the regiment was called to the hills themselves. News had come to the officials of a large rising a few miles south of Chitral. Five Europeans had been killed, a native village sacked, the crops destroyed, and the cattle driven off. The rebels had been led by a man notorious throughout India, Sudar Khan. Revered by one-half of the population, he was as much distrusted by the others. Leader in two rebellions, he had been deported and his lands confiscated. When he returned, it was to find his wife, the one person on earth he revered, dead. By her body he swore that he would rest neither day nor night until her death had been avenged and the English driven from the land in which his forefathers had ruled as princes.

Colonel Davant's face became serious as he heard the news. 'I would rather meet any man, the devil himself, amidst these hills,' he said to his second in command. 'Have you ever seen him?'

'No,' replied the subordinate.

'I met him once, seven years ago, at a Calcutta bazaar. He is one of the finest men I have ever met. He stands over six feet six, and has the strength of an ox. He knows the hills so well that he could find his way from Chitral to Kurran blindfolded. God only knows how many men he has, and I am pitted against him with a force of one thousand five hundred.'

Nevertheless the fighting instinct of the old soldier was aroused, and he went out to the hills with his men as eager as a boy.

The force marched out of Peshawur amid the silence of a July night. The heat all day had been oppressive; but with evening a cool breeze had arisen, and blew softly upon the men across the stony road. To the north-east lay a dense jungle, from which at intervals came the roar of a hyena or the wild laugh of its lesser brother the jackal.

The moon, shining down upon the ranks, showed an eagerness upon the faces of the men; and it shone also upon the dark passes and crags of the mountains ahead—the mountains which held somewhere in their fastnesses a man almost a maniac in his lust for revenge, followed by men scarcely a whit less wild.

There is a silence in the hills on the north-west frontier which is heavy and oppressive, and speaks of danger—a silence which tears at the heart of a man and makes him prematurely old and gray. Men have been known to go mad after spending a night alone upon the north-west passes.

As they entered the defile which led into the heart of the hills there came no sound to the men save the steady tramp of their own feet, and occasionally a soft sibilance from the rising wind.

Three miles in the pass, midway up the side of the hills, they came upon a plain, where Colonel Davant camped for the night. Tents were put up, and men posted on sentry duty. For this purpose the colonel chose the smartest in his little force, for he knew the dangers of the hills and the cunning of the man against whom he was fighting—a ferocious cunning, which had earned him amongst the natives the name 'Son of a Wolf.'

That night Tressider stood at the entrance of his tent and viewed for the first time that which to men who have witnessed it can never be effaced—the darkness of the north-west frontier, and its gradual awakening as dawn breaks over the hills.

Within the next twenty-four hours he had taken his first lesson in the art of guerilla warfare. Before reveille had been sounded the enemy were sniping the camp from unseen shelter. Little puffs of smoke occasionally told of the position of a native, but most of the rifles

only told of their presence by the sharp explosion and rattle of the lead against the rocks.

'Smokeless powder!' said the colonel with raised eyebrows.

In a quarter of an hour the tents were struck, the transport mules loaded, and the men on the march.

Colonel Davant divided his force into three. One he sent farther up the defile in a westward direction, the second he sent south, whilst the largest proportion of men he himself led in a northerly direction towards Chitral, where he judged the rebel Sudar Khan's strongholds to lie. Third in command, he took with him Alan Tressider.

'You're in for your baptism, my boy,' he said as the lines of men swung past them.

Tressider's eyes flashed; he was borne away by the excitement of the moment. It was during the hours of loneliness that his fear of cowardice entered his soul and took possession. In the din of marching men his mind had no room for it. The look on his face deceived Colonel Davant. 'A mother's idle fancy,' he said to himself, thinking of what Lady Tressider had said. 'A delicate lad perhaps, but a born soldier, as all the Tressiders are.'

As they entered the gorge which led up a steep gradient to the northern range of hills, the force met with a heavy sniping. Instantly Colonel Davant spread out his men, and, firing as they marched, they returned the fusillade. Each puff of smoke from the hills and a dozen rifles spoke in reply.

'Got him!' said a Tommy with gruesome enthusiasm as a white-robed figure toppled with a shriek from some crag above them, and bounding from rock to rock, fell at their feet a lifeless, unrecognisable mass.

In a few moments the firing ceased, and the silence which followed was more terrible than the *ping, ping* of bullets upon the rocks.

The colonel, riding level with Tressider, saw him glance anxiously from side to side. Above them on either hand towered the gray hills of the northern frontier, silent and threatening, holding no one knew what amidst their thousand hidden paths.

The colonel knew the hills; but even he, who had travelled through them before, fell beneath their spell, which turns a man's blood to water.

The road wound up before them, between the hills, like a thread reaching almost to the sky.

'Another two miles,' said the colonel, 'and we shall have left all this behind us.'

'Thank God!' murmured Tressider to himself.

Colonel Davant had spent five years of his life on the frontier—five years spent in quelling a series of native rebellions, when no man knew what the next hour might bring forth. Those five years had turned his hair gray, but they had taught him many things, and he knew the hills second only perhaps to Sudar Khan himself. He pointed to where a shaft of light breaking across the path showed an opening in the defile. 'We turn up that path,' he said. 'It is a sheep-track winding up to the summit.'

Ten minutes brought them to the spot. A sharp order, and the men wheeled to the left. As he came in sight of it, the colonel looked up the path through his glasses. Misgivings filled his mind. He knew the hills, and he knew the ways of the men who lived amidst them. But he kept silence, and, Tressider by his side, led the column up the slope.

A few hundred yards, and from somewhere came a voice issuing a command in the native tongue. In answer a thousand rifles spoke, and the bullets fell upon the advancing party like hail on a stormy day.

The colonel's fears had been realised. He turned and faced the men. Already a score lay upon the ground, writhing in their agony. 'Boys,' he said, 'follow me!' And he leapt up the slope.

With a cheer, their ranks thinning every moment, his gray head their oriflamme, the Seventy-sixth followed him. They would have followed him to the gates of Hades had he asked.

A few moments, with the bullets pouring around them, and the foremost men gained the heights. Already the natives were in flight. The soldiers were intoxicated; the lust for killing was in their blood; a mad desire to avenge their comrades who had fallen filled their hearts. Fixing their bayonets as they ran, they tore across the plateau.

On the summit of the path, at the point where it widened into the plain beyond, stood a small aperture leading into a cave cut from the rock itself.

Colonel Davant had seen two white-robed figures pass through the opening, one of whom he recognised.

'Follow me,' he said to the figure at his side, without knowing who it was. 'Sudar Khan himself is in that cave.'

Stealthily he crept to the side of the aperture, then turned to his companion. 'You, Tressider!' he said. 'Good!' He held a revolver in his hand. 'As soon as I have fired I am going in. Follow me as closely as possible. If we are not hidden in the smoke of my revolver, they will shoot us as they see us against the skyline.'

A moment, and he fired three shots in rapid succession, right in the mouth of the cave.

'Now!' he whispered, and clutched Tressider's arm.

Quickly and silently the two men crept in, and, crouching on hands and knees almost, moved to the right of the entrance. There was no answering shot; the smoke had hidden them.

Then, deep in the shadow, they waited, knowing that somewhere in the darkness two

men were waiting for them—waiting for some sign of their presence.

Silently the colonel reloaded his revolver, and the two men crouched, weapon in hand.

Slowly the moments dragged by. To Tressider they passed like hours. No sound came from the outside air. Within there was nought but a heavy silence, one pregnant with danger.

He felt figures moving towards him out of the darkness; every second he expected to feel a hand upon his throat. A wild desire seized him to shriek, to do anything, to rush into the darkness and grapple with the unseen foe—anything to break the awful tension. He gripped the butt of his revolver and bit his lip.

'Steady!' whispered the colonel, his face barely six inches away.

The hot breath upon his cheek made Tressider start, and the colonel gripped his arm. 'Steady,' he whispered again, 'or we are lost!'

Still the moments passed by in a dead, heavy silence.

'God!' whispered Tressider through his clenched teeth. His imagination had run riot; every second he could feel the enemy coming nearer to him out of the darkness, nearer and nearer, until he could almost see their forms silhouetted against the blackness. Intently his ears were strained to catch the slightest sound, until the cavern seemed filled with voices and wild laughter. Suddenly, unable to bear the strain any longer, he raised his revolver and fired twice.

A scream told that one of his shots had found a target. For a second his face was illumined by a ray of flame, and with a grunt of satisfaction Sudar Khan raised his rifle.

'Phew!' whistled the colonel. The shot had struck him in the fleshy part of his left arm.

For a second the whole cavern was lighted up, revealing Sudar Khan bending low over the sight of his rifle, and by his side, lying upon the ground, the body of the other native.

With a wild shout, Tressider leapt forward, and before the light completely died away the colonel saw him spring at the throat of the rebel chief.

Then came darkness, and the sound of two men wrestling in a death-grip. The colonel heard the shuffling of their feet upon the ground, the short, hard breathing as of men strained to the utmost of human power.

'The young fool!' he muttered, and stood waiting, his revolver in his hand.

For five minutes the fight continued, while the men swayed and wrestled upon the floor. Once they were almost within arm's-reach, and he saw their figures dimly outlined. Then they passed away from him again to a distant part of the cave.

'Throttle him, Tressider!' he called out once. 'It is your only chance. He has the strength of a dozen.' It was not for him to know that the man he counselled had been driven to the verge of insanity by the tension of half-an-hour, and that his was the strength of a madman.

Suddenly there came the sound of a heavy fall, followed by a series of sharp knocks, as of some one beating another's head against the stone floor.

Then Tressider's voice, 'I've killed him, colonel.'

'Thank God!' said the colonel. 'Where are you?'

'By his side. I'm done for. He's stabbed me through the lungs.'

The colonel groped his way across the cave, and, stumbling over a body, lit a match. Sudar Khan lay on the floor, his neck broken. By his side lay Tressider, blood flowing from a wound in his right shoulder.

Gently the colonel picked him up and carried him into the open air.

Tressider's eyes were glazing as the colonel knelt by his side. 'I'm no good as a soldier,' he muttered. 'I've no more nerve than a cat.'

Then he closed them. Alan, the last of the Tressiders, had been under fire for the first and last time.

Three days later the insurrection was over, and on the fourth Colonel Davant led his force back into Peshawur. On the plateau, by the entrance of the cavern, rested a small wooden cross, with the initials A. T. and the date.

Ten days later Colonel Davant applied for leave, and on reaching England went straight to see Lady Tressider.

'I'm ashamed to meet you, madam,' he said, bending low over her hand, 'for I have betrayed my trust.'

'You could not help it,' she answered, smiling bravely. 'But tell me, how did the last of the Tressiders die? I hope he died as a man, not as he always feared he might. It will help me to bear my sorrow better.'

'Madam,' replied the colonel, 'he died as a hero, saving my life.' And Colonel Davant looked her straight in the face.

'Thank you!' said Lady Tressider.

'And may God forgive me the lie!' said the colonel to himself.

PROGRESS.

We say we are progressing, proudly tell
How forces yoked by man's imperious hand
Hurry us storm-like o'er the shuddering land,
Or drive us through the climbing ocean swell;
How heaven's lightning mutters 'neath our spell.
But we are aging—mind, and nerve, and limb,
Our step hath lost its lightness, and the hymn
Of Nature turneth to an empty knell.
The birds progress not. This, as every spring
Their mossy walls they weave the self-same way,
Flirt the same colours from the hanging spray,
With the old love-song make the covert ring;
Yet for their youth I'd give the centuries' gain,
The knowledge, and the heartache, and the pain.

THE HEART OF THINGS.

By HENRY LEACH.

LONDON, *Yesterday.*

THE events of the past few weeks have made a strong impression upon the minds of some men of depth, sincerity, and independence of thought. In London, as elsewhere, there are those who are weary of what they conceive to be a strange political game that is being played upon them. From being amusing to them, it has come to be little less than nauseating. There is, they say, something so pitiful in the fall of our political system that they do not wish to speak of it or even to think of it, since from their thoughts there so seldom arises any well-founded hope of an early amendment. They have come to feel that there is no sense in the game that the parties are playing; that it leads to nothing but confusion, chaos, inefficiency, and national failure. In principle, government on the party system is correct; and it is more than correct—it is essential. The proper function of a minority called an Opposition is criticism of a majority called a Government, having the superior numerical strength to govern. By such criticism by the minority the majority is steadied in its schemes, is kept close to the line of propriety and truth, and its finished works are the better for the criticism to which its early proposals were subjected. Thus it is perceived that the majority and the minority, while being as two, are really one, natural complements of each other, and that the Opposition, for all its prating, is but the friendly though strictly candid critic, and is thus the helpmate of the master-side. So in sincerity does each side play its part and strive for the good of all, and so do both fulfil their duties in patriotism. That is true government by party. But it is plainly of the essence of this system that all preliminary schemes shall be honest in conception, arising from deep conviction and the sense of necessity, and disregardful entirely of what is likely to be the view of the minority concerning them. In the ideal state the majority would feel that the minority could not but approve, such would be its own complete belief in the perfection and the beauty of its plans. And, again, it is equally plainly of the essence of the proper working of the party system that the Opposition, or minority, should be honest and sincere to the uttermost degree in its criticisms. It should not raise objections and make difficulties merely for the sake of hindering, conceiving the majority to be the enemies of themselves and the people. Before it hears the explanation of the scheme it should not say to itself, 'This surely must be bad because it comes from the majority, and it must be stopped.' Rather, having heard the explanation, should it think awhile and begin upon the train of consideration with the premise that the scheme is the outcome of the close deliberation of wise and honest men, chosen of the people, working sincerely for the common good, and that therefore it is to be presumed to be good; but that as two heads are better than one, and two hundred better than one hundred, and that as no man or body of men is omniscient, while greater surety comes from the combined consideration of the larger body, so it will examine this scheme for the purpose of its improvement. Such an honesty and sincerity, and, more than either, a sympathy, are, as we say, of the essence of true and proper government by party; and if the parties are to any considerable extent lacking in these qualities and motives, then the system fails, and so far from being helpful to the state, it is a bad and cankerous thing, and is a danger to it, and it were better that the system did not exist, but that government should be carried on by a plain autocracy. This is spoken of as the ideal system and the high principle of party government, but they do not call for any Utopia who say that, while making certain necessary allowances for the peculiarities and weaknesses of human nature, from which even statesmen are not exempt, but which are not considered in the establishment and refinement of ideals, they cannot allow these set principles to be departed from by more than a very little if the system, as it is being carried out, is not to be condemned. That which is not quite good in government by party is bad. Now those sober thinkers who are above the modern party attitude ask, 'Can it be said that at the present time we come in our system so near to the essential mode of working as to permit even of any comparison between the two?' Surely not. Neither party admits the sincerity and honesty of the other. Each accuses the other of selfishness or baseness of motive, and this lack of belief,

[*All Rights Reserved.*]

expressed in violent and often vulgar terms, reacts and reacts again by an alternating process upon the soul of each side until the charges that were made a year ago are proved true to-day, and the new ones that are made to-day will be justified a few months hence. Governments make schemes for defiance and not for good, and minorities oppose on principle and not on conviction. And thus there is a chaos and a madness, a certain hypocrisy and a seething of passion, everywhere. The standard of public life is lowered. Statesmanship is degraded. Vulgarity and abuse abound. Our boasted parliamentary system is being made, it is said, to look foolish in the eyes of the world, and is laughed at by the Ministers of new republics. Our party system has brought us to such a state of hopeless muddlement and confusion that we can think of nothing but our parties, have indeed no time or opportunities for other thoughts.

* * *

In these days we speak of national dangers; and they are many and serious, as we know. But now we have no time, say those critics of all parties, for the consideration of these dangers, although their menace has become no less but rather has grown greater for our distraction. Should a hostile fleet sail close up to our coasts just now, how is the mind of the people and its leaders ready? Our parties and not our enemies abroad, it might be urged, are the greatest of our national dangers. Walking about in London, one may stop awhile to speak with a person of apparent respectability and sense, but he is not now as we once knew him to be. He has eyes aflame; he stamps his feet, speaks hurriedly and passionately, and fiercely denounces a party. All its works are awful and disgraceful. It is not suggested that the party is honestly wrong; the plain accusation is that it is dishonestly, maliciously, wickedly, and almost traitorously wrong. You pass along and you meet another man, likewise of presupposed reason, and he behaves in the same way and says precisely the same things about the other party. Somewhere in the shade, moodily engaged in contemplation, you meet the non-party thinker, and, asking him for views, he may hang his head and say that it is all very sad. Yes, it is very sad. But, it may be urged, was it not always so? Do not the records of elections show us that at all, or nearly all, such times men lost their reason and party leaders lied? No, they say, it was not so. Fair argument had a better place than it has now. At the present time it is the fashion to condemn the mid-Victorian period for its intensity of dullness, its lack of inspiration, its stodginess. Dull in many things it may have been, but there was one vast virtue it had, arising from its very dullness on the one hand, and from one of the temporary circumstances of the constitution on the other, and that was a fair proportion of purity and sincerity, and it was then that our party system in its evolution rose to its best. Individual judgments upon Gladstone may be as individuals please to make them, but the present kind of party warfare would have been almost impossible when he was in the field of politics. Very likely—indeed, almost certainly—it is not the fault of individuals, of any new and peculiar wickedness on the part of our modern politicians, that we have thus fallen. It is merely that the evolution has gone too far, that it has passed the point of best, and—permanence being impossible and change always made—it has gone on to decay. So it is rotten and obsolete. It has faults that are worse than those which existed at the beginning stage. For one thing, it has now become far too complicated to be workable. In the mid-Victorian time the parties were in their simplest state, and for the system to act to satisfaction the parties must be simple and well defined. But now the aims and objects, the principles of rival parties, are so intertwined that it is impossible for any man to say that he believes entirely in the one and not in the other, as he is asked to do. But for all that we try to hang on to old forms and symbols, to retain some semblance of the old system, and to try to work it in the same way. With the complications that we have, this is impossible. It is clear that the inevitable result of the attempt must be lack of sincerity, then lack of honesty, then political hypocrisy, and then utter failure and chaos. What must be done? we ask these non-party critics. We must cast aside, they say, these so-called parties that have proved to be failures. They are worthless, and, more than worthless, they are dangerous to the State. All of them must go. We must by a great upheaval and a solemn renunciation return to a better simplicity. The way has been lost, and we must go back to our base. We must start again with two new parties, with new ideals, new political gods. It is by no means impossible to do so if once it is accepted on both sides that the present condition of things is insalutary and bad. It is some years since that Lord Rosebery exclaimed on the platform, 'A plague on both your parties!' and the country agreed even then. What we need now is a man with the right ideals and the full measure of strength for influence and leadership, who will come out from the mass as a Cromwell might, and with his scorn and contempt hurl the parties as we have them into nothingness. It is only by such a *coup* that the change can be made. We cannot go back to a workable simplicity by degrees and easy stages. And without a doubt the *coup* will be made, and soon; and may it be so soon as not to be too late. So say the men who think of country rather than of party.

When any of you deliberate on making your clever son, just about to leave school, a doctor, and take some professional advice upon the subject, that advice is commonly of the renowned variety of the excellent *Punch*—it is most pessimistically negative in character. You are sometimes told that it would be much better for the boy's future if you placed him in a good office or shop; or, if the object is to assist him to become rich quickly—and hang the risks!—set him to be an aeroplanist. The jockey profession has also some advantages. True, it is highly respectable to be a doctor if you have a practice, but respectability without cash does not count for so much in these days as it once did. Perhaps the parent should not heed so much the gloomy things that are said by the doctor-man to whom he talks about his young Willie. 'If a man placed the same amount of ability and energy into —— as he does into —— he would probably succeed ten times as well.' This has become an established formula, and all the different professions are put into the two blanks. You may place journalism in the first and the Bar in the second, or the other way about, or you may put either of them in one blank—it really does not matter which—and anything else you like in the other one. It is just the same. Nevertheless, there does seem to be something wrong with the medical profession at the present time. Never did there seem to be a time when doctors should do so well as now, for this is an age of neurasthenia and exhaustion with great effort. Perhaps the majority of us take pills, or tabloids, or bottles of something. If we do not think we are really ill, we are rarely satisfied we are quite well, though when we are asked in the conventional way we state in the conventional answer that that is the case. So we coddle and doctor ourselves. I quoted some statistics the other day which indicated that perfectly enormous quantities of patent medicines and like things are being consumed in these days, and that in this country there are no fewer than forty-two thousand licensed sellers of the same. Of course this may be one reason why doctors do not flourish as they should. Then we have just had a Local Government Board report showing what an enormous number of quack doctors there are in the country just now, and what blunders they sometimes make. But in eighty-two towns the quacks are on the increase, so they seem to be doing well. More and more people think they are ill, just a little ill, especially in these ugly winter days. But the doctors are not getting on. Can it be that there is anything wrong with them as a class, a body, a profession? No doubt they regard this as a highly improper question; but it is not meant to be offensive, and it is not, as you and they will see. The doctors are not allowed to write about themselves or to make speeches, except at hospitals and gatherings of their own class; it would be unprofessional. That, no doubt, is an excellent custom, and most proper; but, after all, doctoring is to help us to live longer, and our lives are our own and of literally most vital importance to us, so we may write and speak if they do not. Nor does one do this without thought or consultation with good authority. For many years, if I may be permitted to put it in such a way, I have taken a close interest in doctors, and have been intimately associated with many of them, of all sorts and conditions. With preliminary apologies for the presumption of a layman, I have spoken to them of their profession and expressed my views upon it. Frequently they have agreed, sometimes enthusiastically. Sometimes they have disagreed. Occasionally they have said it was none of our business. As a general rule only the least clever and least successful doctors have crushed me in this last-named way. But it is my business. Doctors disagree. Therefore they do not know everything. I once explained to a doctor a treatment that I had had experience of, but of which he had never heard, though it had been in common practice for many years, and the ailment it concerned was not uncommon either. A few weeks later he said he wished I had told him earlier.

* * *

For many years past I have thought upon a lay scheme for the reform of the medical system which some may consider to be necessary, and I have discussed it with scores of the profession. I did so with one of the first doctors of the time, a man who attends on the highest personages. He said that it was quite right; but what was the use of discussing it, anyhow? This was a man of great strength of opinion and originality of view, as exemplified on some famous occasions. The idea and scheme for the improvement of doctors, the betterment of their own condition, and the prolongation of the lives of others may be stated. The basis of the idea is that too large a proportion of doctors do not keep themselves up to date as they should do. Doctors are divided into two classes—those who are energetic and enterprising, and take a deep interest in their profession, reading all about everything that is new, and following it up when it seems worth the trouble, and those who pass their examinations and let it end at that. There is no word of criticism, of course, to offer against the first class. They are splendid; and our British doctors who belong to it are the best in the world. What is more, these men 'get on,' and very rarely have to complain of any bad times. They may have started doing their rounds on bicycles, but they now make their calls in thousand-pound motor-cars. They are worth all they have earned, and more. But the men who pass their examinations, and soon afterwards think it is not worth while bothering any more about the business, but are inclined

just to jog on and make a nice living, if they can —surely these men are a danger to the community and ought not to be doctors. Class one agrees with me. But there are thousands and thousands in class two. In the lonely country districts where one general practitioner does for a small parish, and does what he likes, they are common, though here of all places the people need the men of class one. I asked one of my doctors what there was to prevent a man who qualified in 1860 from prescribing and treating any particular disease now in just the same way they did then, though the proper treatment was quite different, and had changed a dozen times in the interval. First of all my man answered that there was the doctor's sense of responsibility, his dignity, honour, and so forth. But I answered that a man might be dignified and honourable, but still lazy and without an adequate sense of responsibility; and then you do come across doctors who say that we try to know too much in these days, and consequently make mistakes, and that the old ways may perhaps be best. Then my man said it was practically impossible for doctors not to know everything that was going on in regard to the changing treatments of common diseases like phthisis, and, anyhow, the lonely general practitioner in the country place had always the fear hanging over him of a great specialist coming down and finding him out. I submitted these criticisms of my idea to a very clever and up-to-date man in the West End of London, and he said they were all nonsense, and I was quite right. We cannot go on with medicine as we do with law. We still use Acts of Parliament that belong to the time of Queen Anne. Some of them are very good Acts, too; but even if they are bad and out of date, it does not matter very much in the long-run. It is the same for both sides in a sense, and we only lose our money at the worst. The laws that might take away your life do not belong to Anne Regina. They are quite up to date. So our solicitors and counsel need not bother very much after they have passed their finals. Everything is sure to come right, or approximately right, anyhow. But a doctor must know everything that is new. If he does not he is not a proper doctor. Theories and practice change with the utmost frequency in medicine. We all know that.

* * *

There is a certain part of a doctor's business that is no secret to any of us, and cannot be. Every man is a little of a doctor. Nature made him so, and sometimes he has improved upon the initial knowledge that nature gave him. Often enough he improves upon it to his own disadvantage, and becomes a danger to his own body and a great nuisance to his doctor. But all the more do we insist, therefore, upon the doctor knowing everything that is new and good. We may have a treatment to-day that saves lives which would certainly have been lost by the treatment that was in vogue two years ago. High authorities tell us, what after all is obvious, that marvellous as have been the advances in medical science, it is still for all that but in its infancy. An easy-going doctor who relies upon the knowledge that he had gained at the time that he passed his examinations twenty years ago might almost as well take to bleeding his patients as they did in the old days; but there is an enormous number of men in class two who do so. They make a living; their patients live and die. According to their knowledge they conscientiously do their best for them. They tell you in some cases not to forget that besides their initial knowledge and training they have had twenty years' experience among all sorts of patients and of all kinds of diseases and phases of diseases. Yes; but it is an overwhelming argument that in medicine above all other things experience is of little value when the knowledge has not been brought up to date, and the results of all the experiments that are constantly going on and the discoveries that are being made are not known. No, the easy-going men who are in class two are not as good as they should be. Doctors must all be ambitious, and they must think and learn all their lives, not merely by their own experience but by the experience of all others. 'But what remedy can there possibly be?' may be asked. 'How are you to make sure that the doctors think and study and keep themselves up to date always?' The questions seem difficult at first, but are really extremely simple, and can be answered fully and effectively in a very few lines. According to the present system, a doctor when he passes his examination is licensed to practise for life unless he commits some offence against his profession. Mere ignorance of what is going on in the great medical world outside his own practice is not such an offence. The remedy is, do not give him his license for life; give it to him for seven years to start with, and at the end of that period insist on his coming up again for re-examination upon all that has happened and has been discovered in the meantime, and upon his general knowledge as a properly qualified and up-to-date practitioner. When he comes up for this examination he will be in just the same position that he was in when he went up for his final. If he fails he must not be allowed to practise until he is successful; when he is successful he will get his license for another seven years, and then once more he will have to come up for re-examination. Such a system as this is obviously sound. It will be bad for the men in class two; but it will not even be an inconvenience to the men in class one—they will not need to make a minute's special study in order to pass their examination over again. They will gain, the public will gain, and many people

may live longer than they are likely to do under the present system of things. And probably fewer of us shall think we are ill when we are not. The real doctors of class one will remove that nonsense from our heads, for it will not be so easy to doubt our doctor. Nowadays we are too often inclined to suspect him of belonging to class two.

* * *

Some of the tales that are told by Sir Robert Anderson, the famous ex-chief of the Criminal Investigation Department, in his book on *The Lighter Side of my Official Life*, are mightily entertaining, even when they deal with the experiences of the early part of his career. A certain Government official of consequence with whom he was working in association on the Prisons Commission went into his office one morning, and, sitting down in his arm-chair, said, 'Anderson, I have something to tell you in strict confidence.' 'And he went on to tell me,' says Sir Robert, 'as a State secret, that the Government had a scheme on foot which was certain to benefit Turkey. He had, therefore, telegraphed that morning to his broker to buy some Turkish bonds. He then went out, as I afterwards discovered, to give the same tip in strict confidence to a number of his special friends in the various Government offices. I was younger than I am now, and the bait took. Turkish bonds were quoted that morning at eight pounds, so I decided to go in for a "deal," and I telegraphed to a stockbroker friend to buy for me. The bonds began to go up, and one day the following week I went into the City to make inquiries about them. Failing to find the broker who had bought for me, I applied to another Stock Exchange acquaintance. He told me that in the City they could learn nothing to explain the rise; but it was evident that something was known in official circles, as one day lately a number of orders to buy had been telegraphed from the different Government offices. I cleared out at twelve pounds, and the bonds soon fell back to their normal value.' In another part of his book (which is published by Messrs Hodder and Stoughton) Sir Robert tells us that the public never realised what a marvellous escape Mr Gladstone had in April 1893, when the lunatic Townsend, with a loaded revolver in his pocket, lay in wait for him in Downing Street. A lunatic, says our authority, is often diverted from his purpose as easily as a child; and the man's own explanation of his failing to fire was that the Premier smiled at him when passing into No. 10—a providential circumstance that, for Mr Gladstone was not addicted to smiling. That case cost the chief of the C.I.D. much distress of mind. 'Never keep a document,' he says, 'should be the first rule with a criminal, and never destroy a document should be an inexorable rule in police-work.' But in this case he had destroyed a letter that would have proved an important piece of evidence. Though he had many threatening letters himself, he always ignored them; and when one of his principal subordinates brought him a letter threatening his (the subordinate's) life, Sir Robert felt so indignant and irritated at the importance the man attached to it and the fuss he made over it that he threw it into the fire. But that letter came from Townsend, and, though no harm came of its destruction, Sir Robert says that he could not forgive himself for it.

PETER AND JANE.

CHAPTER VIII.

WHEN Peter came back from Spain he came back to an empty house. The big reception-rooms at Bowshott were swathed in brown holland and dust-sheets, pictures were covered, and carpets were rolled up, giving an air of desolation to the place. The flowers in the formal gardens had all been dug up, and the carefully tended designs—so like a stitchwork pattern—had lost their mosaic of colour, merely leaving a careful drawing of brown upon green; the banks of flowering exotics which his mother had loved to have in her drawing-rooms had been removed to the greenhouses and conservatories. The sight of the gardeners mowing for the last time in the season the hundred-year-old turf of the lawn conveyed a suggestion of regret with it, and the old pony harnessed to the mowing-machine stepped sedately and quietly in his boots on the close, fine grass. Everything about Bowshott looked stately and beautiful in the clean, sharp air of the morning when Peter drove up to the door after a long night-journey, and ascended the flight of steps leading to the hall door.

His return to the beautiful inheritance which had been indisputably his since he was a little boy had a horrible feeling of unreality about it. Half-a-dozen times in the course of the morning he had to check himself when he found his thoughts wandering to alterations or improvements, and to tell himself, with a bewildered feeling, that perhaps he had not a right to the smallest flower in the garden or a chair in the house.

'I can't believe it's not mine!' he said aloud as he drove up the long avenue from the station in his dogcart with one of the famous Bowshott hackneys in the shafts. 'I can't believe it's not

mine!' Many people might have found in the singular unhomeliness of the big house a just cause for withholding their affection from it, but Peter had always loved it. Every corner of the place was full of memories to him. Here was the wall of the terrace off which as a little boy he used to jump, making horrible heel-marks in the turf where he alighted; and there was the stone summer-house, built after the fashion of a small Greek temple, but only interesting to Peter Ogilvie from the fact that he used to keep his wheelbarrow and garden-tools there. He remembered the first day when it had suddenly struck him that the geometrically shaped flower-beds were designed after a pattern, and he had counted with his nurse the loops and circles in the design. There, again, were the fountains, with their silver spray, in whose basins, by the inexorable but utterly unintelligible law of the nursery, he had never been allowed to play. Here was the clock on the tower which used to boom out every hour as it passed, but of whose strokes he was never conscious except when he heard them at night. Inside the house was the hall, with its big round tables by the fire; and beyond that was the library and his mother's drawing-room; while in the older wings of the house were the ballroom where Charles the First had banqueted, and the Sèvres sitting-room (so called from the china plaques let into the mantelpiece) where he had made love.

'I hope, if my brother is alive, he is a good sort of chap,' said Peter.

He breakfasted in the tapestried room which he had ordered to be kept open for him, and then went into the library to write his letters. He had a hundred things to do. At lunch-time he interviewed his steward, his agent, his stud-groom, and the other heads of departments of a large estate. The horses were to be sold, with the exception of a few favourites. The gardens were to be kept up as usual. Some favourite dogs of his mother's would be cared for, his bankers would pay the usual subscriptions to local charities, and the almshouses in the village were to be maintained as they had always been maintained.

After lunch Mr Semple, the lawyer, arrived. He was a pleasant man, and a keen botanist. The gardens at Bowshott were a delight to him, and Peter had often found him good company over a cigar in the evenings. Mr Semple was one of those who had throughout urged secrecy and caution in the matter of the late Mrs Ogilvie's communication. 'In the first place,' he said, 'it may still be proved to be an hallucination of her mind, attendant upon her state of health; and in the second place, anything like publicity might bring a host of aspirants and adventurers whose claims would take months of investigation to dispose of.' He advised that everything about the house should remain in its present state for a year, until a proper legal inquiry into the disappearance of the elder son could be instituted.

'He may have died as a child, although he wasn't buried at Juarez,' said Peter.

Jane had departed to spend her usual six months of the year with Colonel Erskine, but she had written to say positively that she knew it would come all right; and whenever Peter was down-hearted he thought of her letter, believing, in all simplicity, that Jane was always right. If only she were at Miss Abingdon's now, instead of in her uncle's big house in Grosvenor Place!

'She'll miss the hunting, I'm afraid,' he thought miserably, contrasting their present separation with all the joy and happiness that they had so fully intended should be theirs this winter.

Mr Semple had a shrewdness acquired from many years' experience in legal matters, and he shook his head when Peter made the suggestion that probably his brother had died in infancy. 'The conclusion I have arrived at after years of legal work,' he said, 'is that the undesirable person lives, while the useful or much-wanted one dies. Those who encumber the ground remain longest upon it, and the person in receipt of a large annuity or pension is proverbially long-lived. However, we have so far not found a single trace of the existence of Edward Ogilvie; though you must remember we have not yet ascertained in which different parts of Spain your mother lived during those two years which she spent there.'

'I don't see who on earth is to tell us!' ejaculated Peter. 'She generally had foreign maids about her, and I think I always had French nurses. I never heard of any old servant who went with her on her travels; and although, of course, money was paid to her by her bank, and letters were forwarded to her by the bankers, the actual addresses to which they were sent have not been kept after an interval of twenty-five years. One of the old clerks at Coutts's remembers in an indefinite sort of way that he forwarded packages for a long time to Madrid, and afterwards, he thinks, to Toledo, and then farther south, and at one time to Cintra; but my mother's headquarters seem always to have been in Granada, and the clerk says that he can give me no dates, nor indeed any exact information.'

'I didn't know she had been at Cintra or Toledo,' said Mr Semple thoughtfully.

'I won't swear that she had,' said Peter. 'The Peninsula wasn't so generally known twenty-five years ago as it is now. Travelling was difficult then, and people in England who have not themselves travelled much are very liable to get confused about the names of foreign places.'

'Still,' said the lawyer, 'Cintra and Toledo are places that every one knows.'

'You mean,' said Peter 'that in a well-known

place, with English people living in it, there would be more likelihood of getting the information which we want?'

'I mean,' said Mr Semple, 'that, as there is no evidence of your brother ever having been seen at Juarez, the next thing is to find out in what place there *is* evidence of his appearance.'

(To be continued.)

THE POLICE-DOGS OF EUROPE.

THE new Prussian Budget provides a sum of twenty-seven thousand marks for the equipment of a breeding and training establishment for the police-hounds. The grant is exceedingly popular in Germany, as the people fully recognise the great advantage which a well-trained pack of dogs would be in the prevention of crime, not to mention the protection such would afford to the police officers in the execution of their duties. The hardened criminal who fears neither God nor man—and he is met with in all civilised countries—respects a dog, and a powerful-jawed terrier would be a moral force in itself. Our own Government still looks with indifference on the police-dog, and treats it with the contempt due to some passing fad; but there is no doubt that the trained police-dog will yet be reckoned a force in the detection and prevention of crime.

The police-dog movement had its origin in the employment of a dog by a night-watchman in a quaint, old-world town in Hanover, and the man's example was quickly followed by others of his own class. On the local police getting to know of this they adopted the plan, with the approbation of their superiors, and the dogs are now used there not only as guards but as trackers, and in the latter capacity especially they have proved an unqualified success. An instance was given recently of a police-dog in Wales which, it is to be hoped, will be the forerunner of the officially recognised police-dog in Britain. An officer of the Glamorganshire constabulary has trained his dog to accompany him on his beat and take part in his duties. The animal works the backs of the houses while its master works the fronts; it never misses a man if there is one about, and its warning bark at once makes known to the constable the presence of tramps loitering or sleeping in farmyards.

In one Continental province last year the police-dogs assisted in effecting over three hundred arrests. More than half of the prisoners were suspicious characters found by night in places where they would probably have escaped the observation of the constables. Thirty resisted arrest, and would have escaped but for the dogs, which were also instrumental in the discovery and capture of fifty thieves.

At Opalenitza, in East Prussia, at the end of last year, an attempt was made to derail an express train, which, had it been successful, would have resulted in great loss of life. Fortunately the mischief was detected and the attempt foiled. The police failed to find a clue to the perpetrator, and eventually two detectives were sent from Berlin to investigate, accompanied by the police-dog Tricka. On arriving at the scene of the crime the dog picked up the scent from a stake which had been used by the criminal to hoist up the rails, and followed it through a wood to the dwelling of a workman who had formerly been employed on the permanent way, but had been discharged for bad conduct, and who had since been heard to say that he would get even with the inspector by giving him trouble. To make certain that there was no mistake, the suspect was subsequently placed with a number of other men; but the dog, again picking up the scent from the tell-tale stake, at once singled him out.

In a recent issue of *Der Polizeihund*, the name of which journal speaks for itself, there were recorded successful instances of tracking by an Airedale terrier, a Doberman, and a German sheep-dog. In the case of the last mentioned, poultry had been stolen, and the dog had to work not only on a 'clean-boot spoor' but on a trail that was nine hours old. Yet the animal followed the trail to the spot where the birds had been killed, and from there to the house of the thief. And the Continental records give many such examples of quite as satisfactory work done by police-dogs.

Several private individuals in this country—most prominent of whom is Major Richardson, whose ambulance-dogs are now world-famous, and whose kennels have been visited by police officials from Germany, Russia, France, and India—are working quietly, and experimenting with dogs; but it would seem a long way yet to the time when the canine crime-detector will be officially recognised in Britain. For many years now the dog has taken its place with success in the police forces of the Continent, and in nearly all European countries it is making decided headway, its value for such work being daily more widely recognised. In Alsace-Lorraine, for instance, after many delays and much correspondence, a decree has been issued by the Imperial Ministry for the province sanctioning the use of police-dogs by eight sergeants of the force. These men will receive an allowance for the keep of the dogs and the cost of training them.

It is in Germany that, with the Teutonic thoroughness of method in doing things, the police-dog has reached its greatest develop-

ment. The German opinion is that the most easily educated and the most suitable dogs for police-work are their own native sheep-dog and our English Airedale terrier. One of the largest and most powerful breeds, and a national dog of Germany, the Great Dane or German boarhound, has been tried, but without success. It is deficient in scenting abilities; and as it is a very excitable animal it is liable to get out of hand, and because of its size and strength is more dangerous than useful.

To most people the term 'police-dog' means a bloodhound; but, so far, this ancient breed has not given satisfactory results in police-work. Whatever may have been the working abilities of bloodhounds in the days when they were used for hunting and tracking, the detection of crime had not then been brought to its present stage of perfection, and the criminal was not so cunning as he is now, for the reason that he did not need to be. People had not the facilities for travelling between one locality and another that we have; and, besides, the conditions under which travelling took place in the past, as can be readily understood, made much more for the success of the hound than they do now. True, English-bred bloodhounds are being used by the police of the United States for tracking purposes, and instances are given of successful trailing on a scent thirty hours old. In some of the Southern states the practice prevails of leasing convict-labour to large employers; and as a heavy penalty is imposed should a convict escape, the employers maintain small packs of bloodhounds to help in the recapture of any convict who gets away. So successful have those hounds proved that it is seldom an employer has to pay forfeit. The advocates of the modern bloodhound as the ideal police-dog cite the old Cuban bloodhound, which was such a terror to escaped slaves. The Cuban hound was not, however, anything like the modern bloodhound; it was a cross-bred dog, usually ferocious and savage, and trained from puppyhood to hunt negroes; and when comparing the two breeds, it must be borne in mind that the negro leaves a much stronger scent than does the white man.

The trials carried out by the Association of Bloodhound Breeders in England make for the development of the scenting-powers of the hounds, and it is likely that in years to come a very 'strong-nosed' dog will be evolved by selection in breeding and care in training. But the fact remains that the bloodhound as a hunting animal must have deteriorated considerably since early times—that is, if we are to believe the written history of the breed—as its scenting-powers are now equalled, and in some cases surpassed, by many terriers and sheep-dogs; and the breed is very delicate constitutionally. What is needed as an ideal police-dog is an animal that can not only track well, but that can attack the criminal and defend the officer when required to do so, and no amount of training will make the bloodhound suitable for work of attack or defence. The police-dog of the future will not be the tracker of ancient times, but an animal possessing the characteristics of the terrier. No doubt, with the development of the police-dog every police-station will have its trained animal or animals, and this will obviate the delay that is caused at present when hounds have to be telegraphed for and some time elapses before they can be put on the trail, which in the meantime has grown cold and been obliterated to a great extent.

Some German authorities have made an attempt to differentiate between the work of the detective-dog and that of the ordinary police-dog, affirming that each should be trained solely for its special department; but this has met with so much opposition that it is unlikely to be adopted. To those of us who have had any lengthy experience of dog-training it certainly seems that to attain the maximum of success only one system of training must be carried out, and that it is absolutely necessary that all dogs used by the police should show distinct capacity for 'nose-work' and be capable of picking up a trail readily and at once. The full success of the police-dog depends greatly, one might almost say entirely, on the careful selection and suitable training of the best and cleverest dogs for the work.

It may be interesting, in conclusion, to give an idea of the thorough manner in which the training of police-dogs is carried out in Germany. The German police-officer is supplied with a form in which to record particulars of the tracking-work done by his charge, and columns are provided for noting the time taken from the picking up of the trail to the finish. Details of the weather, the nature of the ground, and the character of the dog's work are to be supplied; while the quantity and kind of food given to the dog, and the circumstances under which the animal can best do its work, are all to be noted. Records of failures as well as reports of successes are to be written down, so that both trainer and dog may profit by their failures as well as by their achievements.

In training police-dogs in Germany, the method is adopted of repeating every exercise over and over again until the dog thoroughly understands what is wanted of it without the aid of the trainer. To begin with, the trainer works with an assistant whom the dog knows well, and ten minutes or so before the lesson begins the assistant goes over the ground, leaving visible footprints, for a distance of fifty yards, and then conceals himself. The dog is given scent of the concealed man by smelling a glove or handkerchief belonging to him, and is then taken by the trainer to the place where the trail begins. The animal is at first worked on the leash, but is released immediately it begins to work unaided. The officer follows the dog closely, and as soon

as it reaches the hidden man it is ordered to give tongue, which it has been previously taught to do at the word of command. The distance is increased, and increased again, until the dog knows its work thoroughly, when a further stage is reached in its education by its being set to track an assistant whom it does not know, and whom it tracks solely by the scent on the glove or handkerchief. Encouragement and repetition are the two great factors in the training of police-dogs, just as they are in the training of animals as a whole.

THE KING'S CHAMPION.

By JULIAN STRANGE.

THE elaborate formalities which have accompanied the coronation of our monarchs through so many ages include many customs of great antiquity, the most curious and impressive of them all being the appearance of an armed and mounted champion, who offered to do battle with any one who should dispute the right of the sovereign to the Crown.

The office of champion is a survival of the ancient rite of the 'ordeal by battle,' one of the oldest and most widespread of judicial superstitions. In the following quotation from *The Dooms of Ine* (A.D. 688–725) we have the earliest direct reference to this custom: 'There stands no other purgation in an accusation by a Saxon against a stranger save the ordeal.' The Church, both in England and on the Continent, early adopted this pagan tribal custom as a Christian ceremony. Royal champions are mentioned as early as the days of Charlemagne, and Otto the First employed them in deciding the succession to the Empire. Doomsday Book contains many entries of cases where men offered to prove their rights or the rights of their lords by the ordeal of battle.

The right of a person charged with treason or capital felony to choose trial either by jury or by wager of battle was legal as late as 1819, when one Thornton, who was charged with the murder of Miss Ashworth, summoned his accuser, the victim's brother, to a trial by combat. After the issue of this challenge the case was not proceeded with, and the right of appeal to a wager of battle was abolished.

The office of king's champion in this country dates back to the time of William the First, who granted the castle and town of Tamworth and the manor of Scrivelsby in Lincolnshire to Robert de Marmion, Lord of Fontenaye in Normandy, on condition that he and his heirs performed the service of champion to the kings on the day of their coronation. The Marmions thereafter continued to grow in wealth and power until the death, in 1292, of the fifth baron, Philip, who left two daughters but no male issue. The Tamworth estates passed to the elder daughter, Margery, who married Alexander de Freville; the younger daughter, Joan, married Sir Thomas de Ludlow, who succeeded to the manor of Scrivelsby, and their only daughter wedded Sir John Dymoke, a knight of Gloucestershire, an ancestor of whom, fifty years before the Conquest, had married a daughter of the Prince of North Wales. The name Dymoke or Dymock is undeniably of Welsh origin, and Sir Bernard Burke has traced the family back to Tudor Trevor, lord of Hereford and Whittington, and the founder of the tribes of the Marches.

At the coronation of Richard II. Sir Baldwin de Freville, a descendant of Philip de Marmion's elder daughter, claimed the championship as lord of Tamworth, and on the day of the ceremony rode, fully armed, upon a barbed horse, into Westminster Hall, there to offer combat to any who should gainsay the king's title. His claim was, however, disputed by Sir John Dymoke, lord of the manor of Scrivelsby, who was finally adjudged to be the rightful champion on the ground that the office was holden only by knight-service, and was attached to the manor of Scrivelsby. At the coronation of Henry IV. the then representative of the De Freviles revived the claim against Dame Margaret Dymoke, the widow of Sir John Dymoke, who asserted that she held Scrivelsby *per baroniam* and as head of the Marmion family. Her plea was successful, and her son Thomas officiated as champion in her place. In the event of the male line failing, the rights and privileges of the female to perform grand serjeantries in respect to their lands at coronations have always been allowed by the Crown. In some instances the serjeantries were performed by the claimant in person, as in the case of Ela, Countess of Warwick, who held the manor of Hoke Norton by the serjeantry of carving before the king on Christmas Day.

There is no official record of the performance of the duties of champion until the coronation of Richard II., when the office was held by Sir John Dymoke, whose motto was, '*Dimico pro Rege.*' His challenge, we are told, was made in these words: 'Yf ther be any man of high degree or low that will saie that this owre soverayne Liege Lorde Richarde, cousin and heire of the Kynge of England, Edward late deceased, ought not of right to be Kynge of England crowned, he is redy now and till the last houre of his brethe with his bodie to bete him like a false man and a traitor on what other daie that shall be apoynted.'

Originally the challenge was given before the

act of crowning took place; but later, when it became a mere act of state, it was made between the first and second courses of the great banquet which was held in Westminster Hall after the coronation had taken place.

Froissart quaintly tells us that in the midst of the coronation banquet of Henry IV. a 'knight appeared called Dymoke, all armed, upon a good horse richly apparelled, and had a knight before him bearing his spear, and his sword by his side, and his dagger. This knight took the king a label, the which was read; therein was contained that if there was either knight, squire, or other gentleman that would say that King Henry was not the rightful king he was there ready to fight with him in that quarrel. That bill was cried by a herald in six places in the Hall and in the town. There was none that would challenge him.'

At the coronation banquet of Henry VIII. and Catharine of Aragon, Hall picturesquely relates that, after the second course had been served, there entered Sir Robert Dimmoke, to whom Garter King of Heralds cried, 'Sir Knight, from whence come ye, and what is your pretence?' To which his own herald by proclamation replied, 'If there be any person of what estate or degree soever he be that will say or prove that King Henry the Eighth is not the rightful inheritor and king of this realm, I, Sir Robert Dimmoke, here his champion, offer my glove to fight in his quarrel with any person to th'utterance.'

In the College of Arms is still preserved a portrait of Sir Edward Dymoke, champion of Queen Mary I., in the act of throwing down his gauntlet. He claimed for his fee 'one cuppe of gold, the horse and furnyture with th'armoure which he that day weareth, and all other to his furnyture appertaining, and also xviij yardes of crymsyn sattynge for his lyvery, and full service of meat and drynk belonging to a baron to be conveyed to his lodgynges.' He appears to have had some difficulty in getting these various articles, for we find him complaining to Sir William Cecil that he had been bidden to sue for a warrant for them, whereas at the previous coronation his father (Richard Cecil) had delivered to him all his perquisites without a warrant; he preferred, he said, to lose them rather than be driven to sue a warrant for such small things. From the following copy of the bill sent in to Sir William for some of the articles supplied for use at the coronation, it would appear that the champion's hand was more familiar with the 'shworde' than the pen:

Item, for a shworde, gerdyll, and scabbard of velvet	xj *s.*
Item, for ij purdeynzyns gylte	xj *s.*
Item, for a poll-ax	xx *s.*
Item, for a chasynge staff	vj *s.* viij *d.*
Item, for a payre of spowres	xvj *s.*
Sm. total, ij *l.* iv *s.* viij *d.*	

Pepys notes in his *Diary*, under 23rd April 1661, that it being Coronation Day, he rose about four and got to the Abbey, and with much ado did get up into a great scaffold, where with much patience he sat until eleven, but to his great disgust could not see any of the ceremonies. He afterwards went round to Westminister Hall, and was there more fortunate, for he saw 'above all these, three lords, Northumberland, Suffolk, and Ormond, coming before the courses on horseback and staying so all dinner-time, and at last bringing up Dymock, the king's champion, all in armour, with his spear and target carried before him, and a herald proclaims, "That if any dare deny Charles Stewart to be lawful King of England, here was a champion would fight with him," and with these words the champion flings down his gauntlet; and this he does three times in his going up towards the king's table. To which when he is come, the king drinks to him, and then sends him the cup, which is of gold, and he drinks it off and then rides back again with the cup in his hand.'

At the coronation of James II. the champion was given a gilt cup in place of one of gold, greatly to his dissatisfaction. The arms he used were a suit of white armour, a pair of gauntlets, a sword, a pair of pistols, an oval shield with his arms painted thereon, a velvet saddle, a breastplate and trappings richly ornamented with gold and silver, a plume of red, white, and blue feathers, and trumpet-banners. These articles were the usual fees; but on this occasion he was required to return them to the Master of the Royal Armoury, who paid the champion a fee by way of compensation. At the coronation of William and Mary he claimed two gold cups for acting as champion for both the king and the queen. On his claiming the usual perquisites at Queen Anne's coronation, he was told that the armour he had used had belonged to Charles II., and could not be given him, but a fee of sixty pounds was ordered to be paid him, which the Board of Ordnance 'hoped would be to his satisfaction.'

In olden days it had been the custom to claim the arms, horse, and armour only in case a combat ensued; otherwise it was only at the sovereign's pleasure that they became the property of the champion. A combat never has resulted from the challenge, probably greatly to the ease and comfort of modern champions; although the *Gazetteer* for August 1784 says that after the champion had thrown down his gauntlet it was taken up by an old woman, who escaped with it from the Hall, leaving in its place her own glove, in which was a challenge to meet her next day at a specified hour in Hyde Park. This occurrence caused no little amusement in the Hall. Next day, at the appointed place and hour, some one appeared in the same dress, although generally supposed to have been a good swordsman in that disguise; but the

champion politely declined to fight with one of the fair sex, and consequently did not put in an appearance. After the Revolution it was frequently a matter of speculation as to what course would be adopted if, as at one time appeared not improbable, the Pretender or one of his friends accepted the challenge and raised the gauntlet. Prynne in his *Ephemeris Vitæ* relates another mischance which occurred at this coronation. He says that 'when the champion let off his horse to kiss the king's hand he fell down all his length in the Hall, when there was nothing in the way that could visibly cause the same, whereupon the queen said, "See you, love, what a weak champion you have!" At which the king laughed, but said nothing, and Dymock excused himself by pretending that his armour was heavy, and he himself weak with sickness, which was false, for he was very well, and had had none.'

Prior to the Peace of Amiens in 1802 our kings were crowned Kings of France as well as of Great Britain and Ireland, two persons being present to represent the Dukes of Aquitaine and Normandy. At the coronation of George I. two actors were selected to play the parts of the dukes, and they did homage to the king in the same manner as did the English peers.

As the last appearance of the champion was at the coronation banquet of George IV., the occasion may be deemed of sufficient interest to warrant the following quotation from the *London Magazine* of the day: 'After the soup the gates of the Hall were thrown open, and a noble flourish of trumpets announced that the champion was about to enter. He advanced under the gateway on a piebald charger and clad in complete armour. The plumes in his helmet were tri-coloured and very magnificent. He bore in his hand a steel gauntlet ready for the challenge. The Duke of Wellington was on his right hand and the Marquess of Anglesea on his left. Having come into the Hall, the herald read the challenge: "If any person of what degree soever, high or low, shall deny or gainsay our Sovereign Lord King George the Fourth, of the United Kingdom of Great Britain and Ireland, Defender of the Faith, son and next heir to our Sovereign Lord George the Third, the last king deceased, to be right heir to the imperial crown of this United Kingdom, or that he ought not to enjoy the same, here is his champion who saith that he lieth and is a false traitor, being ready in person to combat with him, and in this quarrel will adventure his life against him on what day soever he shall be appointed." At the conclusion of this challenge the champion hurled the gauntlet on the floor. After a few seconds' pause the herald took up the glove and delivered it to the squire, who kissed it and handed it to the champion. The same ceremony was performed in the middle of the Hall and again at the foot of the royal platform. The king then drank his health and afterwards sent him the cup, and he, taking it, drank to the king.'

Sir Walter Scott tells us that 'the champion was a fine-looking youth, but bore a little too much the appearance of a maiden-knight to be the challenger of the world in the king's behalf. He threw down his gauntlet, however, with becoming manhood, and showed as much horsemanship as the crowd of knights and squires around him would permit to be exhibited. His armour was in good taste, but his shield was out of all propriety, being a round rondache, or Highland target, a defensive weapon which it would be impossible to use on horseback, instead of a three-cornered or leather shield which in the time of the tilt was suspended around the neck. However,' he concludes, 'the young lord of Scrivelsby looked and behaved extremely well.'

An amusing incident, to which Sir Walter did not allude, occurred at this ceremony. The champion, in withdrawing from his sovereign's presence, should have backed his horse out of the Hall so that his face should keep towards the king. To prevent any hitch at this part of the ceremony, the Duke of Wellington, who was acting as the Lord High Constable, had hired a specially trained horse from Astley's Circus for Dymoke's use; but through some unfortunate perversity the animal obstinately persisted in turning tail and backing towards the king, until it was slued round in the opposite direction by the grooms.

That the backing of the horses by the champion and his supporters should be graceful and free from any mishap had caused no little anxiety at the coronation of George III. To this end a dress rehearsal of this part of the ceremony had been held in Westminster Hall by the champion and Lord Talbot the day before the coronation. The former rode a gray horse said to have been used by the king at the battle of Dettingen, while Lord Talbot bestrode a very fine bay horse. Notwithstanding the precautions taken, Lord Talbot when entering the Hall beside the champion could not prevent the animal from advancing backwards towards the king, and it was only with considerable difficulty that the attendants could induce it to advance in the orthodox fashion. His lordship was subjected to a considerable amount of chaff anent the incident, and afterwards fought a duel with John Wilkes for making it the subject of an unpalatable joke.

At every coronation from that of Richard II. to George IV. a representative of this ancient family has performed the duties of royal champion. Sir Henry Dymoke, the seventeenth representative of the office, died in 1865. His grandfather, John Dymoke, was champion to George III., but his father, the Rev. John Dymoke, being in Holy Orders at the time of

the coronation of George IV., appointed his eldest son, the Henry Dymoke above mentioned, to act as his deputy. On the death of Sir Henry, his brother John succeeded to the championship, in which he was followed by his son, Lionel Henry Dymoke, who died and left a widow but no issue. At the coronation of William IV., owing to the parsimony of a Whig Government, the great banquet at Westminster Hall was dispensed with, and the champion was not called upon to perform his customary duties. At the two following coronations this precedent was followed, although at the coronation of Edward VII. Frank Dymoke made appearance at the Court of Claims held at Whitehall, and claimed, as owner of the manor of Scrivelsby, to appear as 'champion of England,' and asked for the revival in his favour of the baronetcy granted to his predecessor in the manor of Scrivelsby, in lieu of rendering services at the last two coronations. The court, however, decided that it had no jurisdiction.

In the church of Scrivelsby are many interesting monuments of the Dymoke family. Whilst the recent restoration of the building was in progress a skeleton was discovered under the floor, the place of the head being occupied by a ball of clay. This is conjectured to be the remains of Sir Thomas Dymoke, who was beheaded by Edward IV. after the battle of 'Loosecoat Field,' fought near Stamford, when the fugitives threw away their coats to expedite their flight. Since that time the Dymokes have been very zealous supporters of their sovereigns, and suffered for their loyalty, the representative of the family at the time of the Commonwealth being fined two hundred pounds a year and also a sum of four thousand six hundred and sixty-three pounds for his 'delinquency.' At the Restoration the champion was Sir Charles Dymoke, who was held in high esteem by Charles II.; he was knighted prior to fulfilling his office. His father, who died in 1644, bequeathed two thousand pounds (a large sum in those days) to Charles I.

Standing before the entrance to the old baronial residence at Scrivelsby is the Lion Gateway, over which is a stone lion *passant*, indicative of the official hereditary honour of the house; and in the hall were formerly many of the suits of armour worn by the champions, together with a large collection of champion cups. After the death of Sir Henry Dymoke much of this fine collection of armour was dispersed. In 1877 a cap-à-pie suit of plate-armour and some horse-armour belonging to the late champion were purchased at Christie's for the collection at Windsor Castle. The cups had been bequeathed to Queen Victoria, but she afterwards bestowed them on the succeeding champion.

The coronation ceremonies have in recent years been considerably curtailed to bring them more in accord with modern ideas, but only at the cost of many services which were especially interesting as illustrative of the customs of a bygone age. Among them has been the challenge of the royal champion, which was the most perfect relic of feudal times, and one that had been carried out in its entirety for nearly eight centuries. It cannot but be a matter of regret that an office which is of such peculiar interest has not been retained among the many elaborate ceremonies which still attend the coronation of our sovereigns.

THE MONTH: SCIENCE AND ARTS.

TELEGRAPHING A THOUSAND WORDS A MINUTE.

AMERICAN telegraphic circles have been stirred recently by the announcement that Mr Patrick Delany, a well-known investigator in matters pertaining to telegraphy, has discovered a means of transmitting and receiving messages at the rate of a thousand words a minute over a line one thousand miles in length. The system appears to have been brought into use upon a limited scale, and, it is claimed, with success. The messages are sent by means of a perforated tape, specially prepared in a perforating-machine in which steel punches, operated by magnets and controlled by the usual Morse transmitting-key, perform the requisite perforating operation. These punches are mounted in pairs, and the depression of the key brings about one perforation, while its release causes the other pair to act, the perforations being made at either edge of the paper, corresponding to a dot or a dash, and with an angular relation to each other owing to the tape being always in movement. When the tape has been perforated it is passed into the transmitting apparatus, where one set of perforations by co-operation with suitable mechanism sends positive electric impulses over the wire, while the other line of punch-marks despatches negative electric impulses. There is a pair of contact-fingers corresponding to each line of perforations, and when one or the other is brought into action a positive or a negative impulse is despatched, as the case may be. At the receiving end the impulse is recorded by electrolytic action on a chemically prepared tape, one electrode being of iron and the other of platinum, the impression on the tape being a deep blue. The inventor has also devised a special perforating-machine not unlike a typewriter, which can be operated at twice the speed of the ordinary Morse-key. It is stated that no limit can be placed upon the speed with which the

alternating positive and negative impulses can be sent over a wire. A remarkable future is promised for this invention, but it is as well to point out that it is by no means the first system for expediting telegraphic transmission that has been brought before the public. A similar system is already under test in Canada; but so far the old system, which may be slow but is perfectly sure, reigns supreme. A revolution in telegraphy is promised in the United States, introducing a cheap era in telegraphic communication. If the Delany invention is the means of reducing telegraphic charges in America it will have achieved something tangible, for there long distance telegraphy is a luxury.

CELLULOID PEN-NIBS.

An enterprising inventor has discovered yet another use for celluloid. This is its application to writing in the form of the humble pen-nib. In appearance it calls to mind the writing-point of the almost extinct quill. Certainly with the new nib writing can be done easily and smoothly, the ink being carried well. The nib is also always clean, of great durability, and, what is more important, does not corrode. The point retains its original condition for a prolonged length of time, and is extremely flexible. It can be used with equal success with any kind of ink, copying, red, or the ordinary blue-black; and even the two first-named inks, which so rapidly destroy the ordinary steel nib, fail to exercise any deleterious effect upon celluloid. Commercial houses should find a means of reducing their expenses in one branch of their business by recourse to the new pen-nib, which has been protected by patent.

TELESCOPE EYEGLASSES.

For the benefit of short-sighted persons a German inventor has devised what he describes as a telescope eyeglass. The object is the enlargement of the image on the retina of the eye. The device is made either in the usual double or monocle form. The frame is made of light metal—duraluminum has been employed so far, owing to its lightness and strength—and each part carries a front objective lens or collector, with a second lens behind, nearer the eye, to disperse the rays at the proper angle to correct the degree of myopia in question. It is stated that when these spectacles are properly made there is no astigmatism, distortion, or prismatic border to the image obtained, while to avoid aggravating reflections the inside of the frame between the two glasses is roughened and blackened.

AN INGENIOUS PARCEL-CONVEYER.

We are all aware of the inconvenience caused to pedestrian traffic in the commercial quarters of our large cities by the transference of goods from a warehouse, shop, or business establishment to a van drawn up alongside the kerbstone. When this is carried out in a busy thoroughfare the obstruction is a serious matter to those on the pavement. In order to overcome this drawback, a Manchester shipping-house has adopted an ingenious arrangement which completely solves the problem. Over the entrance to the building is erected a porch or awning extending to the edge of the kerb, such as is placed over the entrance to a theatre or hotel. This awning is built on the cantilever principle, so that external supports are unnecessary, and is dome-shaped. At the kerb end the front is provided with a roll-shutter, and the flat base or deck of the awning is fitted with an endless conveyer. Consequently, if it is desired to pass parcels from the building to a van in the street, the vehicle is drawn up alongside the kerb, under the outer face of the awning, the shutter opened, and the endless band set in motion. If the parcels are being sent outwards they fall from the conveyer-mouth direct into the van, while if the parcels are going inwards the vanmen simply throw the parcels into the opening, and they are whirled into the warehouse to a table from which they can be distributed to any part of the building. There is no interference with the pedestrian traffic whatever. The appliance erected in Manchester is designed to deal with parcels up to ten pounds in weight; but the idea may be modified to meet almost any requirements. Results of operations by this new method prove that the transference of parcels can be carried out at twice the speed obtainable under existing methods. When the apparatus is out of use the front shutter is simply closed down. The arrangement can be so set up and designed as to offer no offence to æsthetic tastes, being merely a dome-shaped awning capable of external decoration in any desired style. The authorities and the commercial houses of our busy cities would do well to extend the idea, for it removes one of the dangers of the pavement, and at the same time reduces to the minimum the blocking of the roadway by vans waiting to load or unload.

RIVER-WEED AS FUEL.

An important development which will have the result of converting a nuisance to commercial account is being effected in the Sudan. As is well known, navigation of the Upper Nile is seriously hindered by the dense, dank water-grass which in a gale or storm becomes detached, drifts, and blocks the waterway, forming what is colloquially known as the sudd. For some three hundred miles the river runs through a swamp where this grass flourishes luxuriantly, the morass covering some thirty thousand square miles. Lord Cromer realised what a serious handicap this vegetation was to the development

of the country, owing to the obstruction it presented to navigation; and when some enterprising German chemists suggested the possibility of converting this weed into fuel he co-operated in their experiments, at the same time inducing the Egyptian Government to lend substantial financial assistance. These investigations have proved completely successful. The grass is first dried like peat, and then passed through a disintegrator which reduces it to a coarse granulated condition. It is then briquetted, the time occupied in the whole operation occupying only a few minutes. Tests with this fuel have shown that it has a heating-power two-thirds that of coal. Inasmuch as black diamonds in the sudd-district cost on an average sixty-six shillings a ton, and wood is almost as dear, it will be seen that the cheap production of this sudd-fuel is of far-reaching importance to the country. Investigations show that the fuel can be manufactured on the spot for about half the price of coal, and consequently a factory is to be established in the sudd-country for the production of briquetted water-weed on an extensive scale. The Sudan Government are taking part in the enterprise, and there is no doubt that it will prove commercially successful, besides offering an economic solution of a complex problem which has hitherto seriously retarded the opening up of the country.

AN INGENIOUS RAILWAY-SIGNALLING DEVICE.

Those countries which possess long stretches of single railway line at present unequipped with a reliable signalling system should find the new automatic electric torch which has recently been perfected of far-reaching value, since it offers an inexpensive and highly efficient means of avoiding head-on and end-on collisions due to two trains meeting in one section. The block-system is, of course, the protective installation *par excellence*, but it is costly to install. The torch-system is only intended to be brought into use in the event of any emergency, such as when the train-despatcher has made a mistake. It comprises a small box which is attached to a horizontal arm fixed to a telegraph-post, and connected to the train-despatching station by an electric circuit. The box contains a self-igniting torch, held in position by an inverted electro-magnet, and fitted with a short length of wire or cord. The signals are placed at intervals of a quarter of a mile. Should two trains travelling in opposite directions be inadvertently sent on to the same section by the train-despatcher, directly he has grasped his error he simply presses a button in the signalling-circuit. This causes all the torches in the section of line over which the trains are travelling to fall from their holders into mid-air, and at the same time to burst into flame through upsetting a small vial containing sulphuric acid, which, coming into contact with the ingredients of the torch, sets up a chemical action resulting in combustion. The torch burns slowly with an intensely brilliant flame, and this light, being seen at intervals of a quarter of a mile, gives ample warning to the engine-driver. The torch is proof against weather, and the apparatus is of such simple construction that failure at the critical moment cannot result. Moreover, should a rail become displaced or broken, or a bridge or embankment collapse, the signal is instantly brought into play. Prolonged tests have proved its reliability, and that it is an effective means of correcting a mistake on the part of the train-despatcher which would otherwise be fatal. The torch cannot be extinguished except by great manual effort, and can be as readily seen by day as by night, for it emits a certain quantity of smoke which the engine-driver cannot fail to observe. As it is of the emergency type, directly it is seen the driver realises that something serious is amiss, and pulls up his train. Many cheap methods of signalling over a long length of single line have been devised; but this is, so far, one of the most effective and inexpensive systems that have yet been evolved, the cost of installation and maintenance coming out at a very low figure per annum.

A SIMPLE ELECTRIC WATER-TESTER.

The testing of water for impurities is somewhat expensive and tedious, as it involves recourse to the analytical chemist. Two English inventors have, however, devised a small apparatus whereby the purity of any water may be determined as easily as the finding of a fault in an electric lighting circuit or of a gas-leak. The device is carried in a small box containing glass tubes in connection, two of which are connected to the positive and negative poles of a small hand-dynamo, the condition of the water being instantly shown on a dial. The principle of the tester is based upon the discovery of Kolrausch that the conductivity of pure water containing any electrolytic substance in solution is due almost entirely to the dissolved matter, and only to a negligible extent to the water itself. Consequently this apparatus measures the conductivity of the liquid under test. For instance, suppose its application is to a public drinking-water supply. The water is first chemically analysed, and if satisfactory, its conductivity is measured. Thus a unit of measurement is obtained. All that is required in future to check the purity is to measure the conductivity of a sample by filling the tubes and rapidly turning the small dynamo-handle. If the water is up to standard, it is instantly shown by the indicator-needle. The operation can be carried out in about two minutes by an unskilled man. So long as the conductivity of the water does not vary from that obtained at the initial chemical examination all is well. A change in the conductivity proves

that chemical analysis is again required to determine the character of the impurity. Or suppose the pollution of a stream is suspected, all that is necessary is to ascertain the conductivity of the water above the point where pollution is feared, and also below it. A difference in the conductivity-reading on the dial will show that the water is being contaminated. Again, by acting in a similar manner with the effluent from sewage-works, it is possible to determine whether the purification process is working satisfactorily or not. The applications of this simple little instrument are illimitable. In the power-house it can extend valuable assistance in testing the hardness or softness of water, and in the manufacturing establishment it can tell whether any particular solution is of the desired strength or composition for the process in hand; its employment, in short, is possible wherever an electrolytic substance is present in a liquid which in itself has an inappreciable degree of conductivity. It does not displace the chemist, but it constitutes an efficient, simple auxiliary to his work.

A HUGE ELECTRIC CLOCK.

A novel lunch was recently taken in Leicester round a table formed of a clock-face which is the largest specimen of horology that has yet been contrived. The palatial offices of a Liverpool friendly society are to be adorned with a four-dial timepiece, two hundred and twenty feet above the ground, each of which measures twenty-five feet across and weighs three and three-quarter tons, including five hundredweight of opal glass for glazing, while the minute-hands are fourteen feet long by three feet wide at the broadest point. The clock is electrically driven, the internal mechanism being insignificantly small for such a huge timepiece, and completely free from complicated trains of wheels, weights, and winding apparatus. The hours are indicated by broad black marks three and a half feet long instead of by Roman or Arabic characters, and the minute spaces are no less than fourteen inches apart. Another novel feature is the automatic switching on and off of the electric light, by which it is illuminated at dusk and dawn in all seasons of the year, without necessitating an ascent of the tower. There is an ingenious contrivance whereby compensation is even introduced for the occurrence of leap-year, and the error is so slight as to be of little account during a period of thirty years, at the end of which time the correction is effected. The clock is of British design and construction throughout, and its successful completion has established a unique horological record.

ELECTRICALLY LIGHTED LIFE-BUOY.

When the cry 'Man overboard!' is heard at night the task of rescue is indeed extremely precarious. Even if a life-buoy is thrown the chances are that the man in the water will not see it, or should he secure it he in turn would be difficult to observe in the darkness. Some of the largest liners carry one or two life-buoys which have a special device equipped with calcium carbide, which is chemically ignited the moment it touches the water, betraying the whereabouts of the buoy by the intensely brilliant light. Now an inventor has improved upon this appliance. This new life-buoy carries four small nine-candle-power electric lamps, two above and two submerged in the water. These lamps derive the necessary current from special electric batteries which are sealed until the buoy is brought into service. Directly the appliance is lifted from its rack the lamps light up, and will continue to burn for three or four hours. The buoy weighs twenty-five pounds, and is capable of supporting a man weighing twelve stone when he is lying prone upon it, or three men clinging to it, when they are partly supported by the water. The lights are plainly distinguishable on a clear night for a considerable distance.

STERILISING WATER BY ULTRA-VIOLET RAYS.

During the past few months the process of sterilising water by ultra-violet rays, which constitute one of the most powerful germicides extant, has undergone considerable development, and apparatus working on this principle have been devised either for small household installations or upon an elaborate scale for purifying water infested with microbic life. It has been found that the Cooper Hewitt mercury-vapour electric lamp is the most efficient means to this end. For household purposes a continuous supply of one hundred and thirty gallons of water per hour of perfect purity can be obtained, the mercury-vapour lamp being enclosed in a tank in such a way that a thin film of water is exposed to its full glare for about five seconds, which is sufficient to bring about the extinction of all germ-life. The water is furthermore incessantly agitated, so that any dust particles in the liquid which might provide refuge for microbes may be turned over and over and brought under the rays. In the tests carried out at the Competitive Exhibition for Sterilising Apparatus, held at Marseilles, the results achieved by this method were startlingly convincing, water which before submission to the ultra-violet rays contained from five hundred to one thousand coli bacilli per litre showing a complete absence of these germs after treatment. Owing to the extreme simplicity of the apparatus, together with the low power-consumption, and the fact that sterilised water can be obtained just when desired, this latest method of water-purification should come into extensive use, especially as the process does not affect the taste of the water in the slightest. One of the disadvantages of the ozonising system is the

peculiar flavour imparted to the water, which is distinctly distasteful to some palates.

IN THE HANDS OF THE SHIPBREAKERS.

Among the little-known pursuits of life, that of the shipbreaker is one of the most curious and romantic, for into his charge pass some of the famous vessels that have made history, to be broken up, plank by plank, and consigned to the flames or the curio-hunter, as the case may be. Save for the *Victory* and a few more three-deckers used as training-ships, powder-hulks, &c., the 'wooden walls' of Old England are fast disappearing beneath the spell of the breaker's axe, saw, and crowbar. In contrast to the early age at which our modern warships are scrapped, it is significant that the old wooden ships are rarely broken up under a hundred years. In support of this we may mention the three-masted *Caledonia*, built in 1802, broken up at Woolwich in 1907; and the wooden hulk *Calcutta* consigned to the shipbreakers a few months ago. When the royal yacht *Osborne*, built at Pembroke in 1870, and used by Queen Victoria, was superseded by the *Alexandra*, it was sold by auction. It will be remembered that this vessel was a paddle-wheeler, and elaborately furnished. After purchase she was dismantled at Felixstowe, the valuable timber, including mahogany panels, being disposed of at good prices. Although these obsolete boats are sold by order of the Admiralty at very low figures, there is always a stipulation that the buyers shall break up the vessels in British waters within a specified period. The best timbers are made into bookshelves and other useful articles, the remainder being sold in logs or bundles as firewood. There is at least one firm in London which supplies the royal palaces and the House of Commons with old ship-timber logs. Nelson's flagship, the *Foudroyant*, came under the hammer in an unexpected manner. When in tow off Blackpool, this relic of the past was driven ashore, and becoming a wreck, was sold by auction on the spot. A rich harvest was gleaned from the timber and copper, which were transformed into curios and eagerly bought. Moored at the Motherbank roadstead, off the Isle of Wight, are half-a-dozen battleships which have been scrapped after twenty years' service. They are the *Royal Sovereign*, *Repulse*, *Royal Oak*, *Ramillies*, *Resolution*, and *Empress of India*, each of which cost nearly a million pounds. After serving in the Channel and the Mediterranean fleets, they were eventually attached to the Fourth Division at Devonport, from whence they were sent to their present rendezvous, to be sold to the highest bidder at no distant date.

THE TELEWRITER.

The invention of the telewriter, an instrument which at any distance reproduces on paper one's actual handwriting, is another illustration that truth is stranger than fiction. The telewriter is an addition to the telephone, and has this advantage over it, that whereas it requires two persons to engage in a telephonic conversation, the written message can remain on the record for any length of time. The business man who wishes to communicate with another firm having the telewriter installed attracts the latter's attention as in the case of a telephone call, and then writes his message by means of a pencil attachment. Instantaneously an exact facsimile is produced on a 'receiving roll' at the other end of the electric wire. The invention has received the favourable attention of the Postmaster-General, who has granted a license and arranged to supply wires at a yearly rental. Already some fifty firms in London alone have been connected with the Telewriter Exchange.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

DREAMS.

When dusk of night comes down,
And all the house is still,
I heed nor fret nor frown
God sends to cross my will;
But on the wings of dreams
My thoughts take flight, and go
To lands of hills and streams
And woods I ne'er shall know.

Hope fades not with the years,
I mourn not what is past;
Though grief may bring forth tears,
I shall find joy at last.
What though the way be long,
And stones may bruise my feet?
I 'll go with jest and song
By hill and lane and street.

Lead on, fair dreams! lead on!
I will nor faint nor fail
If that the light be gone,
Or falls the snow or hail;
I still will keep the way,
Though it be strown with rue,
And find at last some day
My best dreams have come true.

TINSLEY PRATT.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

TOWAGE SERVICES.

By ARTHUR H. HENDERSON.

PART I.

THE early autumn daylight had faded rapidly, and the sun had long since sunk behind the menacing masses of black cloud which had gathered in the west. The first great beam from the Lizard lighthouse shot swiftly across the edges of bare cliff and circled in its wide arc of warning brightness to the sullen horizon of the sea. In the square, whitewashed tower of the Lloyd's signal-station on the adjoining headland the signalman on lookout shut the little seaward windows, replaced the big day-telescope on its rack, and descended to the snug, small night-cabin to hand over his duty to his mate of the first evening-watch relief.

'The *Quanhattan* is due past presently, the new "Q" line boat with passengers from New York to Plymouth and London,' he said. 'She will be sure to night-signal you if she's close enough in.'

The other man nodded, understanding. They are spare of speech those keen-eyed, watchful men who read the distant messages from ship-board and telegraph inland the tidings to the eager folk who wait. His trained gaze searched observantly over the wide expanse of darkening water. It rested on a faint smudge to south-ward.

'Falmouth tug?' he queried shortly.

'Ay, the *Bumble*.' For once there was some-thing to communicate. 'She stood right in, while ago, to talk.'

'What for?' The hearer's tone evinced sur-prise.

'Asked for the news of the *Quanhattan*,' answered the day-signalman slowly. 'Wanted to know if we'd got her by wireless.'

Between the Lizard lighthouse and the Lloyd's station is a Marconi mast, with a wireless instal-lation beneath, in a little tin hut. Here the ocean liners speak the land from afar, and their positions in latitude and longitude, if given, are telephoned by the shore operator to the Lloyd's men, who in turn report to London.

'I rang up Bill'—this was the local Marconi telegraphist—'but he'd had no word of her yet. Said he expected it any moment. Then I spoke the *Bumble* by megaphone, and passed it on. Old Catcher seemed quite disappointed-like.'

There was a pause. The offgoing signalman lingered, unwontedly loath to leave for his supper. The other stared reflectively. Fal-mouth tugs are not in the habit of seeking information at the Lizard as to the movements of liners.

'There was a girl aboard the *Bumble*,' said the first signalman abruptly. 'Youngish, too, far as I could see.'

'No!' A large grin spread over his listener's bronzed face. 'Catcher's never taken a new missus, surely?'

Speculation on this point led to no solution. The last speaker took down the night-glass and peered earnestly at the dim outline of the distant tug. Then he lowered the telescope, wiped the lenses with care, and strained his eye through it again to pierce the darkness. 'That's queer,' he muttered.

'What is?' demanded his companion crisply.

'You look, Jack, at his mast. 'Tis plaguy thick out there, but—I'm thinking'—— The words came in jerks.

'Well?' The other man took the telescope, focussing it intently.

'Seems as if he'd rigged a taller thin mast on him—above the old one. See?'

A misty drizzle was blurring the vision. The low, dull boom of the waves on the rocks below jarred the stillness. The gazer put down the telescope in disgust.

'Blotted out,' he commented with curtness. 'Reckon 'tis some new game of Catcher's. Good-night, Jack!'

'Good-night.' The door of the night-cabin closed, and the man left behind settled down to his lonely vigil in the dark.

As a skipper, Captain Croucher of the *Bumble* had achieved notoriety; as a man, his appearance corresponded with his marine reputation. As an adept in all the wiles of persuasion known to the practical tugmaster he was unrivalled; and this superiority of genius had wrung for him from the envious and the detractor an un-willing tribute of admiration in the shape of the nickname of 'Old Catcher.' For catching by tug at sea is an accomplishment, and catch everything within his radius which was remotely considering a tow Captain Croucher did.

[*All Rights Reserved.*]

He would wallow out to sea in the teeth of a westerly gale which slapped the spray hissing to his topmost funnel-stays, and fetch up under the lee of some jaded nitrate-ship from round the Horn, whom he would cajole into taking a tow before her master had scarcely realised where he was in the flying spindrift. To the infamous ingratitude of ship-captains who dissented from his generous views on towage charges he would maintain—in a solicitous bellow—a flowery conversation on the perils of the rock-strewn, wreck-encumbered coast, and the extraordinary vagaries of tide and current at that especial hour. Once she was found, he would shepherd a possible tow with a gracious tenacity, flaunting the abilities of the *Bumble* in irritating swoops round his heavily laden victim. For example, he had recently clung stubbornly all the way from the Scillies to the Eddystone beside an economically minded, Pensacola laden, German barque, till her Teuton master had become incapable of further shouting and the wind had veered on shore. Then, from the moment the weather changed, the *Bumble* became unexpectedly coy and financially dictatorial, until the misguided German, with an alarming drift rockwards, yielded in a burst of regrettable epithets, and the patient Captain Croucher hoicked her from destruction in the nick of time for an agreed remuneration far greater than if he had towed her the whole distance from the Scillies. Moreover, when those glorious opportunities—alas! so rare—occurred in which disaster arose on the deep, there was no man so bold and resourceful in tendering assistance, or so superbly large-minded in his notions as to the value of the salvage services rendered—in cash—afterwards.

These are but instances of Captain Croucher's craft. To his credit stood many a life snatched from the greedy sea; and there are delicate women in happy homes at this day who will always bless his name.

The captain's appearance may be strictly described as square—square-headed, square-jawed, square-shouldered. Short, stout, and sturdy both in face and figure, his build, it was averred, resembled that of his blunt-nosed, squat-shaped *Bumble* herself, and his gait waddled just as a tug in a cross sea. But this comparison was no more confided to the captain himself than was his nickname of 'Catcher,' since one spirited incident when, under abnormal provocation, he had swung an abusive Irish fireman round and round by the slack of the trousers till the garment carried away in one shameful rend, and its owner had whirled at a tangent into a heap of fish on the quayside which the sanitary inspector had recently condemned as unfit for aught but manure.

Captain Croucher detested what he termed 'shakings.' They worried him, and he was apt to say so with bitterness. Yet on the afternoon previous to his arrival off the Lizard he had received two, both perfectly shattering to the composure of well-ordered nerves.

His employer, the owner of the *Bumble*, was old. It is the obvious destiny of elderly gentlemen of ninety to pass to a better world; but old Abel Mercer, tug-owner, had done so with an unseemly crash. American speculative securities are not unwont to collapse periodically in hideous panic; and, instead of the savings of a lifetime, old Mr Mercer's nephew and sole heir found himself that afternoon possessed of the *Bumble* tug and precious little else. This shaking intelligence he communicated to Captain Croucher in person in the *Bumble's* little cabin. The resultant despondency was mutual.

'I always sez to 'im plain an' solemn-like,' declared the captain, much moved, referring to his lately defunct employer, 'that them stocks was same as bad rockets wot fizz, splutter, an' bu'st premature. No good for nothin' no'ow! But 'e wouldn't 'eed me, the guv'ner. 'E mostly 'ad 'is own will in this world—wotever 'e 'as in t' other now,' qualified the speaker ambiguously as an afterthought—'cept when some addle-'eaded judge as don't know a 'awser from a life-line reduced our salvage claims ridic'lous.'

There was a pause. Outside, the lap of the tide against the planks of the jetty had a dreary sound. The gray autumn twilight was stealing over Falmouth harbour, and shrouding sea and shore in a veil of sinister gloom.

'Who put 'im up to them investments?' demanded the captain with fierce feeling, ejecting an intrusive cockroach from his pocket.

Lieutenant Tommy Mercer of the Royal Artillery shook his head dolefully. He foresaw a speedy cessation of the generous allowance which had so far supplemented his scanty pay. Certain bills connected with polo-ponies rendered this moment of bereavement particularly inopportune.

'Well, it 's this way, skipper,' said the stricken subaltern lugubriously. 'Uncle Abel had a Scotch-American pal in New York—awfully wealthy beggar he is now—one of those fellows always making corners in things other chaps want. He had been poor as a rat once, and the uncle had given him a lift years ago—he was a real good sort, uncle, y' know. Farquhar—Peter B. Farquhar, that is the joker's name—always vowed he was no end grateful, and he 'd send my uncle tips—sometimes topping ones, too.'

Captain Croucher's snort at this point indicated scepticism.

'Over this spec, though, uncle went a proper mucker; didn't sell out in time, as the fellow on the spot in New York, of course, did. I've found some pretty frantic telegrams on the subject among the papers left behind in the old man's desk.'

'Then that there Yankee ought to do somethin' 'andsome for ye,' affirmed the captain sombrely. 'Leastways, enough to keep the tug bis'ness together. 'Tain't likely, though—wot I knows o' 'uman gratitude. Does 'e know ye, sir?'

'He wired for my address,' answered Mr Tommy Mercer doubtfully. 'I told him I'd be at Falmouth for a week or two on leave.'

'Eard any more?' interrogated the captain discouragingly.

'No.' The tone of the answer was equally bleak. The conversation languished.

'Wot might yer wages be now, sir?' resumed the captain suddenly.

The subaltern grinned at the question. 'Six-and-six a day, skipper,' he declared.

'Sodgers get their drinks cheaper in them canteens, I've 'eard,' comforted the civilian cautiously. 'But yer can't run the *Bumble* on that screw, I calc'late. Ye'll 'ave to wear round on another course, sir—sharp too, far as I can see.'

'What's that, then?'

'To wed.' The skipper wagged his chin sagely. 'Some fine, upstandin' young woman would suit ye proper. Mighty poor as them wages o' yers be, sir,' the speaker commiserated, 'yet there b'ain't nothin' like a slaughterin' sodger's uniform—'cept a sailor's—as catches the female eye, which I never could understand noways. All ye 'ave got for to do is to sight some nice, rich girl roamin' disconsolate-like an' puzzlin' 'er pretty brains where to throw 'er moorin'-lines. Then ye steams up temptin' smart an' takes 'er in tow, so to speak. Rest is easy. Why, if ye made a good job o' it, sir,' cried the skipper, exultant at the brilliancy of his suggestion, 'I'd live to see ye run a fleet o' tugs—not one. Pay ye better, too, that would, than aimin' at targets ye can't 'it, or 'andlin' explosives wot gives you unnat'ral creeps to think on.'

'But I don't know any one who'd have me,' objected the predestined husband dolorously.

'Cruise round, then, an' look out,' counselled the skipper briefly. 'W'y, when I was your age'——

The reminiscence was never related. There was a sudden knock at the cabin door. It opened cautiously.

'Well, I'm'—— The skipper mercifully choked before declaring aloud his opinion of what fate had decreed for him.

For a girl stood on the threshold, fair-haired, blue-eyed, entrancing. Never had the *Bumble's* dingy cabin beheld so winsome a vision. Resolute determination puckered her small, oval face.

'Can I see the captain of this tug, please?' she asked in a soft, musical voice.

'I'm 'e, miss,' responded the skipper with distended eyes. 'An' wot might ye be wantin'?'

She glanced doubtfully at Lieutenant Mercer, who was staring, transfixed.

'Ye needn't 'eed 'im,' indicated the skipper cheerfully. ''E is—— Oh!'

'What is it?' asked the girl, alarmed.

Captain Croucher bent down to soothe a leg injured by a violent kick under the table.

'My name is Thomas. I am one of the crew,' interposed the subaltern with unblushing promptness. His companion righted himself, very red in the face, and glared at him ferociously and wondering.

'I want to hire this tug,' the girl announced with simple directness. 'Can you put to sea at once?'

The *Bumble's* master pricked up his ears professionally. 'Maybe ay, miss; maybe no,' he replied with caution. 'Depends on the job.'

'I'll tell you. And if this cabin wasn't so dirty,' she remarked severely, 'I could sit down while I explain.'

Mr Mercer leapt to his feet and raked in a locker for a rag. He failed to find one, and was driven to surmount this deficiency by having recourse to his pocket-handkerchief, with which he wiped a grimy seat with solicitude.

'Thank you very much, Mr Thomas,' said the lady gratefully.

The skipper gurgled.

She whisked her skirt around her with adroitness, revealing the slightest glimpse of daintiest white drapery underneath, and the smallest ankles; for Captain Croucher was a wet smoker, and not so particular as to the cleanliness of the floor as he might be. Then she sat down, rested her elbows on the table, and scrutinised both men earnestly. She seemed satisfied with what she read in their faces. The curving lines of her own profile were alluring.

'What I propose to do is a secret,' she confided mysteriously. 'And you must both promise never to talk of it afterwards. Do you agree?'

Such is the power of pleadingly blue feminine eyes on masculine susceptibilities that both her hearers promised with simultaneous recklessness.

'I have got a cab outside,' she continued at this, 'with all the apparatus—poles, wire, batteries, and a detector. My'—she hesitated—'my assistant is sitting on them at present, and they are uncomfortably hard. Besides, he is rather frightened, and doesn't want to come because he'll be seasick, you know. But I simply made him. His name is Horace Smellie.'

This was enigmatic. But when she smiled a perturbing dimple appeared in one faultless cheek. Tommy Mercer watched it, fascinated.

'And wot might them contrivances be for, miss?' inquired Captain Croucher blankly.

Her voice sank to the low impressiveness of a conspirator. 'I mean to intercept a wireless

message from a steamer at sea to the Lizard station,' she divulged, 'and read what the message says.'

'Lor'!' exclaimed the skipper, staggered.

'You see, it's this way,' went on the girl hurriedly. 'I won't be married to some one I don't know.'

Mr Mercer sat upright with a violent start.

'Whom I have never even seen,' she added with flushed resentment.

There was a strained pause.

'Sounds reasonable like,' the skipper managed to comment after a pregnant silence. 'But 'oo wants ye to do it, now?'

'My father. He lives in New York, and is president of a Trust which controls telegraphs and telephones, or something of that sort. I've learnt all about telegraphing too, over there; but lately I've been living in England, and yachting—oh, such fun! So I just love going on the sea, and don't mind this dirty little tug in the least. And, anyhow, the other tug in the harbour is much worse than this one; I've been to see it,' she declared.

Captain Croucher swelled visibly. He disliked that other tug. 'Cockles'—the rival tug-skipper—'ain't no class,' he opined bitterly. ''E'll potter alongside the poorest tramp as 'ad lost 'er way in a fog, followin' 'er in without a word o' warnin' when she was shapin' for the rocks in 'er ignorance; an' then when she's struck, as 'e'd been waitin' for, up 'e comes all innocence an' sorrow offerin' salvage. Dirty tricks Cockles 'as, sure as dogfish.'

'Well, I like the look of you, anyway,' acknowledged the lady with frankness; 'and I'm in an awful hurry; and there is no other vessel in harbour, as far as I can learn, which is ready to go to sea at once; and I'll pay you well, as dad gives me a good allowance; and you've both got kind faces; and you'll help me, won't you?' She stopped, breathless with entreaty.

'Of course we will,' the *Bumble's* new owner assured her with emphasis, cutting in before Captain Croucher could start on the subject of hire-money, as he was about to do. 'But what has the wireless to do with it?'

The girl crimsoned, half in embarrassment, half in anger. 'Dad is on the *Quanhattan*, homeward-bound from New York. He is mad to marry me to the nephew of some friend of his at Falmouth. Dad wrote me that he was going to send a wireless message off the Lizard to this person to meet him and arrange it all. And dad is a perfect terror at getting his own will over things if he's not stopped in time. But he never told me the wretched creature's address. I want to find it out first from the telegram.'

'Why?' asked Tommy, intensely interested.

'Because then I shall write to the horrid man instantly,' said the girl defiantly, 'and tell him I'll never see him or have anything to do with him—never. I've had a fearful rush; but I've got the wireless things together just in time, and Mr Smellie is an operator. The bamboo poles all fit into each other beautifully, and we'll rig up an aerial mast and wires on your stumpy mast as soon as we are clear of the harbour. Oh, I've planned it all out splendidly! I only want to know that you'll go—real smart.'

'Rather!' Such was the urgency of the occasion that Captain Croucher was constrained to depart himself to retrieve two members of the *Bumble's* crew from the seductions of the nearest public-house, which they quitted under pressure and without joy. Meantime Tommy Mercer achieved the transfer of the wireless apparatus from the shore to the ship, Mr Smellie assisting in a protesting spirit. The skipper eyed this new passenger with disfavour on his return.

'If a sea caught them thin legs of 'is they'd crack,' he disparaged. 'Fine sort o' guardian for a lone girl 'e is!'

'You can be a father to her yourself, skipper,' suggested the sub. maliciously. 'Faith knows, you're old enough. What a joke it is!'

Captain Croucher grunted, and the *Bumble* lifted to the swell as she swung head-out from the harbour entrance, nosing her way westward into the oncoming blackness of the night.

(To be continued.)

THE ELEPHANTS' DYING-GROUND.

By Douglas Blackburn.

AMONG the many fascinatingly suggestive travellers' stories that provide stock-material for discussion when African mysteries are in vogue is that of the dying-grounds of the elephants.

It is asserted by some and disbelieved by others that the African elephant, when it feels death approaching—in response to that premonition which many authorities say is instinctive to most animals—retires to some secret retreat where it can die in peace. These dying-grounds are occasionally discovered by the natives, and, as they necessarily contain a vast accumulation of ivory, become the perquisite of the chief of the district in which they are found. If the dying-ground is outside his domains, the secret of the spot is rigorously preserved until all the ivory has been removed to a safe hiding-place within the territory of the chief. There is a gruesome native legend to the effect that the inviolability of the secret is assured by 'removing' every man who takes part in transporting the

ivory from the dying-ground to its place of concealment, including the discoverer.

The existence of these dying-grounds has been disputed and ridiculed by several persons whose authority on most matters connected with the African wilds is recognised. Therefore, before asking the reader's acceptance of stories based on the presumption of the reality of these secret treasure-houses, it will be fair to set out the arguments employed by the supporters of the legend.

It may be accepted without argument that elephants must and do die somewhere, even in the face of the fact that they live to enormous ages. It has been remarked frequently by hunters like Gordon Cumming, Hartley, John Jennings, Hill, and John Bailey—all experienced men—that the rarest thing met with in the haunts of the elephant is the dead body of one that has died a natural death. Now and then the skeleton of the victim of an unsuccessful sportsman or native hunters is found under conditions suggesting that the poor creature died of wounds in a spot undiscovered by the authors of his fatal hurt; but even these instances are few, for it is comparatively easy to keep close on the track of a wounded elephant. The question therefore arises, what has become of the thousands of elephants that in the course of years must have died even in those parts of Africa fairly well known to hunters and to traders? Vultures and the red ant account for every particle of flesh, skin, and tendon within a week or so, but the bones and tusks are all but indestructible.

The theory that the dying mammoth seeks some secluded spot is supported by the fact that many, if not most, animals retire to the closest possible cover when badly wounded. During the terrible visitation of rinderpest in 1894–95, when oxen and buck were carried off by hundreds of thousands, it was noticed that the latter invariably sought cover in which to die. Even those who reject the dying-ground theory accept this; what they refuse to credit is that hundreds of elephants at different periods select the same spot.

One of the strongest arguments—in fact, the one which first gave rise to the belief in the dying-ground—was this. Traders on visiting a chief for the purpose of purchasing ivory have sometimes found only a small supply, and had no reason for not accepting the explanation offered: that few elephants had come within the district covered by the native hunters. Even in savage Africa the eternal law of economics prevails. Scarcity of supply and urgency of demand produce enhanced prices, and the chief asks and obtains more for his score or so of tusks than he would otherwise have got for thrice the number. It has often happened that within a short period of a purchase a message has been received by the traders announcing that a successful hunt has provided the chief with a large stock of ivory. On returning to the kraal, the traders have been surprised at finding a supply of tusks that could only have been the product of a wholesale massacre. This fact was in itself suspicious, for elephants are not so plentiful as buck; but there was another circumstance which aroused attention and provoked inquiry. All the tusks bore unmistakable signs of having been long exposed to the weather. This was, of course, quite compatible with the theory that the chief had a secret reserve, and very wisely did not put all his stock upon the market at once. For years this explanation was accepted. It was the late Emin Pasha who first revealed the secret of the existence of dying-grounds. He also made the interesting and illuminating declaration that several hunters who professed to live by their prowess as elephant-hunters owed their good fortune to having been shown by friendly natives, or having discovered for themselves, one of these wondrous hoards.

It is not surprising that a man possessed of such a secret should take every precaution to preserve it for his own benefit, and, if occasion arose, discourage search by others with authoritative expressions of incredulity as to the existence of such things. Half the business of the professional hunter consists in keeping off poachers from his preserves. It was no uncommon thing for the old elephant-hunters to proceed to their ground by a circuitous and difficult route for the especial purpose of shaking off and misleading possible followers. It is an axiom of the colonial sportsman, 'Always look for game in the direction that a professional hunter warns you against.'

The revelations of Emin Pasha were made to an Englishman who in the early 'seventies had been of service to the German savant at a serious crisis in his affairs, the information being given by way of recompense. It is a common belief among African professional hunters that Emin Pasha held the secret of more than one dying-ground, and that the promoters of the relief expedition were quite as anxious to relieve the ivory as the explorer. But the old German Jew was no business man. The discovery of a new species of butterfly would have given him more genuine delight than a dozen dying-grounds choked with tusks.

Carl Mauch, another German opener-up of South Africa, who has not received full recognition, is accredited with having either known or guessed the existence of dying-grounds. There is an old Boer still living in the Krugersdorp district of the Transvaal who for a period acted as guide to Mauch, and he tells how the German 'wanderer' used to ask 'funny questions' as to what became of dead elephants that were not slaughtered. On one occasion the two came upon a kloof on the north-west borders of the Transvaal 'shaped like a gin-bottle;' that is,

the entrance was very narrow and difficult, but opened out to a wide, deep gorge. The place was almost blocked with huge bones which Mauch recognised as those of elephants. They made a search for tusks, but found only a few teeth. It was evident that the place had been visited by Kafirs, who had left various signs. In the crannies of the wall-like rocks overhanging the kloof hundreds of aasvogels (vultures) had at one time made their nests. In one of these deserted nesting-places Mauch made an extraordinary discovery. What at first was taken for the dried and withered skin of some animal of the ferret species turned out to be a lady's long kid-glove, the ten or twelve metal buttons being deeply oxidised, but still adhering to the leather. How this adjunct of the higher civilisation could have reached such a remote region is a mystery that is accentuated by the probability that at the period of the discovery there was not a pair of lady's gloves nearer than Capetown, one thousand three hundred miles distant.

Mauch, unlike his countryman Emin, had the business instinct well developed, as was proved by the energy he put into the quest for minerals and rubies; but there is no reason for suspecting that he realised his anticipations regarding the treasures of ivory.

Direct evidence proving the existence of the dying-grounds is scarce, for easily understood reasons, but there is on record one case that may be accepted. A white trader and storekeeper in the Selati district, the low-lying, fever-haunted region of the north-east Transvaal, used to show great interest in the problem, What becomes of dead elephants, hippos, and rhinos? He invariably put the question to hunters who stayed at his primitive hotel, but never propounded a theory of his own. In the year 1879 he hired a man to take charge of his store while he went northwards on a shooting expedition. His few neighbours were surprised, for the storekeeper was almost notorious for his lack of sportsmanlike qualities, some going so far as to aver that he had never handled a gun. As rumour alleged him to be an ex-drapery-assistant from London, the suggestion was not improbable. Surprise became amazement when it was known that six months later the cockney draper had arrived at Lourenço Marques with a long procession of native carriers loaded with hundreds of elephants' tusks, estimated to be worth anything between twenty and forty thousand pounds. The lucky establisher of a theory never returned to his store. He wrote to his assistant from Delagoa Bay giving him a power of attorney to carry on the business on half-share terms, but never claimed his half. Rumour says he settled down in England under a new name and in circumstances consonant with ample means. Some years later a hint at the solution was provided by an old native who had accompanied the storekeeper on his mysterious journey: 'I knew the place where the elephants die, and showed the *baas*.' What the reward of the guide was may be inferred from the fact that this native was later arrested by that marvellously magnetic autocrat Abel Erasmus, Native Commissioner of the Lydenburg District, and sentenced to a fine of all his cattle and a long term of imprisonment for being in unlawful possession of rifles and ammunition.

The reasons why the existence of these dying-grounds does not become common knowledge may be summed up in the comprehensive and explanatory phrase self-interest. If the place is discovered by the subjects of a native chief, he has effective means of ensuring silence; if by a white man, he is equally keen on keeping his knowledge to himself, even after he has secured the treasure, for, he not illogically argues, other elephants will probably use the spot in accordance with what seems to be their instinctive custom, and so long as the species remain in the region the dying-ground will be a source of profit.

The argument of the sceptics that they have never found a dying-ground may be dismissed to the company of that of the gold-prospectors of the Rand in 1886 who reported to the Barberton gold-diggers' committee, 'There is no gold on the Rand. We know, because we have looked for it, and did not find a trace.'

PETER AND JANE.

By S. MACNAUGHTAN, Author of *The Andersons, The Fortunes of Christina Macnab*, &c.

CHAPTER VIII.—*continued.*

IT was late afternoon, and as all clerical work for the day was now finished, Peter suggested a walk in the gardens, and Mr Semple readily agreed. There was nothing left in the flower-beds, but the conservatories and the orchid-house were a real feast of pleasure to the lawyer. He went into the outer hall to fetch his stick and coat, and then, turning back towards his host, he made a humorous signal to convey the intelligence that some callers had driven up to the door. Peter retreated precipitately; but Mr Semple had already been seen and was hailed by Mr Lawrence, who had a few minutes before drawn up to the entrance in his big red motor-car. Already Mr Lawrence was in earnest conversation with the butler, and his feminine-like ejaculations could be heard as he stood and conversed with the man at the hall door.

'How sad!' he was saying. 'And no one had any idea how ill she was! Dear, dear! Captain Ogilvie not seeing any one—terribly cut up, I have no doubt'——

He stood on the doorstep while his guests in the motor, fearing that they might be intrusive, looked as though they would prefer to hasten their departure.

'Ah, how do you do, Mr Semple?' said Mr Lawrence in his high-pitched voice, advancing a few steps into the hall. 'It is a great piece of luck meeting you like this! I have just driven over with my friends Sir John and Lady Falconer.—Lady Falconer, may I introduce my friend Mr Semple?—This is a very sad house to come to, Mr Semple, is it not?' he said, and paused, hoping for a little gossip from the lawyer. 'I was just driving through the village, and I have been to see the church with my friends, and we thought we would run in and inquire how everything was going on.'

'Everything,' said the lawyer dryly, 'is going on as well as could be expected.'

'How is Peter?' said Mr Lawrence, putting on an appropriate expression of woe which sat oddly on his big, healthy red face. He was a kindly man at heart, but an idle existence and his inveterate love of gossip had made a poor creature of him. His healthy, muscular frame did not know the sensation of honest fatigue which follows a good day's work, and his mind travelled on lines of so little resistance that he may be said to have exercised it almost as infrequently as he exercised his body.

Mr Semple replied that Peter seemed well; and Mr Lawrence, taking him in an affectionate and familiar manner by the sleeve of his coat, said, 'I should so much like my friends to see the gardens. Peter would not mind, would he?'

Lady Falconer, the least intrusive of women, who had heard the whispered colloquy, here interposed, and said that as she was very cold she would much prefer to go home; and Sir John added with simple directness that he thought that, as the place was more or less shut up at present, it would be better to come some other time.

Mr Lawrence protested that a walk would do Lady Falconer good, and that, further, as she and Sir John were leaving so soon, there would not be another chance of seeing the famous gardens. In fact, Mr Lawrence had the door of his motor-car open and was helping Lady Falconer to alight almost before he had obtained Mr Semple's permission to make a tour of the gardens.

'It's all right,' he said in his fussy, dictatorial way, divesting himself of his heavy motor-coat and preparing to act as cicerone. 'This place is thrown open once a week to the public; and although this isn't a visitors' day, all sorts of people come to visit Bowshott on the other days of the week.'

Lady Falconer felt slightly ruffled by the way in which her wishes had been ignored in a small matter, and confined herself to talking to the lawyer; but Mr Lawrence overtook them, on the pretext of pointing out some special beauty in the design of the gardens, and showing the fine view that could be obtained from the high position of the terraces, and the next moment he had plunged somewhat ruthlessly into the absorbing topic of Mrs Ogilvie's sudden death.

'We were all shocked by it,' he said, emphasising his words in his gushing way; 'and of course to our little circle,' he said, turning to Mr Semple in an explanatory manner, 'it is more particularly painful and distressing because Sir John and Lady Falconer had only just renewed a very old acquaintance with the deceased lady.'

'We knew Mrs Ogilvie very well in Spain,' said Lady Falconer in her charming voice, still confining her remarks to Mr Semple.

'Ah!' said the lawyer, 'you knew her in Spain?'

'Yes,' said Lady Falconer; 'and it was one of those friendships which I believe it was intended on both sides should be renewed when we returned to England; for on my own and on my husband's part it was a matter of real liking. But we have been on foreign service ever since we were married, and I never met Mrs Ogilvie again till she drove over to the races at Sedgwick.'

Mr Semple detached himself and his companion from the little group which Mr Lawrence was showing round with so much assiduity, and as they paced the broad walks of the terrace together he said to her, with an air of frank confidence, 'You were with her, perhaps, before her elder child died?'

'No,' said Lady Falconer; 'and, rather strangely, I never knew till the other day that Mrs Ogilvie had lost a child. There was only one boy with her when we knew her at Juarez; and, although she was in deep mourning at the time, we knew, of course, that she was in the first year of her widowhood. But we had no idea, as I was telling Mrs Wrottesley the other day, that Mrs Ogilvie had suffered a double loss.'

Mr Semple led the way through the orchid-house, and stopped to examine some of the blooms with absorbed attention. 'It is very chilly,' he said as he stepped out into the cold air after that of the hot greenhouse. 'I hope you will not take cold.' He locked his hands lightly behind his back as he walked, and continued to talk to the companion by his side. 'I wonder,' he said, 'if you could tell me exactly the year and the month when you first met Mrs Ogilvie? There are various formalities to be gone through in connection with Captain Ogilvie's accession to the property which necessitate hunting up family records, and these have been very badly kept in the Ogilvie family. Also, may I say this to you in confidence?

There was an idea in many people's minds that about the time of Colonel Ogilvie's death and during the early infancy of the second son Mrs Ogilvie's mind was slightly unhinged. It may not have been so, but one cannot help wondering if the concealment which she used to keep from her family the knowledge of the existence of the disease from which she died may not have been something like a return of an old mental malady.'

Lady Falconer looked genuinely distressed, and protested that certainly when she knew Mrs Ogilvie she was in all respects the most sane as well as the most charming of women. 'And as for giving you dates,' she said pleasantly, 'that is very easily done, for it was in the year and the month of my marriage that I first met her.'

'That would be?' said Mr Semple, unlocking his clasped hands and touching his fingers together in the characteristic manner of the confidential lawyer.

'That was in December 1886,' she said.

'Ah!' said Mr Semple contemplatively,' then it must have been after little Edward Ogilvie's death, of course.'

'I cannot tell you,' said Lady Falconer, 'because, as I say, Mrs Ogilvie never spoke of her loss. Perhaps that does not seem to you very remarkable, as we only met her in a most casual way in an out-of-the-way village in Spain; but we really were on terms of some intimacy with her, and one can only explain her silence by the fact, which seems to be pretty generally known, that she was a woman of quite unusual reserve.'

'Yes,' said Mr Semple, 'I believe no one ever knew Mrs Ogilvie very well.'

Mr Lawrence called to them from behind to suggest that the new row of greenhouses was an immense improvement, and that they had cost over a thousand pounds to build.

Lady Falconer politely turned to look back, and then found herself rather determinedly appropriated by the lawyer.

'I always understood,' he said, 'that Mrs Ogilvie travelled considerably in Spain; and, of course, in those days when railways were few, this was considered rather unusual, especially for a lady travelling with no gentleman with her. How courageous she was!'

'Much more courageous than I was, even with my husband with me,' said Lady Falconer. 'Mrs Ogilvie had been in quite out-of-the-way parts of the country; she spoke the language perfectly, and I believe I used to hear that she had Spanish blood in her veins.'

'Yes; she had property at Granada, beyond where the railway now extends,' said Mr Semple.

'I think, if I remember aright,' said Lady Falconer, 'that she had just returned from Cintra when I met her.'

'I have always heard that Cintra is a most lovely place,' said Mr Semple conversationally, 'and Mrs Ogilvie had a peculiar love of beautiful things.'

'Cintra is beautiful, and Lisbon itself is a particularly fine town,' assented Lady Falconer.

'Mrs Ogilvie was not there when you knew her?'

Lawyers are inquisitive by profession, and Mr Semple made his inquiries with easy tact; his manner was kind and pleasant, and betrayed so much real feeling for his clients that Lady Falconer was tempted to continue the subject of conversation in which he seemed so deeply interested.

'I wish,' she said cordially, 'that I could remember more details that might be of interest or of use to you. My husband and I have spent a most varied life, in which many interesting experiences have, alas! been almost forgotten; but we were both considerably impressed by Mrs Ogilvie's vivid personality and her very real charm. These made much more impression on me than anything that she told us about her journeys. She was fond of travelling by sea, I remember, and I perfectly well recollect her telling my husband and me that she had come by ship to Lisbon when she first travelled in Spain for her health.'

'Yes, I remember hearing that,' said Mr Semple. 'Indeed, I believe that we took her passage for her, and in going over her papers the other day we came across two letters which she had written home from the ship.'

'Talking of that,' said Lady Falconer, 'I wonder if the maid who was with her during the time I was at Juarez could be of service to you? I often think a maid must know her mistress with even a greater degree of intimacy than many of her friends, and I remember it was a particularly nice Spanish woman whom she sent to nurse me when I was ill.'

Mr Semple was curious to know if Lady Falconer remembered whether or not the woman had come out from England with Mrs Ogilvie.

'I am afraid I cannot remember,' said Lady Falconer. 'But stop! Yes, I can! The maid who came out from England with Mrs Ogilvie left her because she objected to the sea-voyage. It seems that the poor thing was so ill that she never left her bunk the whole time, and as soon as the ship touched port she went straight back to England by land. I remember that quite well now, because it was a particularly stormy winter, with dreadful gales; and when my illness was at its worst it was a very stormy night, and this Spanish woman whom I mentioned just now told me the story, and was evidently full of sympathy for the English maid. She enlivened the whole of her watch during the night by lamentations over the danger of sea-voyages, interspersed with prayers to the Virgin. I shall never forget how it blew! The house shook

with the violence of the gale, and the Spanish maid sat by my bed and told me stories of shipwreck and of bodies washed up on the beach. Mrs Ogilvie, I understand, had but lately parted with friends. Ah, I see now! I do not speak Spanish well, and I remember I had an idea at the time that this parting which the woman spoke of had something to do with friends who had left her. But, of course, what the Spanish woman must really have meant was that Mrs Ogilvie had lately suffered a bereavement.'

'It is strange, then, is it not,' said the lawyer, 'that you should connect this parting in your own mind with the storm that was raging on the night of which you speak?'

'That doesn't seem to me very strange,' said Lady Falconer, 'because, as I have said, I know so little Spanish. And yet I have an idea that this very emotional serving-woman seemed to predict some horrible catastrophe to the travellers.'

'How little self-control some of those people have!' commented Mr Semple. 'I always wonder how it is that ladies choose foreign women to be their personal attendants. I suppose you don't happen to know if this maid remained long with Mrs Ogilvie?'

'I do not, indeed,' said Lady Falconer; 'but I am under the impression that Mrs Ogilvie changed her maids frequently. This will coincide with your view that she was in a nervous, uncontrolled condition at the time; although in other respects I cannot honestly say that I ever noticed the least sign of an unhinged mind. One thought that she was too much alone; but of course her loss was a very recent one, and every one knows that in grief there often comes a desire for solitude.'

'It was sad, therefore,' said Mr Semple, 'that those friends of hers should be leaving her just then. Mrs Ogilvie would have been all the better for having a few intimates about her. It would be useful if you could remember their names.'

'I do not even know that they were friends,' protested Lady Falconer; 'and, as I told you, the Spanish maid may well have been alluding to a recent death. But indeed the incident made very little impression on my mind. Even if I were able to give you information about those unknown friends, I do not know how it could in any way help you to solve the sad question of her mental state at the time.'

'You think those friends of hers whom you speak of would not be able to do so either?'

'Ah,' cried Lady Falconer, 'you are accepting my vague recollections almost as if they were legal evidence! Whereas I really cannot tell you whether the Spanish maid alluded to friends or to the death of Mrs Ogilvie's husband and her little boy. I can only say that the impression that remains with me is that Mrs Ogilvie had been seeing some friends off on a voyage.'

'It would be important to know who those friends were,' said Mr Semple.

'I wish I could help you!' said Lady Falconer.

They made a longer detour in the gardens than Lady Falconer would have cared to make had she not been interested in the man by her side, whose inquisitiveness was based upon friendship, and whose most persistent interrogations were touched with a quiet and sober tact which contrasted pleasantly with Mr Lawrence's dictatorial manner. That genial and rubicund person was now seen approaching with Sir John, and suggested that they ought to 'draw Peter for tea.'

Lady Falconer declined the refreshment with considerable emphasis. This visit to the closed house, so recently shadowed by death, seemed to her in doubtful taste, and she would now have preferred to return home. But Peter had seen them from the house; and being the least churlish of men, he came out on to the terrace and invited the party to come in. He disliked Mr Lawrence as much as it was in his uncritical nature to dislike any one; but it is more than possible that he would have resented a word said in his disfavour. 'Lawrence is a good fellow,' he used to say charitably, 'only he is so beastly domestic.'

Mr Lawrence's conversation was, indeed, principally of the intimate order of things, and was concerned with details of births, deaths, and marriages such as the feminine mind is more generally supposed to indulge in. He drank several cups of tea, and was deeply interested in the fact that the tea-service was not the one in common use at Bowshott, and that, therefore, probably the bulk of the silver had been sent to the bank. He would have liked to make a tour of the rooms to see if there were any other changes noticeable anywhere, and he more than once remarked to his friends as they drove home in the motor-car that he could not understand why the drawing-rooms were swathed in brown holland, unless Peter meant to go away again. If so, when was the marriage to be? Why should it be postponed for more than a brief period of mourning? And why did the rooms which he had seen through the windows wear such a shut-up and dismantled appearance? He found food for speculation during the whole afternoon call, and in his inquisitive way gave his mind to finding out as much as possible about his neighbour's doings.

Lady Falconer sat by the fire of logs while Mr Lawrence's garrulous conversation went on uninterruptedly. Peter found her quiet manner attractive, and began to feel grateful to Mr Lawrence for his intrusiveness, without which he would not have enjoyed a conversation with this pleasant, gentle-mannered woman seated thoughtfully by the fire.

'May I ask a favour?' said Mr Lawrence gushingly, laying his hand upon Peter's shoulder.

'I want awfully to see that new heating apparatus you have had put in downstairs. I was recommending it the other day to the Carstairses; but I want to know something more about it, and then I shall be able to explain it better. How much coal, for instance, do you find it consumes?'

When the two men had sought the lower regions, Mr Semple took Peter's vacant chair by the fire. Lady Falconer held her muff between her and the blaze, and her face was in shadow. The lawyer said briefly, 'We are in great perplexity, and I think you can help us; and I feel sure'—he looked at her with admiration—'that whatever I say to you will be received in confidence.'

'I shall say nothing,' said Lady Falconer.

'At the same time,' said Mr Semple, 'I must tell you that I mean to ask you a great many questions, and to tell you very little in return—at least for the present. In the first place, it is all-important that we should know when Mrs Ogilvie's elder boy died.'

'And I,' said Lady Falconer hopelessly, 'did not even know until the other day that she had ever had another boy.'

'And yet,' said the lawyer, 'however slight the chain of evidence is, we must follow it closely. You are probably the person who saw Mrs Ogilvie first after the death of the child.'

'That I can hardly believe,' protested Lady Falconer. 'It seems to me that, however reserved a woman might be, she would still let another woman know about so intimate a trouble.'

'Mrs Ogilvie was a very unusual woman,' said Mr Semple.

'But even so'—— began Lady Falconer.

'Even so,' repeated the lawyer, 'my friend Peter and his talkative neighbour will soon be back again, and I must examine my witness before they return.'

'But a witness,' exclaimed Lady Falconer, 'whose evidence is based on the only half-intelligible gossip of a Spanish serving-woman made twenty-five years ago, during a week spent in an out-of-the-way mountain village, where she was ill nearly the whole time!'

Mr Semple waved protests aside. 'Do forgive me for bothering you,' he said, 'and try to remember positively if there were any friends or neighbours who came about the house, of whom we could perhaps ask tidings.'

'I am sure there were none,' said Lady Falconer. 'The charm of the place to Mrs Ogilvie was, I know, its solitude, just as it was its charm for us also.'

'No English people?'

'None, I am quite sure.'

'You have no idea who those friends were to whom Mrs Ogilvie had lately said good-bye, and who were starting on a voyage?'

'I think,' said Lady Falconer slowly, 'it was because the storm blew so loudly that we spoke of them; and, yes, I am sure the woman crossed herself and prayed for those at sea.'

She hesitated, and Mr Semple, giving her a quick glance, said, 'I am only asking for a woman's impression.'

'And at this length of time I cannot even tell you how I came to have this impression,' she replied, 'and yet the picture remains in my mind that these people, whoever they were, were sailing from Lisbon. The maid who waited upon me had evidently been engaged in Lisbon.'

Peter and Mr Lawrence were heard in the hall outside, and the motor-car was at the door.

'Thank you very much,' said the lawyer, as the door opened.

Mr Semple left the following morning, and did not return until the end of the next week. He was a contented man, and made an excellent companion, and Peter enjoyed seeing him again and having his companionship at dinner on the night of his return. He was always interested in something, and quite disposed to take a book and remain quiet when his client was busy or disinclined for conversation. He and Peter smoked in silence for a considerable time after the servants had left the room; and even after an adjournment had been made to the library, the lawyer, who was possibly tired after his journey, sat quietly in a leather-covered arm-chair by the fire without saying anything.

Peter began to talk about the small items of news of the neighbourhood. 'The Falconers have left,' he said. 'I wonder what they found to amuse them at Lawrence's place.'

'Lawrence himself, perhaps,' said Mr Semple dryly.

'But Lady Falconer does not even laugh at people,' replied Peter. 'I thought her a very charming woman.'

'She is a very charming woman,' replied Mr Semple, 'and she used to know your mother long ago in Spain.'

Peter took his cigar out of his mouth and turned interrogatively towards the lawyer. 'I don't suppose she was able to tell you anything?' he said, with a sharp note of interest in his voice.

'She was able to tell me nothing,' said Mr Semple, 'but she gave me a woman's impression of a conversation she had with a Spanish serving-woman.'

'I should like to hear all she had to say,' said Peter briefly.

'Ships sailing for Argentina stop at Lisbon and take up passengers there,' said Mr Semple. 'I have been to Lisbon since I last saw you. Mrs Ogilvie paid the passage-money for a woman and a child who sailed from that place in December of the year in which your brother was said to have died.'

(To be continued.)

THE LATEST ABOUT RADIUM.

By ROBERT S. BALL, B.Sc.

SCARCELY twelve years have elapsed since Professor and Madame Curie, by a painstaking and laborious process, succeeded in isolating the radio-active substance from a large mass of mineral having radio-active properties, and to it the name radium was given. This discovery was followed by fantastic theories and elaborate hypotheses brought about by the desire of physicists to account for the wonderful properties of the new substance without doing violence to existing laws. Here was a phenomenon which had to be reconciled to existing laws of energy, though apparently it transgressed the fundamental law of the conservation of energy. Radium gave off energy day by day and year by year without apparent exhaustion or even diminution in radiating power; and not a few of our leading physicists were ready to disown the law of the conservation of energy under the formidable evidence presented by the untoward phenomenon of this new substance; but recent researches have shown that this barrier to the full acceptance of the law of the conservation of energy has broken down, and that radium slowly wastes away by the dissipation of its energy just as a furnace unreplenished with fuel will eventually lose its radiating power. The extreme slowness of the decline in radiating power of radium was the cause of the first incorrect assumptions regarding it; but under the experimental skill of such men as Professors Soddy, Dewar, and Rutherford the apparent inexhaustibility of radium emanation has been disproved; and, instead of a substance possessed of an inexhaustible store of energy, it may now be regarded as a body possessed of great concentrated energy, which it allows to escape slowly and persistently, and in this respect it fits in with the existing order. As we learn more about it we find that there is less occasion to modify our previous ideas of energy in general.

We may for convenience consider the latest additions to our knowledge of radium under three aspects, which are necessarily somewhat interconnected. In the first of these we would discuss the recent conclusions regarding the extent and amount of radium in the earth, and its distribution in geological strata; in the second we would ascertain the effect of the quantity and distribution of radium upon the internal heat of the earth; and lastly, we will examine the physical properties of the metal itself and its salts, in which latter form it is known to us, for the pure metal has only recently been isolated in a minute quantity.

When in 1897 Becquerel found that uranium compounds gave off rays, the attention of physicists was attracted to pitch-blende, in which material the uranium ore was found. Even after the discovery of radium, pitch-blende—of which there are large deposits in Cornwall—was regarded as the sole source of radium until the Hon. R. J. Strutt showed that, instead of being confined to a single geological formation, the substance might be sought for anywhere in the crust of the earth and the oceans with a certainty of success. The revised figures show that though distributed very sparingly, it nevertheless exists in the hardest rocks, and it would probably be difficult to find a formation which did not contain a minute quantity. Even in good bearing pitch-blende, which is richer in radium than any other deposit, radium exists only to the extent of one part in two millions; and so difficult is it to obtain that thirty tons of pitch-blende yielded only one-tenth of an ounce (about one part in eleven millions) after operations lasting more than two years. The cost of reducing such a vast quantity of material is very great, and at present there does not appear to be any ready means of extraction except by the tedious concentration process. Nevertheless the pitch-blende is rich in the mineral compared with other formations, which contain about one millionth as much. We must, therefore, look for future supplies to pitch-blende, which is so rich in uranium compounds, and therefore in radium, for the two minerals are found together for reasons which will appear later. Careful quantitative measurements have been made of the amount of radium in sea-water; and while the density varies conspicuously in different seas and oceans, some general idea may be gathered from the fact that a cubic mile of water in the Atlantic Ocean contains about 0·13 ounce, or there is one ounce in 7·7 cubic miles. A cubical box with a side 1·97 miles long would contain an ounce if filled with water from the Atlantic Ocean. These results given by Eve differ from those of Knoche, who has found the quantity of radium to be somewhat greater from water taken from other places; but it is probable that they are not far from an average of the radium content of ocean water.

The universal distribution of radium throughout the earth and water has given rise to conjectures as to its formation, length of life, and the effect it has, even in minute quantities, of altering the conditions of temperature existing in the interior of the earth. For an answer to these and kindred questions we must draw upon the careful researches of the Hon. R. J. Strutt, who has thrown new light upon the questions connecting geology with radio-active substances. Before radium was discovered, the internal heat

of the earth, which gives rise to an increase of temperature according to a definite relation with the depth below the surface, was supposed to be due to the slow convection of heat from the molten interior; and upon the laws of cooling Lord Kelvin deduced the age of the earth from observed conditions. But with the constant emanation from radium throughout the interior these deductions required modification, for no allowance had been made for the heat evolved from this source, which is far from negligible. Accurate experiments by Professors Rutherford, Soddy, Barnes, and Precht showed that the rate of evolution of heat-energy from radium is so great that, though its distribution may be small, the effect is considerable. A gramme of radium dispenses energy chiefly in the form of heat at a rate which is about one hundred and twenty gramme-calories per hour; or, to draw a comparison, a given weight of radium radiates the same amount of heat-energy in sixty-five hours as would be given off by the complete combustion of an equal weight of good coal; and, while the latter would be entirely consumed, the capacity of the radium for continued radiation would not be materially lessened, for its exhaustion would only be complete after a period of from seventeen hundred to two thousand years. Thus a minute quantity of radium distributed throughout the earth would cause a rise in temperature of the surrounding rock, and Mr Strutt has expressed his surprise that, from an investigation of the outer layers of the earth's crust, the internal heat is not even greater than it is from this cause. The constant emission of heat from a furnace implies constant replenishment by fuel; and as it is known that radium slowly decomposes, we must look to some source from whence the stock of radium in the earth is replenished. It is found that the amount of radium present in a formation or stratum is almost in direct proportion to the amount of uranium it contains, whence it is to be supposed that there is a natural connection between the two minerals to account for such an unlikely relation. The experiments of Professor Soddy show that radium is not directly formed from uranium, but that there is probably an intermediate substance formed in the uranium-radium series, with a long period of life which may be ten thousand years. The radium is therefore only one stage of a series of transformations which we have been able to isolate, and it is hard to resist the conclusion that in this series we find to some extent what the alchemists of old were in search of, the transmutation of one element into another, though all of them bear a resemblance sufficiently close to justify their common relationship to a distinct group. For an explanation of this continual change from uranium compounds into subsidiary and allied forms we must await the results of further experiments and research. There is thus a constant production of radium in uranium-bearing formations, which accounts for the existence of the substance in the earth, as otherwise it would have all disappeared long ago, for two thousand years is a short period in geological epochs. Sir William Ramsay gives radium a shorter life-period than two thousand years in the light of experiments he made on radium bromide containing 53·6 per cent. of metallic radium; but even if the life-period were in error to a considerable extent, the presence of the substance in the earth would still require an explanation, which is provided by the known transmutation which is taking place.

Now we come to recent researches regarding the dissipation of radium, and the nature of the substances formed by its disintegration. We have up to the present been concerned with its production; now we must look upon the other side of the balance-sheet. There are three distinct kinds of rays emitted from radium, known as α, β, and γ rays. The experiments of Sir William Ramsay and Professor Soddy show that there is a continual evolution of the gas helium from radium. The α particle carries off helium at a rate which Sir James Dewar shows to be about 0·46 cubic millimètre of the gas per day from one gramme—that is to say, a pound of radium would give off about 47 cubic inches of this gas in a year. The presence of helium has been proved in almost every mineral, and the evidence that radium is the source of helium is very strong, for the amount of helium present bears a fairly constant ratio to the amount of radium in the mineral. The emerald is a notable exception to this constant relationship, for it contains much more helium than can be accounted for by the radium it contains, and so far no satisfactory explanation of this anomaly has been put forward. The γ rays are similar in penetrative power to the X-rays of the Crookes tube, and in this respect are thousands of times more powerful than the α rays containing the helium atoms. It is, therefore, in the α rays that we find another element formed from the disintegration of the radium, and the discharge of these particles is continuous, but not, as was previously supposed, everlasting.

As for the practical applications of radium to industry and medical purposes, much remains to be done before anything can be said with confidence on that point. The great cost of obtaining it by freeing it from its native surroundings will, as far as can be seen, preclude its use in any large quantity, and up to the present the total amount extracted does not exceed a few grammes. The Radium Institute in London was founded on the initiative of King Edward, with funds provided by Sir Ernest Cassel and Lord Iveagh; and in December 1910 Sir Ernest Cassel acquired for it, at the price of £15,000, one gramme of radium

for medicinal, curative, and research purposes. It has proved its usefulness in the cure of certain diseases, such as rodent ulcer and nævus; but whether the long-sought-for cure for cancer will be found through its application remains to be seen.

It is not without interest to speculate upon the utility of large quantities of radium, if ever it could be produced on a commercial scale. The energy given off by twelve pounds of radium, if fully utilised under the boiler of a perfect steam-engine, would develop one horse-power continuously; and thirty-two tons of radium in the furnaces of the *Mauretania* would propel the ship by developing the same power now generated at the expense of hundreds of tons of coal a day. Need I say that this method of saving our coal-resources is hardly likely to be put into practice; for even if this amount of radium were so situated in available places as to be extracted, the interest on the capital expenditure would more than pay for all the coal required for the ships of the Empire that sail the ocean for all time to come. Moreover, there might be difficulties and dangers in the use of large quantities of radium which at present we cannot estimate, but which may be surmised.

CONTINENTAL SCHOOLS AND SCHOOLGIRLS.

By MAY BALDWIN,
Author of *A Popular Girl, Two Schoolgirls of Florence*, &c.

PART I.

IN my wanderings through Europe, in any town in which I have made a stop, one of the 'sights' that I have always asked to be shown has been the best girls' school in the place.

In Paris, Berlin, Munich, Milan, Florence, Rome, Moscow—in any little country town or mountain-village where I happened to stay for a few days—I invariably found my way, with or without an introduction, to the accredited best girls' school, and, with one exception (of which more will be said later), I never found any difficulty in obtaining permission to go over it and talk to the mistresses and girls. And, without exception, there is one question which I never escaped being asked after having been shown a school—a question which possibly may arise in the minds of some of my readers, but one which I carefully refrained from answering—and that question was, 'Which country has the best schools, in your opinion?'

Naturally, each questioner hoped that her own country would be selected, but feared that English schools would be given the preference. Neither hopes nor fears were realised, though I managed to give an answer that satisfied; which, indeed, was not difficult, for there was always something to praise and much to interest and instruct.

It is in the hope of passing on that interest and instruction that this article is written. And here it may be well to explain that the interest lies, not in the points of resemblance between the various girls and their schools—which, since teachers have met in congress, interchanged visits to each other's countries, and compared educational methods, are many—but in the differences; and it is from this point of view that these experiences are related.

Teachers in London and in Moscow encourage their younger pupils' love of botany by growing acorns in bottles; new methods of teaching languages and science are adopted almost simultaneously by the enterprising in different countries; and there is not so great a difference in the time-tables in efficient schools in England and abroad as might be expected. Mathematics and science are not strong points, generally speaking, with the Gallic races, nor art with the Anglo-Saxon and Teutonic; while the Slavs have an art of their own and an excellent all-round education. But literature, geography, and history are taught—from different points of view, be it understood—much in the same fashion, though the history has always a bias in their own favour and in the disfavour of other nations. 'By their fruits ye shall know them;' and I have judged schools by the intelligence of their pupils, with many of whom I have had interesting and instructive conversations.

One point which strikes an Englishwoman in Continental establishments—and this applies, more or less, to all European countries—is the status of the teacher.

In no country does she hold the honourable position which is hers in England. The French saying that a woman who leaves her home to earn her own living is *déclassée* still holds good to a great extent; though this prejudice is being weakened, thanks to British influence.

Only the other day, however, a broad-minded Italian lady said to me, with a shake of the head, 'It may do for you English, who are so independent; but, in my opinion, for a girl to teach in a girls' public school—it is *impossible*. If she must earn her own living, let her go as governess into a private family, where at least she would be protected;' and the average Frenchwoman of the upper classes will say the same thing.

The Germans and Russians are more advanced in their ideas; but even the latter nation, when seeking an honourable employment for the widows

and undowered daughters of their officers and Government officials, give them the charge of dopôts for the sale of *vodka*, the brandy of Russia and a Government monopoly, which they sell from behind a wooden partition of the depôt, through a small window.

As a natural result, the teachers in foreign schools are not of the same class as those in English schools; and though many estimable and cultured women are to be found among them, their influence is not such a refining one.

In Catholic countries, women of even the highest ranks with a vocation for teaching enter religious teaching orders; but these have not always been of the high standard to which they are being brought now, and in many places the convent schools have been abolished.

On entering a school abroad the first thing that an English pupil notices (and generally dislikes) is the dress. In all good schools on the Continent uniform is worn by the girls; and in Russia and Italy the teachers in the schools I visited all wore black—which is, I believe, obligatory in Italian Government schools. Simple dresses of blue, gray, black, or brown, with simply trimmed hats, are the rule for boarders; while in many day-schools the pupils wear black overalls—'to hide the ink-stains,' as a little girl once confided to me; and English girls soon get used to their uniform, and like it as saving trouble.

Another point of difference between English and Continental schools is the division of the school-year. In England, generally speaking, it is divided into three terms of thirteen weeks each, making a total of thirty-nine weeks of school-work and thirteen weeks of holidays—three weeks or a month at Christmas, a fortnight at Easter, and seven or eight weeks in summer, usually in August and September.

To take the girls' schools and schoolgirls most unlike our own, it is only necessary to cross the silver streak, which, though so narrow, defines so sharply the boundary between Anglo-Saxon and Gaul; for French schools and schoolgirls are as a whole very unlike English ones.

The discipline is different; and the manners, customs, and ways of thought of French girls are so very unlike those of English girls that they rarely become great friends, the Anglo-Saxon and Gallic minds being so diverse. One thing is certain: such friendships are not encouraged by the authorities in French schools, the ideas of English girls upon the position of women, and, above all, their views upon marriage (which they think is a matter for a girl to decide for herself) being considered quite too dangerous and impossible.

The average French schoolgirl, it must be admitted, is by nature frivolous, and more bent upon amusing than instructing herself. To try to interest her in the dry facts of science or mathematics is to despair; but read a poem to her, and you find that they are poets every one. Or rouse their sympathies—an easy task—and a breathless silence reigns in place of the inattentive buzz which accompanies a lesson on science or mathematics.

The French are proverbial for their good manners; though I have heard their irate English schoolfellows, when they have fallen out with them, declare wrathfully that they can be ruder than English girls.

Now that the convent schools have mostly disappeared, and efforts to replace them with secular schools taught by pious lay persons have had small success, their place is being taken more and more by the *lycées* and other Government schools, where a good education is given, and girls are allowed more freedom, *à l'Anglaise*, as they say; but it remains to be seen what will be the effect on the mind of a schoolgirl of a system in which the idea of the Deity is considered a myth, and belief in the supernatural a sign of weak-mindedness.

In Germany the most unobservant tourist is generally struck by the sight of children of all ranks and ages trotting along the streets in the coldest weather, as in summer, before eight o'clock in the morning, with well-filled satchels on their backs or under their arms, generally (but not always) accompanied by a man or maid servant, on their way to school. In the case of the infants it is the *Volkschule*, or National School, to which little girls as well as boys of all ranks are sent.

German girls are certainly very industrious. What they do they do well; and they do many other kinds of needlework than the cross-stitch which we English used unfairly to say was their one idea of fancy work; though this is a very favourite way of ornamentation—gowns, aprons, towels, linen, and antimacassars being elaborately worked in this manner. The work may not be beautiful or artistic, but it lasts for ever; and it teaches a habit of industry which makes the German schoolgirl later the proverbial good *Hausfrau*.

But whether it be needlework, music (in which they excel), literature, mathematics, or history, it is well taught and well and thoroughly learnt.

I listened once to a history lesson in a German school. It was the history of Germany; but the teacher, a professor of the university, questioned and was answered readily upon the contemporary history of England, France, Italy, Austria, and Russia, whether it had any bearing upon Germany or not. And great was the chagrin among my compatriots when the professor interrogated an English girl upon British foreign policy, and, failing to get a reply from her, passed the question on to a German girl, who gave the right answer—'which we had none of us ever heard before,' the English girls explained to me. In this case truth compels me to say that the girls ought to have known the historical fact;

but I have seen and even been taught out of German history books which record facts not told in any English history, and give a number of victories over the British calculated to humble one considerably. And hot have been the arguments over these histories and even geographies, for they were not flattering or fair to the British.

The German schoolgirl is not demonstrative like the French; but she makes up for it in sentimentality, and this has given rise to a word which is not to be translated into any other language, and that is *Schwärmerei*—a devotion to some other girl or mistress, at which we English girls used to scoff, for it took such silly forms as carrying about the loved one's photo or writing poems to her. But it does not prevent a German girl from forming a true and lasting friendship with an English girl, which the French girl's nature does not as a rule permit.

To pass from Germany to Italy, though only Switzerland divides the two countries, is to make a great change, for we pass from Teutonic to Latin; and here the two characters amalgamate even less than the French and English, and the dislike is mutual. The Italians find the Germans 'tactless and wanting in delicacy'—a word the French and Italians use much; and the Germans retaliate by calling the Italians 'lazy and unreliable in temper'—in other words, they have the artistic temperament. For they are artists, one and all, the Italians; and their love of art is a passion with them, which it is not with their Teutonic neighbours, despite their love of Wagner and music in general.

One must speak as one finds; and I have found Italian schoolgirls sincere and affectionate, in the north especially so, and not so quick-tempered as in the south, though they are vivacious enough everywhere in Italy. In that country education is carried on either in convents or public institutions under Government. In a large Italian town I visited in 1909, on two consecutive days, two schools, each of which I was assured by different authorities was the best school in the town, if not in Italy. One was a large convent school, the other a royal school, both of them held in magnificent buildings; the royal one, indeed, had been the palace of a king of Italy. At both schools the girls wore black overalls over some kind of gray uniform.

The convent school was founded by a rich Italian noblewoman, who built a beautiful house for a school and laid out delightful grounds; and here the teachers are women of good birth, who teach for love of the work, and have all passed examinations. At this particular school—and it was by no means exceptional in Italy—holidays spent at home were discouraged, and the girls only went home for one day every half-year. The argument was that they would have their minds filled with frivolous thoughts and distracted from their studies; so, instead of going home for the holidays, they spend them at school, and for the three or four months of holidays the whole school migrates to a villa by the sea or in the mountains. The intercourse of the girls with their parents and relatives is restricted to a visit once a week in the large reception-room or *parlatorio* of the convent, which is provided with a cushioned seat all round the walls and little groups of chairs for each family. But into the *parlatorio* boys over fourteen are not admitted; special arrangements and permission must be obtained for them.

There may be some excuse for the restriction as regards holidays at home; for an intelligent Italian schoolgirl told me gravely that, though school began at the end of October, it was not the fashion to return for the first week at least. And she deliberately stopped at home for that week, though she had an examination looming in the distance, and worked very hard for it!

The head-mistress of this convent school—a nun—was an enthusiastic educationist; and her second in command, who showed me the school, related how, when the Italian Government took education in hand, and, with its new rules and regulations and higher requirements, practically shut up many of the private and conventual schools, she invited inspection and co-operation, brought her school into line with the Government standard, and, without allowing it to lose in the least its former character, gained Government and royal patronage; and she still proudly calls her school, if not the best, one of the best girls' schools in Italy.

One feature of this school was the beautiful and artistic needlework executed by the pupils, for which rooms were set apart, and to which girls repaired, in the words of the teacher, 'whenever they had a spare half-hour, to recreate themselves with a little needlework.' And very exquisite work it was—tapestry on huge frames, embroidery, pillow and needle lace of all kinds. I saw some cobweb-like point de Venise and other laces for which Italy is famous, as well as plain needlework.

It was with great pride that the teacher next showed me a number of bathrooms, which she supposed I had not expected to see in Italy; adding gracefully that they had learnt their benefit from the English. The attempt made to introduce gymnastics with apparatus into girls' schools failed, as the feeling was against it; the girls confined themselves to simple drill.

Here, as one might expect, almost every girl learnt painting, and every schoolgirl knew her Dante. In Florence I heard a little boy of five ask his father whether he was not old enough now to read the *Divina Commedia*. His sister, aged nine, had read parts of it.

In both schools they mentioned as noteworthy that the schools were heated. In former days this was not usual; people were hardier and less

luxurious, and fires were not known in the schools, nor indeed in most Italian houses. The English had probably much to do with the introduction of this comfort. I was once asked to help in a *Scuola di Carità*—not, as it literally means, a charity school, but what we would call a 'continuation school'—where voluntary teachers taught Italian working girls—milliners' apprentices and others—English, French, painting, drawing, designing, and other subjects. It was not heated; and in winter we froze, for there was no heating apparatus, and a *scaldino*, or earthenware pan full of charcoal, does not appeal to me as a means of warming one's self. But in spite of the cold, my pupils (some twenty working girls) came regularly once a week, and sat for two hours learning English, in which tongue I occasionally receive pretty little letters full of grateful remembrances of those chilly hours, very well expressed, too, though the spelling puzzles them terribly.

(To be continued.)

THE SAILOR IN THE LIBRARY.

THE seaman who would fight his battles over again in the sunset of life need have no difficulty in refreshing his memory in the library, for the sea has played a wonderful part in literature, sacred and profane; in Bible story, in heathen mythology, in the classics, and in medieval and modern prose and verse. In the holy writings it figures in the Flood, in the passage of the Red Sea, and in the shipwrecks of Jonah and Paul; while the Psalmist, a lover of both still and running waters, frequently employs it in the wonderful imagery of his immortal song. In the classics we get magnificent Mediterranean pictures of calm and storm in the voyage of Ulysses, the shipwreck of Æneas, and the tempest that terrified the exiled Ovid.

Of the brooding bitterness of the sea, Edrisi, Von Humboldt, Victor Hugo, De Amicis, and Conrad give their versions. The mystery of its darkness, with the beauty of its dawn, is rendered by Loti in *Pecheur d'Islande*, by Lamartine in the *Voyage en Orient*, and by Stevenson in his *Essays of Travel;* its storms shriek in the *Cruise of the Midge*, in *Mr Midshipman Easy*, and in *The Wreck of the 'Grosvenor';* while its calms brood in Masefield's *Tarpaulin Muster* and in Bullen's *Sack of Shakings*.

Of shipping, too, there is a mighty literature. The change from sail to steam, the whole theme of books by Clark Russell and others, is referred to in Conrad's *Mirror of the Sea*, as well as in Van Dyke's *Opal Sea* and Wells's *Future in America*. Life on board ship from the standpoint of the tourist is variously interpreted by Darwin, Dickens, Washington Irving, and Kipling.

In our poetry the sea has hardly filled as important a place as might have been expected. With the exception of Montgomery's *Pelican Island*, a work of somewhat artificial sentiment, the only considerable sea-poem in the language is William Morris's *Life and Death of Jason*, which contains fine passages descriptive of the eastern Mediterranean and the Black Sea. Coleridge's *Rime of the Ancient Mariner*, for which he owed some of his inspiration to Wordsworth and most of his sea-lore to one Captain Thomas James, deals less with the phenomena of the sea than with the penance and remorse of a seaman who has shot an albatross. Coleridge had no knowledge of the sea when he wrote the poem other than might have been picked up by rambles on the beach, and it was not until a year later that he made his first short voyage. Tennyson's best-known sea-piece, apart from the nautical flavour of *Enoch Arden* and the seashore setting of *Sea Dreams*, is the *Ballad of the Revenge*. In one respect this fine piece has suffered like Macaulay's *Spanish Armada;* it is the constant victim of the enthusiasm of amateur reciters, whose lisping 'At Flores in the Azores Sir Richard Grenville lay' is too often the prelude to a woeful exhibition of inefficient anxiety to entertain.

THE SANDHILLS.

We went across the barren lands
Towards the barren sea;
The pimpernel beneath our feet,
The ragwort to our knee,
The hollows lined with silver weed,
The grasses blowing free.

Veiling the sun, a thundercloud
In skies of amber lay,
Like a dim agate ringed with gold;
And far above the bay
Streamed crimson the funereal plumes
Of the departing day.

Below the purple cliffs, the loud
Wild waters broke in spray—
Salt spray of tears, of foundered ships,
Of sailors drowned and gray;
And o'er the wave a shadowy gull
Swept wailing on its way.

Gray was the ebbing tide, and dun
The lonely waste; but high
Over the sandhills, like a hope
Unto fulfilment nigh,
The moon, a silver boat, had sailed
Into the evening sky.

A MEMORY OF OLNEY.

By HENRY H. BROWN.

WHAT is my recollection of Olney? It is the memory of a long, curved street of irregular brick houses, with brightly polished window-panes, white sashes, and fresh white curtains; of a railway station at one end of this street, and at the other a market square, with an old elm in the middle and a flag-staff towering through the foliage; of a many-arched bridge, with white-railed approaches, spanning the narrow channels of the sluggish Ouse; of roads bordered by hedges of hawthorn and bitter-sweet, over which the wild convolvulus tossed its pure white bells, even flinging them up into the hedgerow trees. Nor can I forget in this retrospect 'The Bull,' most comfortable of hotels, worthy to be hailed with the 'Carissime Taurorum' of Cowper, and to be remembered with the Holly-Tree Inn and the hostelries beloved of Dickens.

But the memory of memories at Olney is that of the gentle poet whom I have just mentioned. His name is everywhere, and associations with him are discovered on every hand. In the market-square is his house, now the Cowper Museum; in an outhouse is the pew in which he worshipped, brought from the parish church; in an adjoining garden is the 'greenhouse,' as he called it, in which he read and wrote, and listened to the bees humming in the mignonette; and in the fields and woods are the walks which were his delight, and which furnished the setting of his poems. 'My descriptions,' he says, 'are all from nature, not one of them second-handed. My delineations of the heart are from my own experience.'

The scenes amidst which a great poet received his inspiration have in all cases a deep interest for the book-lover; but this is especially true in the case of Cowper. He dwelt at Olney in unbroken seclusion for a great part of his life. He remarks in one of his letters: 'The world is before me; I am not shut up in the Bastille; there are no moats about my castle, no locks upon my gates of which I have not the key; but an invisible, uncontrollable agency, a local attachment, an inclination more forcible than I ever felt even to the place of my birth, serves me for prison walls and for bounds which I cannot pass.' The reason is not doubtful. A mental constitution originally delicate had been weakened by the irreparable loss of his mother in childhood, shaken by cruel usage at school, and overstrained by the injudicious action of his friends. He fell out of the battle of life sorely wounded, but maintained from his position in the rear a watchful observation of the progress of the struggle. His attitude towards the world at large is sufficiently indicated by the motto which he chose for himself: *Bene vixit, qui bene latuit;* and which may be freely translated, 'He has lived well who has lived in complete seclusion.'

It thus happens that Olney is still the land of Cowper, the unforgetable scene of *The Task.* Even his friends the lace-makers are as poorly paid as ever. I made some inquiry on this point, and found that an ordinary worker will receive about six shillings for what involves the labour of a month. Yet there is injustice somewhere if it be true, as I was told, that the agent who pays six shillings for a lace collar will sell it in London for a guinea. There seems to be room at Olney for the best kind of philanthropic effort in obtaining for these poor workers such remuneration for their labour as may encourage them to exercise this beautiful handicraft more extensively and more perfectly.

This circumstance recalls an aspect of Cowper's character which might have been made more prominent by his biographers. Much has been said of his piety, his sensibility, his humour, his delight in domestic pleasures, his love of animals, and his sympathy with nature, but less of his thoughtful kindness towards the poor; and yet this was one of his most lovable attributes, as witness the following passage: 'When a poor woman, and an honest one, whom we know well, carried home two pair of blankets, a pair for herself and husband, and a pair for her six children, as soon as the children saw them they jumped out of their straw, caught them in their arms, kissed them, blessed them, and danced for joy.'

The most agreeable of my memories associated with Cowper is the walk to Clifton Reynes through the meadows near the Ouse. I am inclined to believe that this is the route followed in *The Winter Morning's Walk.* But one must not be too positive, because the poem does not contain any express statement on the subject; it merely furnishes a slight clue by referring to

[*All Rights Reserved.*]

a mill where the poet admired the delicacy of the frost-work about the wheel. We know that this walk was a favourite, leading as it did to Clifton Rectory, the residence of the Joneses, through whom Cowper made the acquaintance of Lady Austen, the originator of *John Gilpin* and *The Task*. Just before one ascends the 'cliff' or bank, which gives its name to the village, the path passes over two brick arches which cross channels once the tail-races of a mill, but now choked with mud, sedges, and overgrown vegetation. The buildings of this mill have disappeared; but they were standing in Cowper's time, and we may fairly assume that here he saw the frozen spray, and consequently that his morning's walk took this course.

A wicket-gate near Olney Vicarage gives access to a path which, passing by hedges, gardens, and orchards radiant with blossom in spring and laden with fruit and walnuts in autumn, leads to meadows that stretch for nearly a mile between Olney and Clifton. The track is laid with cobble-stones to prevent its being washed away when Ouse 'overfloweth his banks,' as he is very apt to do in harvest and at other times. The river is divided into separate channels, and these streams are crossed by white-painted wooden bridges, closed at the ends with swinging gates to exclude the cattle which are grazing on the long, sweet grass.

Standing on the middle bridge, we look round upon a typical Bucks landscape, reminiscent of Constable or one of the old English masters. The charm of such scenes lies less in the beauty of particular details than in a general impression of peacefulness. One does not expect mountains, precipices, and waterfalls in North Buckinghamshire, but is content with the less romantic, though not less pleasant, effects of grass and foliage, water and sky. Overhead, the deep blue is chequered by masses of white cloud, and the upper air is filled with the liquid carolling of larks. On all sides are meadows clothed with a rich crop of grass, where herds of cattle are grazing, and here and there is the gleam of water, as some part of the Ouse comes into sight. As we look back, the town is almost hidden by the solid mass of Olney Church, large but lacking in interest, with its tower and lofty spire, the high buildings at the mills, and a number of elms. As we look forward, the view is closed by a wooded bank rising from the riverside, and crowned by the village of Clifton Reynes and a most interesting twelfth-century church with a battlemented tower. Beneath the bridge where we stand the stream flows gently in a clear current, rippling against tall rushes, the sword-shaped leaves of the yellow iris, and the crimson stems of the water-dock. Perch are darting from one tuft of water-weeds to another; and farther down, where the channel widens into a pool, a number of cows are wading in the cool water. If the time happens to be Sunday morning there is a pleasant sound of bells. First comes a mellow peal from Clifton Reynes, bell following bell in regular and graduated succession; then the louder, but somewhat harsher, tones from Olney Church; and, lastly and more faintly, the chimes at Emberton. The whole scene leaves a sense of placid calm which continues to impart refreshment after one has left it far behind.

The walk to Weston Underwood, which forms the subject of the first book of *The Task*, is another delightful memory. Every step here is taken on classic ground. The ordinary tourist may go by the highway, but the lover of Cowper must walk in the footsteps of the master. He will leave the town by a field-path which keeps to high ground, whence he looks down into the valley of the Ouse, and sees the river winding like a 'blue ribbon on the grass,' to use an apt simile of Hugh Miller. To the left hand is the First Spinney, where Cowper spent many hours in wrestling in prayer for Newton and himself. To the right hand is the cottage which he named the Peasant's Nest, and which is still so called, although the rustics, mistaking the allusion, twist the appellation into Pheasant's Nest. Passing through the Second Spinney, with its mysterious circle of ancient yews, of which the history appears to be unknown, one enters the 'length of colonnade,' or chestnut-avenue, where stand the great trees which sheltered the poet and led him, in the gratitude of his heart, to immortalise both them and their owner, 'Benevolus,' Mr Throckmorton. Descending to the 'rustic bridge,' and ascending to the park of Weston Underwood, we come to an indistinct path leading to the 'proud alcove.' This building presents much the same appearance as it did in the poet's days, and is even more disfigured with names cut on the panels 'in characters uncouth and spelt amiss.' No one can gaze unmoved from this alcove on the extensive prospect of rich grass and richer foliage, the avenue of chestnuts he has just left, and the still finer avenue of limes he is about to enter. No place, not even Cowper's houses in Olney and Weston Underwood, seemed to me so full of memories as this spot, which is truly sacred to his genius, and the principal shrine at which his admirers must offer their tribute of eulogy and appreciation.

The lime-avenue brings us to the public road, and the road takes us to Weston Underwood, a very pretty village in which Cowper spent many years subsequent to his leaving Olney and prior to his removal to Norfolk. It is well known how he dreaded and shrank from this last wrench. I have seen the pathetic lines written with trembling hand upon the window-shutter at Weston:

> **Farewell, dear scenes, for ever closed to me;**
> **Oh for what sorrow must I now exchange ye!**

Yet he was made as happy at East Dereham as

his mental condition permitted, and his relative Mr Johnson tended him till his death with the most affectionate devotion.

The lover of Cowper who visits Olney and Weston regrets this removal upon another ground. He can see the two houses in which the poet dwelt, the garden where he played with his tame hares, the summer-house in which he read and wrote, and the country through which he wandered and which inspired much of his poetry. But he cannot see Cowper's grave.

PETER AND JANE.

CHAPTER IX.

'I THINK I'll go over and see Toffy,' said Peter to himself one day in the following week. Mr Semple had been down to Bowshott again, bringing a mass of correspondence with him, and had left that morning. Nigel Christopherson was ill at Hulworth with one of his usual appalling colds which brought him as nearly as possible to the grave every time they attacked him. Peter once again read through the letters and papers which he and the family lawyer had pored over until the small hours of the morning, and then he ordered his horse and rode over to see his friend.

No one ever arrived at Hulworth without remarking on the almost grotesque ugliness of the house. It was a flat-faced, barrack-like residence, with a stuccoed front and rows of ill-designed windows. A grim-looking flight of stone stairs with iron railings led to the front door, and beyond that were large and hideous rooms filled with treasures of art incongruously hung on lamentable wall-papers or pendent over pieces of furniture which would have made a connoisseur's eyes ache. The house and its furnishings were a strange mixture; the owner of the grim pile, be it said, had a mind which presented a blank to the dictates of art, and it puzzled him sorely to determine which of his possessions were beautiful and which were not. He had heard people become enthusiastic over his pictures, which he thought hideous; while they had frankly abused his furniture, which he was inclined to think was everything that was desirable.

'There's only one way,' he used to say hopelessly, 'in which a fellow can know whether a thing is ugly or the reverse, and that is by having a price fixed to it. If only some one would be kind enough to stick on a lot of labels telling me what the things are worth, I should know what to admire and what to shudder at; but, as it is, the things which I, personally, like are always the things which other people abuse.'

Alas for Sir Nigel and his lightly held treasures of art! his pictures and the vases ranged in great glass cases in the hall were heirlooms, and Toffy in his most impecunious days would often look at them sadly and shake his head, murmuring to himself, 'I'd take five hundred pounds for the lot, and be glad to get rid of them.' There were times when, in a gentle, philosophical way, he felt a positive sense of injury in thinking of the vases behind the big glass doors, and he would then go into intricate and complicated sums in arithmetic whereby he could tell what it cost him per annum to look at the contents of the cases and at the old portraits in their dim frames.

This afternoon he was lying on a florid and uncomfortable-looking sofa, in a very large drawing-room, in front of a fireplace of white marble in scroll patterns and with a fender of polished steel. It was probably the ugliest as well as the least comfortable room in the house; but it happened to be the only one in which there was a good fire that afternoon; and Toffy, descending from his bedroom, weak and ill with influenza, had come in there at two o'clock, and was now lying down with a railway-rug placed across his feet, and his head uncomfortably supported by a hard roller-cushion and an ornamentation in mahogany which gracefully finished off the pattern of the sofa-frame. Many men when they are ill take the precaution of making their wills; Sir Nigel's preparation for a possible early demise always took the form of elaborately and sadly adding up his accounts. He had a large ledger beside him on the sofa, and slips of paper covered with an intricate array of figures which neither he nor any one else could possibly decipher.

His faithful valet, Hopwood, had been despatched to London in order to learn chauffeur's work; for Toffy had decided, after working the matter out to a fraction, that a considerable saving could be effected in this way. His debts to the garage were being duly entered amongst Toffy's liabilities at this moment as he lay on his sofa in the vast, cold drawing-room.

The drawing-room was not often used now. But it was the custom of his housekeeper to air the rooms once a week; and, this being Wednesday, she had lighted a fire there, while Lydia, a young housemaid and general factotum, had allowed all the other fires to go out. There was a palpable sense of chilliness about the room, and in one corner of it the green-and-gold wall-paper showed stains of damp. Long, gilded mirrors between tall windows occupied one side of the room, and had marble shelves beneath them, upon which were placed ornate Bohemian-glass vases and ormolu clocks and candlesticks.

Some uncovered and highly polished mahogany tables imparted a hard and austere look to the apartment. The windows, with their aching lines of plate-glass, were draped with rep curtains of vivid green, while the floor was covered with an Aubusson carpet exquisite in colour and design. And between the green woollen bell-ropes on each side of the fireplace and above the cold hideousness of the marble mantelpiece hung a portrait by Romney of a lady as beautiful as a flower.

Sir Nigel at lunch had endeavoured to eat part of a chicken which his housekeeper had warmed up with a little gray sauce; and he was now wondering, as he lay on the sofa, whether any one would come if he were to tug at the green bell-rope over his head, or whether he could make his own way upstairs to his bedroom and get some fresh pocket-handkerchiefs. He had had a temperature for the greater part of the week, and he was now feeling as if his legs did not altogether belong to him; while, to make up for their feebleness and lightness, his head was most insistently there, and felt horribly hot and heavy.

He had just decided that he had better mount the long stairs to his room, for there was not only the consideration of handkerchiefs, but there was some medicine which the doctor had told him to take, but which he always forgot at the right moment. He thought the journey had better be made now, and that he could do the two things at one and the same time. He walked with uneven steps to the window and looked out upon some stretches of field which were euphemistically termed the Park, and was watching some sheep huddled together to protect themselves from the first sharp touch of frost, when he heard the sound of hoofs, and saw Peter ride up to the door.

'It's an extraordinary thing,' he said to himself, as he saw his friend dismount; 'Peter always seems to come when you want him. I believe he has got some sort of sense which tells him when his friends are down on their luck!'

Peter would, of course, fetch the medicine from upstairs, and the pocket-handkerchiefs. Toffy wondered if he had ever felt ill in his life, and thought to himself, gazing without envy at the neat, athletic figure on the horse, what a good fellow he was. Toffy crept back to the sofa again, and extending his thin hand to Peter as he entered, said, 'You see here the wreck of my former self. Sit down, Peter, and ring for tea; there isn't the smallest chance of your getting any.'

'Why didn't you come to Bowshott, you ass, if you are ill?' said Peter sternly. 'You will kill yourself some day coming down to this half-warmed barn in the winter-time.'

'It isn't half-warmed,' said Toffy. 'I wish it was! This room is all right, isn't it? I aired another sofa by sleeping on it last night.'

'What on earth for?' demanded Peter, still in a tone of remonstrance. Toffy had been his fag at Eton, and Peter had got into the habit of taking care of him. He knew his friend's constitution better than most people did, and he expended much affection upon him, and endeavoured, without any success, to make him take care of himself. 'Why didn't you sleep in your bed like a Christian?' he demanded sternly. 'You will kill yourself if you go on playing the fool with your health!'

'The sheets seemed a bit damp in my bed, I thought,' said Toffy simply.

'Then why didn't your idiot of a housekeeper air them?'

'The duty of airing sheets is invested in the person of one, Lydia, the niece of the aforementioned housekeeper,' said Toffy. 'I asked her in the morning if my sheets had been aired, and she said that they had not. She further explained that she had taken the precaution of feeling them, and that they had not seemed very wet.'

'Oh, hang Mrs Avory!' said Peter inwardly. 'Why has not Toffy got a good wife to look after him?'

'Look here,' he said decisively, 'I am going to sleep over here to-night, and see that you go to bed, and I'm going to get your sheets now, and warm 'em.'

'You'll get a beastly dinner if you stay,' said Toffy through his nose.

Peter brought the sheets down in a bundle, and placing a row of hideous walnut-wood chairs with their legs in the fender, he proceeded to expose the fine linen sheets to the fire till they were a deep brown.

'They are warmed through,' he said grimly when the smell of scorched linen became intrusive.

'I have been doing up my accounts,' said Toffy; 'and I believe the saddest book I ever read is my bank-book. A chap has been down from the British Museum to look at those vases in the hall, and he says that one of them alone is worth four thousand pounds—four thousand pounds, Peter, for a vase that's eating its head off in a glass case, and might be broken any day by a housemaid, while I perish with hunger!'

'If it's money,' began Peter easily, 'you're an idiot if you don't let me know what you want.'

And then the whole realisation of his uncertain position smote him sharply and cruelly for a moment, as he remembered that he did not know how he stood with the world as regards money, and that probably he was not in the position to lend a five-pound note to any one. He had accumulated, through sheer laziness, a certain number of large debts, the payment of which had never troubled himself or his creditors, who were only too glad to keep his name on their books; but now it seemed that if he were only

to have a younger son's portion he might find himself in debt to his brother's estate. With the lawyer he had gone thoroughly into the will of his father, and found that everything which it was possible to tie up on the elder son had been willed to him. His own share of the patrimony, if his brother were still alive, would be but a small one.

'Rather a beastly thing has happened,' said Peter. He rose from the chair where he was sitting, and went and stood by the marble mantelpiece. The black tie which he wore seemed to accentuate his fairness, and it was a boyish, unheroic figure which leaned against the whiteness of the marble mantelpiece as he began his puzzling tale. It did not take very long in the telling, and until he had finished Toffy did not speak. Indeed, there was silence for some time in the room after Peter had done; and then, there being no necessity for much speech between the two, Toffy said merely, 'What are you going to do?'

'I am going to Argentina next week,' said Peter. 'It seems proved beyond any manner of doubt that my mother paid the passage of a woman and a little boy to go there in the very month and in the year that my brother was supposed to have died, and Cintra or Lisbon is the last place where there is even the vaguest evidence of her having been seen with two boys.'

Toffy lay on the sofa thinking, his arm thrown above his head in the attitude that was characteristic of him during the many weeks of illness that he usually had in the year.

'I can't think why,' he said, 'you should go yourself. There must be plenty of lawyers in Buenos Ayres who would undertake to see the thing through for you.'

'You see,' said Peter, 'if my brother has been done out of the place for twenty-five years, and if he is a good chap, and all that, I suppose the least one could do would be to try to look as if one didn't grudge giving him back his own.'

Probably there is an element of fairness about English men and women which obtrudes itself from time to time to their personal disadvantage; and Peter already found himself occupying, in his own mind at least, the position of a younger son.

'We will brave the terrors of the vasty deep together,' said Toffy; 'it's no use your going alone.'

'You ain't up to it,' said Peter gruffly; 'thanks all the same, old chap.'

'I must fly somewhere,' said Toffy—'it doesn't much matter where.'

'Has the usual acute financial crisis come?' Peter said, looking affectionately at the long, thin figure on the sofa. 'You can't in the least deceive me into thinking you had better go into Argentina to hunt for a man who has been missing for twenty-five years. It isn't good enough!'

'I shall have to get a lot of boots,' said Toffy thoughtfully; 'it seems the right sort of thing to do when one is starting on an expedition, and I would rather like to get some of those knives that fellows buy when they go out to South America.'

The actual journey to Argentina was not a matter demanding any courage on the part of either of the young men, but the result of the journey might have a grave effect on the fortune of Peter Ogilvie. To-morrow was to have been his wedding-day; and this fact being persistently present to both men, they left the subject to the last. It was with an effort that Peter said, before they parted for the night, 'Whatever happens, we mean to try to be married when I come back. Jane is awfully plucky about it, but this confounded Court of Chancery does not seem to regard me with much favour at present.'

'It's only for a year,' said Toffy hopefully. 'Let's make a solemn covenant that we shall meet in this very room on the 25th of October 1911, with the wedding-day fixed for to-morrow again.'

'Where is your Bible?' said Peter. 'If you haven't one in your pocket or under your pillow, will it do if I kiss your account-book?'

'The whole thing can be just as we intended it to be,' said Toffy cheerfully. 'And this time next year Jane will be staying with Miss Abingdon, and old Wrot will be ironing out his surplice—at least Mrs Wrot will be ironing it, and he will be looking on and thinking he's doing it. And I'll be here, probably with a cold in my head as usual, and thereto I plight thee my troth!'

He fingered in his pocket the wedding-ring which Peter had given him for safe custody, and the care of which had seriously disturbed his slumbers at night. 'I'll keep the ring until then, Peter, and place it on the third finger of Jane's left hand. No, you do that, by the way; and I shall have to wait until I get a wife of my own.'

'Here's to her good health!' said Peter. And they endeavoured to be lively, as befits the subject of marriage; but Peter was thinking that perhaps his own wedding-day might be five years hence, and that, however they might plan that all should be the same as they had first intended, it was a long time to wait. And Toffy was wondering how long Horace Avory meant to live, and if Carrie would mind his going to Argentina, and whether she would write him one of those long, tear-blistered letters in her indistinct handwriting which he found so hard to read, and, suppose Horace Avory never died (as seemed quite likely), what would be the end of it all. Also, he wondered whether Carrie and Miss Sherard would get on well

together if they were to meet, and he hoped with manly stupidity that they might be friends.

And each of the two young men, being absorbed in quite other subjects, talked cheerfully of the voyage, and speculated on what sort of sport they might incidentally get; and they discussed much more seriously the fishing-flies and guns they should take with them than the possible finding of Peter's brother or his own change of fortune.

(To be continued.)

THE MINERAL WEALTH OF PORTUGAL

IN the popular mind Portugal is generally associated with wine and fruit as its only industries and products, yet there are several important mining concerns which add materially to the wealth of the country. For its size it is one of the most highly mineralised countries in the world; but while in the time of the Romans it was the scene of much mining and metallurgical activity, in these days its resources are not developed to the extent that they should be.

The great belt of copper-bearing iron pyrites which springs from the Sierra Morena in Spain passes through Algarve and Estremadura in Portugal, and is lost in the sea near Lisbon. All through its course it is associated with manganese. These are the only minerals south of the Tagus. The Spanish end of the belt is much wider than the part which passes into Portugal, and is worked by many large companies, the most important being the Rio Tinto and the Tharsis mines. The former is the largest mine of any kind in the world. On the Portuguese side, the largest mine is the San Domingos, in the extreme south; farther north the Aljustrel mines, and nearer Lisbon the Mina da Caveira. Besides these there are several others of less importance. This is the copper district of the country.

At the three mines named, the ores containing over 2 per cent. of copper are sold to smelters either in England or on the Continent; and the poorer ores are treated at the mines for the extraction of the copper by exposing the mineral in heaps to the alternate action of air and water, by which means the insoluble sulphide of copper is converted into the soluble sulphate. This copper sulphate is conveyed in solution to wooden canals filled with scrap or pig iron, on which the copper is deposited, a corresponding quantity of iron being at the same time dissolved. After the copper has been extracted in this way, the ore is sold for its sulphur contents to the sulphuric acid manufacturers. The indication of a deposit of pyrites is the appearance of an outcrop of oxide of iron more or less honeycombed. This is called the 'iron cap,' or in Cornwall 'gossan.'

In one of the Portuguese mines where the gossan attains a thickness of one hundred and thirty feet it is treated with marked success for the small quantity of gold and silver which it contains. A large plant was erected there four years ago, and now three hundred tons of gossan are treated daily with most satisfactory results. Doubtless there are many similar deposits in the country, but this is the only one that has been successfully treated.

To the north of Lisbon gold-bearing quartz is found in several places, and is successfully worked. Wolfram is also found, and is worked profitably.

In the north antimony is found in considerable quantity, generally carrying a good deal of gold; but for want of a suitable process the recovery of these metals has not hitherto been profitable. However, a process has been discovered which has been proved to recover both the antimony and the gold at very small cost. It is, therefore, certain that the large deposits of antimonial gold ore will be actively developed in the near future.

Anthracite coal is being worked in the north. Petroleum has been prospected, but not yet worked to any extent.

It is a noteworthy fact that no mine of any importance in either Spain or Portugal has been discovered that has not been worked by the Romans during their occupation of these countries. Wherever mineral outcrops appear the Roman workings are to be found, and in many cases heaps of slag amounting to many thousands of tons, clear proof of the extent of their industry. These slags show that the smelting was very well done—which is the more to be wondered at when we consider the crude nature of their appliances. Traces of their furnaces have been found. These were very small reverberatory furnaces built entirely of stone and fired with wood. In the course of mining in the gossan deposits it is most interesting to break into old Roman workings that have been closed for about fifteen hundred years, and to find traces of work as fresh as if the workmen had only just left them—the marks of the pick, the recess for the oil-lamps, and the sooty stain from these. The writer has frequently come across, in the pyrites workings, portions of shafts and galleries with timbers intact. The sets had been most carefully made, and were well preserved.

In those days only the richest ores were touched, and one cannot help admiring the skill with which they followed these, sometimes taking out from the mass of poorer mineral a wide pocket, at other times following up a narrow

stringer. They evidently did not believe in doing any work simply for the security and comfort of the workers. If the vein was narrow, only the smallest possible space was cut to permit of its being removed. It is difficult to conceive how it was possible for a man to work in these narrow galleries and push past him the broken material. In any case the conditions of work must have been very trying for the men employed; but as it was entirely slave labour, no doubt little consideration was given to them.

While these old workings are most interesting, they have been the cause of many serious accidents in cases where the walls or floor, believed to have been solid and strong, had been weakened by the old workings and collapsed with disastrous results, or when a large accumulation of water in old workings broke into and flooded the mine. Therefore very great care has to be exercised in carrying on work in these old mines.

The mining industry would be much more active than it is if the Government assisted those who are willing to develop the country. Instead of that, however, heavy import duties increase enormously the cost of installations. With the professed object of protecting a few works of little importance, a prohibitive duty of ninety-eight pounds per ton is imposed on all metal on which work has been done. Steel, iron, and zinc plates pay only a comparatively small duty of something like two pounds per ton; but if any work has been done on them, such as a hole bored or a part filed or painted, they come under the high duty of ninety-eight pounds a ton. Complete installations are allowed to come in at a lower figure; but when renewals are required it is generally necessary to pay this exorbitant figure. To take an example: on rivets which cost in Britain seventeen pounds per ton, ninety-eight pounds per ton duty is charged in Portugal, and one has either to pay this or buy an inferior article at forty pounds in the country. Thus when any important work has to be done it is generally found best to import the crude material and machinery to manufacture the plant on the spot. It would be much more sensible to admit free of duty everything that was intended for the development of national industries. This duty and the lack of transport facilities are the causes of the great mineral resources of Portugal not being more fully developed.

It is to be hoped that the new form of Government that has now been established will do something to remedy these matters.

While these difficulties have to be reckoned with, labour, the chief outlay, is cheap and good. The ordinary pick-and-shovel man working in the open from sunrise to sunset earns one shilling and eightpence per day, mechanics two shillings and sixpence to four shillings per day, miners for a ten hours' shift earn two shillings and sixpence, and the team-men and brushers two shillings. Therefore, after the cost of the necessary plant and machinery has been met, working costs are very low.

The Portuguese workman has a warm heart and a hot head; and while the head is apt at times to run away with his heart, he is easily managed. So far agitators have not troubled him much. If he finds that his manager treats him with fairness and consideration as well as firmness, he can be trusted to work steadily and give no trouble.

All over the country British goods are considered to be the highest quality obtainable, and Britons are trusted for their straight dealing and business habits. May it long be so!

TOWAGE SERVICES.

PART II.

As the *Bumble* rose to the driving sea a quarrelsome rain-squall swept across her from the clouds low-hung in the windy darkness. The breeze was backing to the south-west, and angry little cross waves were beginning to surge against the tide up over the trending Channel swell. Steaming fast along the dented land-line, they speedily picked up the Lizard light, with the high Cornish coast in a shadowy background. The great beam seemed to blink on the *Bumble* with an almost menacing stare.

'You'd best fix up your fash-dangle in the wheel-'ouse. 'Tis a scrap small an' a bit 'ot an' stuffy like, but 'twill be most convenient, I'm thinkin'," said the skipper, appearing suddenly from out of the heavy drizzle on the bridge. He was in sea-boots and a greatcoat muffled to his ears. 'The missie can 'ave my oilskins, wot's worn summat ragged, but's comfortin' dry.'

'Won't you want them yourself?' the girl demurred.

'Not me,' said their owner stoutly. 'An' don't ye never 'eed the smell of 'em—'tis wholesome, though strong.'

The girl struggled into the stiff garments with an amused laugh, and the fresh, salt-scented air tinged her cheeks with an adorable colour. She was entirely at ease on the plunging tug even in the cumbersome oilskins which were much too large for her; and on the swaying, slippery deck she moved with the light tread of a sailor, heedless alike of the water which churned hissing around her ankles and of the gritty dust from the plentiful soft coal. She had little words of thanks for the dingy men who arose from the

depths of the engine-room to lend a hand in lashing the socketed bamboo mast into position; so that they returned to their shovelling and oiling below in a state of gratified bewilderment. The skipper exhorted and the soldier marvelled.

'I on'y 'opes 'twon't all carry away,' remarked the former dubiously, peering at the gaff of the wireless installation swaying decoratively aloft. ''Twill catch the gale fine up there wot 's beginnin' to snort.'

The complete Marconi receiving-apparatus had been unpacked from some innocent-looking boxes, wires had been rigged and connected, and a delicate detector of the latest, most approved pattern fixed in the wheel-house. It remained now to wait till the message came rustling through the mysterious ether waves.

'Spindle-legs there'—the skipper sniffed in the direction of a collapsed Mr Smellie soon after the megaphone conversation with the Lloyd's station—'is nigh too sick to manage 'is job. Ye 'd best bring an' prop 'im on the locker-seat while waitin'. 'Tis goin' to be a coarse night, an' black as a bog to west'ard. Glass is fallin' remarkable, too.'

Under coercion, the miserable Smellie was wedged in a corner, with the double-eared receiver over his aching head. He was given a paper and pencil to write down messages, and further provided with a handy pail in case of uncontrollable illness. The little interior was smoke-ridden and the oil-lamp flickered greasily. Tommy Mercer felt quite sorry for the hapless man.

The girl was leaning over the bridge-rail of the *Bumble* when Mercer joined her, and so close did he deem it advisable to stand that a stray wisp of golden hair, escaping from under the oil-skin cap, brushed his cheek. The touch thrilled him. She was gazing out into the void of darkness over the heaving sea. Somewhere in that night of denseness the *Quanhattan* was sweeping homewards at full speed, bearing her father, bearing lives and life-stories perhaps as strange as hers. Mercer stood beside her, sheltering her as much as he could from the spray that drove along the decks in gusts as the tug slapped her broad bows into the green seas. His heart was beating fast.

'Do you know you have not told us your name yet?' he said with a sideways glance at the small chin uptilted from the huge oilskin collar.

A little ripple of mischief crossed the lady's face.

'I don't think my name matters,' she remarked evasively. 'You see—when we go ashore again'——

'What then?'

'We shall probably never meet any more.'

'Oh!' said the sub. blankly. 'Why not?'

She flashed the briefest glimpse at him from under demure, long lashes.

'How can we? You are a sailor and live in Cornwall. I shall be going back to London or New York.'

'I am sometimes in London,' the young man informed her swiftly.

She gave a little laugh of girlish embarrassment and ignored this.

'Well, my name is Doreen.'

'Doreen—what?'

'One name is quite enough for to-night,' she challenged, on the defensive. 'Don't you think so, Mr—Thomas?'

That gentleman's conscience ticked suddenly. 'Then I am to call you Doreen?' he queried nevertheless with audaciousness. 'Miss Doreen, I suppose?'

'It certainly isn't Mistress,' said the name's owner coldly. 'How stupid you are! If I were married should I be doing what I am?'

Mr Mercer recollected her errand with mingled relief and mortification.

'I don't see that it is necessary for you to call me anything at all,' the lady instructed him. 'All sailors have sweethearts or wives, and yours mightn't like it.'

'I haven't.' The contradiction was hot, but a wail from the wheel-house intervened.

'That 's Mr Smellie,' cried the girl sharply. 'Quick! Perhaps he 's got a message.'

Mercer considered the interruption most inopportune.

'The Lizard has been talking,' groaned the operator weakly on their entrance. 'Heaps of silly rot, too. Been sending the evening's shore news to sea to be taken after dinner to the passengers on the liners. Telling them how the Suffragettes floated an airship over Westminster, and came down on a gaswork. Votes for women—ugh! I 'd vote for all Suffragettes to be sent to sea in tugs, I would. Good, frisky, stinking craft like this one,' the speaker moaned vindictively.

'Buck up, man!' encouraged Mercer as he paused, exhausted.

'Ain't I doing it?' demanded the telegraphist with sickly indignation. 'You be thankful as we 've got the right tuning—that 's luck, that is. There is something now coming through from out at sea. That 's why I hollered.'

'Can I help?' asked Doreen eagerly.

'Yes, miss. You take the pencil and paper and write down the letters as I spell them out.'

The buzzing noise in the ear-piece held at the receiver's ears chattered, quavering.

'The fellow at sea is calling up the Lizard, telling the station there to wire as follows on to Falmouth,' proclaimed the operator, clutching dizzily for support as the *Bumble* rolled: 'S.S., Q, U, A, N, H, A, T, T, A, N. It 's your message, miss, sure enough. Now he 's off.'

Slowly punctuating the strained silence of the listeners came the dot and dash letters strung in groups. The girl wrote them down on the damp sheet of paper upon the clammy table under the smoky lamp, her quickened breathing alone betraying the tension. Gradually sense evolved from the jumble.

'To Lieutenant Mercer, Royal Artillery, care of Abel Mercer & Co., Falmouth. From Peter B. Farquhar of New York.' Stop.

'Ah!' Tommy could not quite stifle the exclamation.

'That's the wretched man I'm supposed to be going to marry to please dad,' explained the girl in quick-flung parenthesis. 'Brute—as if I should!'

Tommy's face was mask-like.

The letters clicked monotonously, and the reader droned on: 'Hope to arrange satisfactorily to provide for your future to repay the old debt I owe your uncle. Important we meet immediately. I propose'—— The words ceased abruptly.

'Go on, man. What next?'

'Not clear,' said Smellie shortly. 'Message has ceased,' he added a moment later. He pressed the receiver closer to his ears, but no sound came.

'It's a pity we've no sending-key, or we'd ask what's up,' muttered the operator, puzzled, forgetting the illicit nature of his task. 'It's queer.'

The three figures in the little wheel-house waited intent and motionless. A big wave caught the *Bumble* abeam, and drenched, hissing around the obstacles on deck. Captain Croucher was heard in emphatic conversation with a subordinate. Still the wireless was silent.

Suddenly the detector broke into brief life once more. 'S, T, D, B, I,' it spelt.

'What's that?'

'Stand-by,' interpreted Smellie. 'Now he's sending "N, C—N, C—N, C." What the deuce does that mean?'

None of them knew.

Mercer went to the door and shouted through the noise of the battering seas. The skipper appeared, streaming with water, which poured into a pool on the floor.

'Is "N, C" something in the marine code?' he was asked.

'Oily snakes, yes!' The skipper's eyes blazed with excitement. 'It's "In distress; want immediate assistance,"' he ejaculated.

'More coming,' called Smellie with strangely altering face. 'Take it down—quick!'

From the aerial wire overhead down through the detector spun momentous words: 'In [group] collision [group] seriously [group] damaged [group] send [group] help. Message ends.'

'Liner disabled!' trumpeted Captain Croucher, hurling himself deckwards. Next moment he had flung his huge bulk furiously on to the bridge and was roaring down the speaking-tube to the engineer:

'Give 'er all the steam ye can, Joe. It's the *Quanhattan* full o' passengers an' specie. She's worth half a million. Hustle an' move yerselves lively, below there.'

'Ard over!' The *Bumble's* wheel-chains rattled smoothly as the helmsman brought her round in a wide circle into the inky pall of the night. The watchers on her bridge crowded behind the wind-screen, and the powerful little tug bucked, squealing into the gale.

'Reckon the *Quanhattan* can't be more than a matter o' ten mile to west'ard. She'll be runnin' into land if she can steam an' steer. Lord send we finds 'er afore some blamed tramp picks 'er up,' called the skipper piously. 'If 'twas Cockles now, 'e'd 'ave 'is engines adrift from their bedplates in this weather. But the *Bumble's* a fair buster in a blow.—Ain't she, Mr Mercer?'

A cold chill crept down that young gentleman's spine at the name. His girl-companion beside him stiffened perceptibly. Under his breath he denounced his faithful skipper as a clumsy, doddering windbag.

'Yon wireless will 'ave done us a good turn,' the latter opined further. 'Burn a flare,' he shouted to one of the expectant deck-hands.

The red light spluttered, gleaming over the wet deck. It lit Doreen Farquhar's fair little face with its ruddy glow. Her changeful blue eyes met the subaltern's discomfited ones ruthlessly.

'Please don't stand so close to me,' she commanded with coldness. 'I hate people who deceive.'

Tommy edged miserably a fraction farther along the bridge.

'I suppose it has been just a game to you—this,' she continued with icy composure, 'since you were Lieutenant Mercer yourself all the time.'

The culprit mumbled.

'It was a detestable trick of yours to conceal who you were,' she cried. 'Now, if we meet my father what will he think—and say?'

'There is no need for you to meet him,' Tommy was roused to retort.

'How is it to be avoided?' she flashed.

'Easily, if you desire it,' he answered bluntly. 'You can stay below till we arrive in port.'

The girl regarded him dangerously. 'You are the owner of this tug?'

'Yes.'

'And I have hired it for the night. You are all my servants. What is to prevent my ordering you to put back to Falmouth at once?'

'This'—the soldier answered without the slightest hesitation—'that if you ever gave such a command you know perfectly well I should never speak to you again.'

'Oh!' Doreen gasped, dazed.

'I shouldn't ever want to,' Mercer appended laconically.

'But if I wished it?' She was taken aback.

'No one on board would heed you,' he told her with firmness. 'See there!'

As he spoke a rocket soared out of the void ahead and burst in a shower of sparks. The

Bumble's skipper pulled at the siren lanyard, and the ship plunged forward, hooting into the blind darkness of the night. More rockets seared the gloom, banging skywards in urgent calls for help. Again the skipper yelled to the engine-room a fervent adjuration to 'spit on yer 'ands an' stoke.' Others of the tug's crew were wrestling with the boat, getting it swung outboard ready for launching if needed.

The skipper stooped to sweep the black horizon with his glasses, and the patches of foam danced ceaselessly through the Channel night. Suddenly a dim shape loomed up on the tug's starboard bow, and as the *Bumble* climbed over the crest of a huge wave a line of lighted portholes shone sicklily over the water.

'Yonder 's a pretty sight for the insurance people,' opined the tugmaster, shutting away his binoculars. 'Ought to prove a tidy job for us, though,' he muttered with some anxiety, 's' long as she don't take to submarinin' first.'

The steamer was down by the stern and listing slightly to port as well. Her high gray stern was cocked unnaturally upwards. A volume of escaping steam was snoring through her giant funnel. She rolled suddenly on the swell.

'Reckon the sea 's sizzlin' into 'er aft there, an' they 're prayin' the watertight doors 'old tight.' By a little masterpiece of adroit seamanship Captain Croucher twisted the *Bumble* under the lee of the injured liner.

As, however, he swung momentarily broadside on to do this a great green sea crashed over the tug's quarter. In an instant the girl felt herself caught in a grip of steel while the *Bumble* heeled over, quivering like a stricken thing. A hoarse shout, 'Hold on for your lives!' rang out frantically on the canting deck.

Slowly the brave little vessel righted from the shock, and the girl was shrinkingly conscious of deadly peril past. A rather white-faced subaltern of gunners was clinging desperately to the reeling bridge-rail with one sinewy young hand, while the other encircled her waist as in a vice. He was speaking in her ear. 'Come into the wheel-house again at once, and stay there, Doreen,' he said.

She let herself be guided into shelter humbly. Then he was out again in the wind and sea and danger by the skipper's side.

Doreen Farquhar was scared. What was this new compelling influence which this young soldier-stranger already exercised over her girlish will? Why did her heart beat so waywardly at the feel of his arm round her, at the knowledge that he had saved her from being swept overboard into the raging sea? Men often saved women's lives, she believed. The women were grateful, of course; so was she. For the first time Doreen Farquhar discovered what introspection meant; and she pondered why this particular occasion for gratitude produced so warm a glow within her heaving breast.

Then reaction came. He was the odious man who was destined arbitrarily for her husband. Did he imagine that he already possessed a prospective right to her? Her cheeks burned hotly. How silly she had been to obey him so meekly! But when she peered from shelter into the slithering storm outside she was uncommonly glad that she had.

Nevertheless she would be very dignified and severe when he returned to her. She thought over a properly formal speech of thanks, which should be correct and — crushing. She even became impatient to deliver it. She was totally disconcerted to find that he never came.

For intricate manœuvres and much vociferation were occurring on deck. The *Bumble* was edged in towards the liner as closely as her navigator dared approach. He had no mind to be dashed to destruction against the towering bulk of the vessel he was trying to succour.

Then the steamer lit another flare. By its illumination a dusky figure on her bridge conversed through a gaping megaphone.

'We 've been run into by a barque from Tyne to Callao with coal. She 's sunk. We 've got her crew aboard here. We want a tow into Falmouth,' came stentorian tones.

'Ay, ay, sir,' bawled the skipper in answer. 'But we 've got to get a hawser fast first,' he muttered in a lower key.

Here lay the difficulty. Thrice the *Bumble* braved the whirl of the angry seas in a mad rush near to the steamer, and each time the light line thrown by deft hands was blown back into the water by the force of the gale.

(To be continued.)

CONTINENTAL SCHOOLS AND SCHOOLGIRLS.

PART II.

BUT to return to the two other girls' schools of which I have spoken. Of the rival claims to be the best school in Italy it is impossible to judge after a day spent at each. But I believe both give an excellent education, and the time-tables seemed to show much the same time given to the most important subjects, arithmetic not being among these; indeed, I know more than one secondary school in Italy where it is down for an hour weekly. Perhaps its place is taken by a subject which is not to be found in English time-tables, but which is, I believe, on most Italian ones—that is, patriotism (or, as they express it, 'a lesson on the duties and

rights of a citizen')—a moral and patriotic discourse which is very popular with the teachers and pupils alike, for the Italians are very patriotic.

My acquaintance with the Russian tongue is too limited for me to say whether the Russians have a slang. While in Russia I conversed either in French or German. But my Russian friends told me that neither in their own tongue nor in any other foreign language have they found such a difference between the written literature of a country and its spoken one as in England. And this was borne in upon me very forcibly when I came across young foreigners who had learnt English from an uneducated or unrefined Englishwoman; the colloquialisms and slang words which pass among schoolgirls in England sounded ugly in the mouths of foreign children.

I stated at the beginning of this article that, with one exception, I had found no difficulty in obtaining permission to visit any girls' school. I have now come to that exception, which was the First Gymnasium of Moscow, the best girls' school there. This was the more unexpected, as I knew former pupils of the school, and therefore did not anticipate having any difficulty in getting the permission which had been so gladly accorded in other countries. Moreover, as I wished during the short time I was in Moscow to study the Russian character, I did not ask for an introduction to the English Consul, but depended upon my Russian friends for any permits I wanted. Great was my surprise when I was first remonstrated with for wanting to waste my time seeing a girls' school. All girls' schools, my Russian friend assured me, were alike. She had even happened to visit one in England, and it was exactly like a Russian school—the same desks, ink, pens, rooms, and all! And girls were girls all the world over; but if I wished to see schoolgirls of Moscow, she would bring some to see me, both from the First Gymnasium and from others.

This offer I gratefully accepted; and the next day she fulfilled her promise, and I made the acquaintance of a National School girl (the cook's little sister) clad in a neat brown uniform of some thick stuff like wincey.

After her came a pupil of the First Gymnasium, also clad in a neat brown uniform (soft cashmere, I believe). This puzzled me at first, as I knew her to be the daughter of very rich and aristocratic parents. Then it was explained to me that all Russian schoolgirls, of all ranks and ages, wear this uniform—a brown or maroon dress—whatever the grade of the school they attend, the make and material being left to the choice of the parent. This last schoolgirl spoke French fluently, and we became great friends. She was most intelligent, and reminded me more of an English girl than any Continental schoolgirl I have ever met; though I know and love an Italian schoolgirl who tries to copy English schoolgirls in everything—sports, speech, manners, and dress—and yet remains Italian in all; while this Russian girl, without any desire to be English, seemed to have the same ideas as ourselves in many things.

One story of a schoolfellow of hers is very sad; but as it gives another and very important side of schoolgirl character in Russia, and one in which they do not at all resemble English schoolgirls, it may be well to relate it here.

My young friend was fourteen, but her friend was older, and a Revolutionary (so, she remarked in parenthesis, was she); and at a students' meeting which she, like many other Russian schoolgirls, attended, it was decided by the secret society to which they belonged to kill the Governor of Moscow. The elder girl was chosen, or may have offered herself, to drive round the town with the youth (he was not more than eighteen, I believe) who was to throw the bomb. Her presence, my friend explained, was in order to give the drive an innocent appearance. The bomb, as it happened, killed a sentinel; but this did not distress my informant. What did was the fact that this escapade ended the school career of her friend, who was put in prison; and I nearly imperilled our friendship by observing that it was the best place for her.

After the visits of these girls I reiterated my desire to visit a Muscovite girls' school—by preference the First Gymnasium, which contained such an intelligent pupil. But, in spite of the flattery, I was again met by a refusal. If I wished to visit the Kremlin—yes, and any and every other sight of Moscow and its environs which foreigners generally wanted to see—they would gladly show me it; but a girls' school—no, it was impossible!

After much reasoning I was told that permission must be obtained from the Grand Duke at St Petersburg, who was the official head of this school; and that would take weeks, if not months, even if he gave the permission, which was most improbable.

I then declared my intention of calling upon the head-mistress and boldly asking to be allowed to visit her school, as I had done more than once in other countries with success.

Great was the consternation! I was implored not to do any such rash thing; Russia was not 'other countries;' and the General who was the head-master might do—anything!

Eventually, to prevent my getting into mysterious trouble with the General, my friend obtained, through a high official, leave for me to walk through the premises after school-hours (when there were no pupils) under the guidance of a teacher.

Glad to have even this privilege, I went at the appointed hour—an hour after the school closed, to preclude any danger of my meeting the pupils—and found my guide waiting. She

was a cultured and charming woman, and made my visit most interesting, showing me everything that she thought would interest me, and telling me a great deal about the routine.

The school being subsidised by Government, expense was no object. In all my wanderings I never came across a school where money was so lavishly spent, not so much upon the building as upon the staff and equipment of the school; for the building, though commodious, was very plain, being an oblong structure, with a wide staircase leading to a broad corridor (which ran the length of the building) in the middle of each floor, having on both sides of it classrooms for the upper, middle, and lower schools.

There was a room set apart for work, in which was a Singer's sewing-machine, at which one girl was working (making a dress), while another was cutting out under-garments; they were elder girls, about seventeen, and were taking a special course in needlework after school-hours. Another room was arranged for the lady-doctor, who is on the staff, and makes periodical examinations of the girls, investigates excuses for unlearnt lessons, attends any girl who may be taken ill during school-hours, and generally supervises the health of the girls.

In Russia it seems to take two people to do what in England would be one person's work; and in this school there was a double staff of teachers (two for each class or subdivision) and three heads: the Grand Duke in St Petersburg, who controlled the finance (and the visitors, as I knew to my cost); the General, who supervised and had a private room on the premises; and the head-mistress, who also supervised and had her own sanctum—none of these three doing any teaching.

The school course lasts eight years; and a pupil stays in one class for a year, beginning with a teacher in the first class, and ending her school-life in the eighth class with the same teacher, who moves up with her pupils, and is assisted by another lady, who sits beside her and takes her place if she is ill or absent, but otherwise seems to have nothing to do but sit there.

By a telephonic mistake, which I cannot regret, I saw the school again, in school-hours, and the head-mistress, also the General; but this by the way. On this occasion I talked to the girls while they ate their lunch of tea (or cocoa) and bread-and-butter, which they took at eleven o'clock, the school-day ending at two o'clock, at which time the girls go home to their dinner—rather an awkward hour for the parents, they told me, as Muscovites lunch at one as a rule. I had an interesting talk with some elder girls, who spoke English not very well, but French and German fluently; they had all read Dickens. I have yet to find a foreigner who has read at all who has not read our great humorist, either in English or in a translation. They were surprised to find—and they were not the only ones who were surprised to hear—that he depicts a state of society which no longer exists. I was also much edified by a lesson in French given by a Russian teacher to younger children by means of a pictorial chart, not a word of any language but French being allowed, and the girls being helped to tell the story in French as they interpreted it from the chart before them.

I should have seen more but for the advent of the General, who, though very polite, was much surprised to see me there; and, the mistake being discovered, I, with many apologies, withdrew, very glad that I had seen the brown-robed, bright, intelligent girls, with their simply dressed hair as severely combed back as that of German girls, but so interested in their school-work, and so frank and independent, that one could almost imagine one's self in an English school, talking to English girls, but for the language and a certain nervous excitability and a tendency to be *exaltée* and have impossible ideals which betray the Russian.

It being found that I took quite an unpolitical interest in girls' schools, I was asked by other Russians to visit more girls' schools in Moscow. One, a private school, I did visit. The head-mistress had been to England and Germany to study the educational methods of the two countries. Hers was an ideal school, if all I heard was correct. She never punished a pupil, she told me; they were managed by moral suasion, I suppose. Whether this was literally true or not I cannot tell; but I did notice that her girls were happier-looking than any I had seen in Moscow, where people, young and old, were grave rather than gay.

Another interesting school near Moscow is a Royal School founded by the Empress Catharine for the daughters of officers, who stay there ten years—never visiting their homes during that time, though they go out with their teachers. They wore, on the occasion I saw them, white dresses with short sleeves, low cut—rather in the early Victorian style—and simply parted hair, neatly braided.

The Gymnasium girls, who are day-scholars, despise these boarding-school misses as *bornées*. It must be admitted that their knowledge of the world is elementary—a dangerous thing in a country where revolution is in the air and gets wafted into even Royal Schools with dire results, as a case in the papers not long since has shown.

And which country has the best schools? I cannot say; but I do not think any English schoolgirl at a good English school need envy her foreign contemporaries, though she may learn something from each and all of them.

THE MOLES.

By TAFFRAIL.

THE low fort on the summit of the hill, the earth of its parapet and escarpment showing red in the afternoon sun, is crowned with a volume of dun-coloured dust, punctuated here and there by the white, woolly puffs of smoke from the bursting shrapnel. Lower down, and apparently in the body of the fortification itself, a series of miniature eruptions are momentarily becoming more and more frequent. The dust and débris flung up by each fresh explosion shows up well against the background of dust and smoke drifting slowly to leeward on the afternoon breeze; and it is evident that the guns, concealed in a fold of the hills some two miles away to the rear, have found the exact range. Shell after shell, each adding more floating matter to the cloud already commencing to obscure the well-known outline of the fort, crashes home, and we instinctively feel a deep pity for the brave men who have to hold it in the face of such a fearful bombardment. The rumble of the continual explosions, mellowed to a certain extent by the breeze, comes to one's ears in an incessant volume of sound, whose monotony, however, is changed now and then by the whine of the hostile shells cleaving their way through the air *en route* for the bombarding batteries. Occasionally, also, the hum of a bullet is heard above the tumult, and the dread sound, terminating with a vicious *zip* as the missile strikes the ground and ricochets, lets us know plainly enough that we are within easy range of the hostile rifles. The sound of the rifle-fire itself—which during the morning and before the bombardment was heard as a peculiar metallic rattle—has now become merged in the tumult caused by the larger weapons, and nothing except these occasional bullets tells us that rifles are being used.

The hillside itself, on the summit of which the fort stands, is all pitted and furrowed with the craters caused by the shell falling short before the Southerners entrenched themselves upon it; but now the trenches and saps running in all directions across the gentle slope, the freshly turned earth at their edges distinctly marking their progress, have torn up the ground even more, so that the face of the slope now looks like a heap of loosely piled road-metal. The trenches themselves, running across the face of the hill, start in the valley below, which cannot be reached by the fire from the fort above, and from here they extend at regular intervals of about eighty feet right up to the glacis of the fort. They are all connected with each other by deep zigzag saps, so constructed that the enemy cannot pour an enfilading fire into them, and the whole hillside appears to us as a veritable network of saps and trenches. The last trench on the glacis, which now constitutes our firing-line, is but three feet deep, for it has been hastily thrown up, and the soil is hard; but the head-cover of sandbags and provision-tins filled with earth and rubble has to a certain extent made up for its shallowness.

The khaki-clad soldiers, lying close to the earth, with their rifle-muzzles protruding through the rough loopholes, are keeping up a desultory fire on the sandbag defences on the parapet of the fort. They can see nothing of their enemy except the occasional darkening of a hostile loophole; but the bullets are travelling across the short sixty feet separating the combatants as thickly as the raindrops in an autumn shower. Men are being hit occasionally, some being killed outright and others wounded; but beyond being roughly bandaged there is no possible assistance to be had for the latter, and they are left lying in the narrow space in the bottom of the trench until the ambulance corps can do their work under the cover of darkness.

Between the opponents is the ditch of the fort, and as it is some forty feet across by thirty feet deep, it is the one obstacle which now prevents the Southerners from capturing the position. Time after time, and not knowing its true depth, they have endeavoured to fill it with sandbags and rubbish to create a causeway across which they could attack; but on each occasion their efforts have been useless owing to the vast dimensions of the formidable chasm. To any man entering it, the chasm forms a veritable death-trap, for it is commanded by the fire of the Northern troops stationed in the loopholed caponiere galleries running under the glacis and connected with the interior of the fort by a subterranean tunnel running under the ditch. Several men, in their anxiety to get to close quarters with the enemy—for our troops have held the trench on the glacis for a week—have leapt into the ditch in a sudden frenzy, and have endeavoured to scale the steep slope of the escarpment. None of them have returned, for they have been shot down from the caponieres behind, and their corpses now lie in the coarse grass under the loopholes as a terrible warning to any of their comrades who may attempt to do the same.

It is obvious that the capture of the work can never be accomplished until the terrible chasm is either bridged or filled up; and as both these courses are impossible to our troops in their present position, the only way to solve the difficulty is by mining. Shafts are even now being excavated down from the bottom of the trench until the concrete top of the caponiere

gallery is arrived at, and from here they will be continued down its rear wall until the foundations are reached. Here a small chamber will be hollowed out and the explosives laid, and when all is ready the troops on the surface above will be withdrawn to safety and the mine will be fired. It is hoped that the débris of the explosion will fill up the ditch and make the necessary bridge for the waiting troops to rush to the assault.

Even now the sappers are hard at work, for there are three irregular orifices in the ground, one at the centre, and one at each end of the advanced trench. We can hear the metallic thud of the picks at work far below us, while every now and then the soldier waiting at the top of the shaft will draw a basketful of shale and soil to the surface. Every ounce of earth has to be removed by hand in this manner; and as the tunnel itself is practically vertical, and only some four feet wide, it can be understood that the work of the men down in the bowels of the earth is no light undertaking. Every now and then a man in his shirt-sleeves will appear at the mouth of the shaft, his face all streaked with perspiration and red earth, while his brawny hands, the finger-nails bleeding at the quick from endeavouring to dislodge the masses of shale with his bare hands, are trembling from the effect of the work below.

'Well, 'ow goes it, Bill?' remarks one of the soldiers in the trench.

'Orl right, mate,' gasps the sapper. ''Ow 's it up topsides 'ere? Any news?'

'No,' answers the soldier; 'we never gets no news 'ere; we 've got to wait until ye 've done yer job. 'Ow 's it goin'?'

'Pretty well, thank you,' says the man. And with a final, 'So long, mates,' he once more disappears to his work below.

The lot of these sappers, albeit they take it so cheerfully, is by no means an enviable one, for the enemy has discovered what they are doing, and are busy countermining. Yesterday the dull ringing of their picks could be distinctly heard by the men below, but to-day the sound is plainer. They all know what it means; the countermine will be completed, the explosives laid and fired, and those working below will be either blown to pieces in the resulting explosion or entombed in their shaft, with no possible means of escape, to die by slow suffocation. No wonder, then, that each gang feels doubly grateful when their turn comes to be relieved; while the feelings of the new men going to their work in the awful tunnel below, and hearing the thud of the enemy's picks gradually coming closer and closer, are too terrible to be imagined. They never know that the next moment may not be their last; but whatever they feel, they show no signs of it, and the heroic parties relieve each other every four hours, and carry on their appointed task with undaunted courage.

The days pass, but still the enemy's countermine is not exploded, and all the time our own shaft is nearing completion. It is now only a matter of hours, for the sappers are even now boring the holes in the base of the concrete wall to take the dynamite cartridges; but the sound of the enemy's picks has long since ceased, and our one anxiety is to fire our mine before they can fire theirs. The sappers work on in their gloomy tunnel; but their efforts are useless, for suddenly, and without the least warning, a terrific upheaval takes place. The roar of a violent detonation is heard, a thick cloud of dust and whitish smoke leaps skyward, while the sappers, being at work in their subterranean chamber below, are buried alive. Our troops, also, in the advanced trench have not come off scatheless, for many have been crushed to death in the awful upheaval or killed by the shower of falling débris.

The work of weeks has been destroyed in a second, and the awful agony has recommenced, for if we wish to capture the fort it is the only way. After the effects of the explosion have subsided, and it is certain that another mine is not going to be fired, the troops in the trenches below creep forward to the glacis and occupy their old position. The trench is all but filled by the thrown-up earth, and they employ themselves in erecting a slight head-cover to protect themselves from the murderous fire poured from the parapet of the fort above. Those killed by the explosion lie in grotesque attitudes on the hillside, while the wounded, in some cases with limbs severed from their trunks, are lying on the ground sobbing their lives away. The scene is awful beyond description, for mutilated and dismembered bodies lie around, while the ground in places is covered with the ghastly red of blood that was flowing through the veins of living men a short time before. It is fearful beyond description; but I can say no more for fear of shocking my readers.

The sappers are busy examining what remains of their tunnels, and find they have been filled up for the greater part of their length; but in a corner of the chasm formed in the ground by the explosion a portion of the concrete wall forming the rear face of the caponiere galleries held by the enemy has become visible. It is determined to blast a hole in this, and to endeavour to clear the stubborn defenders out of their defences below; and within forty-eight hours the concrete has been bored and the charges are fixed in readiness.

Before going any further, however, I must explain the construction of the gallery itself. It is a semi-subterranean passage varying from five to eight feet wide, and constructed of concrete fully six feet thick. Its rear face, forming the counterscarp wall of the fort, is loopholed and

faces the ditch, which can thus be commanded by the fire of those within it, while the front face is buried beneath the slope forming the glacis of the fort. The passage itself is not continuous, but is divided off by thick concrete walls into small chambers communicating with each other by narrow arched doorways, thus forming a series of rooms about eight feet square opening into each other. The sappers, as mentioned above, have chiselled out a cavity in the concrete wall on the opposite side to that having the loopholes in it, and on their exploding their charge a wide rent is made about half-way up the chamber wall. The troops below instantly evacuate the chamber, while our men, heedless of what may happen, creep in through the hole made by the explosion. They never come out again, and the dull detonations of the hand-grenades flung by the enemy in the adjacent chamber tell those above what has happened. The mutilated corpses of the brave men lie in their subterranean vault, which has been converted into a veritable charnel-house, and it is evident that the gallery can never be captured through the single breach, for the soldiers are blown into fragments as soon as they drop through the hole.

The deadly monotony of the sapping has again to be resorted to, and this time another shaft is driven from the floor of the trench until it reaches the other end of the caponiere gallery wall. Again the explosives are laid, and again the wall is breached; but this time the effect is greater, for the enemy have been driven out of two of the rooms. Another charge is laid in the wall of the other end, and on its explosion the defenders are forced to retire to the next chamber, and the consequence is that our soldiers are in possession of a room at either end of the gallery, with the enemy between them. At each end, and between them and the enemy, there is a chamber which cannot be held, for the exploding grenades flung by the men on both sides make it impossible for a man to live inside, so both sides content themselves by barricading themselves inside their respective chambers with sandbags.

The enemy have still communication with the interior of their fort by the underground passage running under the ditch; but, brave, heroic men that they are, they realise that once they are driven out of their gallery the capture of the fort is only a matter of time; so their defence is very stubborn.

For nearly a fortnight the fighting in these underground dungeons goes on, both sides losing many men, while the opponents of this terrible new-fangled method of fighting are standing with only a narrow chamber between them. Sometimes a soldier, pushing a sandbag before him, will endeavour to creep to the enemy's wall to throw a grenade over it; but more often than not he will be discovered, and will be blown to pieces or shot before he can effect his purpose.

Day after day passes, and still no headway is made, while the sight of their killed and wounded countrymen pulled out of the openings to the horrible chambers below begins to tell severely on the nerves of the soldiers above. The sight of the mutilated remains of what were once fine men brought to the surface in canvas bags dripping with blood oozing from their ghastly contents is enough to appal the stoutest heart, and it is no wonder that the men are beginning to despair of ever achieving their object.

A soldier below, however, has hit upon a new idea. The sandbag-wall behind which he stands is three bags deep, and seizing one at his feet, he drops it over the farther edge. His comrades do the same, the result being that the wall gradually advances across the hitherto untenable chamber. Its progress is slow, and is not effected without the sacrifice of many more lives, but in twelve hours it has moved the whole length of the chamber, and is soon actually touching the enemy's sandbags. A lively interchange of hand-grenades thereupon takes place; and, although nine lives are lost, the advantage lies on our side, as the greater number of the defenders are either killed or stunned by the explosives.

The word had been passed through the trench above to our soldiers holding the far chamber, and they too have adopted the same tactics; the result being that our two parties of men are gradually meeting, with the enemy between them. The latter, in spite of the fact that they have a safe retreat to the fort, are still making a heroic but futile resistance, for the walls are still moving forward, and chamber after chamber falls into our hands. Two of their soldiers, wounded and stunned by the last grenade explosions, have been left behind for dead by their companions now seated behind their sandbag-wall, and the wretched men, now reviving and realising that they have been left behind, and that there is a horrible death in store for them, scream and implore their friends to rescue them. Their pathetic entreaties are useless, however, as nothing can now be done to save them, and, still moaning in their agony, they are at last buried beneath our advancing sandbags. By the time these have passed over them they are beyond all human assistance, and two more heroic men, enemies though they are, have gone to their Maker.

The work goes on, and at the expiration of another day the defenders have been driven out of their counterscarp defences and have taken refuge in the body of the fort. The first phase of the capture of the fort has been carried out with success, but with a loss to us of well over a hundred men in the tunnels below. In spite of the fearful slaughter, however, it has been

worth while, for the ultimate capture of the whole position is now but a matter of time and further mining.

Once more the sappers are requisitioned, and they are soon busily at work digging a tunnel down through the floor of the gallery and under the ditch. It will eventually be carried right under the heart of the fort itself, and here a recess will be hollowed out and filled with some two thousand pounds of dynamite. The work, however, is even harder than it was before, for the men are in a lower strata, which is composed largely of shale and boulders. Where picks were used before, chisels are used now, and in some cases, even, the main tunnel has to be diverted to pass an immovable boulder or mass of rock which prevents its farther progress.

This difficult and laborious work takes a good deal of time, but on this occasion the enemy are not aware of our intentions, for they make no attempt to countermine; and the sappers, deep down in the bowels of the earth, are free to work unmolested. The bombardment of the fort is still kept up, so that the occupants may be led to believe that infantry attacks are contemplated after the counterscarp defences are blown into the ditch; and the unfortunate beings who are presently to be blown into the air or buried alive under the falling débris and masses of riven masonry are not aware that our sappers are busily at work under their very feet laying the explosives which are to decimate them. Two mines have been laid, one under the centre of the fort and one close to the escarpment; and within three weeks of the day the shafts were commenced the charges are ready for explosion.

At last the time has come, and the infantry have been massed in the upper trenches ready to make the assault the moment the ditch has been filled by the débris of the explosion. In the trench a captain of engineers squats before a small, innocent-looking mahogany box, on the lid of which is a small ebonite-handled key. From this box two wires lead to the gray-painted battery-boxes, while two more go to the detonators in the dynamite under the fort. The sapper who has fitted the detonators stands by with an anxious face; and well he may, for upon his work depends the success or otherwise of the explosion.

The troops waiting in the trench have fixed their bayonets, and as the appointed time draws near a shiver of suspense passes through the ranks.

Five minutes more, two minutes, thirty seconds, five seconds. The captain looks at his watch, and presses home the firing-key. There is a moment's suspense, when suddenly from the centre of the fort an enormous cloud of black smoke, mingled with earth, bits of timber, and broken masonry, shoots skyward. The rumble of the upheaval has scarcely died away when another explosion takes place, and between the whirling eddies of smoke and dust the escarpment of the fort appears to be falling. The soldiers waiting on the glacis have sprung forward to the assault, and are scrambling across the broken, still sliding mass of masonry and concrete almost completely filling the ditch. They leap from foothold to foothold, some, alas! falling and becoming buried in the shower of rubble; but in less time than it takes to write this they have reached the parapet—or what was once the parapet, for it is now nothing but a shapeless mass.

The defence, although stubborn, is not prolonged, for the greater number of the garrison have been either entombed in their bomb-proof fort or killed outright by the explosion or the terrible artillery fire. The remainder are bayoneted or shot to a man, for they will not surrender even now, and the fort we have been striving to gain for four long, weary months is ours, but ours with a loss of over three thousand five hundred men. Dying by rifle-bullet, shell-fire, hand-grenade, or by being suffocated by slow degrees, a man has fallen for every inch we have advanced; but of these the palm must be given to the sappers, those human moles whose unparalleled heroism has enabled us to capture the position. The pathetic remains of many of their comrades lie still in the sleep of death in the subterranean chambers, and our triumph is due to them, and to them alone; while the scarred outlines of the fort above, which they have been instrumental in capturing, forms a fitting monument to their heroic and successful endeavours to uphold the glory of their King and country.

MY OUTLOOK.

THERE is a spot beyond the busy street
To which, when weary, I lift up mine eyes;
A place of rest whereon the sunlight sweet
Shines down in glory from the tender skies.

Set far beyond the toiling and the strife,
On its green slope the cares of life grow still.
'Tis there I leave the burden of my life,
And breathe the air of freedom from the hill.

I ope my window to the fragrant breeze
That bears a message from that sun-kissed place,
And to the love that shineth 'mong the trees
I turn with look of longing on my face;

And peace returns—the peace of other days,
When as a child I wandered through the glen,
And wist not of the strange and busy ways
That vex the souls and blight the hearts of men.

The purple heather on yon steep hillside
Holds still the first place in my exiled breast,
And in the sunset of God's eventide
I find the charm that soothes me into rest.

AROUND THE DEAD SEA BY MOTOR-BOAT.

I HAVE just spent a week on the Dead Sea, during which a complete circuit of this historic yet little-known inland sea was made in that strange little motor-craft the *Sheikh Jalal*, placed on the waters here some few months ago. Its passenger capacity is only thirty-five people, and it is about one hundred feet long.

As it was intended to explore the whole lake the vessel was specially chartered. Starting at the northern end of the sea, we skirted along the western shore, visiting Engedi, Masada, the great salt-cave at Jebel Usdum, explored the wonderful gorges, and tramped over the delightful little fertile plains, and then up the eastern shore to our starting-place. With the exception of a certain spot at the northern end of the lake, the Dead Sea is seldom visited. Indeed, its desolate shores, yet strange, fertile oases, wonderful ravines and caverns, and magnificent mountains are seldom intruded upon by the foot of man.

The fact is, much nonsense is spoken about this lake. Even in Jerusalem they will tell you that the Dead Sea is gradually disappearing, that it is impossible to swim in its waters, that birds cannot fly across it, and that no vegetation can be grown near its shores. While it is true that fish cannot live in its waters on account of their saltness and bitterness, swimming is both feasible and enjoyable. In fact, did Palestine belong to any Power but Turkey, probably the northern shore of this sheet of water would be a popular bathing-station. No doubt the chloride of magnesia which enters so largely into the composition of the water would be found to have medicinal and curative properties.

Then on the trip we found birds flying over its surface near the few fertile oases that dot its dreary shores, and here fruit and vegetables and millet were growing luxuriantly. As for getting smaller, the Dead Sea is actually increasing in size. Evidence of this was apparent in the partially submerged forests of large trees still standing in the waters all around the west, east, and southern shores. Twenty years ago there was a small island about half a mile from the shore, near the northern end of the lake. This has now entirely disappeared, having been submerged by the encroaching waters.

This strange body of water is some forty miles in length and about ten miles wide at its greatest breadth. It lies no less than thirteen hundred feet below the surface of the Mediterranean. The density of its water is certainly very great, containing 23 per cent. of solid matter, and is, bulk for bulk, heavier than the human body. Perhaps the following figures will give a more comprehensive idea of its density: In a ton of water from the Caspian Sea there are eleven pounds of salt; in the Baltic, eighteen pounds; in the Black Sea, twenty-six pounds; in the Atlantic, thirty-one pounds; in the English Channel, seventy-two pounds; in the Mediterranean, eighty-five pounds; in the Red Sea, ninety-three pounds; and in the Dead Sea, one hundred and eighty-seven pounds.

To the popular mind the Dead Sea is always associated with Sodom and Gomorrah, the 'cities of the plains' that were overthrown on account of the wickedness of their inhabitants. Biblical scholars have never yet been able to fix the site of these ancient cities. Tradition has conveniently placed them on the northern shore, the spot visited by tourists and pilgrims. Those who have studied the subject at all, however, are inclined to believe that these cities stood on the eastern shore, where there is palpable evidences of volcanic upheaval, not to mention combustible substances in sulphur, bitumen, and possibly oil that might have played a part in the overthrow. On our trip, however, we found for the first time evidences of volcanic eruption on the western shore.

In our journey round the sea we found four or five very fertile little plains, abundantly watered and capable of untold development. They are known as Ghors. They are only a few acres in extent, but wonderfully fertile. Indeed, as soon as one crop is gathered another can be put in. These oases are well watered, some with both hot and cold springs.

Engedi, the first place at which we dropped anchor, is the only spot on the western shore where good fresh water is to be found. It lies about half-way down the lake. Its half a square mile of plain that skirts the shore, with its hot springs and luxurious vegetation, was a pleasing picture. In the time of Solomon it was undoubtedly a little paradise, and it is frequently mentioned in the Old Testament. We found three natives here attending to the crop of millet. There are, of course, no towns or villages around

[*All Rights Reserved.*]

the Dead Sea, the small oases referred to possessing a small population, who live by raising early vegetables for the Jerusalem market.

A journey of ten miles brought us to the site of the fortress of Masada (Sebbeh), first fortified by the Maccabees, then used as a place of refuge by Herod, and finally immortalised by the flight thither and the stand made by the Sicarii or Zealots, in the vain hope of escaping subjection to the Romans, when the country was conquered by Titus. History records how the nine hundred and sixty brave defenders burnt their palace and its treasures, and then put their wives and children and themselves to death rather than go into slavery. The fortress is seventeen hundred feet above the sea, and can only be approached from a connecting neck of land called the Serpentine. A more inhospitable place or one more disadvantageous to besiegers could not well be found. Evidences of the Jewish wall around their last stronghold and of the Roman camp and siege are plainly to be seen here.

Eight miles from Masada is the mountain of Jebel Usdum. It is some six miles long, and rises to a height of five hundred feet. It is entirely composed of rock-salt. In this mountain is a large cave, which we explored to the extent of about two hundred yards, when we found a strange shaft, which was twenty feet in diameter and some eighty feet high, cut through the solid rock-salt, and which admitted the sunlight into the cavern. No doubt this shaft was caused by the rain. From the ceiling of the cave hung great snow-white stalactites. The approach to the mountain presents most fantastic shapes of walls, buttresses, parapets, projecting towers, &c., caused by the stratification and lie of the salt-boulders.

Perhaps the beauty spot of the Dead Sea region is the magnificent gorge of the river Arnon (Mojib), which separated the territory of Moab from Ammon. It certainly contains the finest natural scenery in Palestine. The sides of the cañon rise perpendicularly about three hundred feet, and are only about twenty feet apart, here overhanging, there overlapping or dovetailing into one another, as though this mighty mass had been violently rent asunder to allow this seething stream of the Arnon, with its cascades and whirlpools, access to the sea. We explored the gorge for half a mile, which was as far as we could go, and probably farther than any one else has yet traversed it. We were absolutely spell-bound by the beauty of the surroundings. On the western shore the cliffs are of limestone, while on the eastern they are of sandstone of exquisite hues, giving these hills that indescribable colouring which is so frequently raved over by tourists, and which is one of the glories of the sunsets in Palestine. Words cannot describe the exhaustless variety and beauty of the veining and tracery in the richly shaded sandstone forming the side-cliffs of this gorge. The delicate designs are both rich and lavish, and never-ending in their variations.

We are now, of course, on the eastern side, and a farther journey of eight miles brings us to the hot baths of Callirhoe. Here Herod came when stricken with his last sickness, in the hope of finding recovery, which was sought in vain; and here remains of his buildings can be seen. Several miles inland, higher up among the hills, lies the Castle of Machærus, where John the Baptist was beheaded. Only a few feet apart lie the streams of hot and cold water. These waters seem to be most salubrious, and are credited with medicinal virtues. Journeying on, we encounter another magnificent gorge, where the Zerka, a stream almost as great as the Arnon, flows into the sea.

On all the oases vegetation was abundant. The wild oleander, with its beautiful pink flower, was very plentiful; also the reed, with its feathery tuft or bloom 'shaken by the wind,' referred to by Christ; the willow and tamarisk; and the *gharof*, a pretty-looking wild fruit much like a cherry. That strange plant the apple of Sodom was also found in large numbers in these watered regions, as well as the argal, the so-called grape of Sodom.

It certainly looks as if we may hear more of this remarkable region in the near future, for the Turkish Government has granted to a foreign syndicate a concession for the exploitation of the minerals in the Dead Sea basin. According to the reports from Constantinople, a sum of seventy thousand pounds has been paid for these rights. It is well known that the finest and purest bitumen is obtained here, also quantities of peerless sulphur. In Byzantine times copper-mines were actually worked near the south end of the sea. Many classes of fine stone, such as marble and porphyry, abound; while salt is to be had in large quantities. It is thought, too, that the region will be found to be rich in both coal and oil.

PETER AND JANE.

CHAPTER X.

IT required some pluck to be perfectly even-spirited and to show good mettle in those days. The world contained for Peter Ogilvie and Jane nothing but a sense of parting and uncertainty, and a horrible feeling of disappointment. Their lives were severed perhaps for years, and over all the uncertainty and the thought of separation hung the mystery of Mrs Ogilvie's

half-finished message. The memory of her was clouded by the thought of how much she had suffered, and the thought intruded itself painfully that if they had but known more, something might have been done for her. The burden of a secret lies in the sense of loneliness which it brings. A unique experience, dissimilarity of thought, or knowledge that is not shared by others makes a solitude with which no bodily isolation can be compared. Such a solitude had been Mrs Ogilvie's—that seemed the intolerable thing to the two persons left behind to wonder what the message could mean.

'I sometimes wish she had been a Catholic,' Peter once said. 'Confession might have been some comfort to her.'

But Mrs Ogilvie was a woman who could remain silent always, and perhaps it was the supreme effort of having to break through a lifetime of reserve that, in its added strain upon her heart, had caused her death.

The last few days that the lovers had together were spent in a very loyal and affectionate endeavour to make each other as happy as possible. They made no mutual confessions of love, nor ever dreamed of vowing to be true, because they never for a moment could admit the possibility of being anything else; and they did not even promise to write to each other, or to say their prayers at the same time every evening—the difficulty of calculating what would be Greenwich time on a westward voyage put a stop to anything of that sort! Nor did they talk of remembering each other as they looked at the stars; but they spoke of the future and of all the good things it was going to bring, and they even laughed sometimes over imaginary portraits of the brother whom Peter was to seek, and they told each other ridiculous little tales of what he would be like and what he would say and do.

One afternoon Jane gave Peter a gold cigarette-case as a parting gift, with his name scrawled in her big handwriting across it; while Peter presented his fiancée with a very handsome diamond ring, and forgot altogether that perhaps he could not pay for it, and went back and told the jeweller so. The jeweller, having known Captain Ogilvie all his life, and, being aware that he had lately succeeded to an immense property, thought the young man was joking, and said it did not matter in the least.

Then came the day of parting, when Jane said good-bye to Peter and Toffy, and kissed them both; and then Toffy took a flying leap downstairs on the pretence of looking for a missing bag which he held in his hand, and the two people whom this story most concerns were left alone in the drawing-room.

Peter was smiling oddly as he came out, with a twisted smile which had been conjured up for Jane's benefit. And on the other side of the door Jane was telling herself that she did not mean to give in, or break down, or do anything idiotic until Peter should be gone.

It was a drizzly, wet, depressing day—such a day as people often seem to choose on which to leave England. There was the usual routine of departure—the embarkation, the 'special' from Waterloo, the crowd at the station, the plethora of bags, chairs, and hold-alls; the good-byes, the children held up to the carriage-windows to wave hands, the 'last looks,' and the tears stopped in their flow by anxiety about luggage and missing bags. Then Southampton and enforced cheerfulness, combined with admiration of the ship. Those who had travelled down to see friends off adopted a tone which was a sort of congratulatory intimation that, having travelled so far safely, they did not see why any one should have much to fear for the rest of the voyage.

At last the ship began to move slowly away, and finally swung round and got out of dock. It was just then that many of the voyagers wished that they might have had a few minutes longer of that dismal scene in the drizzling rain and those dear hand-waving, smiling, or weeping figures on shore. But the engines had started their solemn beats, the pilot was on the bridge. The voyage had begun for good or ill, and the Lord watch over us all!

Nigel Christopherson, being a man of feeling, said to a Scot who leaned over the rails with him, watching a group of female figures dressed in black on the quay, 'These good-byes are rather beastly, ain't they?'

To which the Scot replied, 'They make no difference to me whatever;' and the remark, Toffy thought, was an extraordinary check to any emotional feeling.

Jane got her first letter from Peter, dated from Vigo, which peaceful port, with its rows of white houses built along the shore, and the green hill, with its ruined castle behind, is a haven where many seasick passengers would be. They had had a bit of a tossing, Peter said, in the Bay, and Toffy had been very seedy, but was better. The captain was a very good sort of fellow; his cabin was profusely decorated with foxes' masks and brushes, and a few of his admirers believed that when he was at home he hunted. The insensible Scot who had declined to sympathise with Toffy's dislike to partings had turned out to be a very interesting sort of man, and full of yarns. He helped to make the evenings on deck pass rather pleasantly with his stories. If Mr Dunbar, as he was called, had not had such an amazing Scottish accent Peter would have said that probably the stories were not true.

It was a letter such as a schoolboy might have written, but Jane treasured the ill-expressed sentiments as maidens of a bygone age may have treasured their lovers' shields; and although she left the letter lying about on her dressing-table,

after the custom of modern young women, it was none the less the dearest possession of her life, until the next one arrived.

Toffy sat up in his bunk with a horribly bad headache, and wrote a long letter to Mrs Avory, which he posted at Vigo; and he wrote another letter, not nearly so long, but which cost him much more time to compose, and addressed it to Miss Kitty Sherard. And this he carefully tore into little pieces one night when the decks were dark and there was no moon overhead, and he watched the small white pieces of paper as they floated away into the black depths of the water, and then walked up and down the deck until the small hours of the morning, when Peter—one of whose worst qualities was that he always fussed over people he cared about—appeared in pyjamas and overcoat, and asked him sternly if he was trying to get another chill.

At Lisbon the intelligent Scot who had effectually checked Sir Nigel Christopherson's emotion at quitting his native land suggested to the two travellers that they should join him in a trip ashore. The three men had made friends in the smoking-room, and Peter hailed Mr Dunbar as a fellow-countryman, and enjoyed his rugged accent and his amazing intelligence. He abounded in useful information about the country to which they were bound, gave statistics on all points, and teemed with information. He was an ardent and indefatigable sightseer, and never visited a building without seeming to investigate it. The most complicated currency of a foreign country never disturbed him for an instant, and he would make little sums with extraordinary rapidity on the edge of any bill that was given to him. The difference in price as stated in Spanish coinage between a bottle of claret and a whisky-and-soda might have puzzled some people; but Dunbar worked it out to a fraction in a second of time, and without a moment's hesitation laid his own share of the expense on the luncheon-table of the Braganza Hotel. He spoke Spanish better than he spoke English, and thought he had got rid of his Scottish accent, but he still said 'I mind' for 'I remember,' and differentiated in the matter of pronouncing 'court' and 'caught.'

At St Vincent Peter wrote home again, and felt a certain sense of insecurity in leaving letters on the rocky island. It was four o'clock in the morning when the ship got into port, and the sun was rising over the hills eastward, while to the west the bare, rugged mountainous land was a solemn, chilly-gray colour. The water was smooth and dark beneath the hills, but nearer the ship it was touched by the clear, pale light of the rising sun. The hills rose jagged and sharp against the sky, without a scrap of verdure on them; but the kindly atmosphere turned those in the distance to a soft and tender blue, also it smoothed away the rugged lines and effaced the cruel-looking scars that seamed their sides, and covered them with a misty peace. It seemed to the young man as he looked at them that things became easier when viewed at a distance. He had suffered very deeply during the last few weeks of his life, and with him had suffered the girl whom he had loved and cared for always, and whom he would love and care for until the end of his life. As he looked back at the distant misty hills on Cape Verde Island, this voyage seemed to him, in spite of all its horrible sense of separation, to be something of a lull in the midst of quick-happening events. When first he left home he had been plagued with thoughts which he had fought with almost savage fierceness, and he had wrestled to expel them from his mind; but that there could be any mystery in his mother's life had necessarily awakened endless questionings in his mind.

Why, if this little brother of his had not died, had he disappeared? And what was the reason for his disappearance? 'He did not die,' said the half-finished letter which his mother's hand had traced; 'he did not die.' Once, in the middle of the night, as he said the wearisome sentence over to himself, a word came suddenly before him in letters of flame, and Peter turned away from it with a cry. A child who had been deprived of his life might be said, in a sense, not to have died, and there was the word of six letters in front of him in the dark. He turned on the electric light in his cabin, and for a moment he had half a mind to go in next door and wake Toffy. The burden of the suggestion was too horrible to bear alone. 'He did not die!' His mother's mental state might not have been perfectly sound at the time of her husband's death; and her preference for him, Peter, was a fact that had been remarked by all who knew her. Had she begun to write a confession to her son, and stopped short in the middle? 'Don't hate me too much,' the letter said. Why should he hate her? He did not know.

In the morning he was able to put aside utterly the thought which had tormented him, but he lived in dread of being beset by it at night-time again. He began to fear going to bed, and would sit up talking to Toffy till the small hours of the morning, or playing picquet with Dunbar. Men began to say that he 'jawed' too much, and would not let them go to bed; little knowing how the poor fellow used to try to prolong a conversation so that he might not be left alone with a horrible fear always ready to pounce upon him when night fell, and only the thud of the engines playing some maddening tune broke the silence.

He tried, with a baffling sense of impotence, to make his own memory act, and to recall the days when he was not quite three years old. But the thing was an impossibility of course, and his brain refused to give up a single picture of that time.

It was only when the ship had left St Vincent that a certain amount of peace came to establish

itself in his heart, and the large and beautiful consolation of the sea began to make itself felt. The weather was calm and clear, and the monotonous slap and swish of the water against the ship's side was in itself productive of a sense of soothing. The company on board were all strangers to him, and helped to give him a feeling that he was starting anew in life. Also, he was on his way to do the best he could to find his brother if he were living, or to clear up the mystery of his death if he were dead. There was no horrid sense of having failed to do the best that was possible. He must find Edward Ogilvie, or find the grave where he lay; and after that it would be time enough to think what would be the next thing to do.

The ship steamed away from St Vincent in the evening, and the lighthouse on Bird Rock made a point of light in the gathering darkness: the sight of land and of the hills had done Peter good, and had restored him to the normal and natural man again. He turned to look back at the rugged island, with the one point of light high up in the lighthouse, and he thought, with a sense of comfort, that it was like some lamp which a woman sets in the window to guide her husband home. With that came a deep sense of the love and the confidence which he and Jane had in each other; he knew that she would not fail him were he rich or poor, happy or unhappy, and that seemed the only thing in the world worth knowing for certain.

The next day the weather became intensely hot, the wind was with the ship, and there was not a breath of air to be had. Dunbar never felt the heat at all; he had not an ounce of spare flesh on his body, and he always ate two chops and some curry for breakfast, because, he said, if you were paying for a thing you might as well have it. He played in bull tournaments, and had a habit that was almost provoking of doing everything better than any one else. His sharp-featured face, long, keen nose, and eyes with a pair of intelligent-looking pince-nez fixed in front of them, seemed to speak of a sleepless vigilance.

Peter, having at his command a very small amount of information on any subject, was impressed by Mr Dunbar, and thought the man might make a fortune if he used his talents on the music-hall stage, for instance, where, Peter believed, he could with confidence answer any question that might be put to him.

'That is an extraordinary chap,' he said to Toffy. 'I wonder if he would be of any use to us in the way of finding out about my brother?' But eventually he decided that nothing ought to be done until they had seen Sir John Falconer.

'We have had rather a disappointment here,' he wrote from Rio in one of his unliterary letters, 'because the yellow-fever is so bad that we are not allowed to land. I don't suppose you have any idea how tiresome a day in port is if one does not go ashore. The heat is really terrific, and under the awnings it feels exactly like sitting in an oven.' In conclusion, Peter wished he were at home again, and thought Toffy seemed rather down on his luck; and he remained Jane's ever-loving Peter.

'I will tell you a strange thing about Rio,' began Dunbar as he walked up and down the deck that evening. 'If you make your fortune in it, you always go back to England and say that by right you are a Castilian noble.'

'It would have to be a very large fortune that would tempt me to live in this beastly climate,' said Peter, who was in a grumbling mood.

'I believe,' said Toffy, 'that with luck one could make a lot of money in Argentina. I have got a scheme in my head now which, if it comes off, should place me beyond the reach of want.'

Dunbar referred to the 'boom-time,' and gave an exhaustive statement of the fortunes which had been made in that glorious epoch, and had been lost afterwards. 'I have known men without capital make a hundred thousand pounds in a few years,' he said; 'and when they lost it you simply could not find them.'

'People do seem to disappear in Argentina in a queer way,' said Peter with intention, and with a glance at Toffy. 'I know we had a gardener—one of the under-men—and he had a brother who disappeared altogether out there, so our man went to find him, and he also was never heard of again.'

'The reason for that is not very far to seek,' said Dunbar. 'The first thing you do when you come to Argentina is to leave off writing letters—at least if you are a camp-man. You simply can't abide the sight of pen and ink.'

'But there must be some means of tracing a chap who gets lost,' said Toffy. 'He can't disappear into space.'

'You 'd wonder!' said the Scot laconically.

'Still, you know,' persisted Peter, 'if a man 's alive at all, some one must know his whereabouts.'

'Obsairve,' said Dunbar, 'it doesn't require much imagination for a man to change his name as often as he likes; and I should like to know what police supervision there is over the Italian settlers, for instance, in some of the remoter *estancias*. Murderers are hardly ever caught out here, and murders used to be as common as a fight in a *pulperia*. Every man carries a knife, and if you go up-country you will find that half the peons are covered with scars; and if once in a way the knife goes too deep, it 's just one of those things which cannot be helped, and the less said about it the better. Again,' he went on, 'suppose a man is murdered on his own *estancia*—a thing that used to be common enough—the peons are all in league, and they generally have had a hand in it. Their master has been giving them *carne flacca* [lean meat] to

eat, and that is enough to upset the whole rickmatick of them.'

'I suppose no one is likely to turn on a revolution for our benefit,' said Toffy in a tone of disappointment.

'I haven't got the fighting instinct in me,' said Dunbar literally. 'Whenever there was fighting where I have been, I have always sat indoors until it was over.'

Peter, with a desire to lead the subject back to the case of men who disappeared, turned in the deck-chair where he was sitting enjoying a light breeze which had sprung up after dark, and said tentatively, 'I can't quite understand, you know, a man disappearing altogether and leaving no traces behind him.'

'I shall never,' said Dunbar, 'believe in the final disappearance or even in the death of any one until I have seen a doctor's certificate or the man's corpse. Men have got a queer way of turning up, and even the sea may give up secrets when you least expect it. Take the case of the *Rosana*,' he went on, 'and allow me to put the facts of the case before you. The *Rosana* was a ship that used to do a good bit of trading on the coast, and there was a man on board of her whom I used to know, and who had been once a little too well known in Argentina. Well, this ship foundered with all hands on board, and was never heard of again, although two of her lifebelts were picked up, and one or two pieces of deck-gear.'

'Any ship might founder at sea,' said Peter, 'and not be heard of again. Go on with your story, Dunbar.'

The electric lights on deck went out suddenly overhead, leaving only one burning; the breeze blew soft and cool; and six bells sounded sharply and emphatically in the quiet of the night.

'I wouldn't,' said Dunbar, 'give you the benefit of my speculations on the subject of the *Rosana* were it not that E. W. Smith was on board. E. W. Smith couldn't die; he wasn't fit for it. But it's a long story. I'll not bother you with it.'

Dunbar looked doubtfully at his tobacco-pouch, pinched it, and then contemplated his pipe. Peter handed him a cigar-case, and Dunbar accepted a cigar, and slipping it into an old envelope, he deposited it in his pocket. 'I don't believe I should have time to smoke it through now,' he said, and he continued filling his pipe.

'I suppose you come across a good many queer tales, travelling about as much as you do,' said Toffy.

Dunbar nodded without speaking. 'You'd wonder,' he said at last. He finished his pipe, knocked out the ashes, and put it into a little case lined with red velvet and stowed it in his pocket; he looked at his watch and announced that there was still another half-hour before he intended turning in.

'We might have the end of your story,' said Peter.

'A story is as good a way as any other of whiling away the evening, and you are welcome to hear the rest of this one,' admitted Dunbar. He was a grand talker, according to his compatriots, and he chiefly loved the engineers' mess-room, where he could sit by a table covered with oilcloth and sip a little weak whisky-and-water, and revert to his broadest Doric in company with some engineers from the Clyde.

'The *Rosana*,' continued Dunbar, clearing his throat, 'only carried one boat on her last journey. I happen to know that for a fact, but the Lord only knows the reason for it! Now, this boat was found, half-burned, lying on a lonely bit of coast a few weeks after the *Rosana* foundered. This is a thing which, I may remark, is not generally known; but I happen to have had ocular demonstration of it. The boat was a smart-built one, with her name in gold-leaf on the bows. Tranter was the captain of the *Rosana*, and he liked to have things nice. Now, why should this boat have been found half-burned on the coast, but with a piece of her name in gold-leaf still partially visible?'

'The boat probably drifted ashore,' said Peter, as if he were answering a question in a history class.

Dunbar seemed not to hear him, and went on with hardly a moment's interruption. 'I am a student,' he said, 'of the philosophic method of reasoning, and I begin with the *a priori* assumption that E. W. Smith could not die. I should hold the same belief even if I believed in Purgatory.' Dunbar pronounced the word with an incalculable number of r's in it, and it came from his throat like the rattle of musketry. 'Presuming,' he went on, 'that the *Rosana* foundered, was E. W. Smith the man to go down in her, or was he not?'

Mr Dunbar's eyeglasses were chained to his coat with a little gold chain; if this precaution had not been taken there were many persons who believed that they might have started from his head, impelled by the alertness and energy behind them.

'I suppose some of them took to the boat,' said Toffy. 'In an affair of that sort it is a case of *sauve qui peut*.'

'The whole crew would have swamped the boat,' said Dunbar, who liked giving small pieces of information at a time.

'Consequently'—— said Peter.

'Consequently,' said Dunbar, 'I'm just biding my time, and I'll tell you more when there's more to tell.'

'It's a queer story!' said Peter.

'It's queerer than you think,' said Dunbar.

'You can't believe,' said the other, 'that this man Smith went off in the boat by himself?'

'I don't,' said Dunbar; 'for E. W. Smith

couldn't row, and with all his sea-going he was a landsman to his finger-tips.'

'So, then,' said Peter, 'he must have had some accomplices, and accomplices always tell tales.'

'There's one very certain way of silencing men,' said the Scotchman.

Peter rose abruptly from his chair and threw his cigar-end out over the water. 'It's a beastly suggestion,' he said briefly. His face was white, and he found himself hoping that this tale of Dunbar's would not bring back to him those horrible nights he had had at the beginning of the voyage.

'Tranter was the captain of the boat,' said Dunbar, 'and Tranter was about the worst sort of coward you are likely to meet on this side of Jordan. E. W. Smith, on the other hand, never lost his head.'

The story seemed finished, and Toffy got up and stretched himself lazily, and said he was going to turn in; but Peter still sat where he was in his deck-chair.

'There might be a hundred different endings to your tale, Dunbar,' he said, 'each one as likely as the other. The boat, for instance, might have capsized, with too many men crowded into her, and have drifted ashore and been burned accidentally or otherwise by the people who found her. Or the crew and captain of the *Rosana* may never have taken to the boat at all, and she may have foundered with all hands (as you say the newspaper reports had it at the time); or the *Rosana* may be sailing in another part of the world, with her villainous captain and E. W. Smith and no end of swag on board. Or both men, again, may be sleeping very peacefully at the bottom of the sea at this moment; that, after all, seems to me the most likely ending to them. Of course,' he finished, 'I don't know what grounds you may have for making another suggestion about their probable fate.'

Dunbar looked at him keenly for a moment. 'I would not have made the suggestion,' he said quietly; 'only, you see, since the wreck of the *Rosana* I have seen E. W. Smith, or his ghost, and that is why I do not believe in the final disappearance of a man till I have set eyes upon his corpse.'

(To be continued.)

THE DEVELOPMENT OF THE AUTOMAT IN GERMANY.

By A. Ireland Robertson.

THERE appears to be something in the automatic principle, or the principle of the automat, which appeals very specially to the Teuton. Otherwise it would be difficult to account for the remarkable development which has taken place in Germany in recent years in public automatic machines. The number of things which can now be procured through the medium of such machines is enormous, and that not only in Berlin and the large cities, but even in small towns. I do not refer to the machines for supplying sweetmeats, scents, cigarettes, matches, picture post-cards, and so forth, which have long been familiar objects at railway stations and other public places in Great Britain, and which are equally common in Germany. The Germans have got beyond these primitive 'penny in the slot' automats.

Slot gas-meters are much more general in the Fatherland than in this country, the ten-pfennig (penny) being the coin in use in small houses, and the mark (shilling) in larger houses. You could get postage-stamps from automatic machines in Germany long before the British postal authorities could be induced to supply them by this medium. Moreover, while in this country the number of such machines is still comparatively small, in Germany there is scarcely a post-office of any size which does not have several in the lobby. Generally you can get five-pfennig, ten-pfennig, and twenty-pfennig stamps, and also post-cards. Machines have lately been installed at some London stations for supplying penny and twopenny tickets for the railway. In Germany such machines have been common for some time. There are stations in Berlin at which you will find more than a dozen. Tickets, however, are supplied at a variety of prices. One of the cleverest little machines of this kind I have happened to come across was at Danzig. On applying at the booking-office for a ticket to Zoppot, a Baltic watering-place in the neighbourhood, I was referred to the automats. In a corridor I found an array of machines from which first, second, third, and fourth class tickets to various places could be obtained. By inserting a mark in the appropriate one I received a ticket for Zoppot and fifteen pfennig change—a ten-pfennig piece and a five-pfennig piece. This, however, is by no means a solitary specimen of the automatic machine which supplies you with a certain article and delivers your change as well.

In the vicinity of the principal station at Elberfeld there is an automat which supplies the stranger, in return for a small coin, with a useful little address-book (directory) of the town. But the great automatic triumph of Germany is the automat restaurant. All over the country one finds these restaurants. In Berlin they are legion, and they compete keenly with the familiar blue-and-white striped shops of Aschinger. In Cologne you find an automat under the shadow of the cathedral. Away in the north, in quaint,

old-world Lübeck; in the east, in the ancient royal city of Kœnigsberg; in the frontier town of Thorn; in the half-Polish, half-Prussian city of Posen—everywhere the automat restaurant flourishes. It belongs to a very different class from the old German café, but of its immense popularity there can be no doubt. Its methods, suggestive of the American rather than the German, seem likely to exercise an influence on Teutonic habits.

These automats supply wholesome food and drink at very moderate prices. You find ranged along the wall a large variety of viands under glass. By inserting a ten-pfennig piece in a slot you get from one machine a half-roll covered with excellent ham. For a similar sum you get from another a half-roll with cheese, from another a roll and sardines, &c. The viands, it should be noted, are not simply pushed out from behind by some human *deus ex machina* who is invisible. You see, say, ham sandwiches each on a small plate ranged in vertical rows under the glass. The insertion of your ten-pfennig releases a lever which allows the shelves to 'drop one.' A plate is thus brought to an uncovered part, from which you abstract it. The next penny brings down the next in order in the same automatic fashion, and so on. One can see for himself when the supply has been exhausted.

A penny cup of coffee, cocoa, chocolate, or bouillon can be got in the same way. Cups and saucers are provided on a shelf. You drop your ten-pfennig in the slot of the compartment marked by the name of the particular beverage you wish, place your cup beneath the spout, turn a handle, and you get exactly as much as fills your cup. Hot water can be obtained free of charge. 'Cold drinks,' as they are called, can also be got in great variety from the 'penny in the slot' machines. There are several kinds of beer, different kinds of wine, and usually 'English porter,' besides a few non-alcoholic beverages. A penny glass of wine does not sound inviting perhaps, and as a matter of course no one goes to an automat for a choice vintage. However, the quality varies, and the quantity set free by the ten-pfennig piece is in proportion to the price of the wine. In the same way, also, the quantity of beer allowed varies with the sort. Glasses are set out on shelves in glittering array, and each man helps himself. One of the characteristics of the automat is that there is no service and no tips, unless when special dishes are ordered. Most of the restaurants provide such, and they are served in the ordinary way. But the chief business is done in ten-pfennig snacks and ten-pfennig drinks.

The worst thing in connection with the automat development is the rise of the automat gambling-machine. In Berlin especially there is a large number, and on a Sunday night you find groups of excited youths gathered round them in the Arcade and in the shops in which they are installed, eagerly throwing away their hard-earned sixpences and shillings. For the gambling-machine as a rule only takes one-mark and fifty-pfennig pieces. Now and again some lucky gambler receives from the machine a handsome return. He is the exception, though none the less he serves as decoy. It is a sorry sight, but unhappily by no means an uncommon one, to see a youth pushing coin after coin into one of these machines, and, while others are clamouring for a 'chance,' continuing to insist on his right to hold the handle against all comers till empty pockets force him to retire.

TOWAGE SERVICES.

PART III.

CAPTAIN CROUCHER swore.

'Them liner cap'ins give me a pain in the stomach,' he announced with bitterness. 'Never a turn of 'is screw or 'elm at the proper moment to 'elp. Does old brass buttons think as we're goin' to perch on 'is winches through the air, the addle-nosed cauliflower? Who's for the boat to board 'er?' he questioned of his equally irritated crew.

'I am, for one,' Mercer volunteered at once. 'I've pulled in as bad a sea as this before now in an Irish lifeboat off the Galway coast.'

''E's a real man 'e is, that sodger officer,' approved the skipper admiringly a little later as he eyed the *Bumble's* heavy boat squelch plump into the water under the tug's lee. ''E'll be a proper mate for that rich girl I was tellin' of 'im to marry a while ago.'

'Who was that?' Doreen Farquhar demanded. She had been drawn by the prevailing clamour back on to the bridge in defiance of orders.

''Old on tight, miss,' advised the skipper. 'Mr Mercer, 'e's ruined by 'is uncle trustin' some speculation chap in New York. If 'e don't marry money 'e's done in 'is career in the army. Pity, ain't it?'

'I'm rich,' said Miss Farquhar unguardedly, and flushed crimson.

'Are you, now?' responded the skipper. 'Well, I'm—*shook!*' he ejaculated, in the grasp of this new idea. Then he beamed under his sou'-wester at his discernment.

'Real, rollin' rich?' he prompted confidentially.

'Ye-es,' faltered the wealthy one. At that moment she would have welcomed a wave to drown them both. Such is the penalty of impulsiveness.

'Don't ye badger yer bonnie 'ead, then, missie,'

fathered the skipper with delighted benevolence. 'I'll fix 'im up all right for ye soon 's we 're ashore. Snakes alive, look at yonder!'

Doreen clung, horror-struck, to the rail, and a great fear stormed her heart. The tug's boat was crawling dizzily on its errand from one wave-height to another. Now it rose, bobbing on to a crest of foam; now it slid aslant into the hollows. But the stout arms that guarded her held on gallantly.

Then came disaster. As the frail little craft closed on the liner the man in her stern reached to catch a flung line, and the boat capsized.

Instantly Captain Croucher forged in again, steaming at full speed, risking all their lives in a supreme effort. One of the boat's crew was caught as he swept helplessly past the tug; another clung to a far-trailing fender, and was landed on deck in a sprawling heap. Mercer managed to grasp the rope-ladder which was hung down the steamer's side just as the up-turned boat crashed viciously into the liner's steel plating and sank with one splintering rip.

But as the two vessels converged momentarily the tug's opportunity had come. A line was hurled across the chasm of dark water and secured in triumph. By its means a great hawser was made fast.

'Mr Mercer 'e 'll be right as rain soon as 'e 's tilted the water out o' 'is inside,' the skipper now had time to console his girl-passenger. 'Made you jump that, missie, eh?' For a deadly pallor had blanched her cheeks. ''E 'll come back to you safe enough to 'is wooin'. 'E 'as rare pluck, Mr Mercer 'as,' she heard the skipper say as she turned away to hide her tell-tale eyes.

On the *Quanhattan* Mercer was arrayed in borrowed garments of a nondescript variety while his own were dried. There was no returning at present to the *Bumble*, which soon had the damaged liner securely in tow. An elderly gentleman sorted himself out from the crowd of agitated passengers and claimed Mercer's attention with insistence.

'Whose tug is that?'

Tommy eyed his questioner askance between two gulps of hot whisky.

'She belongs to Mercer & Co. of Falmouth,' he answered warily.

The inquisitive party seemed gratified at this intelligence.

'Do you know Lieutenant Mercer of the Royal Artillery, my man?' pursued the old gentleman affably. 'I mean the nephew of the late head of the firm?'

'I'm he,' admitted the subaltern after a moment's reflection.

'My dear boy!' Tommy's hand was wrung violently. 'I was coming to see you. My name is Farquhar—Peter B. Farquhar of New York, a friend of your poor uncle.'

Tommy had guessed so much. It was a matter for consideration that if his uncle's friend hopped so curiously at this first meeting, how much more would he prance when he learnt that his daughter was on board the *Bumble*? The speculation was interesting.

One of the *Quanhattan's* crew came up to the old millionaire and touched his cap. It was the wireless operator.

'I might finish that message of yours now, sir, for Falmouth,' he suggested deferentially. 'But'——

'Oh, there is no need now that I'm here,' Tommy interposed incautiously. Then he bit his lip, flustered at his indiscretion.

'Why, what do you know of my wireless message?' asked the sender with sudden scrutiny. Tommy squirmed, and the operator stared in amazement. There was a painful pause. The operator broke it.

'Meanwhile, I've got back word from the shore for you, Mr Farquhar,' he continued, unfolding a paper. 'It is addressed to you, sir, from London; despatched through the Lizard Marconi station, and signed "Lady Lyntle."'

'Read it out,' commanded the old millionaire curtly. 'I can't see in the dark. It 's from the woman in charge of my daughter.'

The big steamer was beginning to pound sluggishly through the water, straining at her hawser. Tommy Mercer's heart seemed to thump in unison. By the light of a deck electric the operator read the pencilled words:

'"Doreen disappeared yesterday [stop]. Believe she may have gone to Falmouth to meet you [stop]. It is impossible to exercise proper control, since she is so wilful [stop]. Shall be glad to be relieved of the responsibility of her charge as soon as you can arrange this [ends]."'

'Ah!' An intrusive wave sprayed, drenching, over the promenade-deck, and caught Mr Farquhar in the face. This increased the annoyance of his ruffled parental mind. Also, it diverted his thoughts from wireless mysteries.

'A grown-up girl is too much of a handful for me,' groaned the harassed father ruefully, seeking refuge in an alleyway from the seas. 'Mine needs a husband who 'll rule her. You 'll do'—he turned to Mercer, masterful and dramatic. 'I 'll find the money and manage all the details directly we get ashore. It will provide for you both at one go. It 's precisely what I have come from New York to propose,' the autocrat summed up with a completeness of spirit which was not to be overborne.

Thus, while Captain Croucher decreed the order of events on one vessel, Mr Peter B. Farquhar was simultaneously announcing his decision with fervid emphasis on the other.

. . . . . .

Morning broke over Falmouth Harbour cold, gray, and rainy. Mercer, on his return to the *Bumble*, was met by an exultant skipper, who seized him by the arm.

'She is rollin' rich, an' eatin' 'er breakfast in the cabin,' he confided in a hoarse whisper. 'Your clothes ain't wot they might be, bein' dried unskilful-like, but she'll 'ave to lump that. If she don't like 'em, an' says so, just you pass remarks on 'er 'air.'

'Her hair!' echoed the astounded Tommy.

'Seein' there ain't no lookin'-glass aboard, 'tis towsled,' said the skipper judicially.

'I think I'd better not go below, then,' began the soldier bashfully.

Captain Croucher regarded him with asperity and spoke to the point. 'You 've got to wed 'er now. Think of 'er pore father's feelin's when 'e 'ears of yer goin's-on all night 'ere, an' you not bein' even promised t' other to one.'

Tommy did think of Mr Peter B. Farquhar's remarks, and scratched his head.

'I 've insisted on 'er marryin' you,' went on the man of purpose. 'It 's been a shakin' job, but she 's willin' at 'eart. Now get down below an' ask 'er proper—'fore she goes ashore an' gets a new rig-out an' 'er mind changes. Women 'ave a shockin' 'abit o' bein' changeable when they 're wearin' different petticoats.'

In the *Bumble's* cabin a somewhat dishevelled maiden was eating eggs. Tommy, propelled from behind, arrived somewhat precipitately.

'I 'm so glad you 're not drowned,' was her calm greeting. 'Have you seen dad?'

'Yes,' he told her solemnly.

'Does he know I 'm here?' She sniffed warily at a cracked egg.

'No.'

'Ugh! Put it through the porthole there—quick!' she besought, and buried her offended little nose in the flimsiest lace pocket-handkerchief.

Tommy consigned the offending product to the receptive waters of the harbour. With this service of devotion his courage revived.

'What are we to do now?' he demanded boldly.

For a moment her blue eyes lifted to his with shy demureness.

'I—don't—know.'

'I do.'

'What?' It was the merest whisper.

'This, Doreen,' said Tommy Mercer persuasively. And for the second time he held Miss Farquhar tightly round the waist. The love-tide colour stung her dainty cheeks.

'And this,' he added, greatly daring, as he kissed her.

'I 'm shook?' cooed Captain Croucher softly from the skylight overhead. ''E ain't lost much time in 'is wooin' arter all. Now I 'll take a glass o' beer afore interviewin' old brass buttons on the *Quanhattan* concernin' this 'ere salvage —preliminary soundin'-like afore the lawyers come.'

THE END.

ECCENTRIC CHARACTERS.

By JOHN FYVIE.

IF it be true, as John Stuart Mill maintained, that eccentricity has always abounded when and where strength of character has abounded, and that the amount of eccentricity in a society has generally been proportional to the amount of genius, vigour, and moral courage it contained, then there must have been an extraordinary amount of genius, vigour, and moral courage amongst the inhabitants of this country during the unjustly disparaged eighteenth century, for of a certainty the country then swarmed with 'cranks.' This reflection has more than once occurred to me in the course of the researches which I have had to make into certain biographical backwaters of the Georgian era. But, leaving the reader to pursue this line of thought if he pleases, and to turn over in his own mind the great and celebrated names of the period, I will content myself with setting down a few particulars concerning certain eccentric persons of a humbler class, whose achievements were not sufficient to get their names into any biographical dictionary, but whose characters and conduct were so unconventional that many of us would be glad to hear a good deal more of them than anybody has thought it worth while to put upon record.

In 1799 there died at Romford, in Essex, a well-known butcher of that town named Wilson. Mr Wilson, it appears, was notable for his integrity in business and for the gentleness of his manners—two qualities which, perhaps, would scarcely have entitled him to the notice of posterity had he not also exhibited a remarkable addiction to psalmody, extraordinary proficiency in penmanship, and a highly peculiar manner of eating his dinner. Such butcher's bills as he sent in to his customers had never been seen before, and have never been seen since. They were all exquisitely written by his own hand; but the top line would be, perhaps, in German text, the second in Roman letters simulating the finest print; beef would be in one style of writing, mutton in another, lamb in a third; while each of these kinds of meat would be still further distinguished by a different colour of ink. He was a great friend to the Church, observing all its ordinances—and a trifle more. Every Sunday he entertained the congregation with a solo, singing the psalms *by himself* until the minister came into the desk. And on every last fast-day, while all the rest of the congregation went home to their refreshment and rest,

between morning and evening service, he never quitted the church, but went about from pew to pew repeating the Lord's Prayer and singing appropriate psalms, until he had performed these favourite devotions in every pew in the church. He had a large appetite, and seemed determined that all Romford should know it; for, instead of sitting down quietly to dinner in his back parlour, he would usually sally forth into the street, with a leg or a shoulder of lamb in one hand, a large knife in the other, a small loaf of bread in his pocket, and a handful of salt in the bend of the arm which carried the joint; and, thus equipped, would perambulate the town, eating as he went, until he had consumed the whole of this very substantial meal. It is not surprising that his friend Bingley, the London bookseller, declared that he did not know a larger man in Romford.

What Mr Wilson of Romford drank with his meat is not on record; but a certain William Lewis, Esquire, of Llandisruan, who died on the 30th December 1793 in the act of drinking a 'tumbler maur'—that is, a cup of Welsh ale containing about a wine-quart—had made it a rule of his life (as the *Gentleman's Magazine* for that year reports) to read a certain number of chapters in the Bible every morning, and, by way of assisting in the digestion of so much spiritual food, to drink no less than eight gallons of ale every morning! One wonders what the late Sir Wilfrid Lawson, of jocular memory, would have said to this startling instance of an alliance between beer and the Bible. It was calculated by some mathematical genius of the time that in the course of his life Mr Lewis must have drunk enough ale to float a seventy-four-gun ship. His size was extraordinary. If we may believe the *Gentleman's Magazine*, he weighed forty stones, and the diameter of his body was no less than six feet. Fortunately, says the writer of his obituary notice, he died in his parlour, for it would have been impossible to bring him downstairs in a coffin. Even as it was, the undertakers had to use a crane to lift the coffin on to a carriage, and to have the same machine in the churchyard to let it down into his grave.

Another eccentric of a totally different kind was an old bachelor named John Little, who died in his house at Kentish Town in 1798, at the age of eighty-four. So great was his antipathy to marriage that he discarded his brother, the only relative he had left, for not continuing like himself in a state of celibacy. He was extremely penurious; and when a physician whom it had been necessary to call in advised him to drink a glass of wine occasionally, he would not trust his housekeeper with the key of the cellar, but insisted on being carried into it himself that he might bring away a bottle in his own hands. As might be anticipated, his distrust cost him dear; for being carried from a warm bed to a damp vault brought on a 'shivering fit,' and in a few days he was dead. When his keys were obtained, one hundred and seventy-three pairs of breeches, with numerous other articles of attire, were found in a room which had not been opened for fourteen years, and in a lock-up coach-house one hundred and eighty wigs. All these, of course, together with his two thousand pounds' worth of landed property, eleven thousand pounds in the 4 per cents., and twenty-five thousand pounds in various tontines, then became the property of the poor brother who had so grievously offended him by getting married.

The foregoing result was obviously due to Mr John Little's failure to make a will. But most cranks have exhibited their eccentricity especially in their wills. In 1773 a gentleman named Underhill was buried at Whittlesea, in Cambridgeshire. He left very precise instructions as to his funeral, and six thousand pounds to his sister on the condition that she carried them out. No relative was to follow his corpse, but only six gentlemen whom he named, to each of whom he desired his sister to give ten guineas, and to request of them not to come in black clothes. According to his instructions, as soon as the burial service was ended, an arch was turned over the coffin, in which was placed a small piece of white marble bearing the inscription, 'NON OMNIS MORIAR, 1773.' Then the six gentlemen who followed him to the grave sang the last stanza of the twentieth ode of the second book of *Horace*. No one was invited but the six gentlemen already mentioned, no bell was tolled, and there were none of the conventional signs of mourning. The coffin was painted green; and the deceased was laid in it with all his clothes on. Under his head was placed Saundon's *Horace*, at his feet Bentley's *Milton;* in his right hand was a small Greek Testament, in his left a little edition of *Horace;* while Bentley's edition of *Horace* was placed *sub podice*. After the ceremony was over, the six gentlemen went back to the house, and after a cold supper sang the thirty-first ode of the first book of *Horace*, drank a cheerful glass, and went home about eight o'clock. 'Which done,' were the concluding words of this eccentric's will, 'I would have them take a cheerful glass, and think no more of John Underhill.'

A rather less poetic eccentric was a farmer of Stevenage, in Hertfordshire, who died on the 1st February 1721, and was found to have ordered by will that his estate, which was worth about four hundred pounds a year, should be enjoyed by his two brothers (both clergymen), or, if they should die, by his nephew, until the expiration of thirty years, when he supposed he should return to life, and then it was to revert to him. He also directed

that his coffin should be fixed on a beam in his barn, which was to be locked and the key left inside, so that he might let himself out. Strange to say, the provisions of this certainly more than merely eccentric will were strictly observed. His executors let the coffin stay in the barn a day or two longer than the specified thirty years—namely, from 1st February 1721 to the 5th February 1751—and then, as he showed no signs of rising, they took it out and buried it.

What causes eccentricity in men it is impossible to say. According to Professor M'Dougall of Oxford, the physiological explanation is that whereas the neural systems of the brains of commonplace persons tend to become circumscribed and individualised, in a higher type of brain the neural systems are more complexly interwoven. But, in the first place, this physiological complexity is only inferred from the observed results; and, in the second place, it appears to be impossible to tell whether any such complexity will result in the production of a wit, an original thinker, or a crank. There may also, perhaps, be some difference of opinion not only as to what causes but as to what constitutes a wit, an original thinker, or a crank. Wherefore, passing lightly over the case of an elderly maiden lady, known as 'Mrs' Gregg, who towards the close of the century kept eighty cats, at an allowance of a guinea a week, under her hospitable roof in Southampton Row, Bloomsbury; and barely mentioning an old bachelor of Soho, a retired Change Alley broker, who for the last fourteen years of his life amused himself by going daily in the stage-coach from London to Greenwich, and immediately returning in another stage-coach (an amusement for which he paid regularly twenty-seven pounds a year), I will leave it to the reader to say in which of the foregoing categories he will place the hero of my concluding story.

John Kilburn, who was born at Richmond, and who died in a public-house at Water-Newton in 1797, was well known to the sporting gentlemen of his day as a 'list-seller' and attendant in the stables at most of the races in the kingdom. One day, in sultry harvest-time, being in Bedfordshire a few days before the date of the Richmond races, 'stony-broke' and hard put to it to know how to cover the one hundred and seventy miles to Richmond in time, he at last hit upon the following expedient. He got a blacksmith of his acquaintance to make him a bit of iron chain with a padlock on it marked with the words 'Richmond Jail.' Then he walked out into one of the neighbouring corn-fields, placed the bit of chain on one of his legs, locked it with the padlock, and lay down, pretending to be asleep. As he expected, it was not long before he was apprehended and hurried before the nearest justice of the peace. He said nothing beyond mumbling that he had never been tried, and that he hoped they wouldn't keep him till the assizes were over. After some consideration, the magistrate directed two constables to take him off in a carriage to Richmond Jail forthwith. On arriving at the jail the constables asked the keeper if he knew their prisoner. 'Oh yes,' he replied; 'this is Kilburn. I have known him many years.' 'We were sure he had broken out of your jail,' said the constables, 'because the padlock on his chain has your mark on it.' 'Broken out of my jail!' exclaimed the keeper. 'Why, he was never in it; and I never heard any harm of him in my life.' 'No more have these gentlemen,' slyly put in the smiling Kilburn. 'They have made a mistake. But as they have been good enough to bring me home out of Bedfordshire, I thank them for their kind usage. I need trouble them no further,' he added, 'for you see I have the key of my padlock;' and, suiting the action to the word, he took off his bogus fetter, wished them good-day, and walked off to the stables.

AN EFFECT IN LIGHT AND SHADOW.

By Norman Innes, Author of *Parson Croft*, *My Lady's Kiss*, *The Lonely Guard*, &c.

THE woman's cheeks were scarlet; the man smiled sheepishly. Clifford Broome took in the situation at a glance.

'I beg your pardon,' he murmured, conscious that it was Saturday afternoon, and that he had returned somewhat unexpectedly.

'I trust'——

'Not a word, Miss Eden—not a word, if you please,' stammered the lawyer, the prospect of explanations adding tenfold to his embarrassment. 'I left some papers behind me.—Thank you, Mr Sale. Good-afternoon.'

With that he turned in precipitate flight, and was half-way down Bedford Row before it struck him that his behaviour was scarcely logical. After all, there is no need for a man to apologise for entering his own private office. Yet, though head of the firm of Clifford, Wylde, & Broome, he had always found it a matter of some difficulty to realise his position; save for his secretary and an office-boy of seraphic demeanour, the pet alto of a North London choir, there was not a membe of his staff of whom he was not secretly in awe To the managing clerk, a white-haired old gentle man who had been engaged by the founder o the practice, Broome was no more than a boy even the junior clerk was senior in years t his employer, who in self-defence laid claim t being five-and-forty, though in reality a chicke of thirty-eight. Mr Staplehurst, the manager,

course was not deceived by this pious fraud; he recalled a day on which the then junior partner had stalked up Bedford Row proud in the birth of a son who now sat in his office-chair.

Clifford Broome had been born and bred in the sober atmosphere of Bedford Row, and among his earliest recollections were heavy, decorous dinners at his father's house in Queen's Square, at which those kindly, decorous gentlemen whose salaries he never paid without a blush had on occasion been guests. Years before he had been articled to the younger Mr Wylde—Mr Broome, senior, had died while his son was at the university—he had reverenced those clerks, and though past middle age, it was with a certain diffidence that he rang his bell to summon one or other of them from the outer office. They were antiquated in their ideas, wedded to the routine of other days, jealous of precedent, slaves to a conservatism in everyday affairs; he realised their limitations, and time and again had spent hours of an evening in simple, if laborious, drudgery rather than offend them by engaging an extra clerk versed in up-to-date business methods. Daily he admitted the absurdity of the position, but made no effort to free himself from his shackles, content to leave it to time to rid him of the burden of those four reverend old-men-of-the-sea. A bachelor of simple habits and ample private means, he accepted the situation and made the best of it; he was proud of the practice which, thanks to old connections and personal initiative, held its own in spite of modern competition; and, being of eclectic tastes, congratulated himself that his staff should be in such perfect keeping with their eighteenth-century surroundings. Their snowy linen and sombre black matched the dark oak panelling and still darker furniture to perfection; indeed, in the twilight of a winter afternoon the picture of the old gentlemen immersed in some legal question, with books and documents about them, and their ivory features standing out in mellow relief against the depth of shadow at their backs, filled the solicitor with the joy of a connoisseur before a portrait-group by Rembrandt.

No City church breathed an atmosphere of greater calm than that office, in which the clerks might have passed for cathedral clergy, and were certainly every whit as antagonistic to change; and it had cost Broome days of misgiving and nights of unrest ere he had summoned courage to inform his staff that pressure of business had decided him in making an addition to their number in the person of a lady secretary.

Upon each of his clerks the tidings had a different effect. Mr Staplehurst's attitude was that of a parish priest the chief of whose flock has lapsed into heresy. Earnestly, but with admirable decorum, he remonstrated against the innovation, reasoned with his principal; and, argument failing, had adopted an air of passive disapproval. Mr Beeching, whose sixty-five years had not cooled the fires of youth, was for handing in his resignation; Mr Pierce, though but just threescore, was prepared to ruin his prospects in life by a similarly drastic course. Both gentlemen expressed a fine contempt for the pusillanimity of Mr Stephen Sale, the bald-headed junior clerk, in bending the knee to Baal. Even the office-boy so far forgot his dignity as alto soloist to whistle when apprised of the news. Mr Beeching could count on his fingers the previous occasions upon which the peace of the office had been broken by a whistle of such levity.

Neither principal, clerks, nor office-boy are likely to forget that Monday morning when Miss Florence Eden entered the service of Clifford, Wylde, & Broome. The staff masked their sense of dissatisfaction beneath a dignified reserve, their employer his nervousness by an attempt at nonchalance. Both parties failed of their object, Clifford Broome with ignominy.

'Poor dears!' sighed Miss Eden as she took her way down Bedford Row, at five o'clock, some ten days after her arrival.

A week passed, a fortnight, and the attitude of the office underwent a gradual change. Even Mr Beeching the ultra-fastidious, apart from the metallic click of the unspeakable machine she operated, could find but little fault with Miss Eden. She was commendably quiet, her voice soft and subdued, and she seemed at pains to dress as if in deference to the tastes of those about her, in harmony with the style of her surroundings. Broome was duly appreciative. More than once he had caught himself gazing abstractedly at the woman as she bent above her work; the clean-cut features silhouetted against the mahogany bureau dark and lustrous as her chestnut hair, the tone of her skirts blending with that of the wainscot, the play of the light upon the snowy blouse to which a bunch of crimson carnations gave a vivid splash of colour, appealed to his artistic perception.

'Satisfied, Mr. Staplehurst?' The managing clerk had sought some expression of his employer's views as to the result of the new departure. 'Satisfied? I am charmed.' Let it be said that each individual member of the staff in his heart of hearts was prepared to sacrifice principle and endorse Clifford Broome's opinion.

It was the junior clerk who wrought the mischief, and at his presumption it seemed as if a spirit of unrest had entered the office. Broome for the first time in his life showed signs of irritability, Mr Staplehurst's reserve developed into settled gloom, high words had passed between Messrs Beeching and Sale, while Mr Pierce, hitherto regarded as a man of mildly sarcastic wit, was transformed into a cynic. Stephen Sale, blind to a state of things for which he was responsible, developed the most alarming symptoms; he bullied the seraph,

worried his fellow-clerks, got upon his employer's nerves, and meanwhile, as was shrewdly suspected, made love to the confidential secretary.

The solicitor realised that what he had seen that afternoon fully confirmed the general surmises. Obviously Mr Sale had proposed; it was as obvious that Miss Eden had accepted him; and the solicitor had not reached the end of Bedford Row ere embarrassment had given way to emotions vastly different. Here was a pretty ending to an experiment which had held such promise of success, and yet Broome could not blame himself for being blind to the possibility of such a dénouement. The junior clerk was five-and-forty, the secretary but half his years; Stephen Sale was bald as a coot, Florence Eden in the heyday of womanly perfection. And yet, when he came to consider the matter more closely, he admitted that of late there had certainly been much that was strange in Mr Sale's manner. He remembered having heard the latter discussing with his friend Mr Pierce the merits of two rival preparations for the hair; and had remarked that the gentleman in question had, without apparent reason, taken to lunching rather later than had been his custom, and, most suspicious of all, had on occasion returned to the office about the same time as Miss Eden.

Apart from the absurdity of it, Sale's conduct was unpardonable. It was an affront, a personal injury, which his employer felt justified in resenting. What right had the man to rob him of one who had already become an integral part of his office? A successor to Miss Eden was out of the question; there was not another woman in London capable of attaining the high standard the secretary had set. The holder of the position must be self-effacing, must recognise that she was no more than a detail in an harmonious whole. A blonde was impossible; a tartan blouse, a check skirt, would ruin the atmosphere of the office. There were women who affected such abominations. Besides, in all probability he would lose Mr Sale as well, and be faced with the necessity of employing some youth of up-to-date ideals, whereupon the spirit of the office would vanish before a whirlwind of blatant modernity. Wing-collars, brown shoes, and obtrusive socks that matched as obtrusive neckwear would destroy the prevailing scheme of colouring. Broome hated fancy waistcoats, and a junior clerk's wardrobe, he knew, invariably contained a unique selection.

The lawyer passed a wretched week-end, during which he realised the futility of attempting to reason with his love-lorn employés, and on Monday arrived at his office with the gloomiest forebodings. The morning passed slowly. Miss Eden sat with bowed head above her typewriter; while the man, after dictating a dozen letters in rather disjointed fashion, relapsed into silence. When the secretary prepared to go out to lunch an hour earlier than was her custom, her employer, who had been watching her furtively the morning through, noticed something unusual in her manner.

'Mr Broome'—the man shuddered in anticipation of the worst—'I wish to leave, if you please, as soon as'——

'My dear Miss Eden!' Broome rose with every sign of embarrassment. Though the girl's words had but confirmed the fears that had haunted two sleepless nights, he seemed hardly to realise their meaning. 'My dear Miss Eden, but why?'

'Something has happened, Mr Broome.' The oval face flushed; the clear voice sank to a whisper. 'I think you will understand. I'd rather say nothing'——

'As yet, of course, Miss Eden.' The lawyer felt it was incumbent upon him to accept the situation in as gracious a spirit as was possible. 'As yet, of course. I quite understand. I am sure I am'——

It was his intention to congratulate her. After all, Stephen Sale must be an eligible parti; but as he glanced at the girl, who had suddenly raised her head, the words stuck in his throat.

'I am sorry to lose you—very sorry,' he stammered, conscious that it was imperative to say something.

'Thank you, Mr Broome. I, too, am very sorry. I have been very happy here—very happy indeed. Every one has been so kind—so very kind.' She paused for a moment, and then came a deepening of her colour, a little deprecating movement of her hands, as she added, 'And if you please, you must not blame Mr Sale. You won't, will you?'

Not blame Mr Sale! Till that moment he had never realised the enormity of that gentleman's conduct; yet what could he do or say in face of the appeal in those dark, wistful eyes? He laughed, or rather made an ineffective attempt at doing so.

'Of course not. Let me say that in a sense I am in sympathy with Mr Sale. But I trust you are in no very great hurry to leave us?'

'I should like to go, if you please, as soon as you can find some one to take my place.'

'A matter of sheer impossibility.' Again the lawyer tried to rise to the occasion, but his tones, though emphatic, were despondent. 'But you would do me a great kindness if you could manage to remain with us all for another week.'

For a moment the woman stood silent, with clouded brow, and then murmured as if with an effort, 'As you wish, Mr Broome. I will try.'

She turned rather swiftly; and the other fancied there were tears in her eyes as he held wide the private door which opened directly upon the landing.

Clifford Broome leant back in his chair with a groan and stared blankly at his junior clerk.

He had scarcely recovered from the shock of his brief interview with his secretary ere Mr Stephen Sale had bluntly informed him of his desire to resign his position.

'My dear Sale, this is wholly unexpected,' gasped the solicitor, whose manner bore witness to the truth of the statement. 'Surely you cannot have any real reason for wishing to leave the firm after more than twenty-five years' service.'

'I am sorry to do so, sir; but there are private reasons which prompt me to the step I am taking. Perhaps you will understand'——

'Yes, yes, Mr Sale, I understand perfectly.' The whole sorry business was only too obvious to him, and his state of mind did not permit of congratulations in the case of his clerk. 'I am indeed sorry that you should take such a course so unexpectedly, and I think I am entitled to ask you whether you cannot reconsider your decision. Perhaps Mr Staplehurst might give you some advice.'

'I have mentioned the matter to my colleagues—to the managing clerk, to Mr Beeching, and Mr Pierce—and they have approved the course I suggested. Indeed, I may say they have acted most kindly, most generously in the matter.'

Stephen Sale spoke with feeling, and his employer noticed that the blue eyes beneath the heavy gold spectacles were unwontedly bright. So the staff had given their approval to this piece of folly. Broome had no patience for such a pack of old fools. Were they blind to the absurdity of their junior's conduct, of this ill-assorted match?

'Well, I must ask you to study my convenience to the extent of giving me a few days in which I can consider my future arrangements. You cannot fail to understand how much I am upset by this event, which is unparalleled in the history of this office. Would you be so good as to tell Mr Staplehurst I should like to see him before he goes out to lunch?'

Even Clifford Broome admitted that his junior clerk seemed conscious of his shortcomings; no man looked less the successful suitor than Stephen Sale as he stole out of the private office without another word.

'It's a very painful matter, Mr Clifford'—the managing clerk was privileged in the form of his address—'and you will understand my feelings.'

'I do, Mr Staplehurst.' The other's manner was sympathetic, and Broome was duly appreciative. 'Sale made a serious mistake, and, I think, will do nothing towards bettering it by leaving the firm.'

The old gentleman nodded gravely. 'That is what I told him when he first informed us of what had happened; but Mr Beeching and Mr Pierce were strongly of the opinion that there was nothing for him to do but to resign; and, after all, his feelings in the matter must be considered. And there's Miss Eden, who is quite one of us, Mr Clifford,' he continued. 'As I said to Mr Beeching only a week ago, I don't know what the office would be without Miss Eden.'

'And she leaves us on Saturday. She has made up her mind.'

'Personally I had hoped she would not do so,' sighed Staplehurst gloomily. 'It is the one thing that Sale feared.'

'Well, I don't know what he expected,' snapped Broome. 'He might have thought of that before he made a fool of himself. He has acted disgracefully.'

'Ill-advisedly, Mr Clifford. Sale, let me tell you in confidence, having committed this error of judgment, has done all that lies in his power. Indeed, he has acted nobly, as I'd have had a son of mine act; and his friends Mr Beeching and Mr Pierce have most generously given him their help. Believe me, Mr Clifford, Miss Eden will not leave this office with her future unprovided for.'

'I understand, Mr Staplehurst; and you've had a hand in it, I know.' Broome knew his managing clerk's generosity, and when it came to a wedding present, felt sure no expense would be spared. 'Of course, Miss Eden shall have some token of the high esteem in which I hold her. It is largely for her sake that I wish Sale could be persuaded to stay with us.'

The wrinkled old face brightened.

'Then perhaps, Mr Clifford, you might ask her to use her influence with Sale. The last thing in the world she would wish is that he should leave.'

'Thank you, Mr Staplehurst; I'll see what I can do,' said Broome; and the other went out to lunch. Surely there never was a match that occasioned such general depression.

. . . . . .

Florence Eden laughed. She had to; time and again within the past four days she had been on the brink of tears, and now her laughter rose unbidden.

'Mr Broome, what made you think that?'

The lawyer coloured.

'But I saw you—you and Mr Sale'——

Miss Eden was serious in a moment; she spoke rather hurriedly.

'Yes, yes, I know. He did ask me to; but, you see, he is so much older than I am, and—and—though I like him, I don't think I ever could'——

Broome felt as if the room was reeling round him; but, as the other paused, his relief found vent in words. He rose nervously and took a turn of the office.

'It was stupid of me; and I am glad, as far as I can see, Miss Eden, we need not lose you after all.'

'But there's Mr Sale. It is not fair to him

that I should stay. He has more claim upon the firm than I.'

Her employer was silent, and for the first time made some feeble attempt at a definite analysis of his feelings; he was conscious of an overwhelming joy at the prospect of the possible retention of his secretary, and a sudden inspiration seized him.

'But we want you, Miss Eden—all of us, including Mr Sale, I am sure; I, perhaps, more'——

'You, Mr Broome!' The woman's glance was down-bent; her employer had paused beside her chair.

'Yes, I.' The lawyer spoke slowly, very gravely.

'For the sake of the office?' There was a note of petulance in the question. 'You are always thinking of the office.'

'I am thinking of myself—of you.'

A hush fell upon the room; the other did not raise her head.

'And you want me to stay in the office?'

'Yes—no,' stammered Clifford Broome, 'with me.'

What immediately followed is known to two people only; but when, half-an-hour later, Mr Staplehurst entered the room he was amazed to find Miss Eden seated in the principal's chair and its owner stooping above it.

'Pray come in,' stammered Broome. 'You wish to see me?'

The managing clerk cleared his throat.

'The staff wished to see Miss Eden.'

'I am sure she will be delighted. Am I in the way?' answered Broome with a guilty air which struck Messrs Staplehurst, Beeching, and Pierce as inexplicable, and the woman stepped forward, somewhat puzzled.

'Miss Eden'—the old gentleman's voice had the suspicion of a quaver in it—'you must pardon us if our conduct savours of an unwarrantable liberty; I hope our good intentions will serve for an excuse. It is with the utmost regret that we heard that you were leaving us; it was with regret even greater that we learnt from our good friend Mr Sale, whose absence you will understand, of the reasons that prompted you in making this decision. Of the personal feelings of each one of us present I'll say nothing, but we are unanimously of the opinion that the staff of this office owe you amends for the circumstances which have compelled your resignation. You have won our esteem, Miss Eden—may I say it? our hearts—the hearts of four lonely men who now ask you to accept a token of their regard.'

The speaker paused and handed the woman a folded sheet of paper.

'It is good of you; it really is,' she stammered. 'What is it?'

Clifford Broome bent beside her for a moment. When he rose there was a mist before his eyes. The shadows were deepening, and the last glow of a crimson sunlight lit the three earnest faces.

'An annuity of fifty pounds!' He spoke as if to himself.

'Oh, Mr Staplehurst, Mr Beeching, Mr Pierce, how very, very kind! But I don't think I can take it. I don't think that I shall want it now. You see, I am not going away after all—at least not very far away.'

The three faces were blank, and then their principal spoke, much after the fashion of an urchin who has been caught in wrong-doing.

'Miss Eden is going to be married, but'—he stammered—'but, if you can understand me, will not entirely sever her connection with the firm.'

Mr Pierce nudged his friend Mr Beeching, who in turn looked at the managing clerk, upon whom the situation dawned but slowly.

'Miss Eden,' he stammered after a moment's hesitation, 'we brought what we feared was a farewell gift; we trust that instead you will accept it as a wedding present.'

'You old dears!' murmured Florence Eden, and took each outstretched hand in turn.

Clifford Broome gazed at the group in silence, conscious that he had never set eyes on a finer effect in light and shadow.

SUNSET IN THE INDIAN OCEAN.

Gray waste of waters, sun-kissed by a rosy goddess beaming
Near pearl skies, touched by the unseen hand of light,
And fleecy cloudlets drifting, like angels softly leaning,
Across the Indian Ocean in the radiant summer night.

Grim ocean, obscured by shadows of night low lying,
While 'God's Watchers'—the stars—shine out in a dusky west;
All still, save lapping of waves and night winds faintly sighing,
In a world of ephemeral glory, as a symbol of life's unrest.

Twilight and starlight blended, in a harmony all too fleeting,
As ships that are passing by night, or love on the ocean of life,
Or friendship's hand in spring-time of youth entwined in greeting,
Before shadows fall, when hearts grow weary of strife.

Purple and gold fading splendour, 'neath a new moon brilliantly shining,
Paling the stars with her rays on the water in ripples of light,
Closing the scene with a wealth of white lustre refining,
While filling one's soul with the peace and content of the night.

SEVENTH SERIES

THE HEART OF THINGS.

By Henry Leach.

London, *Yesterday.*

THE tercentenary of the publication of the authorised English edition of the Bible is to be celebrated, in all places where the English language is spoken, in the spring of this year; and, so far as Britain and most of her colonies are concerned, the celebrations will take place about the end of this month of March. In the United States there will be such celebrations in the last week of April. It is proposed to invite all the clergy and ministers of every denomination in England, Scotland, and Ireland to make the occasion the theme of their discourses on the last Sunday in March, and the Archbishop of Canterbury makes a good lead with his promise to preach in St Paul's on the evening of that day. The head men of the Free Churches are well sympathetic towards the movement, as they might be expected to be, although it was not originated by them, and they have commended it to the leading denominational churches. It may still be news to some of those who are not Welsh nor of Wales to any extent whatsoever—though to others it has been no news for more than three hundred years—that the little Principality, so marked in its individuality in many respects, has a Bible of its own, the first edition of which was printed in 1588 by the deputies of C. Barker, London, further issues being made in 1620 and 1630; and consequently Wales will not participate in these ceremonies. In Scotland, however, the Authorised Version has generally taken the place of the old Gaelic Bible, even in the Highlands, where such changes from tradition and family practice are hardest of all to make, and so the tercentenary will be recognised. The work of preparation of this Authorised Version was entered upon in 1604, when King James I. called a conference to sit at Hampton Court and determine what it was that was 'amiss in the Church.' It was suggested that a new translation of the Bible, performed more carefully and thoroughly and with less prejudice than had been exhibited in some previous translations, should be made. The king thought well of the proposal, and six committees were appointed to execute the work. Of these committees two sat at Westminster, two at Canterbury, and two at Oxford. When they had finished their work it was put together and revised by a general committee, and in 1611 it was brought forth to the people. For all the changes and corrections that were made when the Revised Version was produced a few years ago, there can be no doubt that the translation of this national Bible of ours is a magnificent piece of work, and a great improvement upon translations that had gone before it, complete as some of them were. There was Wyclif's translation, which made its appearance more than two hundred years previously; and Caxton's, which belonged to the fifteenth century, was printed. In 1535 there was issued the first complete English Bible, that of Miles Coverdale; and others followed, notably the Matthew's Bible, the Great Bible, the Geneva Bible (undertaken by English refugees at Geneva in Queen Mary's reign), and some besides. The last-named was that in general use at the time of the publication of the new English version, but gradually the one national Bible displaced the other; and by the time it had been before the public for fifty years it was the master of the field.

* * *

James had no thought of the good that he wrought or of the vast influence that his simple words of approval would have upon the lives and thoughts of his people for the long centuries in the future. Yet for all that it should not be imagined by those who have not taken the trouble to inform themselves of the history of this great book in its different forms and translations, and the part that it has had in moulding the destiny and character of the English people, that the Bible first came into its great popularity when it was thus officially published with the full authority and commendation of the king and the national Church. No; long before that it was the book of the people, for the days of the early Puritans came before that time, and it has been rightly said that at that time the English were the people of a book, one that was read everywhere, in the church and the home, making eyes glow with fervour and pulses beat fast with hope and the desire for doing wherever it was read. It was the one book that was available to the people; they had no others. The classics and the scanty literature of their own time were denied to them. Printing was still an expensive

[*All Rights Reserved.*]

thing, and the time was more than three hundred years in advance of that of shilling editions of standard works and penny volumes of the Testament. So the Bible was the people's reading; they drew their thoughts from it, moulded their expressions upon the phrases that were in it, and language and literature were affected. The Authorised Version was of splendid value when it came, because for purity, quality of translation, and accuracy it was better than the others; and with the book having such a vogue and exercising such influence, even a little advance in these respects was a momentous thing. But if the Bible was then the book of a people, and if it is now perhaps less the book of that people, to their loss in divers important ways, it has become the book of the whole great world. With no prescience that has ever been given to man could James and his committees have foreseen the amazing romance of the circulation of the translations of the Bible into the countries and among all the peoples of the world. The other day I came upon a report of the British and Foreign Bible Society that was, I think, a year or two old, but as one such report is very much like another in these days it was probably no worse for that; possibly, having regard to modern habits of forgetfulness and the evanescence of that which we call news, it was all the better for its revival. This report told how the Bible, or portions of it, was then printed in four hundred and twelve different languages, and how during the previous year sections of it had been printed in Lengue, a language spoken by the Indians of the Paraguayan Chaco; in Lu-Nyankole, the speech of a tribe inhabiting the region south-west of Uganda; and in Hindu-Sindhi, which is a dialect current among the Hindu inhabitants of Sindh. During that year five and a half million volumes had been issued by the society, of which nearly a million were complete Bibles, over a million were Testaments, and the rest were portions of the book. The receipts for sales in that year amounted to over two hundred thousand pounds. And George Borrow, when he took the Bible with him into Portugal and Spain, and caused it to be circulated there, so far from exhausting the possibilities of adventure and interesting experience in such a mission, only touched upon the fringe of them, and it has been left to the more modern travellers in the service of this great society to see more, do more, run greater risks, and endure greater hardships and sufferings. In this report that I write of, the story is related of how one colporteur entered a lonely village in Lower Egypt, and offered his gospels to a number of the fellaheen. They received him with execrations and threats, which they promptly proceeded to put into execution. 'Oh you kafir [infidel]!' they exclaimed. 'Do you sell the Bible to us, the true believers?' Then a man with a gun came up and joined the others. 'Let us take him and shoot him—the dog!' they cried. And so they led the colporteur to a large shed. He laid aside his bag of books, and took his turban from his head. Then an idea came to him. A jar that seemed as if it might contain water stood near to the man who held the gun. 'Before you shoot me,' said the intended victim, 'let me drink from that jar.' In their scant mercy the fellaheen granted this last prayer, and the colporteur went forward to reach the jar. Now this Bible-man was big and strong, renowned indeed for his physical power, as such should always be; and as he passed the man with the gun he knocked him down, and in a trice he wrested his weapon from him. This startling turn of events gave fright to the others, who by a brief process of thought came to the conclusion that he would now shoot them as they had threatened to shoot him, and so with all haste they ran away and hid themselves among the tall Indian corn that was growing near by. Shortly afterwards the colporteur handed the rifle to a company of men with whom he had made acquaintance, and passed on his way, ready and prepared for more adventures and with undiminished intention of persevering with his work to the best of his ability.

* * *

It will be a good thing to make the utmost celebration in London, the country, and in Britain abroad, of this tercentenary of the issue of the authorised English version of the Bible. Centenaries, bicentenaries, and tercentenaries—to the first-named of which we seem uncommonly attached in these days, scouring the old calendars as we do for births and deaths and great events of a hundred years ago to celebrate—are purely arbitrary marks on time. They do not signify any definite or recurring change in nature. They are not like the night and the day or the seasons of the year. The earth and the universe are ignorant of them. They are merely an arrangement, a convenience, belonging to man's system of counting; but they give a definite occasion for a sharp quickening of our interest and sympathy with their subjects, and often lead to a valuable adjustment of our point of view. The celebration of this tercentenary of the Authorised Version of the Bible is opportune, and it may do some substantial good. But much more than that, it may even be said to be necessary. One reads that 'an appeal will be made that the Bible shall be given its rightful place not only in the life of this generation, but of all the generations which shall succeed it.' Here clearly is the suggestion that it has not that rightful place at the present time, and that is certainly true. There is still a large proportion of the people to whom the Bible is the book of books, that which they know best and read most; but the proportion is vastly smaller than it used to be, and

it is dwindling always, while it has to be added that its regular readers for the most part belong to the humbler, less educated, and less reasoning classes. Neglect of Bible-reading by the others has come along with the modern indifference to religion and religious matters in every shape and form; and this is specially unfortunate because it is the result in many cases of a modern ignorance of what the Bible is and what place it holds in literature. Its worth and interest are not understood. Those of whom we speak as being indifferent to religious matters, and wilfully neglectful of them, regard the Bible as being simply a religious book, a sanctified volume which expounds the basis and the principles of belief in God and Christ. Being neglectful of the study and practice of these principles, they feel themselves to be consistent in being equally neglectful of the book which teaches them. As attendance at a place of worship would be irksome to them, would be an act void of sincerity and pleasure, and only undertaken either for the sake of appearances or for the settling of a twinge of conscience that spoke of duty, so would the reading of the Bible be undertaken in the same spirit, and, not being considered as an intellectual pleasure, but as a duty which it is even easier than the other to disregard, it is left undone. It is considered that the study of this book would be merely a practice of religion. The people who take this attitude, being the vast majority, excuse themselves still further when they remember the attacks that have been made by science upon the accuracy of many of the statements that are made in the book. They put it to themselves, whenever they take the trouble to think at all upon the matter, that this is merely a book of religion, and that it is largely discredited at that. In this negative or antagonistic state of mind they are unable to realise the great magnificence of the book in all respects that are quite distinct from its religious history and teaching.

* * *

There is a vast multitude to-day who have never come to know and realise that, viewed in just the same way as other classical works are, as a means of intellectual exercise and delight, as a piece of literature, this book is the most splendid that has ever been given to the world. If they could pick up a part of it that was made up into a volume with a plain binding, or one that, while being handsome and ornamental, lacked the device of the cross and the title of 'Holy Bible,' being called by some unfamiliar name, they might and very likely would be fascinated by its literary charm. But they do not or cannot ever bring themselves to approach the reading of the Bible from this detached literary standpoint. The teachers of the Christian religion do not encourage them to do so. Mistaken as they are in some of their methods, they would in many cases probably condemn the reading and study of the great book in any such frame of mind as being irreverent and so improper, not realising that appreciation of its literary beauty might increase to wonder, and then to further wonder, and to a conjecture that might turn agnosticism to belief as it was seen how the pieces of this marvellous literary mosaic fitted in with each other, and how in all of them there is the sign of a literary inspiration that is nothing short of phenomenal. It is that—the phenomenal literary character of the Bible—which might disturb unbelief when the most vehement harangues of Nonconformist ministers and the gentle prattlings of curates failed completely. If you take your educated and intelligent but often not deeply reasoning agnostic, and grapple with him first on the great problem of the how and the why of the creation of the universe which includes this wonderful world, becoming more wonderful every day, demand of him next an explanation of the cause of the continued beating of his heart, and bring him afterwards to a full knowledge and appreciation of this absolutely phenomenal literary character of the Bible, you must, if he is a man of reason, shake his agnosticism to its foundations, if such it has. But we are not here now to consider the Bible in its religious aspect at all. We want it to be 'given its rightful place' in literature, which is at the head of it. This is a necessity of the time, the time when there is more general reading of the classical works than ever there was before. The cheap reprints have brought it about that in these days everybody is reading Homer and Virgil, Horace and Æschylus, Sophocles and Plato, Aristophanes and Euripides, becoming familiar with them, quoting easily from them, and yet a vast proportion of these people have never read ten chapters of the Bible since they left school, and have no present intention of doing so. That is because the Bible is not like any other book to them, not like a piece of literature. It is just the Holy Bible, the religious book, that which is enjoined upon them to be read as a matter of duty. It is not made to look like any other book. It is given a most distinctive appearance both inside and out. The binding is peculiar and bears peculiar devices, the edges are different from the edges of other books, and the format is of a kind that is seen in no other volume. One cannot help thinking that there is a vast loss in this distinction. If the Bible were merely presented as other books are, and submitted to readers as a piece of literature, or, as one might say, an anthology of ancient writers, it would have a far stronger place among the readers of books than it has now. Its transcendent merits would be better recognised. Those of lesser literary understanding might still have their fancy Bibles with brass edgings to the covers, marginal references that are never considered, and type that is a

severe test to the eyesight and defies long reading, but others would be led to taking up the book with less prejudice and more pleasure of anticipation if it bore the same appearance as their Homer or their Horace. They would take it up as many of them have taken up the Koran; for, strange as it may appear, I have encountered several English people in recent times who have read more of the Mussulman's Bible than the Christian's. Then they would realise their good fortune. They would come to know that the Hebrew of the original and the English of the translation have suited each other as no two other languages so far apart in origin could have done. The translation was made in a period that is celebrated for its literary richness; and in style, diction, and clarity and force of expression there is nothing in our language that is so good, so beautiful. And it is the very heart of our English literature. Works that came after it and became classics were deeply influenced by it. It was a well from which writers drew large draughts of inspiration in style and manner. It had, and still has directly or indirectly through the works of others which were directly influenced, an effect upon our literature that no other book has had or could have.

* * *

Those who would know anything about the history of our English writing and the causes that have worked upon it to different ends must make a deep study of the Bible. Modern writers of ambition might with advantage examine it more and practise what they must inevitably learn from it. In no other book is there such a magnificent economy of words, and such an economy is the first essential of perfect literature. In the Bible there is no word wasted, no redundancies, no loose and wearisome verbiage. The simplest words are used, and they are the exact words for the expression of the meaning that was meant to be conveyed. They give room for no doubts. Then the phrases are clean cut as with a knife, and with it all the language glides beautifully on through the chapters. When one is led to think of the superb terseness of this book, there comes into the mind a memory of a story concerning the editor of a great daily newspaper in New York and one of his youngest and most enterprising reporters, which I believe to be true. A hint was conveyed to the office at New York of some important happening far away, and the young reporter was forthwith sent off to make inquiries concerning it, and if possible 'write it up.' He was successful in his task, and came by some news which he had good reason to believe would not be gathered by rival newspapers. With a customary and creditable enthusiasm, he was inclined to exaggerate its importance, and telegraphed to his editor in New York begging for more space than that which had been assigned to him in the first place. He asked that he might be allowed to telegraph a column, this representing about fifteen hundred words. The editor, lacking the correspondent's enthusiasm for his personal success, and having a jealous regard for the value of his space, answered: 'Send six hundred words.' This was sad for the reporter. As a final effort he tried to compromise with the chief at headquarters, and telegraphed again: 'Cannot do it in less than twelve hundred words without spoiling. Shall I send that?' The editor's reply was interesting and crushing. It was: 'Story of creation of world told in six hundred words. Try it.'

* * *

But with all its compactness and conciseness the language flows smoothly and sweetly through this book. There is nothing else in the world like the sweet, rippling cadence of the Psalms of David. Here indeed have we the music of words, gentle and sweet, seeming like the singing of a gladdened soul: 'The Lord is my shepherd; I shall not want. He maketh me to lie down in green pastures: he leadeth me beside the still waters.' And consider the sublime perfection of the Hundred and Fourth Psalm, when the singer, after his meditation upon the mighty power of his Lord, is roused at the end of it to a great ecstasy of admiration and reverence, and shouts aloud, 'I will sing unto the Lord as long as I live: I will sing praise to my God while I have my being.' And so it is again in many places in this glorious book, in the beautiful Song of Solomon and in his Proverbs, graceful in their expression, rich in their imagery, acute and appealing in their wisdom. Men who have a love of literature, and consider that they have made the most extensive and useful explorations among it, are familiar with the Meditations of Marcus Aurelius and the Maxims of La Rochefoucauld; but what was the wisdom of these sages, and what was the expression of it, compared with the aphorisms of the Hebrew king? Were they given such a title as is suggested in the last sentence, and published in separation from the Bible as an ordinary classic, there would surely be a vogue for Solomon as there has never been to now. The keen perspicuity and the sound common-sense, the deep insight into the weaknesses and the follies of human nature, are set forth here as in no other book. Solomon truly deserves his reputation for wisdom. Men and women of the world today who have not read him because his advice is bound up in the religious book that, in their folly and mistake, they do not consult, would be deeply impressed by what he says; they would be fascinated so that they would unwillingly sleep again until they had read him through. 'The heart knoweth his own bitterness; and a stranger doth not intermeddle with his joy,' said the king. 'Hope deferred maketh the hear

sick: but when the desire cometh, it is a tree of life,' said Solomon. 'A continual dropping in a very rainy day and a contentious woman are alike,' was his reflection. 'Look not thou upon the wine when it is red, when it giveth his colour in the cup, when it moveth itself aright: at the last it biteth like a serpent, and stingeth like an adder,' is the most perfect anti-Khayyám. 'A word fitly spoken is like apples of gold in pictures of silver,' King Solomon said; and also, 'As cold waters to a thirsty soul, so is good news from a far country.' Then there is a system of conduct put forward negatively in the list of the seven things that are hateful in a man: 'A proud look, a lying tongue, and hands that shed innocent blood, an heart that deviseth wicked imaginations, feet that be swift in running to mischief, a false witness that speaketh lies, and he that soweth discord among brethren.' And none knew better than Solomon how we should hold our relations with our fellow-man. There is a maxim for the unduly lingering guest, him who in the modern phrase 'outstays his welcome,' in this that Solomon said: 'Withdraw thy foot from thy neighbour's house; lest he be weary of thee, and so hate thee.' And, irregular as may appear the suggestion that there is humour in the Bible, there is yet in Solomon a certain grimness of understanding and expression which is closely allied to humour, even though it be humour unconscious. Solomon said, 'When thou sittest to eat with a ruler, consider diligently what is before thee; and put a knife to thy throat if thou be a man given to appetite.' Such is a wise king's wisdom. For the one reason that is embodied in these notes, and for many others of a very different character which are held in mind by those who lead the way in the celebration of this great tercentenary, it will be well if the Bible is 'given its rightful place in the life not only of this generation, but of all the generations which succeed it.'

PETER AND JANE.

CHAPTER XI.

PETER sat on a cow's head, bleached and white, at the Estancia Las Lomas, reading a letter from Jane Erskine. He had begun to think that the Royal Mail Steam-Packet Service was run for the sole purpose of carrying correspondence between himself and her, and he felt pleased with its punctuality in delivering his letters.

'It feels a bit queer being here,' he said to himself, gazing round him as he spoke. It was the evening of a hot day, and there was a flame of crimson over to westward, where a few minutes ago the sun had sunk through great bars of flame, dying grandly like a warrior. All round him was a vast, solitary land, but nearer the *estancia* were pleasant, homely sights and sounds. A cart yoked with five horses abreast stood by the *galpon;* a flock of geese walked with disdainful, important gait across the *potrero;* and the *viscashos* popped in and out of their holes with busy importance, like children keeping house. The farm-horses turned out for the night cropped the short grass near where he stood. Peons, their day's work over, loitered in the *patio*, and the major-domo's children rode by, all three of them on one horse, their arms round one another's waists. The little *estancia* house stood red-roofed and home-like, with green *paraiso* trees about it. In the veranda Toffy was stretched in a hammock, a pile of letters and newspapers from home beside him; Hopwood appeared round the corner carrying cans of water for baths; while Ross, their host, in a dress as nearly as possible resembling that of a gaucho, was that moment disappearing indoors to make the evening cocktail. He came to the door presently and shouted to the two men to come in, and pointed out to them—as he had pointed out every evening since they had arrived—his own skill in swizzling.

It was a curious coincidence that had led Peter and Christopherson to Las Lomas. When they reached Buenos Ayres a very pleasant and unexpected meeting occurred, for Peter met Chance, a man who had been with him at Eton, on his way down the river to go home. Chance had lost his young wife a little while before, and was returning to England to see what the voyage and a change would do to cure him of an almost overwhelming grief; and his partner, Ross, was left behind to look after the *estancia*. Ross was at the hotel also, and proved an excellent fellow. And Chance suggested that Ogilvie and Christopherson should return to Las Lomas with him and see something of the life in Argentina, and stay as long as they could, and keep Ross company until he himself should return.

The invitation was accepted without hesitation, and it seemed that the two travellers were in luck's way. The *estancia* was a snug little place, amply watered by a river, and lying some miles above the last port where the small river-steamer called. This port was nearer the *estancia* than the railway station at Taco, and the last stage of the journey, therefore, was made by steamer. The river was a wide, shallow stream, very difficult of navigation. Nearly ten miles broad in some parts, at its deepest it never gave soundings of more than five fathoms of water. In dry weather it was possible in some places to drive a cart across it, while in others the

current was quick and dangerous. It was full of shallows and sandbanks, and for some miles the course of the little steamer was marked out by boughs of trees stuck into its muddy bottom.

The steamer was a well-found craft compared with many others that had navigated the river before, and was a new venture on the part of a man, Purvis by name, who had lately acquired considerable property on the river-bank. He was a gentle-mannered, nervous-looking individual, with weak, pale eyes that watered incessantly, and he had a curious habit, unknown except to dwellers in town in Argentina, of dressing like a city clerk. All the men in camp wore breeches and wide felt hats and polo boots, but Purvis was habitually dressed in dark tweed clothes and a bowler hat. Even on the steamer and in the heat of the midday sun he wore the same kit, and walked up and down the deck with an umbrella held over his head. He spoke half-a-dozen languages, but seemed to think in Spanish, for whenever he spoke quickly or impulsively that was the tongue which he used.

The crew of the steamer was composed of a queer mixture of elements; and, whatever their moral qualities may have been, their appearance would not have been altogether reassuring to a man, for instance, travelling with a good many valuables about him. There was Grant the engineer, a Scotchman who never spoke at all, and who loved his engines with a personal love; Pedro, a man with big, melancholy eyes, half-Basque and half-Italian; an old Belgian stoker and a nigger from South Carolina; and, lastly, John Lewis (or Black John, as he was always called), who came from a Danish West Indian island, and who said he was a Scotchman and had been a cabinetmaker in Glasgow.

The little steamer was not uncomfortable. She was a flat-bottomed river-boat, and carried cargoes of hides and other Saladero produce. There were some live pigs with immense tusks, and some *tasajo* in the hold, and a raft of pipes of tallow which a hawser towed behind. The boat was supposed to draw only two feet of water, but in her present overloaded state she dragged heavily against the mud in the shallower parts of the river.

The lawyer, Sir John Falconer, who had come down to the river to see the two travellers off, drew Peter Ogilvie aside and had a considerable talk with him before saying good-bye.

'Don't attempt amateur detective work yourself,' he urged, 'but remain with Ross until proper official inquiries can be made into the case. There is nothing for it but to remain inactive for the present; but gather information quietly where you can. The law out here is a clumsy mover, and you may have to wait months before you hear anything. Keep your eyes and your ears open; travel about the country a little, and get into conversation with as many people as possible. News in Argentina is not carried by the newspapers but by the men who ride from place to place, and more particularly by scamps who have no fixed address for very long. My advice to you would be to say as little as possible about the business which you have in hand, but get into conversation with men who have lived long in the country.'

'I tried that sort of thing on the steamer coming out,' said Peter, 'but we didn't get very much information. The whole thing, you see, is a very old story.'

'This man Purvis, whom you are travelling with,' said Sir John, 'is the sort of person who might help you. He knows the country intimately, as far as I can gather, and depend upon it he hears more gossip on board his boat than is ever heard anywhere else in the whole country. Chance dislikes the man, but he may be useful.'

'He looks rather a worm,' said Peter.

'It is generally worms who turn king's evidence,' said Sir John with a laugh at his own joke, and then added quickly, 'I don't speak personally, of course. Your captain is not exactly one's idea of an old sea-dog, but he is a gentle, intelligent little man.'

'Ross said something about there being trouble on his *estancia*,' said Peter. 'I don't know what it was all about.'

'He must have some difficult men to manage up there,' replied Sir John. 'There is always more or less trouble amongst these mixed nationalities out here. But that need not affect you, of course.'

'No,' said Peter. 'My cue seems to be to gossip like an old woman with every one I come across.'

'And to say as little as you can yourself,' concluded Sir John. 'The man who speaks very little and hears a great deal is always in a strong position.'

'Although an uninteresting beast to meet,' Peter remarked in parenthesis.

And then, as the voyage was about to begin, the two friends bade each other good-bye.

The steamer trip up the shallow river was thoroughly enjoyable, in spite of the amazingly bad food which the travellers had to eat, and the ever-present smell of pigs and hides. The vegetation of the river-bank was beautiful in the extreme, and the smells on board the boat were often counteracted by the exquisite scents which were wafted from the shore. Willows and mimosa-trees, air-plants, and every sort of creeper gave an almost tropical appearance to the low woods through which the river ran.

Purvis proved himself an agreeable companion in a timid, mild way. He pointed out his own *estancia* house by the river-bank, and invited Peter and Sir Nigel to come and stay with him some day.

The three passengers did not trouble to turn in when night fell, but lay on deck and leaned against bales of wool until the boat arrived at

the little port of La Dorado at two o'clock in the morning. Moonlight and dawnlight lent an air of mystery and beauty to the solitary country; there was a sort of vast stillness over the land as the boat glided to her moorings in the early morning. Nothing could be heard but the chirping of a *bicho* or the desolate neigh of one of the horses that awaited them by the little quay. The stars shone and twinkled overhead, and the air was clear and cool and marvellously still. Black John woke the travellers up and told them it was time to disembark; and Purvis, to whom sleep seemed to be quite unnecessary, was awake and ready to give them a send off.

'Anything I can do for you while you are out here,' he said to the two friends as he bade them good-bye, 'I will do most willingly. I am *paseando* now, but I hope to be at my own place shortly, and will ride over and see you. Ross has not been out here long, and perhaps does not know so much about the country as I do.'

The Englishmen thanked him and mounted their horses, while their luggage was put into a rough cart, and they then rode off in a mysterious dawn across the great, silent country to the little *estancia* house amongst the *paraiso* trees.

Ross was a capital host, and as the only possible entertainment he could offer his guests was work upon the *estancia*, he gave them plenty of it; and the out-of-door life, notwithstanding the heat and the want of newspapers, the mosquitoes and other minor ills, was full of interest, and touched with a sense of freedom and hardness.

In spite of many drawbacks, our two friends enjoyed the return to the primitive conditions of life. To be uncivilised has indeed considerable charm when the blood is young and the muscles are strong and wiry. Peter was for getting some of his own sheep out here, and a few good horses to improve the breed. And Toffy had schemes for an immense shipping industry which would carry cattle at so low a rate to England that beef might be sold there at fourpence a pound, which, as he remarked, would benefit all classes. Ross gave his two years' experience with a weight of wisdom. He had a share in the *estancia*, and having tried to live in London in a Government office on two hundred a year, found Argentina by contrast the only country in the world for a white man.

Peter himself, as he sat on the cow's skull near the door, and saw the pleasant, simple life of the place, the major-domo's children ambling along on their horse, the flock of geese, and the peons loitering by the *patio*, was inclined for the time being to put a very low price on civilisation, and to wonder how Jane would like a trip out here.

'Who knows,' he said to himself, 'my brother and I may do a deal. I may find him a patriarchal sort of cove, living the simple life and tending his own flocks and herds. He will migrate with his wives and little ones to Bowshott, and Jane and I will annex the flocks and herds in Argentina. The place might have its attractions for Jane; and, anyway, there would not be this beastly separation.'

Toffy appeared at the wire door of the corridor and shouted to them that breakfast was ready, and Peter strolled towards the house. It was an absurdly small dwelling, one story high, but with a number of low buildings round it, covering a considerable amount of ground. And withal it was a trim little place which a man had furnished and fitted and made ready for his bride; and the poor little garden, now devoid of flowers, was another evidence of his care. The dining-room was a small, whitewashed hall hung with guns and rifles, and furnished with a table and a deal cupboard which held some bottles of the rough red wine of the country. The room next to it, called by courtesy the drawing-room, had been built for Mrs Chance when the rest of the house had been made ready for her, and it still bore upon it the impress of a lady's taste. There was a shelf running round the room furnished with photographs, and a sofa covered with the *guanaco* rug. In one corner of the room stood a piano, and upon it was a copy of *Hymns Ancient and Modern*, with music; for Mrs Chance was a parson's daughter, and she used to play to Chance and sing very sweetly on Sunday evenings.

The roughly built fireplace in the room was filled with logs, and a guitar always stood on a cretonne-covered box close by. It was on this little cretonne-covered box that Mrs Chance had been wont to sit and play the guitar which Chance had purchased for her, and one of the peons had taught her to thrum Spanish airs upon it. It had been a pleasure to her during the brief year that she had spent in the *estancia* house, with its red roof and simple rooms, and the corridor that had been enclosed with wire-netting for her. It was she who had carved the blotter and the paper-knife on the writing-table, and had made covers for the chairs. Mrs Chance and her baby lie buried in the cemetery at Buenos Ayres, and the *estancia* house always had an unfinished look about it, for Chance liked to have it just as she had left it.

Three or four sparsely furnished rooms opened out of the living-room of the house, and the corridor with its wire-netting made a cool resting-place for the wayfaring men who often rode up to the house at sundown, and for whose tired limbs a *catre* and a rug were sufficient for a night of dreamless slumber.

'All the same,' said Peter to himself, 'we don't seem to get much forrarder in our search for the missing heir.'

(To be continued.)

A SURFEIT OF SCORPIONS.

AMONG the drawbacks incidental to residence in tropical countries, scorpions must be reckoned in the same category as venomous snakes and mosquitoes. Indeed, since they have a trick of hiding in your boots and bedclothes, whereas the snakes are as a rule easily seen, and the mosquitoes fight in the open, these horrible, lobster-like creatures, with their dangerous sting, are perhaps the worst evil of all. Many years ago, when I was spending some weeks in a Moorish garden, scorpions were said to be plentiful; though, thanks to the devotion of a native servant, who swept them out of our sleeping-quarters every evening before we retired for the night, we were not troubled by them. In fact, my stay was drawing to its last hours when, anxious to take some of them back to the Zoological Gardens, I went out of my way to seek them.

I had already heard lurid tales of their destructive presence in the city from a barber who came periodically to look after us, and who was famous, over and above his professional skill (which would not have earned him a job at Shipwright's), for curing scorpion-bites. This he did with an application of cautery and ambergris, accompanied by an Arabic incantation, the rough translation of which would run as follows: 'Scorpion, daughter of scorpions, your mouth is as a saw's edge, your tail as a needle. . . . May the Almighty God help us to cool you, even as the sting of fire is cooled; and may your strength fail, as we trust in God!' This abracadabra he had long since purchased from the renowned Ali Ben Hadj for a large loaf of Christian sugar, and it was allowed in the neighbourhood to be infallible, particularly when the offending scorpion was roasted in a metal ladle during its recital. Of course it is a faith-cure; but faith-cures count for much in the East, and European doctors, with all their diplomas, get less native custom than the sallow old quacks who deal in cures in the market-place, with no more stock-in-trade than pen and ink, a sand-sprinkler (instead of blotting-paper), and a bundle of coloured slips of paper.

During the early days of our occupation of the Riad (garden) Ben Ibrahim, there had been some fears of the scorpions taking the initiative, and an army of whitewashers, a caste of their own, were summoned, with their pails and palm-leaf brooms, to go over every wall and ceiling, so that at any rate (since the scorpion lacks the arts of the chameleon) the enemy might not take us unawares. What with this precaution and the afore-mentioned solicitude of our servant, we saw no scorpions; and on the eve of my departure for the mountains I besought the barber to make me more closely acquainted with some. This singular request, which at first he could not take seriously, presented no difficulty, and he offered to bring two jars full of them. In accepting this suggestion, I asked in addition to see them caught; and fortunately a very ancient caravansary in the Mellah or Jewish quarter of the city was to be pulled down next day, and there, he assured me, I could see plenty of scorpions.

Let me, for the benefit of readers unacquainted with the Orient, explain that a caravansary is nothing more than a large building with a court-yard and many rooms, serving as a rest-house for caravans, the yard for the camels and the rooms for their owners, with spare rooms for barter, like the showrooms or sample-rooms of commercial hotels in Europe. There is no furniture, and there is much insect life. In such an establishment the curious traveller may see the quaintest pictures of native life, and pilgrims with their bourdons and soldiers with their matchlocks often loiter there in company with the traders, for whose use they are primarily intended, taking snuff and coffee and gossiping after their kind. Some even smoke small-bowled pipes of *kief*, an exceedingly unpleasant preparation of hemp-seed, which is supposed to furnish visions of Paradise, but which invariably makes Europeans sick.

This particular caravansary had long stood amid the dwellings of the sons of Jacob, and was now to be demolished. As it stood on dry ground, the barber told me, it was certain to harbour scorpions, which had swarmed in the dirtier quarters of the city ever since the 'warming of the grass,' the Moor's picturesque expression for the spring.

The worthy haircutter awaited me early next morning at the gates of the ghetto, and we made our way along the narrow streets, through a press of beggars and loafers, on horseback of course, until we had to dismount beside the débris of the caravansary, which was already nearly level with the ground. Here I saw the amazing spectacle of native workmen wallowing barefoot and knee-deep in brick-dust, from which every few moments one or other would extract a writhing scorpion, deftly nipping it between his thumb and forefinger, in which position the scorpion was powerless to strike, however willing it might be to wound. In some respects, no doubt, this was a sorry spectacle; but the sight of other folks in danger (which, by the way, they wholly ignored) has an irresistible magnetism, else why the crowds at a Madrid bull-fight or a London fire? But worse was to follow; for, hearing that there were distinguished strangers among the audience, two lads famed for their bravery with scorpions next appeared on the scene, and handling the disgusting creatures as indifferently as if they had been

butterflies, they took them between their teeth and laid them on their eyelids! There was no trickery, for the scorpions were taken at random from the newly upturned earth. Then they palmed the scorpions and made them reappear, as professors of legerdemain do with coins; and it struck me, as I gave them a trifling gratuity which moved them to eloquent gratitude, that they would have been popular in the music-halls at home, where the public is ever on the lookout for new sensations.

By way of postscript to this uncanny reminiscence, let me add that I did eventually leave Morocco with two large jars half-filled with earth, each containing fifteen healthy scorpions. I was assured by the natives that these jars could be packed away in my luggage without any damage to the animals; so I had them fitted in wooden cases, and bothered no more about them till my steamer lay in the Thames. The scorpion is a hardy creature. The thirty I had travelled hundreds of miles with me, jogging over the hot plains, and banging against the sides of a camel, and then for more than a thousand miles tossing on the Atlantic. No food did they get, and very little fresh air. At Tilbury a Customs officer lingered doubtfully over the cases; but I resolved his doubts by begging him to open them at his own risk, and not to hold me responsible if his action should create a vacancy in his department. On opening the cases at the Zoo, in the presence of the late Mr Bartlett, I found that only ten survived, having devoured the other twenty. But the diet had suited them admirably, and they lived quite a long time in the warm atmosphere of the Insect House.

THE SUPERSTITION OF THE SEVENTY-SIXTH.

By J. Morton Lewis.

I HAVE seen it altogether on three occasions. The first was over fifteen years ago, whilst I was staying at Aldershot on a visit, and was shown over the officers' messroom of the Tenth Surrey, the regiment known in the fifties and sixties as the much-dreaded Seventy-sixth. Then it lay on a velvet cushion in a glass case which hung on the wall, surrounded by the bullet-torn, shredded, and disfigured colours of the regiment—their scroll of honour, on which were emblazoned the names of Culloden, Oudenarde, Malplaquet, Badajoz, Waterloo, Seringapatam, Sebastopol, Delhi, and many others, where their sons had helped to build up the immortal glory of the regiment.

As far as I could judge, it was an ordinary bugle, much dented and battered. I stood before it for a moment, wondering as to its history.

My guide, a private of the Tenth Surrey, was plainly anxious to hurry me on.

'Why is it so honoured?' I asked.

'Because it's bloomin' well 'aunted,' was the gruff response; and that was all the information I could obtain from him on the subject. Whether it was from ignorance or disinclination to satisfy my curiosity that he refused to say more I am unable to say.

The second occasion on which I saw it was when the regiment returned from the last South African war, where they had still further added to their fame by conspicuous bravery at Ladysmith and Colenso. I saw them pass up the Mall on their march through London; and there, proudly held by a diminutive member of Her Majesty's army, was the sacred bugle, no longer clean and bright, but tarnished with the stain of powder and the dust of many battles.

The third occasion was a couple of years later, when I was the guest of the regiment at their headquarters. It was after dinner, and I was seated on the right hand of the colonel, a grizzled old veteran of seventy, who had seen service in the Mutiny, had passed unscathed though the dread passage of Majuba, and had lived to avenge that day of disaster.

Whilst we were smoking and chatting over the wine I asked him why they placed such count upon the instrument.

He gazed at it for a moment, and a look almost of reverence came into his eyes. 'Every one asks us that,' he replied.

'And they go empty away?' I suggested.

'We do not tell many,' was his response; 'they would not understand. Do you believe in the supernatural?'

'To a certain extent,' I said. 'Why?'

'That bugle is a superstition of ours.'

He turned to the adjutant. 'Have you the keys of the case?' Then to the assembled company, 'You have no objection to my showing it, gentlemen?'

There was a chorus of replies in the negative.

Seeing my look of astonishment, the colonel explained the reason for this ceremony. 'This bugle has only been out of its case three times within the last ten years—once when the late Queen asked specially to see it, once when the present King was made honorary colonel of the regiment, and when we sailed for South Africa.'

'I remember seeing you bring it back,' I said.

'We should not have come back without it,' was his reply.

He unlocked the case, and, withdrawing the bugle, laid it on the table.

I leant forward to examine it. When I first saw it the instrument appeared to be made of plain white metal. On closer inspection I

saw it was beaten out of fine silver. On it was a pattern wrought as delicately and subtly as any work of the great Cellini.

'What a magnificent piece of workmanship!' I ejaculated.

'Yes. Do you see this?' replied the colonel, pointing to the bugle.

Inside was a sentence written round and round in the metal, each letter picked out with the most perfect rubies.

'It is in Pali, the sacred language of the Buddhists, and, translated, means, "To you, O protectors of Buddha, be all honour, glory, and fame."'

'How did it come into your possession?' I asked.

'In a very strange manner. I was a junior at the time. It was given to us a few months before the outbreak of the Mutiny. The regiment was stationed at Mahor. We had no idea of what was in store for us, and there was very little for us all to do except smoke and pass away the time. A dozen or so of the senior officers had gone out on leave for a week's shooting.

'A couple of nights after their departure they were encamped about fifty miles north of Mahor. They were seated outside a small bell-tent they had taken with them, smoking and chatting before turning in for the night, when in the distance there suddenly arose the sound of chanting. It was in the height of a tropical summer, and above the trees they saw thin wisps of smoke rising.

'Partly from curiosity, and partly from a fear that the jungle was on fire, they mounted, and leaving the camp in charge of a couple of servants, rode in the direction from which the smoke appeared.

'In those days the country to the north of Mahor was practically untraversed. Where the railway now runs connecting it with Rajputana and the Punjab there was then only a narrow path through the jungle and highlands, with here and there a small village clustering around a temple.

'The course they followed led them towards a group of small, densely foliaged hills, the name of which I forget for the moment, but they have played an important part in Indian history.

'When they reached the foot of these the singing had increased in volume, and in the pauses they could hear the pattering of men dancing on the bare earth.

'Although they could see no flames from where they stood, so dense was the undergrowth, the odour of the burning camphor-wood was driven down to them by the wind, and every now and then, in the brief intervals of silence, they could hear it crackling.

'Most of them were for turning back; it is no pleasure to encounter a group of Indian fanatics at dead of night in a practically unknown country. But amongst them was a man who ultimately became one of our most brilliant officers. His name is indissolubly bound up with that of India—Captain Ograh. He was an Irishman, as hot-headed and fearless as I have ever known a man to be. "Son of the Devil" was our name for him. To him danger was the staff of life; he could no more subsist without it than we can without food. He expressed a determination to climb the hill and see the cause of the demonstration.

'Knowing the terrible risks he would run, the others tried to dissuade him; but he was resolutely determined to have his own way, and swore he would go by himself if no one would accompany him.'

The colonel took a sip of wine. 'It was as well he did. We owe the bugle to his inflexibility.

'Determined that he should not go alone, the others fell in with his wild project, and, leaving their horses in charge of a native at the foot of the hill, commenced the ascent.

'Groping their way through the thick undergrowth, and disturbing numbers of birds at almost every step, they stumbled, half-way up, upon a narrow, winding path which soon brought them to the summit.'

When the colonel commenced the recital he spoke impassively, almost with the hesitation of a man who finds that acts are easier than words. Now the fervour and excitement of the scene seized upon him. His eyes shone with enthusiasm as he proceeded. He leaned across the table, gesticulating as he spoke, oblivious of the presence of others. More than once his hand travelled to where his sword would be, and I saw on his face the soul of a man who had sprung from generations of soldiers and knew not fear.

'As they approached they could see the flames from the fire throwing weird, fantastic shadows out into the darkness, and in the cool of the night its heat beat down upon them. Every now and then they caught glimpses of one of the white-robed figures dancing and singing.

'When they were within fifty yards, Ograh—who had by common consent constituted himself leader—ordered a halt, and then slowly and by a devious route they approached a thick cluster of bushes to the rear of the natives.

'When they reached its shelter a terrible sight met their gaze. On an open platform on the summit of the hill were gathered some hundred and fifty men and women from the hill-tribes living in the small villages around.

'In the centre was a huge fire, and by its side, chained to a couple of stakes driven into the ground, stood a girl absolutely naked, her only covering being her own long black hair, which hung in masses far below her waist, covering from view a small portion of her olive skin.

'Around her danced a score or more of priests beating tom-toms, singing, screaming, and invok-

ing their gods. The sweat dropped from them in huge, glistening drops as they leapt into the air in their frenzy; their eyes were aflame with a diabolical look of madness; foam gathered at the mouths of some.

'Behind them, apparently deep in meditation, sat an arch-priest enthroned upon a moss-covered stone.

'And amidst it all stood this girl, silent, almost grandly impassive, without a sign of fear upon her face, only one of shame that she should stand thus before so many.'

The colonel paused to finish his wine. 'I am sorry I cannot tell you the story as graphically as I should like, but I was not there. I would give ten years of my life to have been present.' He paused. 'And the boys are all dead.

'I was told that Ograh was like a maniac when he saw everything and realised for what purposes the fiendish preparations had been made. It took all the strength of his companions to hold him in restraint until the supreme moment.

'Now and then one of the devils would seize a live brand from the fire and sear her bosom with it, and the concourse would break into a wild chorus of jubilation and praise at his action. And even then the girl stood silent and unflinching beneath their blows and insults, although the skin upon her body was scorched and sizzled by the heat.'

The colonel's voice shook with emotion, and there were tears in his eyes. 'Don't you see it was her religion against theirs?

'At last, at a sign from the head-priest, who had fallen on to his knees in an attitude of devotion, the tom-toms played still more loudly, the priests danced in a circle round the fire, some even leapt over and through it, while all the men and women shrieked discordantly, until the scene must have resembled hell.

'Two of the young men stepped from the concourse, and, loosing the girl's chains, lifted her up in their arms and threw her into the midst of the flames.

'That was enough for the boys. There were only a dozen of them. The odds were ten to one; but, thank God! they were Englishmen and officers of the Seventy-sixth. With drawn swords they rushed upon the fiends, and within five minutes the place was cleared. Heaven knows how many they killed. I was told Ograh accounted for fifteen with his own sword.

'When they got the girl to the foot of the hill she was nearly dead. They made a stretcher of their coats, and carried her into camp laid upon that.

'For the next few weeks it was a grim fight, grimmer than the one upon the hill, and all through the time Ograh nursed her as a woman might a babe.

'A couple of months after she left us to return to her own people. She had almost recovered, but the marks of that terrible night remained upon her body until her death.

'During her illness we never knew who she was, for she never told us, but asked us to call her Maru, and by that name she was known.

'A little later—it was a few days before the news of the mutiny at Meerut reached us—a native arrived at our camp bearing a letter and that bugle. Then we learned that the girl they had rescued was Princess Mawana, a daughter of one of the most prominent Buddhists. Her father begged us to accept the bugle, which had been made specially for us by the Buddhist monks at Balaspur from the drinking-cup of Buddha. Whenever its voice bade us charge he prophesied we should never know defeat.'

'And has it come true?' I asked. I felt a sudden unaccountable reverence for the silver instrument lying before me.

The colonel poured out another glass of wine before replying. 'Since that day the old Seventy-sixth have never known defeat, and we have been in some tight corners. Once the bugle saved the lives of the whole regiment.'

'How?' I asked in astonishment.

'By blowing the charge when no one was near except a dead man.'

'What!' I exclaimed incredulously. I looked at the colonel to see if he was joking; but his stern, gray face was bent towards mine in all seriousness.

'It is perfectly true,' he said, 'impossible as it may sound. It was in 1876, when we were sent with three regiments of native troops as a punitive expedition against the Zakker Khels on the north-west frontier.

'As you know, we spend a great portion of our time in India, and are always chosen for that kind of work; and confoundedly unpleasant it is as a rule. It generally means a mere handful of men, who fight against an unseen enemy sniping at them from amongst the hills, with occasionally a flank attack from some apparently inaccessible cliff to provide a bit of excitement. More often than not half the company are down with cholera or fever.

'But in the expedition of which I am speaking it was totally different. The rebels were led by a splendid man, Rami Rhandor. He was a born fighter and tactician. If he had been English he would have made the finest general our army ever possessed. As it was, he used to make raids with a handful of followers—never more than three hundred—down as far as Multan almost, seizing everything he could lay hands on. He was the terror of the natives; and so, instead of serving under him, I had to have him put up against a brick wall near Chitral and shot. He led us an awful dance for six months. De Wet was a tyro in comparison. We never knew where he was. One day we would hear of him twenty miles up-country, and within

three hours he would swoop down upon us and deliver a flank attack, leaving twenty of our small force dead upon the field. You don't know the north-west frontier at all?'

'No,' I replied, 'except from books.'

'The most dangerous kind of knowledge as a rule. Well, I heard a Tommy describe it as the place where he should imagine the Almighty had chucked down all His waste material when He had finished making the rest of the world, and his description was very apposite. About twenty miles south of Chitral and the Pass there is a village, with a small, very small, British garrison. To the north is a range of mountains intersected by a series of dangerous passes—the northern gate to India. To the east a dense jungle stretches away for nearly thirty miles. To the west lies a stony, almost barren country, sun-baked and parched nine months in the year, and the other three devastated by torrential rains. It leads across a stretch of mountains into Afghanistan. It is an ideal battle-ground for one who knows it, and Rami Rhandor knew every step of it. It was here, by his cunning, he led us, intending to inflict a crushing defeat that would have annihilated our complete force. Then the natives would have risen, and we should have had a second Mutiny.' The colonel took a deep draw at his cigar. 'That bugle saved us.'

'Amongst the men under my command I had some very insubordinate ones. The chief offenders were half-a-dozen Irishmen. They were always giving me trouble. Two of them had to be put under arrest before we had marched forty-eight hours from our base.

'A week before the deciding battle, when we were coming down from Chitral, we discovered the bugle was missing, and also one of those Irishmen, named O'Gallagher, the ringleader of the whole party. The loss was a terrible blow to the regiment; the men had such a tremendous belief in its powers that the effect upon them was paralysing. We delayed the march half a day searching for it; then, as it had not been recovered, the word was given to push forward without it.

'It was on the following Sunday. For twenty-four hours we had been continuously fighting against a large force situated a couple of miles to the south of us, and led by Rami Rhandor himself. We were terribly outnumbered, and the generalship of this man was superb, almost superhuman. We had lost over a couple of hundred of our small force, dead and wounded, and the men were dropping from fatigue; some were so drowsy that they almost fell asleep at their posts.

'Knowing that a sudden charge would mean complete annihilation, I was about to give the order to retire, so that we might find rest among the hills, and if possible divide up the opposing force, when suddenly—I remember it all so well!—the charge was sounded in direct opposition to my orders.

'Apparently it came from the hills a few hundred yards to our right.

'Instantly every man had risen to his feet, whispering to his comrade, "It is our bugle!—our bugle!"

'Gone was all sense of fatigue, forgotten the weary hours of fighting and the terrible losses. The light of battle was in their eyes; its fever ran like ichor through their veins. I believe my boys could have withstood the hosts of the Egyptians at that moment. I have seen a force demoralised within ten minutes; I have seen an army fight as if the lust of the Furies was in their blood; but never in my life have I seen men rise to such magnificent heights as the dear old Seventy-sixth did then. For a second there was a death-like silence, then the whispered words, "It is found!" and like a flood we rushed upon the rebels. Never before or since have I lived through such an intoxicating hour. It was a lifetime condensed into a few minutes of exhilaration. By sunset it was all over, and Rami Rhandor stood before me and surrendered his sword.'

The colonel fingered the bugle lovingly. 'And it was as well it gave the message when it did. If we had retreated to the passes we should never have reached them alive; for we had a force ten thousand strong five miles to our rear, and another half its size five miles away, in the jungle, and they were only waiting for night-fall to attack us. But when they knew Rami Rhandor had been taken prisoner they melted away as only north-west frontiersmen who have lost their leader can; and when we marched him through to Chitral we saw many whom we had fought against busy in the fields.'

'And the bugle?' I asked.

'We found it next day at the bottom of a ravine, hidden from sight by the body of O'Gallagher, who in trying to escape with it had evidently fallen down there in the darkness and broken his neck.'

'Then he blew it?' I said.

The colonel shook his head. 'No,' he replied; 'that was impossible, for he had been dead over three days, and when his body was found the vultures had picked it almost clean; and nobody else could have reached it except with a rope and a companion, for the ravine was over a hundred feet deep, and it lay at the bottom.'

THE MONTH: SCIENCE AND ARTS.

HOUSING THE WORKING CLASSES.

THE question of housing the labouring classes in rural districts economically is one of vital importance. There is a general outcry against workers flooding the cities when their field of activity is properly on the land. In country areas, however, wages are relatively low, and house-rents comparatively high—too much so, at any rate, in proportion to a man's income. But rural landlords cannot cope with the situation under present conditions, handicapped as they are by vexatious building laws, which when drawn up were satisfactory enough, but which made no allowance for developments in the realms of science. With a view to solving this problem an enterprising inventor has devised a system of portable dwellings, mounted on wheels, to which he has applied the generic name of 'vancotts,' and which may be most appositely described as a compromise between the gipsy caravan and the ordinary cottage. The building is substantially carried out in wood-framing and modern scientific cellular wall-construction of cement, asbestos, or lathing and plaster, which conduces to cheapness in first cost without any sacrifice in solidity, hygiene, spaciousness, or comfort, being warm in winter and cool in summer. As they are mounted on a trolley, these dwellings can be moved easily from one part of an estate to another, since they can be drawn along any main road by a team of horses, and will pass beneath any ordinary railway bridge. The idea is carried out on the unit system, each section being complete in itself. Each unit comprises two rooms, having a superficial area of one hundred and ten square feet. The building on its trolley is seventeen feet from ground to roof, by thirteen and a half feet long and nine feet eight inches wide over all. One great advantage secured is protection against damp, since, the building being mounted on wheels, creeping moisture, with its unhealthiness, is prevented. The placing of the building on wheels solves the question of cheap, satisfactory houses, free from any objection under the building Acts. A special feature is the complete solution of the problem of sanitary requirements, drainage being dealt with by means of an antiseptic tank on wheels, which receives all sewage, this vessel being charged with powerful oxidising chemicals at a nominal cost, and providing as a residue a valuable potash fluid for fertilising the soil. Water can be led to the dwelling from an existing service through a flexible hose connection. The first unit is equipped with all sanitary requirements—sink, kitchen stove, boiler, and so forth—as well as staircase. When it is desired to increase the size of the building to meet the needs of a growing family, other units containing rooms only can be drawn up and grouped on either side, doorway connections being effected through the walls on the respective floors. The 'vancott' is certainly an attractive-looking structure, and the unit system lends itself to effective grouping in a very elastic manner.

TELETYPOGRAPHING.

Great activity is being evinced by numerous inventors in the field of telegraphic science for the purpose of increasing the advantages of this system of communication, a result no doubt due to the powerful competition that has been offered by the widespread use of the telephone. A Continental inventor has perfected an appliance which he describes as the 'teletypograph.' The idea is to enable messages to be telegraphed to an addressee and immediately written down, a kind of typewriter being employed for the purpose. The inventor has submitted his apparatus to the French Government postal officials, who have expressed a desire to see the invention in actual operation, and who propose to introduce it on lines of lesser importance at first where the telegraph operators are not very expert in handling the Morse code. Should the system prove commercially successful under these conditions its application will be extended to first-class lines, and possibly adopted throughout the whole French telegraphic system.

DESTROYING RATS ON BOARD SHIP.

The recent experience in the eastern counties of the dissemination of disease by rats has resulted in an organised campaign against this pest. Unfortunately, however, at the present moment the true seat of the pestilence does not receive the attention it ought to do. Vessels are the vehicles whereby rats are mostly carried from one country to another and from port to port. If such carriers were cleared of the nuisance at frequent intervals the invasion of a district would be effectively prevented. Some time ago the port of Hamburg acquired a special vessel by means of which an incoming ship was completely fumigated with noxious gases pumped through flexible hose to all parts of the hold, especially to the parts where the rodents gather in greatest numbers, and where they are immune from detection and destruction by ordinary means. The port of London has also a similar apparatus mounted on a small barge carrying a complete plant for generating the poisonous gas SO_2. The barge is brought alongside the vessel to be fumigated, and delivery-pipes are laid from the gas-generating plant through the hatches and ventilators of the ship, and a stream of noxious air containing 3 per cent. of the SO_2 is discharged at the rate of one thousand

cubic feet a minute. This gas, being of a searching character, penetrates to the most inaccessible parts, suffocating the rodents instantly. The noxious gas is then cleared out by a powerful blast of pure air, and the dead rodents can afterwards be collected and destroyed in the ship's furnaces. Were such an effective appliance in use at all our large ports a severe check against the rodent invasion of the country would be rendered economically feasible; and it should be possible to apply the same idea to the clearance of large warehouses which at present are overrun by these pests, since the gas, from its heavy character, would find its way into all holes and nesting-places. The cost of the operation is stated to be very low.

A TREE WHICH SUPPLIES RAIN.

One of the botanical curiosities of Peru, which offers a protection against drought, is the rain-tree. This tree, which grows to large proportions, is supplied with large leaves which have the property of condensing the moisture of the atmosphere and precipitating it in the form of rain. When the rivers are at their lowest during the dry season, and the heat is intense, the condensing capacity of this tree is apparently at its highest, the water falling from the leaves and oozing from the trunk in a steady, continuous stream, flowing over the immediately surrounding ground, and nourishing the parched soil. This water can be collected and carried by ditches to distant points for irrigation purposes. It is stated that a single tree will yield on an average nine gallons of water per day. It is computed that if a plot of ground a kilomètre square is planted with ten thousand trees, a daily yield of nearly thirty thousand gallons of water available for irrigation, with due allowance for evaporation, can be secured. The rain-tree appears to be indifferent as to the soil in which it grows, can withstand extreme climatic fluctuations, needs but little care in its cultivation, and grows rapidly. It would seem that under these circumstances nature has provided a simple and effective means of reclaiming the desert, and that the widespread cultivation of the rain-tree would be amply repaid, inasmuch as there are vast tracts of country in all the five continents which at present have no economic value owing to absence of water-supplies for nourishing the soil, which might be easily secured by systematic culture of this tree.

ROAD PAVING-BLOCKS FROM HOUSE REFUSE.

The economic disposal of house refuse is a matter in which this country has achieved unique distinction, for the greater number of our municipalities turn the calorific value of domestic and other rubbish to commercial account, and with the power thus derived operate tramways and electrically illuminate the thoroughfares. The one point, however, which stands out above all others is the economic disposal of the clinker resulting from the combustion of the refuse. In some places it is pulverised, associated with suitable binding materials, and fashioned into large slabs for paving purposes. Pavements so constructed have a long life, and consequently the output of clinker from the destructor greatly exceeds the demand, so that the accumulation of residue becomes somewhat of a nuisance. One English firm, however, has evolved a means whereby the clinker can be employed not only for the laying of pavements but for roads as well. Seeing that the market for road-paving material, owing to the heavier wear and tear due to the greater volume of traffic, is so much more extensive, this is a decided advantage. This latest development has aroused considerable interest in view of the fact that the road-traffic problem is so acute at the present moment. A borough in the west of London decided to test this road-paving system. The idea is the formation of paving-blocks of the same size as those utilised in wood-paving or granite setts, and the product is eminently satisfactory, because the great advantages inherent in wood and stone pavings are secured without the drawbacks of either. The clinker issuing from the furnace is ground and screened in a mill, and then mixed with asphalt while the ingredients are in a heated condition, whereby the various materials combine and become a homogeneous mass, finally being pressed into small blocks. From the economic point of view the process leaves little to be desired. To make a thousand blocks about three and a half tons of clinker are used to one ton of asphalt, and the weight of the finished blocks is about four tons, the difference being accounted for by the asphalt losing its moisture. The cost of production is low, being about four pounds per thousand blocks for materials and about fourteen shilings for labour. The installation erected in west London has been visited by engineers concerned in the problem of economic and durable street paving. The thoroughfares so paved have been found as noiseless as those paved with wood. The blocks are non-porous, unaffected by temperature and climatic conditions, provide excellent foothold for horses, produce no dust, and, in addition to being sanitary, cost less for cleansing than ordinary paving. The invention has since been adopted in other towns, and equal success has been achieved.

AUTOMATIC POSTAGE-STAMP ISSUING MACHINES.

Another attempt to supply the British public with the same conveniences as are possessed by Continental countries in regard to the sale of postage-stamps through automatic machines is to be made. This country has been assailed as being backward in this direction; but the postal authorities have been reluctant to introduce them

in the interests of the public, the majority of machines of this character having proved unreliable in working. The new apparatus, however, appears to have proved completely successful, the experiments with the machine at the General Post Office in London having met with official approbation, and licenses have now been granted for the erection of over a hundred machines in various parts of the Metropolis. The Indian and Egyptian postal authorities are also introducing the same convenience into their respective countries. In Germany the machine is in wide popular favour, over fifteen hundred such appliances being in use. The invention is also applicable to the printing and issue of railway tickets, over four hundred machines having been installed on the French and Russian railway systems. Such facilities in these days of high pressure are indispensable so long as reliability is assured.

THE UTILISATION OF 'AIR-GAS.'

During the past few years the utilisation of air-gas for lighting, heating, and other domestic purposes has advanced considerably, as we have from time to time pointed out in these pages. Air-gas, it may be explained, is an inflammable mixture formed by the addition in very small proportions of the vapour of a highly volatile spirit such as petrol with the air. Several disadvantages of the system have developed in its use, the most noteworthy being the condensation of moisture in the pipes, which impedes the flow of the gas and produces a disconcerting flicker in the light. This drawback, however, has now been overcome by previously passing the air to be associated with the volatilised spirit over a moisture-absorbing medium such as calcium chloride. That the system in the main is reliable and efficient is proved by the increasing establishment of small installations for the lighting of the houses in small communities from a central point. Worked on such a principle, it enables the smallest and most remote village to secure the same illuminating and other conveniences as are possible to large towns with an elaborate coal-gas generating station, and at a much smaller proportionate expenditure.

A VIBRATION-PROOF METALLIC FILAMENT ELECTRIC LAMP.

One of the drawbacks to the metallic filament incandescent electric lamp is the extreme fragility of the filament. The average lamp, if submitted to a jar or vibration such as occurs in a large manufactory where machinery is running, is apt to break down. This disadvantage counteracts the many attractive features which the lamp possesses. A recent invention seeks to obviate this defect. In this case the strands of the filament, instead of being looped over hooks, as is the usual practice, are passed through small rings which are carried on the hooks, but in such a manner as to have a little free-play. By this arrangement the filaments are not held so rigidly, and the effect of vibration is not so forcibly conveyed thereto. It may be pointed out that a lamp which suddenly gives out can often be given a little longer life by turning on the switch and giving the bulb a few taps to cause the broken ends to come together or fall across another strand, when, immediately lighting up and becoming incandescent, they fuse together.

NATIONAL MEDICAL SERVICE.

What the *Times* has called a trenchant plea for a State-organised national medical service, with full compulsory powers to take preventive measures against disease, is elaborated in *The Dawn of the Health Age*, by Dr Benjamin Moore (London: J. & A. Churchill). Recently Mr Henry Leach, in the 'Heart of Things,' made suggestions as to remodelling the present system of medical service; this writer is more drastic still. He points out that hundreds of thousands of lives and millions of money would be saved every year if disease were attacked on scientific principles. The hygienic aspect of social reform is the most dominant of all reforms. He says: 'Poverty and destitution simply cannot exist amongst a fit, virile, healthy nation. Banish acute and chronic infectious diseases, teach temperate and normal habits of eating, drinking, and living, making the reverse a crime, and poverty and suffering in corresponding measure must decrease.' The passion for drugging and doctoring the individual with specific cures and quack nostrums he counts one of the prepotent curses of our time, and the labour of the thirty-two thousand medical men at present practising in this country is, he thinks, almost wasted as far as the health of the community is concerned. The doctor ought to be a teacher, an instructor, one who labours in a scientific way for the eradication of disease. His labours should be preventive. Under the national State régime here proposed, medical treatment would be as free to every one as the school and education to-day, and after ten years of such a system nine-tenths of the disease, and almost an equal proportion of the destitution, would disappear. The annual disease-budget—ill-health, causing loss of employment, destitution of widows and children, death of fathers by preventable diseases—costs one hundred millions annually; and the deaths by consumption alone cost sixteen millions. Dr Moore's statement of his health-ideals is calculated to make people think, although we are as yet far from their accomplishment.

A NEW WHITE METAL ALLOY.

Metallurgical investigation has resulted in the perfection of a new white metal alloy. 'Atherium' it is called, and it is stated to be lighter than aluminium. The metal is said to be superior to the pure metal, to make good,

sound castings, and to work well in rolling and turning. It can also be soldered, welded, and forged; it does not tarnish, and is impervious to corrosion and the action of sea-water. It should prove an excellent substitute for German silver under these conditions, and be effective for a great variety of purposes for which aluminium would be used were it stronger, and lightness combined with strength is the superlative consideration. Owing to its electrical conductivity, the new alloy should be extremely useful in a wide range of applications in this phase of industry.

CONCRETE POSTS FOR FENCING.

The increasing cost of timber has resulted in more spirited search for efficient substitutes. One inventor, realising the growing popularity of ferro-concrete, has turned his endeavours into this channel with a view to effecting the desired result, and has achieved distinct success. The posts made from this material are stated to be extremely durable and far superior to those of wood. The cost averages about twentypence per yard; but in this connection it is as well to point out that the cost is governed by geographical situation, inasmuch as the transportation charges for posts of this description, or for manufacturing them on the spot after the materials have been brought in, are heavier than for those of wood under certain conditions. At the same time, if the materials are obtainable on the spot the fence can be built exceedingly cheaply; and when it is pointed out that the durability of a ferro-concrete post is from five to ten times that of timber, according as the wood is preserved with creosote or otherwise, it will be seen that the former has overwhelming advantages in those districts where wood is not readily obtainable. Three of the great British railway companies have erected fence-posts of this material, and are stated to be eminently satisfied with the same; while it has also been used for gradient-posts and gate-posts to crossings.

THE DISTRICT-MESSENGER SERVICE.

This extremely useful service was founded in London in 1890 for the purpose of introducing to the Metropolis and the provinces the electric call-box system of summoning messengers, as in all American cities. At first it was well-nigh smothered by the impositions and opposition of various Postmasters-General; but thanks to its public utility and vigorous management under Mr George Manners, it has taken its rightful place in supplying a public demand. There are now forty offices and sub-offices, with a staff of eight hundred messenger-boys, whose services have not only been utilised in London and the neighbourhood, but messengers have been sent to America twice, to Turkey, Berlin, South Africa, Holland, France, and Switzerland. There is the famous case of Jaggers, who was sent from London to Chicago, New York, and Philadelphia, and on his return was presented to Queen Victoria. In relating its rise and progress in the *Cornhill* for November 1910, Mr J. Henniker Heaton, M.P., is only too modest in his statement as to what he has done personally in Parliament on behalf of the service. There is scarcely any emergency to which a smart, intelligent messenger is unequal; in fact, the capabilities of the call-box and the messenger-boy are well-nigh inexhaustible. These district messenger-boys are also invaluable in other respects. They are frequently utilised for conducting blind people from place to place. The charge is eightpence per hour, in addition to any travelling expenses. As escorts for young boys or for persons visiting London for the first time messengers are very useful. The first night's performance of a new play now causes a great demand for the boys to stand in a queue outside the doors of the theatre, and the busy man who has not a reserved seat is thus enabled to finish his work and take up his position just before the doors open. The company, whose offices will be found in the leading hotels, clubs, and mansions, and at all the great London railway stations, has a staff of specially trained bicycle-boys who may be relied upon to get to the point required in the quickest possible way. Finally, a district-messenger can be utilised for any purpose, and it is interesting to note that they perform annually upwards of a million services of all kinds.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

THE FIRST SNOWDROP.

When from the west the soft winds blow,
And a brighter day awaketh,
Out of a land of frost and snow
The first pure snowdrop breaketh;
And with nodding head of pearly white,
All in the glad breeze swinging,
To a world made bright with God's fair light
The tender flower is clinging.

Above that drooping blossom sweet
A joyous lark is soaring.
Heaven hears the throb of pinions fleet,
The earth its soul's outpouring;
As with bursting heart to the angels' bower
It bears this tender story
Of a little flower, and a sunlit hour,
And a spring of wondrous glory.

GILBERT RAE.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

Printed and Published by W. & R. CHAMBERS, LIMITED, LONDON AND EDINBURGH.

THE WOOING OF TEZALIA.

By J. MORTON LEWIS, Author of *Señorita Dolores*, &c.

IN FIVE CHAPTERS.—CHAPTER I.

THERE is a town not fifty miles from Durango, in the distant shelter of the southernmost slopes of the Sierra Madre—Molenga. Molenga is a curious town. Such civilisation as Mexico knows has not reached its walls. With open arms it welcomes all rascaldom, sunning them in the brilliance of its climate. If I wanted to find a murderer, or a man who had robbed me of thousands, I should straightway go to Molenga, and if I did not find him there despair would begin to seize upon me.

Of its six thousand inhabitants, many are ranchers, some work in the silver-mines of the sierra, and not a few gain a precarious living by unknown means which none seek to question, for it is not their business, and in Molenga it is wise to pay exclusive attention to one's own affairs. Men who have done otherwise have been known to disappear.

Law and order of a rough-and-ready kind exist. Molenga boasts a Vigilance Committee and a mayor; the former metes out punishment upon the miscreants who offend against the legislature of the community. As they are essentially men of business and ranchers and cowboys by occupation, cattle-lifting is in their eyes a more heinous offence than a bullet well aimed, which may find its mark. Hence duels of a somewhat one-sided nature are of more frequent occurrence than cattle-stealing.

The mayor, Manuel Vellos, a Mexican of Spanish descent, held a position which was practically nominal. Molengans liked to speak of him as mayor, because he was the richest man in the district; of authority he had little or none. He was a quiet man, a giant in strength, whose mind was well content to dwell amidst the horses and cattle he owned. His ranch, covering nearly fifteen thousand acres, lay outside the town, at the foot of the sierra.

Vellos was a widower. His wife had danced in the chorus at Madrid until she came to Molenga as mistress of his house. For years she had lived there, the belle of the town. Then she died, and the ranch was without a mistress save for Tezalia, the eight-year-old daughter she had left behind.

As Tezalia grew up to early womanhood, Molenga saw that the beauty which had been given to her mother was granted to her also; and, as a result, Molenga worshipped her, especially that portion which had grown to manhood and were seeking a wife. But Tezalia would have none of them. A shake of her pretty head, a smile, and she sent them one and all about their business. Some, for love of her and despair at her indifference, had taken to the mountains.

'But you must marry some day, Tezalia,' said a friend.

'Then the day will bring the man,' answered Tezalia; 'and until then I am content to wait.'

At the time this story opens Tezalia was twenty-two, tall and dark, with lustrous eyes, shaded by long lashes, ever changing in expression, now sad, now bright and mocking. A true daughter of Spain, with centuries of Spanish blood in her veins, she possessed a grace that no daughter of the sierra could have possessed.

It was one afternoon in July. She was seated in the *sala;* a deep awning hung across the piazza to keep out the overpowering heat. Tezalia was devoted to reading; an open book lay on her knees when a servant entered. 'A Señor Crayton has called to see the master,' she said.

Tezalia looked up. 'Crayton!' she said. 'Crayton!' Then she remembered. He was the manager of a large silver-mine in the sierra. 'You may show him in.'

She rose as the Englishman entered, and with a woman's quick glance surveyed him as he stood before her. He was tall and fair, with a physique that spoke of great strength. His clear-cut features, surmounted by curly golden hair, his steady gray eyes, pleased her. He was dressed for riding, not in the clothes of a Mexican, but as Tezalia knew an Englishman would dress. In the quick glance she gave she noted he wore no spurs on his brown riding-boots.

'I called to see Señor Vellos on business,' he said.

'I am the Señorita Vellos, she answered.

He smiled. 'But business would not interest you.'

She covertly watched him. He was different from the men of Molenga who daily crossed her path.

[*All Rights Reserved.*]

'But no,' she answered. She motioned him to a chair. 'Father will not be long, if you will wait.'

'Thank you, I will,' responded Crayton, 'for the business is very urgent.'

'And that is why you would not tell it to me?'

'Pardon, señorita, no; but ladies are not meant for business.'

Tezalia shrugged her shoulders. 'I know many women who are very good at business in Molenga.'

'And I one,' he replied. 'She permits me to board at her house for a sum which must keep the whole family. I have a great respect for her. She is a good business-woman.'

At this moment Señor Vellos entered, and took the young Englishman away, much to Tezalia's chagrin. The business which brought him from the sierra took many hours to negotiate, and it was late in the evening before they rejoined her in the *sala*.

Señor Vellos ordered wine to be brought in. 'You will stay the night, señor,' he said as he filled the Englishman's glass.

Crayton hesitated. 'You are very good,' he said.

'And it is safer riding to the sierra in the daylight,' responded Vellos.

Crayton laughed; it was the laugh of a man who knew not the meaning of fear. 'I was set on once,' he said, 'and I left the man upon the road. Since then I have been left alone.'

'All the more reason you should take care,' responded Señor Vellos. 'A Mexican does not forget, and he does not strike in the open, as your countrymen do. A dark night is more to his liking.'

Tezalia joined the conversation. 'If I, as hostess, add my word to the invitation?' she said.

'Then I shall stay,' replied Crayton.

It was later in the evening. They were seated on the piazza in the cool. The two men were smoking, and Tezalia lay back upon a low couch. A guitar which she had been playing lay on the ground.

The countryside was white beneath the moon. At their feet lay the paddocks and fields of Señor Vellos's house, beyond a small wood, and then the commencement of the Sierra Madre, the first slopes standing out in dark relief.

The girl was watching Crayton. A shadow rested across his face, one which made it look sad.

'See,' he said, 'it is not so very dark to-night!'

'You are repenting of your decision?' said Tezalia.

'A thousand times no, señorita,' he rejoined hastily. 'I was thinking how beautiful the sierra looked. It is the first time I have seen it look beautiful. It is generally sinister.'

'You have not known it long?' said Tezalia.

Señor Vellos rose. 'Long enough to learn some of its secrets, eh? If you will excuse me, señor, I will go indoors for a little while. I have some business which must be seen to.'

Crayton bowed; then he answered the girl's question. 'I have been here six months,' he said.

'I remember hearing you had arrived, but I did not know it was so long ago. And we have not met until to-night!'

Crayton smiled. 'Once before. I saw you riding in Molenga.'

'Ah, señor, I ride a lot. I love horses.'

'Perhaps one day, then, you will honour me,' said Crayton. 'I come of a race who ride, but we could teach you nothing.'

Tezalia glanced at him and smiled. 'Perhaps,' she answered lightly.

CHAPTER II.

ENTERING the small room which he designated his office, Señor Vellos found a visitor awaiting him. He was a short, dark man, with a thin, drawn face, from which a pair of closely set, narrow eyes surveyed the world with a look which did not ensure confidence. He was dressed in the typical Mexican costume—wide trousers and a brightly coloured shirt, over which hung an equally bright and badly fitting coat. In his hands he held a sombrero, the sides of which were greasy and faded.

He half-rose and made a perfunctory bow as Señor Vellos entered.

'I am late, Miguel,' said Vellos; 'but I have a visitor—the Señor Crayton. You have heard of his name perhaps?'

Miguel smiled at the jest. 'Yes, señor; and I have heard of the devil,' he replied.

'No doubt, no doubt,' responded Señor Vellos in tones which made the listener wonder as to their meaning.

Then the two men fell to discussing business. In the midst of it the sound of a guitar came to them.

Miguel's eyes gleamed. He possessed all a Mexican's love of music.

'It is my daughter playing to the Señor Crayton,' said Vellos. And the look in Miguel's eyes turned to one of hate.

Meanwhile Tezalia and Crayton sat upon the veranda together, chatting and breaking down the reserve of a first meeting with the ease that is only given to young people.

Crayton touched the guitar lying at her feet.

'You will play to me, señorita—in the moonlight?'

She took up the instrument, touched a few notes, then thought for a second. 'I will play you a Mexican dance,' she said. That was the music Miguel heard.

Crayton sat watching her—the lissome grace

of her figure, the great beauty of her face—and his heart beat wildly.

'I should love to dance that with you,' he said when she had finished.

'Perhaps you will be able to do so next winter. We have many dances; there is nothing else to do.'

'If I am here I shall remind you of your promise,' he rejoined. At the bosom of her dress she was wearing a cluster of roses. 'And if I may, I should like one of those flowers as a seal of the promise.'

The señorita looked at him with mockery in her eyes. 'I have promised nothing,' she said. Nevertheless she took out one of the flowers and gave it to him—she who had never looked on man before save as a butt for her jests and the folly of the moment. And as she stood in her room that night, and looked out of the window across the paddocks to the woods and the sierra, the words she had once spoken to a friend came to her mind: 'And when the day comes it will bring with it the man.' Little she guessed the nearness of the day or the sorrow it would hold for her.

The next morning Crayton rode away early, and she watched him canter along the road which led to the foot of the sierra, the rose she had given him in his coat.

A voice at her side roused her from the reverie into which she had fallen. It was the señor's.

'Tezalia,' he said, 'we shall see a good deal of this Señor Crayton, for he and I have business together, so I hope you will be friendly—very friendly.'

Tezalia gazed at her father in astonishment. She had never heard him speak in such a strain before.

'And he is the manager of the silver-mine in the sierra—a very rich man—a useful man to know.' And Señor Vellos left the room, to ride a few miles' journey from Molenga to inspect some cattle he proposed adding to his stock.

The road which Crayton travelled to reach El Nitro silver-mine lay along a deep gorge. High above him the rocks towered, leaning on either side in a conical shape, so that the way was full of shadows and dark. He rode on, his mind filled with thoughts of business, oblivious of all else, careless even of the road he traversed.

A few hundred feet above the main path was a narrower one running laterally along the face of the sierra, little more than a goat-track. Stretched at full length behind a boulder, a man lay watching him. His arm rested on a projecting piece of rock, and in his hand gleamed the steel barrel of a revolver. Behind him stretched another man.

'Now, Miguel!' said the latter.

Miguel was intently watching the horseman. Suddenly he pulled the trigger. There was a flash and an explosion which echoed in the rocky stillness. The bullet struck the ground at the feet of Crayton's horse, causing it to plunge.

The Englishman was no coward, but he had a wisdom which long exposure to danger had taught him, and he put his horse to a gallop, guiding it through the gorge.

The man addressed as Miguel swore softly and fluently to himself, and fired a second shot, which went wide of its mark, for a galloping horse is no easy target.

'Bah!' he said, 'my luck is out.'

Miguel was a cosmopolitan who had earned a precarious living in three continents, learning from each many idioms of speech with which he besprinkled his Mexican. He had also learned all the trickery that his ready brain could assimilate during his travels. Men spoke of him behind his back as Miguel the Fox, and to his face as Señor Miguel—which spoke much for his reputation.

'Perdition!' he said as he watched the fast-receding figure. 'He was at Señor Vellos's last night, and the señorita sang to him.'

His companion smiled the cynical smile of a man who understands more than the spoken word.

El Nitro silver-mine lay in a gorge deep in the Sierra Madre. A company floated by a financier whose name is known throughout two continents, no one was more surprised than he when the property yielded silver in abundance.

From a spectacular point of view the mine was not a success. A tall chimney, a half-dozen shafts, some hundred wooden sheds where the boys lived, and, apart from the rest of the buildings, the offices and the house of the assistant-manager.

As the Englishman entered a man leapt to his feet. 'You, Crayton!' he said. 'Thank God!'

'What's the matter?' asked the manager.

'We were attacked last night. A little after midnight about a dozen men rode into the gulch and started firing on my house to attract my attention.'

Crayton's face grew serious. 'Yes?' he said.

'I went to the window to speak to them. And their leader, a short, dark man—I couldn't see his face distinctly—asked me to hand over the silver we had stored—said it belonged to the State of Mexico, and that he was their representative.'

Crayton smiled a hard, mirthless smile. He knew his assistant-manager. 'What did you do?'

'I sent Forster and Cranfield downstairs to get some ammunition. Fortunately we were all in the house. Then I told the representatives of the State of Mexico to clear—which they refused to do without the silver.'

'Did they get any?'

Paston, assistant-manager to El Nitro silver-mine, possessed a dry sense of humour. 'No;

but they got some lead instead. The first volley dismounted a couple, and the rest rode off.'

'We are going to have trouble,' said Crayton. 'I was fired at coming over this morning.'

'See the man?'

'No. Molenga Gulch is hardly the place to stop and make a minute investigation when some one is sniping at you from the rock above.' Crayton lit a cigarette. 'We've got plenty of ammunition?'

'Yes.'

'Good. But I don't think we shall be troubled again for a few weeks. Let's see, it's a fortnight to-morrow that we take the next consignment to the coast. That is when the fun will start.'

'Who are the men?'

Crayton shrugged his shoulders. 'A respectable army could be formed out of the men who infest the sierra. It would be hard to distinguish a man unless one had shot him. What became of the bodies of the two you killed?'

'They came back for them during the night.'

While Crayton and his subordinate were talking, Señor Vellos was riding back to his ranch.

On the way he encountered Miguel. The Mexican was mounted on a small, shaggy pony, a cigarette between his lips.

'We failed last night,' he said curtly.

'Failed!' Señor Vellos's face expressed the surprise he felt.

'Yes. Holy Jesu, how those Englishmen can shoot! Five shots and two killed.'

'Who are they?'

'Lopez and Mutrie.'

'Where are their bodies?' inquired Vellos anxiously.

'We went back for them, and buried them on the sierra.'

'Good. There are occasions when dead men tell tales and give away their friends—men who in life would scorn to do such a thing. That proverb is foolish.'

Miguel did not know the proverb, and had little interest in its truth or falseness. 'And we failed to-day,' he said.

'Failed! What in?'

'I shot at the Señor Crayton in the Molenga Gulch, and missed him.'

'You shot at the Señor Crayton! What for? What has he done to you?' Señor Vellos's reasoning was somewhat illogical.

Miguel's eyes flashed. 'I hate him!' he said shortly.

Señor Vellos laid a hand on the other's bridle and looked him sternly in the face. 'Miguel,' he said, 'you understand that in future we will have no more of this folly. Señor Crayton is of more use to us alive than dead. You understand?'

'Yes,' answered Miguel.

'Therefore, if you shoot him I shall have you handed over to the Vigilance Committee.' And Vellos rode away, leaving Miguel giving vent to his wrath in a series of oaths as expressive as they were cosmopolitan. Miguel could swear fluently, and he exhausted his vocabulary before he turned his horse's head to ride back to the sierra.

Tezalia was on the veranda when Señor Vellos rode into the *patio*.

He bent down and kissed her. 'Any news, little one?' he said.

'But no,' she replied.

'And the Señor Crayton has not come back?'

'The Señor Crayton come back!' she said slowly. 'Why, it is only four hours since he left.'

For answer the Señor Vellos bent down and patted his daughter's cheek affectionately.

(To be continued.)

THE PORT WINE OF PORTUGAL.

By C. EDWARDES.

TO see Portugal's wine 'growing' in sweet perfection one must not seek the Douro valley, its prime home. The methods of terracing here in the brown schistose soil of the bare mountain-sides, and the keeping the vine as low as an average gooseberry-bush, do not make for scenic splendour. The plain white *quintas*, with their red roofs, among the low-set greenery, also compare very indifferently with the dainty châteaux of the Médoc. Everything in Alto Douro's wine-land is upon a business basis. The stately bailiffs in charge of the vineyards smile if you murmur your disappointment about landscape effects. To be sure, the hills are huge fellows, and the Douro's gorges are thrilling; but the latter come before and after the miles of too regular staircasing east and west of Peso da Regoa, the port wine metropolis. Sun and air, with no waste of rain-power, are what the bailiffs in loose black velvet cloaks and wide planter-hats require for the precious acres under their management. Hence the precision of culture on these slopes facing the south. The port wine of fame and export is a jealous liquor, for the making of which man and nature have to combine their forces with stern devotion. Even the harvesting of the grapes in Alto Douro fails in romantic suggestion. The gangs of Gallegos in blue-and-white cotton are respectable colour-additions, but the men work like machines.

One after the other they go down the blinding white paths, each with his basket of purple grapes on his head. They are scarcely more animated than Cardiff coalmen or the buckets of a mud-dredger about their grimy tasks; and, one after the other, they pitch their loads into the vats of the *lagar* and return for more. The subsequent treading, with twined arms, in the great pans is not a very impressive stage in the production of a fluid a glass of which two-score years hence the *bon vivant* may hold reverently to the light ere he touches his lips with it. There are details to the treading, as in old-fashioned bread-making and the preparation of tinned meats, which are not pleasant, in spite of the quaint piping to which the men dance. The exercise is exhausting and, of course, warm. And here, as at the picking, one remembers that the Gallegos are Portugal's and Spain's despised industrials. To the average Portuguese they are a low-class people, not much better than slaves; made to be put upon and underpaid to the limits of their endurance; migrants to and from their poor corner of Spain according to the measure of their destitution. They do worse and much less remunerative work elsewhere in Portugal than among the Douro grapes, but they are inspiriting objects nowhere in the country. Among the granite and gorse of their dear homeland a certain individuality of some faint charm proclaims itself in them, although even here they seem pathetically conscious of their inferiority as human specimens.

For Portugal's vineyards in their glory one must go north of Douro. Minho province has been sung by many a poet, and yet not overpraised. The three valleys of the Cavada, the Lima, and the Minho itself, all trending to the Atlantic, are gardens of beauty, separated by ranges of blue hills with cultivated slopes as enchanting as the valleys. Here the vines are trellised from tree to tree. Each cottage has its vineyard, and the peasants are as gay as their landscapes. They are a singing and smiling people, the women with golden ear-rings large enough to fill the hand; and the traveller between Braga and Valença in any season will see living pictures and landscapes never to be forgotten. The streams of Minho are not sombre and perilous like the great Douro (which takes annual toll of lives and hogsheads in the wine's transit towards Oporto), but clear as crystal, and with tongues of sunny sand tempting to the bather in the hot September noon.

These are the vineyards of romance, amid which the nightingale warbles out its soul. Flowers and woodland combine to make Minho incomparable. In the spring the vine-blossom suffuses the air, and heather and gorse bloom simultaneously by the roadside. It is a pleasure merely to breathe in this happy land, as Southey said of it a hundred years ago. But though good wine is grown here, it is not the port wine of commerce. This all goes one way down the Douro's sweeping, jade-coloured stream to the russet-roofed lodges of Portugal's second city, where the hammering of barrels is the one predominant sound of the working day. Those acres of low buildings on Oporto's south side, by the great bridge strung like a spider's thread two hundred feet above the river, have been of historic importance since the Methuen Treaty of 1703, which gave our good little friend and ally Portugal a special hold upon our dinner-tables. The importance has varied greatly. It was at about its zenith in the comet year of 1811, but the still more remarkable year of 1820 troubled it. Never was there such a wine as this of 1820. It was so naturally rich and syrupy that British consumers were spoilt by it. Adulteration set in to keep the later wines to the rich, heavy standard established by this phenomenal vintage.

The Oporto lodges are not particularly interesting. One sees rows of barrels in long, low warehouses, and there is not much for one's guide to say about them. There the wine stands ready, or maturing, for shipment; and by-and-by it will cross that still dangerous Douro bar where the Atlantic meets the river's flood. Many a cargo of good liquor has been lost at the Douro's mouth. The lodge bookkeeper may have tales to tell on the subject. My guide's memory went back two full generations, and included vignettes of old Lisbon life, when the cry of '*Agoa va!*' (in rough translation, 'Look out for the slops!') was the customary intimation to the pedestrian from a fourth or fifth floor window that a bedroom was being put to rights. The cobwebs in the lodges are moderately fine specimens, and the glass of moderately old wine with which the tour of inspection ends is perhaps the best feature of the show.

Hospitality of a much more lavish kind is, with suitable introduction, dispensed at those white *quintas* in the vineyards. Long shall I remember the feast at one of them which prepared me for the dreamless night that followed. Portuguese cookery at its best is hard to beat. The forest-fed veal cutlets, the tender chickens in rice, the rich pastries, the pyramids of red strawberries, white mulberries, and carefully chosen oranges, were all served and presented with a refinement of accessories and attention worthy of a palace. But the wines were the thing. The *quinta's* lord soon had me 'market merry' with the mere *vinho verde* that went down with the viands. This was as distinguished a table wine as one could wish for. But with the dessert came charming little decanters of Lachryma Christi and golden *porto velho*, one after the other, each a vintage wine. A discreet veil may be drawn over the sequel, which nevertheless had its delightful moments.

PETER AND JANE.

By S. MACNAUGHTAN, Author of *The Andersons, The Fortunes of Christina Macnab*, &c.

CHAPTER XI.—*continued.*

MANY weeks had passed, and not a word had disturbed the impenetrable silence which surrounded the fate of Peter's brother. That the time had passed not unpleasantly did not alter the fact that not a single thing had been done, nor a single clue discovered. Peter had ridden about, talked to all sorts and conditions of men, had taken one or two journeys, and was still as far as ever from any trace of his brother. Purvis had ridden over several times from his own *estancia*, bringing his little boy with him. Report had it that the child was an adopted one, but the two were always spoken of as father and son. Whatever the relationship may have been, Purvis's treatment of the boy was affectionate to the point of sentimentality. He looked after him with a woman's carefulness, was over-anxious about his health, and treated him as though he were much younger than his actual age.

Peter greeted Mr Purvis's visits to La Lomas with cordiality from a feeling that even a chance word dropped by a man who knew the country and its people as intimately as Purvis did might throw some light on his quest. Added to this, the fair, mild-mannered man was an intelligent talker on the rare occasions when he spoke at any length; but for the most part he contented himself with regretting in his dismal way the existing state of commerce in South America, and asking naïve questions which exposed his ignorance on many subjects. The conversation of the three public-school men who knew the world of London, and still talked its language and discussed its news, who knew, moreover, their friends' stories and jokes, and had stayed in a dozen country houses together, was widely different from Mr Purvis's constant melancholy comments upon the state of Argentine finance. Still, there was no doubt about it, the man might be useful; and, after consulting with Ross and Toffy, Peter Ogilvie had decided to give Mr Purvis a hint of the reason which had brought him to Argentina. Without definitely stating that he had anything to discover, he had allowed Purvis to know that if he could pick up any information about a child who had been lost sight of twenty-five years ago, it would be of considerable interest to himself and others to hear it.

Purvis thought inquiries might be set on foot, but that it would cost money to do so; and, without actually adopting the case professionally, he promised to keep his eyes open, and had already made a journey to investigate what at first sight seemed as if it might be a clue to discovering traces of the missing man.

He and his son rode over very early to Las Lomas to-day; and, the boy having been sent into the house to rest and get cool, Purvis crossed the bare little garden, passed the stout, rough paling of the corral, and went towards the group of *paraiso* trees where Peter was sitting. He wore his bowler hat, and had the appearance of being a very delicate, overworked city clerk.

'Ross is not at home, I suppose?' he said, sitting down beside Peter in the shade of the *paraiso* trees and removing his hat. The hat always left a painful-looking red line on Mr Purvis's forehead, and it was removed whenever he sat down. The surprising thing was that he should ever have worn such an uncomfortable headgear.

'Oh, good-morning, Purvis!' said Peter. 'No, Ross is not about, I think. Did you want him?'

No, Mr Purvis would not trouble Ross; it really did not matter—it was nothing. Probably Mr Purvis did not want to see Ross, and had no business with him, and wanted to see some one else. It was one of the wretched things about the little man that his conversation was nearly always ambiguous, and that he never asked straightforwardly for anything he wanted. And yet, look what a head he had for business! He had made one immense fortune out of nothing at all in the boom-time, and had lost it when the slump came. Now he seemed on the way to make a fortune again. His *estancia* lay on the river-bank, and was independent of the old, heart-breaking system of railway service in Argentina for the conveyance of his alfalfa and wheat. He had been successful where other men had failed. There must be an immense amount of grit somewhere in that delicate frame! Perhaps his chronic bad health and pathetically white appearance, and the perpetual tear in his pale eyes, had a good deal to do with giving one the impression that he must be necessarily inefficient. His dreamy gaze and soft voice heightened the suggestion, and it was necessary at the outset to discount Mr Purvis's appearance altogether before accepting the fact that his mental powers were above the average.

Purvis sat down, wiped his pale forehead with the bar of red across it, and returned his handkerchief to the pocket of his dark tweed coat. He produced a small bottle of tabloids, and shaking a couple of them into the palm of his hand, he proceeded to swallow them with a backward throw of his head. Tabloids were Mr Purvis's only personal indulgence. He had been recommended them for his nerves, and he had swallowed so many that had they not

been perfectly innocuous he must have died long ago.

Peter put down an English newspaper that he was reading, stretched his legs on a deck-chair, and lit a cigarette; and as Mr Purvis did not seem inclined to move off, he made up his mind to submit to a talk with him under conditions as comfortable as possible. As an agent, Purvis was possible; but as a companion, his melancholy, his indistinct soft voice, and the platitudes which he uttered were boring to more vigorous-minded men.

Purvis took a small and uncomfortable chair near the one in which Peter was stretched luxuriously, turned his wide-open, pale eyes upon the young man, and said, 'I have been thinking a good deal about the story which you told me some time ago of the child who disappeared out here in Argentina some twenty-five years ago, and has not been heard of again. It sounds like a romance.'

'Yes,' assented Peter, 'it's an odd tale.'

'I have lived in many parts of Argentina,' said Purvis, 'and one hears a good deal of gossip amongst all classes of persons, more particularly, I should say, amongst that class with whom you and our friend Mr Ross are not intimately acquainted.'

Mr Ogilvie put on an air of detachment, and said he supposed Mr Purvis met all sorts and sizes.

'At first,' said Mr Purvis, 'I did not pay much attention to the story except to make a few inquiries such as I thought might be useful to you. But the other day, by rather a curious coincidence involving matters which I am not at liberty to divulge, I came across rather a curious case of a child who was brought out to Rosario many years ago.'

'What did you hear?' said Peter; he spoke quickly and with an impetuous movement sat upright in the deck-chair, and flung away the end of his cigarette.

'I cannot tell you,' said Purvis, 'how I am hedged about with difficulties in this matter. For, in the first place, neither you nor your friend, although you seem interested in the case, has entered into the matter very fully with me. With that, of course, I shall not quarrel,' said Mr Purvis, spreading out his hands in a deprecatory fashion. 'I only mean to say that before taking any definite steps to trace this story to its source, I must, if you will forgive me, ask certain questions about the child; and, further, these inquiries which I propose to make must be conducted with discretion, and are apt to entail a good deal of expense.'

He paused, and Peter said shortly, 'Of course all expenses will be paid.'

'It will require immense patience to prove anything about an unknown infant who came out here twenty-five years ago,' said Purvis.

'I always thought it was rather hopeless,' said Peter; 'but it seemed to me the right thing to do.'

'It seemed the right thing to do,' said Purvis like an echo. The dreamy look was in his lack-lustre, weak eyes again, and his womanish, soft voice was more than usually indistinct. 'I should like very much if you could tell me anything about the man's childhood,' he continued. 'It is important to know every detail you can possibly furnish for the clue.'

'I never even saw a picture or a photograph of him,' said Peter.

'It is perplexing,' said Purvis, 'when a near relative disappears so completely.'

'Yes,' said Peter, 'it is rather annoying.'

'Old servants are proverbial for their long memories,' the clerkly visitor went on. 'Are there any such remaining in his old home who would know anything about the man? Even a birth-mark—although it is a thing most often connected with cheap romances nowadays—might help to establish a case.'

'Or disestablish it,' repeated the echo.

'As a matter of fact,' Peter said, relenting a little, 'the child was born abroad, and no evidence of that sort is forthcoming. The lawyers have followed every possible clue that could lead to information about him, without any result whatever.'

'Singular!' said Purvis.

'Yes,' assented Peter, 'I suppose there are few cases in which a man has disappeared so completely and left no trace behind him.'

'The property which is at stake is a large one, I understood you to say,' said Purvis.

'I don't think I said so,' Peter answered; 'but there is no harm in telling you that some money is involved.'

'I should certainly know if any considerable property had been willed away about here,' said Purvis quietly; 'and, you see, our richest men in camp have really not much else except landed property to leave. In Buenos Ayres, and Rosario too, a man of importance in the town dying and leaving money could easily be traced.'

'Well, I haven't exactly expectations from him,' said Peter, feeling that he was getting into a muddle. 'The fact is,' he said cordially, 'I shall be interested to hear news of the man if you can obtain any for me.'

So far he had always regarded his brother's existence as some remote and hardly possible contingency. Now Peter began to see plainly that he might very possibly be alive, and not only so, but that his whereabouts could be traced. The sudden realisation of these possibilities staggered him for a moment; but he went on steadily: 'I want the man found, and I shall spare no trouble or expense in finding him. Even if he is dead, I do not mind telling you that any definite information would be welcome to me; and if he is alive, my object is to find him as soon as possible.'

Mr Purvis took out his pocket-book. 'You will at least know whether the man was dark or fair?' he said.

'Fair, I suppose,' said Peter; 'all the portraits in the house are of fair men.'

'The man I spoke of is dark,' said Purvis, continuing his jottings in his note-book in a neat hand.

'Fair children often get dark as they grow older,' said Peter.

Purvis acquiesced. 'The singular thing about it all is,' he said, 'that no one now seems to be living who saw the boy when he was a baby.'

'No one can be traced,' said Peter.

'This affair of the child in Rosario is probably a mare's nest,' said Mr Purvis in his hopeless way, as he closed his pocket-book and put a strap round it.

'Well, at least find out all you can about him,' said Peter, as Hopwood appeared with coffee, and Ross and Toffy joined them and sat down under the *paraiso* trees. There had been some heavy work on the *estancia* that morning, followed by a lazy afternoon.

'Can you tell me, Purvis,' said Toffy, breaking off an earnest conversation with Ross, 'why there should be such an enormous difficulty about getting a boiled shirt to wear? I suppose it really does cleanse one's linen to bang it with a stone in the river, but the appearance of grayness makes one doubtful.'

'You and Peter are both so beastly civilised!' said Ross, in a flannel shirt, with baggy breeches and long boots. 'You don't even like killing cattle, and the way Hopwood polishes your boots makes them look much more fitted for St James's Street than for the camp.'

'You ought to make friends with Juan Lara's wife,' said Purvis in his feminine way. 'She often washes Jim's little things for him, and does it very nicely.'

'I believe that Lara, on purely economical grounds, wears our shirts a week or two before he hands them over to his wife to wash,' said Ross, laughing.

'Ross,' said Peter, 'enjoys the gaucho's plan, and wears three shirts, and when the top one gets dirty he discloses the next one to view.'

'Remember, little man,' said Ross, stretching out a huge foot towards Peter's recumbent figure on the deck-chair, 'I'm a head and shoulders taller than you are.'

'I'm sure Mr Ogilvie's remark was only in fun,' interposed Purvis. He rose and went to summon his boy to come and have coffee, and the three men left behind under the trees watched him disappearing into the house.

'If it were a matter of real necessity,' said Ross, 'I believe I could endure the loss of Purvis; he becomes a bore, and tears and tabloids combined are really very depressing.'

'Poor beast!' said Toffy charitably.

'I can't make out,' said Ross, 'what the trouble is at present on his *estancia*. I have only heard some native gossip, and I don't know what it is all about; but there seems to be an idea that Purvis is lying on the top of a mine which may go off suddenly.'

'I believe,' began Peter, 'that Purvis is going to be of use, as Sir John thought he might be. There is a very odd tale he was telling me just now.' He broke off suddenly as Purvis reappeared in his usual quiet, shadowy way. He took a small saddle-bag with him when he travelled, which seemed to be filled for the most part with papers. His dark clothes were always neatly brushed and folded by himself, and he generally spent his days riding to and fro between the house and the nearest telegraph-office.

'You should take a holiday while you are here,' said Toffy, seeing Purvis sitting down immediately to write one of his interminable telegrams. 'It would do you good.'

'It's my nerves,' said Purvis hopelessly.

Ross laughed and said, 'If I lived on weak tea and tabloids, as you do, Purvis, I should be in my grave in ten days.'

'I think,' said Purvis, 'that these new phospherine things are doing me some good. But I sleep so little now. I don't suppose there's an hour of the night when I'm so sound asleep that a whisper would not wake me.'

'It takes a good, loud gong,' said Ross, 'to make me even realise that I am in bed.'

'At home,' said Peter, 'I once had an alarm-clock fixed above my bed to wake me, and at last I told the man who sold it to me that it never struck; and really I thought it did not until he showed me that it worked all right.'

'There is a beastly bell for the out-of-door servants at Hulworth,' said Toffy, 'which is beside my window, and'——

'I know that bell,' said Peter. 'I tie it up regularly every time I am at Hulworth.'

'Have you also got a country seat?' asked Mr Purvis.

'Oh, Hulworth is a mouldy old barrack!' replied Toffy. '"Country seat" is too fine a name for it.'

'Is it quite near Bowshott?' asked Purvis.

'No; it's nine miles off,' said Peter, 'unless you ride across country.'

'I wish,' he said to Ross that evening as they sat together in the corridor, 'that I had any one else to help me in this affair except Purvis.'

Ross knew the whole story, and was as trustworthy and straightforward a man as ever breathed. 'I wish you had,' he said cordially; 'but in his own creepy fashion I believe Purvis is working for you as well as he can, and he has an extraordinary knowledge of this country and its language. You see, it is not as if you were looking for your brother amongst the most

respectable English colonists in the land. You may have to hunt for him in some remarkably queer places, and it is there, it strikes me, that Purvis will help you.'

'I wish the thing were settled one way or another,' said Peter, 'so that I might know where I stand. You see, if my brother is alive—— Well?'

'Nothing; only I thought I heard something moving outside the wire netting, and I hate the way Purvis creeps about.'

'Purvis is putting his little boy to bed and hearing him say his prayers,' said Toffy. 'He is a queer mixture.'

Ross rose, and, walking to the edge of the corridor, peered out into the pitch-black night. 'It's so dark,' he said, 'I cannot see a thing.'

'Never mind,' said Peter; 'there are no wild beasts to spring at you unawares. Do you remember poor Cranley who was in Pitt's house at Eton? Did you ever hear how he was killed in his veranda in India by a tiger?'

'Yes,' said Ross absently; 'awfully sad thing. Do you know, Peter, I believe I must walk round to the other side of the house and see if that chap is really putting his child to bed.'

(To be continued.)

INDUSTRIAL ACCIDENTS.

By T. Good.

FEW industrial problems are more interesting, and none more vital, than that of accidents to workmen. In each of the last five years more than 4000 British wage-earners have been killed. Roughly, nearly 1000 seafaring men and more than 1000 miners lose their lives at work every year, the remaining 2000 victims being engaged in the railway service, the manufacturing industries, and other occupations.

Here are the numbers for the last few years of the workpeople killed in the course of their employment (including seafaring, mining, &c.) in the United Kingdom:

1901 . . .	4626	1906 . . .	4118
1902 . . .	4323	1907 . . .	4477
1903 . . .	4172	1908 . . .	4226
1904 . . .	3775	1909 . . .	4062
1905 . . .	4384	1910 (provisional)	4446

The frequent contention that industrial accidents are increasing hardly seems borne out by these bald figures. Still, 4000 deaths a year are far too many. They prove neglect somewhere. Besides, while in seafaring and the railway service dangers are decreasing, it is a fact that in mining and manufacturing dangers and accidents have for some years been on the increase. While the transit trades are getting safer, other industries are becoming more dangerous, and here we have ample scope for inquiry and improvement. More than that, there is on this life and death matter just cause for plain speaking. The question why workshop and mine accidents have increased in recent years imperatively demands a plain answer.

In those occupations covered by the Factories and Workshops Acts, not only have nearly 900,000 persons been reported injured and more than 10,000 killed in the last ten years, but between 1897 and 1907 the number injured increased by 115 per cent., and the number actually killed increased by 62 per cent. So great was the increase of accidents in some trades that when the figures were made known two years ago the Government appointed a committee to inquire into the matter. But will this committee get at the real truth? Both labour leaders and employers, speaking generally, are reluctant to reveal the roots of the mischief.

Well, now, let us take a glance backward. Some twelve or fifteen years ago a great deal was said about the 'tragedies of toil.' A gentleman who is now a Cabinet Minister wrote a blood-curdling pamphlet under that title. There was a great agitation for the extension of employers' liability. The Government of the day lent a very sympathetic ear to the labour leaders, and the famous Workmen's Compensation Bill was passed. The assumption in some quarters was that employers were careless and callous, and that all that was needed to promote safety in the workshop was freely to tap the employer's pocket every time a workman was injured. The Act became operative in 1898, but instead of the anticipated diminution of accidents through employers more carefully safeguarding their workers, an increase was soon noticeable, and after ten years' experience of the new law Parliament was invited to consider the 'alarming increase' of accidents.

On the passing of the one-sided labour-law—a law made one-sided at the special request of the labour leaders—employers in some industries began to be more particular about the men they employed; and, urged on by the insurance companies doing compensation business, they began to weed out their elderly and delicate men. But in so doing they were, as a matter of fact, eliminating the safe men. Not only this, but with the law of compensation hanging over their heads, employers became more reluctant to allow their men to 'go easy.' Indeed, as a direct outcome of the unwise extension of employers' liability, something like a revolution has occurred in many of our industries—a big change for the worse, so far as labour is concerned. Large numbers of men—particularly unskilled men—

who used to be employed regularly at weekly wages, and were permitted to 'take their time,' enjoying frequent rests between jobs without loss of pay, are now employed more casually by the hour, rushed while a job is on hand, and then dismissed or suspended, and their pay stopped immediately the job is finished. Employers who were formerly indulgent are not now disposed to have men resting in the shops —or perchance playing, and running risk of accident—when their services are not actually required. Thus not only have workshop accidents largely increased through the elimination of the aged and cautious workmen, but those left in the shops have had their toil made harder and their earnings cut down. To put it briefly, the aged and weak have been turned adrift, the young and strong have been goaded on, unemployment has been aggravated, earnings diminished, toil intensified, and dangers multiplied—by special labour legislation! This state of things has been brought about, not because the law was really wrong in principle, but because, to suit the labour leaders, it went beyond the bounds of reason in seeking the same compensation for an aged man as a young one, in imposing an unfair liability upon employers, and in refusing to permit contracting-out.

But the employers are by no means blameless in this matter. The ex-Home Secretary, Lord Gladstone, attributed the increase of workshop accidents to the general speeding-up policy adopted in British industry. To a considerable extent this is true; but it is a demonstrable fact that the most of the mischief is resultant of the elimination of the elderly workman. The very agency set in operation by the employers to diminish accidents and the cost of meeting claims has resulted in a big increase of accidents and costs, as might have been expected. It is the young man, and not the aged one, who is most liable to accident, and certainly the most likely to cause injury to others by leaving things unsafe. In this respect the 'too old at forty' idea is an egregious fallacy. Sir John Brunner, in a letter to the *Times* a while ago, gave the following figures relating to accidents among the workmen employed by his firm:

AGES AND PERCENTAGES OF ACCIDENTS PER ANNUM.

18–25	26–30	31–35	36–40	41–45	46–50	51–55	56 and over.
8·5	6·8	4·2	3·6	2·8	3·7	2·4	2·4

These figures are eloquent and significant as they stand, but they do not tell—they cannot tell—the whole story. It is not so much a question of the ages of the men who are injured by accident as of the ages of the men who *cause* the accidents through carelessness and ignorance. The negligence of a young man frequently results in injury to young and aged indiscriminately, when the care of a more elderly man might have avoided accident altogether. Those employers who have given the greatest preference to young and inexperienced workmen have had to pay the penalty in growing costs. It is exactly in those trades where the policy of weeding out the aged has been pursued the most vigorously that the increase of accidents has been greatest.

In this matter of increasing accidents the case of the mining industry calls for special mention, because the recent rise in the mining accident-rate follows upon two generations of steady and persistent decline. Between the middle and the end of the nineteenth century the mining accident death-rate declined by about 60 per cent. In the decade 1846–55 the average annual number of deaths was 1 in every 249 employed, while in 1896–1905 it was 1 in 769. But progress has stopped and retrogression has set in. From 1900 to 1904 1 in every 779 was killed, on the average, while in the period 1905–9 the average was 1 in 744. For the last two years we have a sharp rise. While in 1902, for example, only 1 in every 805 was killed, and in 1899 only 1 in 840, in 1909 we had 1 in 698 killed. For 1910 the deaths equal 1 in about 610. And, of course, non-fatal accidents have increased concurrently. In ten years the percentage of the members of the miners' relief societies claiming accident benefit has risen from 184 to 249 per 1000. Why this increase when, with the continued growth of scientific and technical knowledge, coupled with more stringent State control, there ought to be a decrease?

There are reasons for thinking that the wider application of electricity to coal-mining is one source of the mischief. It is quite true that only 51 deaths have been officially attributed to accidents in connection with electrical apparatus in the seven years during which the special electricity rules have been in force; but it is significant that nearly half that number occurred in the last year, when there was great development electrically with a view to minimising the effects of the Eight Hours Act; while the opinion held by some observant miners that one or two recent fires and explosions, involving great loss of life, have been set up electrically is not without foundation. We will not say the use, but we do insist that the misuse, of electricity in coal-mining is a danger.

Then there is the question of 'speeding-up.' No general speeding-up can be proved from statistics; indeed for some years the *per capita* output of coal has been declining, despite the adoption of improved appliances. But when due allowance is made for the deeper and more naturally difficult mining, coupled with the increasingly frequent stops and short days and petty strikes, there is seen to be ground for the idea that the 'Americanisation of industry,' which has certainly done something to increase dangers in our manufacturing trades, has spread to our mines. With the diminished earning-time of the coal-hewers on the one hand, and the more difficult natural conditions on the

other, it seems pretty certain that some speeding-up has occurred, or the decline in output per man would have been still greater than it has been. Not only is it reasonable to think that some of the managers have attempted to accelerate the haulage and windage, but it is probable that some of the miners themselves, under stress of growing difficulties with their trammers and putters, and the loss of earning-time involved, have made extra efforts to make good their tonnage pays by lessened attention to faults of roof, accumulations of gas, and so forth. So far as speeding-up is concerned, the Eight Hours Act—another measure passed to suit the labour leaders—is bound to have a bad effect. In many mines under this measure speeding-up will become a fine art. Elderly, experienced, and cautious miners will be discharged, the young and reckless will be spurred on, the speediest appliances will be introduced, repair-work will be scamped, and a huge increase of dangers and disasters will be the inevitable result. Indeed, the evil influences of the Eight Hours Act are already in evidence. Accidents have already increased as a direct result of this law.

THE SORROWS OF HEINRICH HEINE.

By Henry Leach.

THERE is a little movement astir for giving a fresh consideration to the position and merits of the German poet Heinrich Heine. It is needed. He has been dead now for more than half a century, and the historical perspective may be settled with accuracy, subject always to those fluctuations of what may be called fashion in literature, by which one generation estimates a long-dead poet or writer as being the most transcendent genius, and lingers upon his every line; and the next one neglects him utterly, if it does not condemn him, having found some new favourite to idolise, having determined that another figure in the past of literature shall be brought forward for recultivation and general admiration. Heine seems at present to be in a fair way for having his first turn since the time when he seemed to be relegated to the unconsidered dead and done with. One notices here and there little booklets of Heine anthologies in fancy bindings. The people who dally with poetry in this way are 'taking him up.' It seems clever to know that there was such a poet as Heine, not to be ignorant of him, even to be able to recite a crude translation of some of his witching lines. Heine has been 'coming in,' but too much as we revive a long-neglected style of decoration for our apartments and the ladies take up a new shade of colour for their gowns.

Yet in spite of innumerable English translations from Heine's verse and Heine's prose, fuller or less complete, better or worse, and in spite of longer lives of him (like Stigand's) or shorter (like William Sharp's), it must be admitted that the great English reading public knows too little of the great German poet and thinker. Until lately there has been no full translation of his *Memoirs* (published in Germany seventeen years ago, and partly translated in America some time since), which give the key to all his thoughts, exhibit the sources of his inspiration, the movement and richness of his mind, and explain the reasons of his neglect. It is one of the most valuable and interesting contributions to the world-library of literary memoirs. A good English translation of this has just been made and published, and we should come now in this country to a better understanding of the man. We shall find him an intensely interesting study. The story of a life is rarely so thrilling as when it is tragic. Glory and happiness in biography and memoir soon begin to pall, and even to sicken; but the lives of the great men of letters of all countries have rarely lent themselves to treatment of that kind. Poets for the most part have had very irregular and generally sad existences. They have had the best consolation of their lives from the muse. It is partly because they have been so sad, so pitiable, that it has been kind to them. It is gloom and misery in a great mind that oftenest stir up the genius in a man and make it fruitful of its best capacity, rather than the scintillating joy of happiness.

And there has hardly ever been a greater tragedy in letters than that of Heine. In the little that English people in general have known of him they have thought of him as a renegade, as something almost of a traitor, as a most unholy cynic, and a stirrer-up of trouble, who was very properly kept out of the Germany of his birth. They have known little of his greatness and the sweetness of his song. Then, also, to give the ultimate justification for their neglect and contempt of him, they have come to understand that he hated themselves, the English people; that he spoke and wrote disparagingly of them and their country. So he did; but that is a poor and a petty reason for condemning or ignoring him in literature. Perhaps Heine of the sad but still heroic life will have some justice done to him before long. Nobody will now begin a reading of any of his writings without being fascinated and going through with a study of his work so far as he is able and has the means at his command.

The most elementary facts of Heine's life and circumstances, stated in the baldest manner, are

that he was born at Düsseldorf, of Jewish parents, in 1797; that he inherited a certain love for France and the French people; that he was first set towards a commercial career, but abandoned it as he felt the poetic spirit so strong within him; was attracted by the Paris July Revolution, threw in his lot with the Liberals, and settled in the capital of France in May 1831, regarding it as one of his chief businesses in life at that time to draw France and Germany together. His severe criticisms of both political and literary matters made him numerous enemies, and the sale of his works was prohibited in Germany.

The German people came to hate him intensely, considering that his French sympathies were inconsistent with any proper patriotism. They said, also, that he wavered so much in his religious ideas that he had plainly no moral vigour; and then, too, a cynic of such intensity, one who flings his barbed darts at every person and every institution and everything, can never be popular or liked in his own time, nor can ever get his genius fully recognised. He has no right to expect it, the world being what it is, peopled for the most part with ordinary human beings who are all for comfort and make a god of tact. They preferred to overlook the beauty of his love-lyrics and the marvellous skill which he displayed in portraying Nature in her many moods in his written words, and particularly the Nature of the sea in placidity and in storm. In this no writer has ever excelled him. In 1845, when he was only at the beginning of middle age, he was struck down with paralysis, and the rest of his life was spent on what he called his mattress-grave; but he still worked on and worked brilliantly until his death in 1856. He said of himself, 'I am a Jew, a Christian; I am tragedy, I am comedy—Heraclitus and Democritus in one; a Greek, a Hebrew; an adorer of despotism as incarnate in Napoleon, an admirer of communism as embodied in Proudhon; a Latin, a Teuton; a beast, a devil, a god.' Towards the end he wrote: 'I know not if I deserve that a laurel wreath should one day be laid on my coffin. Poetry, dearly as I have loved it, has always been to me but a divine plaything. I have never attached any great value to poetical fame; and I trouble myself very little whether people praise my verses or blame them. But lay on my coffin a sword; for I was a brave soldier in the war of liberation of humanity.' By his will he forbade that his remains should be taken to Germany for interment, and he was buried in Paris.

In a brief recommendation to his magnificent work there can be no description of it. Matthew Arnold once wrote a famous essay upon the man and his writings (which was splendid in many ways, but somewhat inaccurate, as it is now held, in some of the judgments and criticisms) in which he pointed out that Heine was the chief continuator of that which in Goethe's varied activity was the most powerful and vital. 'On Heine,' said Matthew Arnold, 'of all German authors who survived Goethe, incomparably the largest portion of Goethe's mantle fell.' This was hardly more than a simple truism. Apart from the music of his words, he had a certain charm above all other writers in the blend he made of his wit and his pathos. He has them together constantly, and by the combination he delights exceedingly and penetrates deeply in the sentiments. It is a combination that, strangely, comes most frequently from the saddest and most disappointed spirits.

These *Memoirs* of his are more than usually interesting. They have been translated by Mr Gilbert Cannan, and published by Mr Heinemann, and the result is two volumes that fascinate intensely. The poet's ruminations, his thoughts, his theories, and his complaints, stir the feelings as literary reminiscences not often do. Some one wrote to a London paper recently to condemn the suggestion that the house where Heine stayed at while he was in London should now be labelled accordingly, because he had attacked the English in his writings even more bitterly than his own people, and it was urged that the Germans had erected no monument to him because of his bitter ridicule of them—which is hardly a compliment to German broad-mindedness—and that the plan for a monument to Heine in New York had also fallen to the ground. The translation of Heine in twelve volumes, planned and mostly executed by C. G. Leland, is no inconsiderable American memorial of the poet; the Heine bibliography in Britain must run to hundreds of items. Surely no Englishman or English woman capable of enjoying great literature will even bear a grudge against Heine because he frankly criticised what he did not like in England, pungently as he was wont, and not, as one must admit, wholly without reason. Besides, it is surely time Heine were taken up and studied and admired as the man of genius has the right to be. Humiliating indeed would it be if England had ever to confess herself so small-minded as this correspondent suggests she is or should be. We like to see these *Memoirs* in English for the good they may do and the education they may yield.

Let us know the worst that Heine had to say about England and the English. Some of it is in the *Memoirs*. He found London ugly, as many Englishmen who do not understand the place do also. It is something to be grateful for that Heine did not visit her in 1911. He happened to be there in 1827, and even then he accused her of too much machinery. He wrote: 'I have seen the most remarkable phenomenon that the world has to show to the amazed mind of man. I have seen it, and am still amazed. In my memory there remains the stone forest of houses, and in between the surging stream of vivid human faces, with all their gay passions,

with all their horrible flurry of love and hunger and hate—I mean London. Send a philosopher to London, but on pain of your life not a poet! Send a philosopher thither, and set him at the corner of Cheapside, and he will learn more there than from all the books of the last Leipzig fair; and as the waves of human beings roar about him there will arise before him a sea of new thoughts, the eternal spirit which hovers over the place will waft him up, and suddenly reveal to him the most hidden secrets of the social order, and he will hear with his ears and see with his eyes the beating pulse of the world; for, if London is the right hand of the world, the active, strong right hand, then that street which leads from the Exchange to Downing Street must be regarded as the pulse of the world. But do not send a poet to London! The mere seriousness of everything, the colossal uniformity, the machine-like movement, the shrillness even of joy—this overdriven London oppresses fancy and rends the heart.'

This last was an after-reflection. In a letter he wrote from London to a friend he said: 'You can easily imagine my life here, knowing myself and England. I am seeing and learning much. In a few days I shall go to an English watering-place. The chief object of my journey was to get away from Hamburg. I hope to be strong enough never to return to it. But I am drawn towards Berlin. A shallow life, witty egoism, witty sand. Everything is too dear and too distant here. There are many attractive things too—the Houses of Parliament, Westminster Abbey, English tragedy, and pretty women. . . . English literature at present is pitiful, more pitiful even than ours; and that is saying a good deal.'

But this is really the worst, and it was written from Ramsgate: 'I brought a good stock of ill-temper with me from home, and I increased it among a people who can only kill their boredom in the whirlpool of political and mercantile activity. The perfection of machinery, which is used everywhere in England, and has taken over so many human functions, is for me not a little disquieting; this clever driving of wheels and rods and cylinders, and a thousand different sorts of little loops and pegs and teeth which move almost with passion, filled me with horror. The certainty, the exactness, the great madness, and the punctiliousness of life in England made me not a little unhappy; for just as the machines in England appear like human beings, so do the human beings appear like the machines. But there is nothing like the black mood that came over me once when I stood in the evening on Waterloo Bridge and looked down at the waters of the Thames. It was as though my soul were mirrored in them, as though it were looking up at me out of the water with all its wounds. . . . Then the most miserable thoughts came into my head. . . . I thought of the rose which has been anointed with vinegar, and has lost its sweetest scents and withered too soon. I thought of the lost butterfly which a naturalist who climbed Mont Blanc saw fluttering there all alone between walls of ice. . . . I thought of the tame she-ape who was so accustomed to men, and played and ate with them; but one fine day she recognised in the dish that was laid before them her own young, and she snatched it away and rushed into the forest with it, and never again appeared among her human friends. . . . Ah, I was so woe-begone that the hot tears gushed from my eyes. . . . They fell down into the Thames and were carried away into the great sea which has already swallowed up so many human tears without noticing them.'

On such evidence is Heine to be perpetually banished from recognition! Some foreign people have called the English shopkeepers, and we did not seem to mind. For ourselves, we say we are 'sportsmen.' Heine said we were nasty-looking machines, and were not poets. Was it suggested in the old days that we ought to object to its being said we were not poets? But perhaps we may be sportsmen now. Anyhow, these *Memoirs* should be read for the enjoyment that they give and the thought that they provoke, if not with any object of revising an old and passionate judgment.

HUNTING THE 'CAPTAIN COOK.'

THE WILD PIG OF NEW ZEALAND.

I SUPPOSE that to most men comes at times an instinctive longing to get back for a while close to Nature at her wildest, to experience, if only for one day, the fierce joys and thrills and excitement of primal emotions. It is this longing, more than the mere lust of killing, that sends the sportsman into the out-places. There still remain a few such places in a too orderly world, and none where the desire is better likely to be fully gratified than in the wide, unsettled spaces of New Zealand.

In early colonial days, the days of sparse settlement, so numerous and predatory were the wild pigs that they formed an absolute menace to the pastoralist. On the plains of the Hutt and in Hawke's Bay the droves wandered like flocks of sheep, and early runholders found it necessary to organise battues on a large scale for their destruction. This was generally a matter of contract—the squatters paying at the rate of sixpence a tail, as evidence of a pig destroyed.

With the arrival of the flocks and herds the wild pig quickly developed a taste for fresh mutton, and became a hunting animal on his own account. Thousands of fat lambs, ewes, and hoggets disappeared annually to fill the maws of the porcine marauders, till at length exasperated flock-masters banded together for the destruction of the common enemy. Decimated by this wholesale warfare and harried by pork-loving Maoris, the pig-tribes withdrew themselves far from the region of the menfolk.

The hunter of to-day who would meet the wild boar of New Zealand in his native wilds, who would pit skill and weapons against the tusks and the rush of a genuine old fighting 'Captain Cook,' must seek his quarry far afield—in the wide foothills, beyond the fringe of the great upland forests.

Though known throughout both islands by the generic name of 'Captain Cook,' it is not to be supposed that the numerous progeny of to-day owe common ancestry to the two pairs of porkers presented by the famous navigator to his Maori hosts. There were enthusiasts in acclimatisation even so long ago as 1820, and from that date on to fairly recent times many were the 'breeders' brought by British and American whalers and turned loose to increase and multiply in the empty land. But 'Barkshire' or 'Maryland' freedom and environment have done their work, and at this late date it would puzzle the cleverest pig-fancier to fix an origin.

Long-nosed, hollow-snouted, flat-ribbed, gaunt and savage, russet-brown in colour, roach-backed, and covered with long iron-gray bristles, boars and sows present little difference in appearance except in point of size and tusks. Both offer to the hunter sport of the rarest; though, naturally, in fighting qualities the boar is easily first.

A 'Captain Cook' at bay—chine hunched, horrent in brush of bristles aquiver with rage, standing three feet in height from hoof to shoulder, wide-mouthed, dripping foam, and tusked with razor-sharp, six-inch ivories—forms a picture worth seeing, and the encounter teems with thrills of the keenest.

At the outset let the new-chum disabuse his mind of preformed notions of orderly pig-sticking in India, with attendant host of shikarees, horse, and boar-spear; or the tamer *chasse* of the Continent, where the animal, trapped to order beforehand, is sometimes brought ignominiously in a cart, turned out, and shot at leisure from behind a convenient tree. Here the game must be followed afoot. Broken gullies, rock-strewn declivities, and dark cañons choked with undergrowth make the use of a horse a sheer impossibility. Boar-spear and rifle, too, are to be discarded for close-quarter weapons effective in cramped surroundings and all the hamper of semi-tropical forest primeval.

The 'tools' required comprise a heavy revolver, strong hunting-knife in sheath, and a short-handled tomahawk. The latter, besides being an effective weapon, is useful on occasions for cutting a way through the maze of lianas, vines, and thorny creepers of the underscrub.

Above all, the success or failure of an expedition rests on the quality of the dogs employed. These must possess the first essentials of weight, quickness, holding-power, and pluck. The real pig-dog of New Zealand is of a race apart—hybrid, apparently, from collie and mastiff, with perhaps a far-away strain of the *kaiwaka* or native dingo (now extinct). Dogs of all kinds are employed, even to the veriest mongrels; but, if possible, let the two secured be of the true breed. A numerous *entourage* of dogs and hunters is likely to prove a disadvantage in the thick tangle of thicket where you are likely to 'flush' the quarry, and by getting in one another's way apt to court disaster. A brace of dogs, two men, or at most three, form the ideal complement of a hunting-party. Boars are not gregarious, and it is little likely that more than one will claim attention at the same time.

Having secured dogs and weapons, let us put ourselves for a while in the place of the hunters. Arrived in the pig-country, we are quickly put on the trail of a near-by drove by the more or less fresh pig-rootings in the glades of the fern-land. Over rolling saddles, down declivities steep as a house-side, toes, knees, and hands in turn are requisitioned to follow the track, until, at the bottom of some mountain-gully, scarped and bush-filled, the dogs 'give tongue.'

Down, swinging from vine to vine, clinging to roots and projections, we reach bottom in a tangle of sword-grass and thorny lianas. Straight from fierce sunlight to the dimness of the thick bush, unaccustomed eyes for a minute scarce pierce the twilight of leafy shadow. Here and there a massive trunk rises dark amid the scrub-tangle.

Ha! the dogs have 'bailed' a fighting old boar in a rock-cleft. Flanks and rear protected from attack, he stands at bay, defiant—champing jaws dripping foam; great head slowly swaying, with wicked upward sweep of gleaming tusks; red eyes ashine, as if to say, 'Come on! I'm ready for you!'

But the dogs know better, springing from side to side, barking insult, darting in and away in short rushes, always keeping clear of those scythe-like tusks—anything to lure him to the charge, to lay himself open for one moment to a flank attack. But the pig too knows his own advantage, and refuses to be drawn. Don't 'sool' the dogs to an unwise assault. The dog is yet unborn who could face a 'Captain Cook' in a frontal attack. All that remains is to sting his hide with a revolver-bullet, and by reckless exposure full in front tempt him to a charge.

'That's it! Look out now! Jump for the nearest tree!' Hurrah! the dogs have him on either side, one to each ear. Long bodies,

pressed close against the boar's flanks, avoid his frantic tusk-sweeps.

A mad turmoil of dogs and boar in the confined space, snapping of wood as the maddened brute charges through the thicket in a vain endeavour to rub off the clinging torture at his ears against the undergrowth, shrilling screams of rage, stifled growling of dogs, frantic shouts of men jumping round the mass of struggling animals on the chance of getting in shot or blow.

Winded as he is by futile effort and the backward, downward pull of the dogs, the boar's nose tilts in air and he pauses to get breath for a fresh effort. Now is the moment to spring in. With a sweeping tomahawk-blow on the spine bring the brute's hind-quarters paralysed to the earth.

The battle is not over yet. Despite his broken back, the boar may remain erect on his forelegs for another quarter of an hour. Though hams and haunches lie prone, let the dogs lose their hold from any cause and you will find plenty of fight still remaining.

It behoves one to be careful in giving the *coup de grâce*. In the soft beneath the shoulder, as the struggling animal lifts a foreleg—the only vulnerable spot—you may drive the knife home. So thick is the armour-plate of hide that elsewhere the point turns and the bullet flattens ineffectively.

According to the best traditions of the hunt, the correct manner of despatching a boar is to watch till the dogs, having secured a good grip, have brought the animal to a standstill, head in air and nose uptilted. While he is in this position the hunter, by stooping, grasps the brute's off foreleg close down to the hoof, and with a strong upward heave throws him on his back, getting the knife-point home in the armpit ere he can recover. This method, however, presupposes the most favourable conditions. It is much more likely that the encounter will resolve itself into some such rough-and-tumble as that described.

A question frequently put to hunters is, 'What would happen should a boar succeed in killing the dogs before receiving a mortal wound?' In that case, I imagine, 'things would be apt,' as the Americans say, 'to become pretty lively,' and the ultimate issue doubtful. I have never known or heard, however, of such an occurrence. A good dog, though ripped unmercifully, will still hang on to his grip; and the possibility of both dogs being placed *hors de combat* simultaneously is remote.

Fatalities, of course, are not unknown, and ripping wounds from charging boars are not always to be avoided. One could scarcely meet an old boar-hunter who has not his cicatrised scars of many a shrewd gash to witness to his prowess. These, however, are among the accepted risks of all true sportsmen; and, whatever the progress of the hunt, a battle with a boar will be a fight to a finish. The pig in all lands is among the pluckiest of animals, and only a mortal blow will induce a wounded 'Captain Cook' to abandon a struggle once begun.

The meat of young sows and porkers, though thin, is very good—a fact fully appreciated by back-block pioneers of old, who, far from the region of butchers and provision dealers, looked in great measure to the pig-droves for the replenishment of their larder. Flour and biscuits they carried with them, but for flesh-food and the further complement of the commissariat trusted to the wild pigs and their own skill in hunting them.

It was while on a pot-hunting expedition of this nature that an experience befell me which, if serving only to show how at times comedy treads closely on the heels of tragedy, may be worth the telling. Anyhow, until the intervention of a laughter-loving Fate, the moments that went before were big with the possibility of a very pretty disaster.

Twenty-five years ago I was, with a friend, engaged on a gold-prospecting expedition in the foothills. Our supply of 'tinned cow' and our bacon 'petered out' unexpectedly. The pack-horse train with supplies could not be expected for a fortnight. The prospect of fourteen days' exclusive diet of 'hard-tack' and black tea was not one to be lightly faced by two hungry men. We decided to fill our larder in the good old way, and go a-hunting.

There was no question of 'sport' at all. It was hunger alone that sent us forth upon the trail. Our aim was to steal what we wanted as silently as possible, without interruption from the boars. Indeed, our weapons were hardly of a nature to stand us in good stead in the event of such a meeting. We were without dogs. A fairly blunt sheath-knife and an antiquated shot-gun completed our accoutrements. We prayed hard that the rencontre might be avoided.

Fortune favoured us. Lurking like hidden assassins in a grass thicket beside a spring, we succeeded almost noiselessly in doing to death a fine young sow, and, having cut up the carcass, started for camp with the meat 'pikaned' (carried as in a knapsack) in sugar-bags on our shoulders.

Our way lay down the ravine of a stream-bed nearly dry, and for the most part it offered easy going. Half-way down, to avoid a waterfall and the deep pool below it, the track, leaving the bed, wound precariously at an acute angle round a rock-bluff. The pool below the fall measured perhaps six yards across, with a depth of water of seven or eight feet.

The rock-track was narrow and difficult. We proceeded in single file—I in the van, Jim bringing up the rear with the gun. Above, the cliff-face, scrub-clad and sheer; below, a steep descent of thirty feet into the waters of the pool. We had almost negotiated the awkward corner. Our minds dwelt fondly on the thought of pork-chops for supper.

Suddenly, round the bend a boar big as a house trotted, came to a surprised halt, and stared at us. We all stared. The boar threw his snout in the air and sniffed. I am certain he smelt and recognised the meat we carried as portions of a defunct acquaintance. There was no turning to retreat on that narrow path for man or beast. Here was an *impasse:* retreat impossible, and progress barred by an angry, wide-tusked boar, who gnashed at us injunctions to get off—anyhow, anywhere—out of his way.

Silently we slid our arms from the pikan-straps and dropped our packs. I heard Jim fingering the lock of the gun behind my back. *Bang!* Precipitate as ever, he fired, muzzle thrust forward between my arm and body. The buckshot spattered on the armour-clad hide like rain, and the boar came at us like a battering-ram. As I sprang for an overhanging root, the brute, a living earthquake, thundered beneath my updrawn feet. A rattle of loose stones below me, a shout, slither of heavy bodies falling, a splash, followed a moment later by a second, as Jim and boar shot off the ledge and disappeared together in the depths of the bush-fringed pool.

Scrambling, falling down the steep, as I was, intent on picking up my chum's half-drowned and mangled remains, there came up to me from hidden depths the noise of a fierce tumult: the sound of strong surf on a rocky coast, shreds of human shoutings urgent and interjectory, howlings, gurgles, noise of many waters, gobbling grunts, sounding like nothing else in heaven or earth.

I looked for the worst. I expected—dreaded—what I hardly knew; at least, to be permitted to fish poor Jim's body from the water when the boar had done with it.

The parted bushes at the pool-edge disclosed a sight that sent me straight to a sitting posture in helpless screams of merriment. The waters of the pool, in white waves of foam, beat against the side rocks. In the centre of this maelström man and beast whirled in a sort of aqueous devil-dance. Jim, who in places could just manage to tiptoe the bottom, grasped the boar's hindlegs in a clutch of death, hanging grimly lest the pig should turn again and rend him. The animal's forepart swam strongly and screamed. The man who first said pigs can't swim was an ass. At least a 'Captain Cook' is almost as much at home in water as an otter.

As the shouting, yelling mass spun round and round on the pool's troubled surface, now the boar's head went under with bubbling scream, now the man's. As Jim's head momentarily reappeared it yelled ravings at the pig and swore interruptedly till a fresh kick from the struggling animal again sent it under with a swear-word cut off in the middle.

Following hard on tragic expectations, the scene so appealed to the sense of the ludicrous as to render me helpless from laughter till I was recalled by a frenzied shout from Jim's head as—the hair full of green water-weed—it flashed up from the depths. 'Kill him! kill him, you idiot!' he spluttered. 'Hang it! you blinking owl, d'ye th'—— The rest of the sentence was lost, finished by a *plop!* as the ruddy head went under again suddenly.

Kill him? Yes, certainly; but how? The useless gun, barrel bent like a hoop, lay on the rocks. So much of the boar as appeared above water was invulnerable to a knife-thrust.

At that moment the animal, exhausted, lay still, paddling with forelegs, as he gathered himself for a fresh effort. Prone on my stomach, my arms stretched over the water, I shouted to Jim to let go and jump, and with a quick heave had him out on the bank before the tired animal could turn to use his tusks.

The rock-rim of the pool, the sides steep and smooth, stood quite two feet above the water-surface; and, with no purchase for his hinder hoofs, the boar swam round and round, helplessly trapped as a rat in a water-butt. He still showed fight, gnashing at us with snapping teeth, drenched eyes glaring red rage.

It went to our hearts as sportsmen to do him to death so ignominiously; but there was nothing else for it. Better a quick death than to drown slowly. We could hardly expect a rescued boar to bow grateful acknowledgment should we help him out alive. So we gave him his quietus with a well-directed boulder that cracked his skull.

Subsequent measurement showed him to be a splendid animal, two feet six inches from hoof to shoulder-top, weighing two hundred and fifty pounds, with a tusk-spread of seventeen inches. His tusked skull now looks grimly from the wall above my writing-desk.

DAFFODILS.

I found some early daffodils to-day.
Their graceful charms were mirrored in a brook
That, silver-voiced, ran on its happy way
To thread with crystal many a woodland nook;
And 'neath a sky of mingled smiles and frowns
The daffodils shook out their yellow gowns.

Slim daughters of rough March, in dainty guise!
They curtsied gaily at my very feet.
Shy violets clustered near, with dusk-blue eyes;
But though their fragrant breath was sweet—oh, sweet!—
They loved the shade, their sombre tints were cold;
The daffodils shone forth in living gold.

And suddenly—I cannot tell you why—
Bright hopes that seem to perish in the snow
Sprang up and flowered; the tide of joy ran high,
And all my heart was in a summer glow.
'Thank God!' I cried; 'the world's no longer gray!
I found some early daffodils to-day.'

SEVENTH SERIES

THE TOWN OF STUPIDITY.

By Miss LOANE, Author of *An Englishman's Castle, Neighbours and Friends, The Queen's Poor*, &c.

IT is said, and generally believed, that he who has prudence has every virtue; but although the connection between idleness and every known vice is far more easily traced, we seem to have lost sight of the old doctrine that sloth is one of the seven deadly sins, and regard it not merely as a venial error, but as a failing which leans to virtue's side and is accompanied by many amiable qualities. At the present day every form of wrong-doing is attributed to ignorance, and the moral source of much, if not most, of that ignorance is overlooked. We accept and accentuate the one-sided Socratic teaching which defines goodness as knowledge, vice as ignorance, and maintains that as no man is willingly his own enemy, no man does wrong except from ignorance; and in no circumstances do we seem to hold men and women responsible for ignorance.

Bunyan held very different views. Almost the only recorded failure among the women-pilgrims is that of 'a young woman, her name was Dull;' while the Town of Stupidity 'lieth about four degrees beyond the City of Destruction.' 'I have often wondered that any should come from your place,' said Great-Heart, 'for your town is worse than the City of Destruction itself.' 'Yes,' replied Honest, 'we lie more off from the sun, and so are more cold and senseless.'

Even those who recognise the heavy national loss caused by idleness will not trace it to a mental source or seek a spiritual cure. Sloth, we are told, would instantly be changed to industry if only a man worked directly for himself, instead of getting wages from an employer. As a matter of fact and daily experience, it is rare to find a man chary of labour for which he receives a stated sum, and yet industrious when he is to receive the whole benefit. It seems almost impossible to practise this form of dishonesty habitually and yet be energetic at other times. The country shirker, the man always lurking in sheds and barns or anywhere out of sight, is always the man who grows weeds in his allotment and worm-eaten cabbages in his garden. The man who is the first to fling down his tools is the last to do a hand's-turn at home; the man who is of little use to his master is of still less use to his wife and children. While the idler is half his time out of work, even the spare time of the industrious man is competed for.

We help to obscure our sense of the moral origin of ignorance and consequent bad health by dwelling too exclusively upon the conditions of life among persons suffering from the disabilities of extreme poverty. We speak and write, and presumably think, as if the nation consisted of a small number of persons living in sinful luxury, of a slightly larger number whose modest comforts are embittered by daily anxiety, and of untold millions on the verge of starvation. As a matter of fact, one million families belong to the upper and middle classes, six and a half million to superior wage-earners, and only two and a half million to unskilled labourers, a large proportion of whom are in steady work and earning a decent maintenance.

Bad housing is one of the most fruitful sources of ill-health, but it does not all arise from poverty. I have known many families in town and country who could easily have afforded more rent, but who were perfectly indifferent to the advantages offered by air and light; in addition, I have known many who voluntarily crowded into two or three rooms and left half their cottage empty. Even among well-to-do people, is it not a common thing to live almost entirely in the smallest and darkest of three sitting-rooms, and to keep a couple of 'spare bedrooms,' while children and servants are overcrowded? As long as one sees this among the middle classes, it is not reasonable to think that all badly housed people are the victims of circumstances, or that the mere provision of good houses would secure healthy conditions of life among the poorest wage-earners. Much instruction and some degree of compulsion are needed. A family that I have observed at intervals for eleven years have lived for more than double that time in a cottage consisting of one fair-sized but much-encumbered living-room, with a lean-to wash-house, one bedroom, and a space at the top of the stairs lighted by a fixed pane of glass. The garden is periodically flooded, and the walls of the house are damp for quite half the year. The father earns on an average twenty-four shillings a week; the wife has always taken in washing and kept pigs. They have had twelve

[*All Rights Reserved.*]

children well gifted by nature; the youngest is nine years old, the eldest nearly thirty, so that there can never have been a time when they were all dependent on their parents. The two eldest were girls, and were early sent to service. The third did not go until she was sixteen; she was quick and clever, and soon obtained high wages; but the result of this was that as soon as she had two or three pounds in her pocket she returned home for several months. At twenty her health broke down, and she became the victim of a painful and lingering form of consumption. For four years, and until her death a few weeks ago, she lived in that cottage with her parents, her little sister, and five brothers (three of them wage-earners), while her two elder sisters and the three remaining brothers paid long and frequent visits to the house. An intelligent neighbour who knew that I was interested in the girl has just written to me: 'Until I helped the poor mother to put A. into her coffin I never dreamed what a terrible state she was in, although she used to come and have a cup of tea with me of an afternoon when she had got so weak that I had to hold it to her lips. It was a rest to her nerves from the crowd and noise at home, the piano always going. Nothing has been done to disinfect the place. It is a wickedness that any one should live in it, much less a big family. The next house is just like it, and when a boy was dying of consumption in it, all that the doctors seemed able to do was to put him on the landing and have the pane of glass opened above him. After he died they moved into a better house, but it was too late. The next eldest child has got it, and if she isn't sent to the infirmary the rest will follow.'

The rent of this miserable hovel is half-a-crown a week. Less than a quarter of a mile away, on rising ground and facing south-west, a six-roomed cottage with a profitable garden could have been rented for three shillings and sixpence a week. The piano, second-hand, cost ten pounds; no one in the house could play on it even by ear, and it was simply strummed on, as young children will do when permitted.

The fundamental difference in the scale of values held by the educated and the uneducated must be remembered. It may be reasonable to think that we can easily 'change all that,' but it is never reasonable to leave it out of sight. There are people to whom the advantages of domestic comfort, privacy, and opportunities of mental occupation and self-improvement make no appeal, and the generally low æsthetic standard is a very real bar to progress. Despite all proverbs, there is a close connection between good looks and good health; and although good health alone will not produce industry, industry cannot long be maintained without it. If æsthetic education were improved, national health would benefit. The working classes as a whole are singularly indifferent to good looks. The only discoverable ideal of beauty among them is that held by young girls—a slight figure and a pale face—and it is not one which makes for health, especially as the first is to be produced by main force or voluntary starvation, not active exercise, and the pallor is not expected to arise from strictness of diet but from eating raw rice. Nice personal habits are only inculcated and valued among the aristocracy of the poor. If they were more commonly practised, daily and hourly sources of infection would be cut off.

I was recently travelling by train with a young father and mother and their only child, a sturdy little girl just able to walk, and her grandfather, who was suffering from a terrible form of skin disease which had almost destroyed his sight. The eyes were discharging, and he frequently wiped them with a dingy handkerchief which he constantly held. Presently the baby, who had been daubing her face with a banana, needed a handkerchief. The mother could not find hers, and leaning across her husband, she said, 'Lend me yours, father,' and drawing it from his fingers, rubbed it vigorously all over the child's beautiful little face. To stand out against such habits is considered gross affectation, and is even held to show lack of love. One woman said to me laughingly, 'No, I'm not an affectionate mother. Even baby has to have her own hanky, not mine.'

We must not run away with the idea that all national loss by ill-health occurs among the poor, and can be measured by the rate of pauperism or the amount bestowed in charity. Enormous waste is caused by the self-indulgence, neglect, and culpable ignorance of the well-to-do. If a rich man's son suffers from consumption, or his daughter from anæmia; if his wife becomes a chronic invalid or dies prematurely and leaves her children to the care of strangers, the cost does not fall on the rates, but it is nevertheless felt by the nation. Measured in money, the loss is even greater than if these sufferers belonged to the poor; for, although the early stages of their illness may be, and often are, as much neglected and overlooked as if they were the poorest wage-earners, there is a heavy outlay on the later and usually incurable stages. Not only the poor waste good human material. The children of the well-to-do often suffer artificial and needless hardships, in some cases arising from the ignorance or carelessness of the servants to whom they are entrusted, and in others from unchecked parental fads or ideas of economy. Not only the uneducated ruin their children's whole lives because they will not make up their mind betimes what to do with them and cut their measure according to their cloth. How many sons of clergymen, doctors, officers, and civil servants are allowed to remain at home in the vague hope that 'something will turn up,' and then, when idleness has done the first part

of its deadly work, are shipped off to the colonies with scarcely a chance of being able to surmount difficulties for which they are entirely unprepared! How many of their daughters grow up to be the despair of genuine employment agencies and the prey of dishonest ones!

The health of the women of the upper classes has greatly improved during the last fifty years, but that of the women of the lower middle classes will not well bear comparison with that commonly enjoyed by the wives of artisans and regularly employed labourers. They ought to be, and could be, as strong as any women in the land; but as a class their health at all ages is extremely unsatisfactory, and affords a great field for self-reform.

The conditions of civilised life tend more and more to obscure the fact that all wealth arises from labour and saving. Ordinary people fail to recognise that whether the help they receive comes to them from their relatives, from charitable sources, or from rates and taxes, it has but one origin—other people's labour and sacrifice, and that these have to be continually renewed. They do not realise that if every man were entitled to an invalidity pension, the nation would none the less be the poorer for the incapacity of each one of them. Our final goal is not that every man should be comfortably supported in times of sickness, but that he should never be sick. There are men in all parts of the country who under the present conditions of life and work, under the harder ones in which most of their life has been passed, and the still less favourable ones in which they were born and reared, have not lost an average of three days' work a year from illness. There are women who have brought up large families on narrow means and yet have had an economically valuable middle age and a vigorous and independent old age. We want to multiply men and women of this type, and if some can exist in spite of great discouragement, many might exist in more favourable surroundings.

In considering questions of health we are apt to fix our attention solely on the condition of large factories and workshops, and rest content if these are satisfactory. Even at the present day it is estimated by competent persons that fully half of the working population is engaged by masters who may be fairly described as 'small employers.' Adequate inspection of all these premises may be impracticable; but we ought to try to arouse public opinion and public conscience to realise that national health may receive as great injury from the unsatisfactory state of a large number of small places of business as it could from a comparatively small number of huge factories or mines.

We count up the national loss arising from convicted criminals and habitual paupers; but we make no attempt to estimate the infinitely greater loss arising from irregular, incapable, and unwilling workers. In somewhat the same way we tabulate the blind and deaf and wholly crippled, but think nothing of the national loss which arises from mere dullness of senses due to early neglect or mismanagement.

Hindrances to general progress may be intellectual, physical, or moral. In the past and passing generation social reformers laid most stress on the first; if we could all read and write and cipher prisons would be emptied. The rising school of reformers pin their faith to a carefully graduated system of compulsory physical exercise; this, almost unaided, is to abolish workhouse and casual ward.

If the next generation fixes its mind on moral teaching all these things may be added unto it. If we would remain a great nation and become a nobler one than the world has yet seen, we must abandon the Town of Stupidity, and once more give prominence to the fact that sloth is a cardinal sin; and we must realise that all the natives of that town do not belong to our poorest classes, nor have these the monopoly of idleness, ignorance, inefficiency, and ill-health.

PETER AND JANE.

CHAPTER XII.

So much has been said and so much has been written on the subject of the man who works and the woman who weeps, the man who fares forth and the woman who waits at home, that it hardly seems necessary to begin a chapter with another dissertation upon the subject. Lovers are proverbially discontented under the adverse conditions of separation. Peter Ogilvie would have given much to be at home on the winter following his mother's death, and there is no doubt about it that Jane Erskine felt that things would have been many times easier abroad. But if these persons had changed places their sentiments would doubtless have been exchanged also, thus proving what a difficult class of beings lovers are, and how impossible it is to satisfy or to console them.

The conclusion, therefore, which may be arrived at on the vexed question as to which is worse—the lot of the man who works or the lot of the woman who weeps—may be summed up in the convenient phrase, 'There is a great deal to be said on both sides.'

It is true that Kitty Sherard and Jane, left behind in comfortable and prosaic England, were spared a torment of flies and mosquitoes and

other minor discomforts. They escaped many of the ills of life and enjoyed many of its pleasures and luxuries, but these things seemed to them of very little worth, and the world of action when viewed from the safe security of their environment appeared to be the only place where pain might be assuaged or the bitterness of separation annulled.

Peter Ogilvie and his friend Sir Nigel Christopherson, meanwhile, were in the midst of weather as hot as can very well be endured even by English people, who seem capable of resisting almost every sort of bad climate. The sun rose on the edge of the level plains every morning with horrible punctuality, and stared and blazed relentlessly until it had burned itself out in a beautiful rage and glory in the blood-red western sky.

'Dawn,' Ross said, 'is one of the things you are disposed to admire when you first come to Argentina; but when the hot weather begins you feel inclined to throw your boots at the sun when it rises.'

Now it was afternoon, and a heavy day's work in the corral was over. Peter was writing letters, while Ross and Toffy dozed in long cane-chairs in the corridor. Purvis sat on the little cretonne-covered box beside the empty fireplace and looked with lack-lustre eyes into space. He had been helping with some work on the *estancia;* but he had brought none of his own men with him, as some neighbours had done, and the ominous whisper grew that there was trouble down at his place. Ross treated the matter lightly, and explained it by saying that Purvis was making a fortune with his steamer, and was feeding his men on *carne flaca.** 'Hang it!' he said, 'you can't be exclusive in a country like this. Purvis does his best, poor beast; and I believe he is worth a dozen detectives in this affair of yours, Peter.'

Peter himself, however, was inclined to draw back a little. 'He has put me on the wrong scent once or twice,' he said.

'After all, you haven't told him much,' said Ross.

And Peter agreed that this was so.

There was an undefined feeling in his mind that if he had to hear that his brother was alive, he would like to hear of it through such legalised channels as Sir John Falconer was arranging. The cautious detective spirit was not strong in Peter Ogilvie. He would have preferred to take the whole world into his confidence, and to ask all and sundry to speak out if they had anything to say. But Mr Semple and Sir John had cautioned him against this procedure, and such inquiries as he had been able to make had been conducted at one time with such surprising caution that no possible clue was given towards finding the child, while at others he had allowed more to be known than Mr Semple, for instance, would have thought wise. He had lately become more reserved in his dealings with their neighbour at La Dorado, and almost had begun to try to discount the fact that he had ever consulted Purvis at all about his affairs. He lightly waved aside any information that was given him, and was always busy at the moment when Purvis wanted a few words with him. He advised Toffy to say, if he were asked, that Sir John Falconer was making inquiries, and that for the present they themselves were not going to move in the matter. Toffy and Ross both thought that they had gone too far to make such an attitude possible. 'What harm can it do to find out what he knows?' Ross said more than once.

But Peter still held back. 'I hate his confounded mysteries,' he said, 'and I don't attach much importance to things that are only known in a backstairs sort of way.'

This afternoon, in his letter to Jane, he had given it as his opinion that the little man who, they thought, might help them was proving to be rather a fraud. 'He is always starting ideas,' wrote Peter, 'and nothing comes of them. Why, bless me! you would think that Argentina was peopled with unclaimed babies and stiff with missing heirs.'

He felt better when he had unbosomed himself to Jane and had got rid of some of his impatience and ill-temper.

'I think I'll ride to the post presently,' he said, getting up and stretching himself; 'it must get cooler soon.'

Purvis got up also from his little wooden seat by the fireplace. 'I'll come with you,' he said. 'I am expecting letters which may want my immediate attention, and I can call at the telegraph-office on my way. May I give you my company so far?' he asked. There was a touch of the lackey about Purvis, and his voice was humble sometimes to the verge of being irritating.

'*Como no?*' said Peter lazily, having quickly picked up the formula of the country. His tone was not enthusiastic. Purvis was so much inclined to circumlocution that the fact that he had asked deliberately to accompany him on his ride towards the mail in the cool of the evening convinced him that he could have nothing of importance to say.

They rode together a little way over the short, tough grass of the camp without speaking, and then Purvis began in his smooth, thin voice, riding a little nearer to his companion so as to make himself heard without undue exertion, 'I wanted to speak to you alone.'

'Say on,' said Peter.

When he was riding Purvis was perhaps at his worst. He had an ugly seat in the saddle, and his dark-gray suit, made with trousers, was worn without riding-boots. He looked straight

* Lean meat.

in front of him with his tired, watery eyes, with the perpetual tear in them, and said, 'I believe we are within measurable distance of finding the man you seek.'

Peter looked full at him, but the other did not turn his head; his horse cantered along lazily in the evening light, and Purvis sat loosely in the saddle, his pale, expressionless face turned towards the path by which they were travelling.

'The name of the man,' he said, 'is Edward Ogilvie.'

'Yes,' said Peter; 'my brother.' The thing was out now, and he could thank Heaven that he did not wear his heart on his sleeve.

'It is a very strange story,' said Purvis.

'May we have it?' said Peter briefly. He might employ Purvis, but it galled him to think that his future lay in Purvis's hands.

'No,' said Purvis in his hesitating, thin voice. 'You can't have it for the present. To begin with,' he continued, turning towards Peter for the first time, and raising pathetically large eyes towards him, 'I am not going to speak about it until I am sure of my facts; nor am I going to speak about it until I have asked you for some necessary details which will make a mischance or a case of mistaken identity impossible. I don't want to make a fool of myself, as you have trusted me so far.'

'Ask me anything you like,' said Peter laconically.

His mind was pretty full just then, and there was a note of confidence in Purvis's voice which gave him the idea that the search was nearly over. He began to wonder how much money he had, and whether there was any chance of the Scotch estate being his. Bowshott, of course, would pass away from him, and the beautiful house, with its galleries and its gardens, would be the property of some unknown man. Possibly the man had a wife, and where Jane was to have reigned as mistress there would be some colonial woman, unused to great houses, and with manners perhaps not suited to her position. He wondered what his mother would have thought about it all, and whether she could in the least have realised what the result of her unfinished letter to him might be. Whatever her faults, she had been a great lady to her finger-tips. He remembered her as he had been wont to see her, showing her pictures and gardens to the foreign royalties who came to see her, or receiving Her Majesty when she drove over from Windsor and called upon her. Only Jane could ever fill her place adequately; Jane with her short skirts and graceful, swinging walk, and her queer, plain hats that so perfectly became her, and made country neighbours look overdressed. He loved to remember her in a hundred different ways—in white satin, with a string of pearls about her neck; at meets, on one of her sixteen-hand hunters; playing golf; painting the rabbit-hutch in the garden; binding up Toffy's hand that morning, ages ago, when he had had a spill out of his motor-car; playing with the school children on the lawn; or, best of all perhaps, dancing in the great ballroom at Bowshott, and sitting with him afterwards in the dimness of his mother's tapestried chamber, with her great white-feather fan laid upon her knees.

'Is the man married?' asked Peter with a drawl.

'He is married,' Purvis said, as the two horses swung together in their easy stride.

'Wife alive?' Peter slowed down and lighted a cigarette with deliberation.

'That is a part of the story which I cannot at present divulge,' said Purvis.

'It sounds mysterious!' said Peter, sending his horse into a canter again.

'If it were written in a romance it would hardly be believed,' said the other.

'You were going to ask me some questions,' said Peter, as though to put an end to any dissertation on the romantic side of the story. 'It is a business matter,' he said, 'and we had better be business-like about it. We can unfold the romance of it later.'

'That is my wish,' said Purvis gravely.

Peter began to tell himself that he was treating this man badly. He had nothing to gain beyond a little money for his services, and so far he had behaved well and with tact. He was obviously disinterested, although perhaps his bill for pursuing his investigations might be fairly high.

'I have reason to believe that the identity of the man can be proved,' said Purvis; 'but I am not going to risk finding a mare's nest, as I have told you.'

'I cannot be of much help to you,' said Peter. 'I have never set eyes on my brother since I was two years old.'

'This is his photograph,' said Purvis, producing a coloured photograph from his pocket.

Peter took it in his hands and looked long at it. It represented a little boy with fair curls seated in a photographer's arm-chair.

'Can you tell me if it resembles any of your family?' said Purvis.

'Well, 'pon my word, I don't know,' said Peter. 'The photograph is a small one, you see, and evidently not a very good one, and to my mind all children of that age look exactly alike. He looks a good little chap,' he finished, with a touch of kindness in his voice. If his brother turned out to be a good fellow reparation would be made easier; and, good heavens, how badly he had been treated!

'The chief danger,' said Purvis, 'lies in the fact that even a strong chain of evidence is not likely to be accepted by those who would benefit had Edward Ogilvie died.'

'I suppose one would play a fair game,' said Peter shortly. 'I should like to know where you have heard of the man.'

'I may tell you that much,' said Purvis. 'I heard of him at Rosario.'

'Any reason why he should not have communicated with his friends all these years?'

'Within the next few weeks,' said Purvis, 'I hope to be able to bring you face to face with him, and then you can put what inquiries you like. You must surely see that it is necessary to act with caution until the thing is decided. Even now I can't be quite sure if this man's claim is valid; but once the story is out a dozen claimants may arise, and it would cost you a fortune to sift all the evidence which they might bring.'

'Yes, I see that,' said Peter.

'I am disappointed that the photograph conveys nothing to you,' said Purvis. 'I looked upon it as an important link in the chain of evidence, thinking there might be another like it amongst the old servants, perhaps, at your home.'

Peter looked at the photograph again. 'The trouble is,' he said, 'that there are no old servants who knew us as children.' He was handing the photograph back to Purvis when an idea struck him, and he looked at it again. 'I tell you what, though,' he exclaimed; 'I believe that sash round the child's waist is made of Ogilvie tartan!'

(To be continued.)

WITH THE BLACKS OF WIDE BAY, QUEENSLAND, IN 1862-64.

By JOHN WYATT.

PART I.

THE little work written by Dr Lang on Queensland about the year 1860, and brought prominently before the British public by an article in *Household Words*, ascribed to the pen of Charles Dickens, was without doubt the best advertisement that colony ever had, and to it may be fairly attributed the tide of immigration that flowed steadily into that part of Australia during the 'sixties. At any rate, it was that article which gave vitality to the colonising instinct so inborn in the Briton, and induced a party of us—seven young men, one of whom was married—to fling up our situations and depart from home and friends to that country of which Dr Lang had written in such glowing terms. We possessed youth, health, vigour, and —not of the least importance—a little round sum to our credit at the bank. It is needless to write of the voyage; suffice it to say that one afternoon in September 1862 we landed at Town's Wharf, South Brisbane.

South Brisbane at that time was represented by a few very much detached wooden shanties, which, with two little 'all sorts' shops and a canteen, constituted the sole existing street of that now important and populous suburb. As we had come prepared to 'rough it' from the start, we had brought with us two tents, one for the married friend and a larger one for the rest. After putting our heavy packages in store we carried the tents and some necessaries up a hill at the back to form our camp, while two of our company went marketing.

Our virgin efforts in putting up tents would no doubt have called forth scornful remarks from the onlookers, if there had been any; but as we cut the saplings and worked away in a solitude broken only by ourselves, there was no temptation to break the peace of our sovereign lady the Queen.

I had a small parcel with a letter of introduction to G. Edwards, P.O., Brisbane. Upon inquiry I found he was engaged in the dugong-fishery at Stradbroke Island, Moreton Bay, where he lived; but by a fortunate coincidence his partner, Phillips, happened to be in Brisbane at the time. I succeeded in finding him, and it was arranged that I should take a trip to the camp. Having stored my belongings, as it was uncertain how long our party would remain together in camp, I started with Phillips and a native in their boat for the island. I found Edwards and his wife camped in a small bark 'humpy' on the northern shore of Stradbroke Island. Near him was the 'humpy' of Phillips and his wife, and a tribe of Amity Point aborigines were encamped about a hundred yards away. These darkies are very quiet and inoffensive, quite different from the Bribie Islanders at the north of Moreton Bay. They had never given the authorities any trouble, even in the earliest days, yet their numbers were sadly diminished—perhaps, all told, only about forty remained.

It was here I first saw a very curious method of fishing. Whilst at our *al fresco* breakfast one day we heard a peculiar cry. Edwards jumped up and said, 'Hallo! there's fish. Come and see the sport.' By the time we had covered the few yards to the beach the whole tribe of blacks were running helter-skelter to the shore also. It seemed that the cry proceeded from a sentinel perched high up on a tree, and was a signal to the camp that mullet were travelling along the shore. The men rushed in knee-deep and began striking the water with their shields in regular time. In answer to my question Edwards said,

'That is to call the porpoises to help the blacks to catch the fish.' My expression of incredulity was answered by, 'All right. Wait a bit and see for yourself.' The unemployed 'gins' and youngsters stood on the beach in a high state of excitement, jabbering for all they were worth; while the men continued to beat the water, at the same time calling quickly to the lookout-man. Presently another cry was heard, and the signalman rapidly descended. 'They are coming,' said Edwards; and soon I saw the porpoises careering rapidly towards us. During this time the immense shoals of fish were passing in millions. All at once they seemed to take fright, rushing this way and that until the surface was in a confused ripple; at the same time the shoal moved visibly nearer the shore. Very quickly the squadron of porpoises charged the outer edge of the mass of fish, and the slaughter commenced. The fierce attack drove the mullet close inshore, where the shallow water was lashed into foam by their frenzied movements. This was the opportunity of the darkies, who, provided each with two small hand-nets, calmly scooped up what fish they required. In a short time the porpoises, having fed to satisfaction, went away, the blacks retired to their camp to feast, the mullet settled back to their marching-order, and quietude again reigned in the bay.

That the porpoises respond to the black-fellows' signal is without doubt. I have seen them do so several times, but the explanation is not so easy to arrive at; the only intelligible reason I have heard is that in seeking their prey porpoises will haunt a reef or rocky shore, under the ledges or in the crevices of which the fish take shelter from their voracious enemy. To start these refugees, I am assured by an experienced fisherman that it is the habit of the porpoise to strike the surface of the water violently with its tail, when, if a timid fish tries to take new cover, it is instantly snapped up by this nimble leopard of the sea.

The growing scarcity of dugong in Moreton Bay had suggested to Edwards and Phillips the desirability of moving farther north; and after some discussion I proposed joining them, together with George, my married friend, then in our camp at South Brisbane, and it was so arranged. We decided upon Wide Bay. Without delay we struck our camp and went to Brisbane. After purchasing additional gear we shipped it to Maryborough, the three wives going by the same steamer, while we sailed round in our boat.

Our first care was to make a voyage of discovery to Wide Bay and find out the feeding-grounds of the dugong, which we examined as far south as Stewart's Island. This island was densely wooded and low-lying, intersected by canal-like creeks, the home of innumerable wild-fowl.

Crossing over to the west side of the bay, we laid a net in a likely channel, and that night were fortunate in catching a dugong. This brought great joy, for our larder was bare of meat; but now we were provided with a delicacy the Governor might envy. In quick time we had cut into the loin, and were soon enjoying the dainty, succulent, and tender steak, fried in its own fat. In the opinion of epicures, the flesh of the dugong has no compeer; beef, mutton, and venison must take their place below it not only as a dainty food but as a food that sustains and nourishes. Any one with a delicate stomach can eat the flesh or fat without any fear of nausea or biliousness. The high-class algæ—the *Zostera marina*—upon which alone the dugong feeds, shows us at once the source from which it derives its wonderfully vitalising and sustaining properties.

Our good fortune in catching a dugong the first night made us decide upon forming our permanent camp at Wide Bay.

After dining on the dugong we left for Maryborough, and when about five miles from the town we were hailed by a couple of blacks on the bank, who wanted a 'lift' to town, which we readily gave them, as we could put them to the oars. At the sight of the dugong their excitement was immense; they laughed and yelled with delight, and their eyes and faces were lit up by that joyous expression we sometimes see on the face of a child when offered a cake. When nearing the town our darkies commenced hailing some of their tribe who were standing on the wharf. The fact of dugong being on board was evidently the subject of their communications. On arrival we received quite an excited ovation as they crowded round with eager eyes and clamorous speech. We made the two black-fellows who pulled us up friends for life by giving each a lump of flesh, with which they marched off, surrounded by an admiring yet envious mob of their fellows.

Taking stores for two months, we started amid the cheers and good wishes of quite a concourse of people. Our ladies were the first white women to camp in Wide Bay. We tried to catch dugong, but without success. Our nets yielded nothing but sharks and saw-fish, these big brutes tearing large holes in the nets in their struggles to be free. The size of the sharks in Wide Bay ranged up to twenty-two feet, and saw-fish over eighteen feet long were common. Sometimes we visited Stewart's Island for wild duck, but a great stand-by were the oysters. Succulent and nutritious though they are, yet to have damper, oysters, and tea for breakfast, oysters, damper, and tea for dinner, and tea, damper, and oysters for supper for a fortnight became too monotonous. So we left George in charge of the camp, and explored the channels farther south, where we were fortunate in capturing two dugong.

On our return, as we were coming near our landing-place we were surprised to see a crowd of blacks upon the shore, and presently George appeared on the scene. Jumping ashore, we at once saw that something was wrong. When we left, eight or nine days before, George was the picture of robust health; now he was pale and looked haggard and worn. When asked what was the matter, he only answered, 'Will tell you presently. Take care of the guns. Keep a lookout.'

It appeared that, four days before, a tribe of over a hundred blacks had suddenly arrived at the camp and set up some bush-and-bark *gunyahs* round our tents. Probably the defenceless state of the camp led them to be very demonstrative in their demands for flour, and to make a great fuss about our taking water from their water-hole. With only one man to defend them against such overwhelming numbers, it was natural the poor women got very scared. The blacks were given some provisions, but instead of satisfying them this only seemed to increase their demands. At length their importunities became so unbearable that George and the women took refuge in the tent in which were the few remaining stores, and, securing the entrance, refused to give them any more, saying, 'White-fellow go Maryborough soon for plenty.' The day before our return a 'gin' came and said that a party had been sent out to kill us in our sleep; then George would be killed, and the women would be 'belonging to black-fellows.' Mrs Edwards was for 'belonging to mine,' meaning her (the 'gin's') husband; he had selected that lady for himself, and this no doubt aroused the 'gin's' jealousy and prompted her to 'split.' The anxiety ensuing from this information cannot well be imagined, and their only safety lay in our speedy return. Luckily we arrived the day following. What was to be done? To take the women away on the morrow—if we could—was of course decided upon. We also discussed the advisability of attacking the blacks and driving them off; but, hampered as we should be with three women, and also being insufficiently armed, we came to the conclusion that that plan of action was too risky. Our armament all told consisted of two shot-guns, a rifle, and a pair of pistols.

We made preparations for our departure next morning; but '*l'homme propose, et Dieu dispose.*' A south-east gale sprang up that night and lasted two days, so there was no possible chance to get off that lee-shore. We kept watch day and night, though outwardly we exhibited no concern, continuing about the camp as usual, but armed and on the alert for any suspicious movement.

The gale having blown itself out on the third night, we struck camp and prepared to start, bribing some of the blacks with tobacco to carry our things to the shore. Edwards and Phillips, with the three women, went first and kept the boat just afloat—the arrangement being that, in the event of an attack, the boat should be pulled into deeper water for the safety of the women, while George and I, who remained in camp until the last load was shouldered, were to do the best we could for our own safety. Soon we were following the last package, and felt very thankful when we were all together again. About thirty or forty blacks, all armed, were around the boat, and seemed reluctant to let us go. Whether it was that, seeing we were prepared to fight, they thought it safer to let us depart in peace, or whether our promise to come again with plenty of flour, &c., was the restraining influence, we did not know; but we were not molested, though the absence of their women and children from the beach was ominous. Phillips and George gradually pushed the boat over the flat, while Edwards in the stern and myself in the bow sat with our guns across our knees, ready for immediate action. As the boat receded from the shore the blacks gradually dropped behind. In a short time we were in deep water, and then we had a quiet smoke and a conversation suitable to our relieved feelings.

We arrived in Maryborough without further incident, and at once prepared for our next trip. Needless to say, the wives were domiciled in town.

As the dugong will be one of the chief features in this narrative, a short description of this little-known animal may not be out of place. The dugong is a herbivorous marine mammal, a member of the order *Sirenia*, which includes the two genera of dugongs and manatees, and is not (as was once supposed) connected with the *Cetacea*. The dugong chews the cud; its internal organs and its method of procreation and parturition resemble those of cattle; but in the female there is a marked difference in the structure and position of the lacteal glands. Instead of the abdominal udder, as in the cow, the female dugong has two pectoral mammæ, with one teat only—very human-like. It is possible that from this peculiarity has arisen the mermaid fable. The body is puncheon-shaped, tapering to the rear and terminating in a powerful tail—its only means of locomotion, for its forearms or flippers are relatively small and count for nothing as a propelling power. It has no external hind-limbs, though the pelvis exists in a rudimentary form; the teeth are solid and elephantine, and the bulls have two tusks about six inches long; the lips are fleshy and pendent, and well adapted to gather up the submarine grass-wrack—the *Zostera marina*—upon which it chiefly feeds. The bull averages thirteen feet and the cow ten to eleven feet in length, the weight running up to fifteen hundredweight. The colour is a reddish brown on the back, shading off to pale gray on the lower

parts; and the hide is more than an inch thick at the backbone, graduating to half an inch on the belly. Though its home is the ocean, and it only comes into shallow waters to feed, it delights to linger and sport in quiet bays and creeks or sheltered mouths of rivers. It is a pleasing sight to watch a herd thus occupied in their quiet, leisurely rolling, and to hear the self-satisfied 'blow,' like a big sigh, emitted when they rise to the surface to breathe. All this presents to the onlooker a perfect picture of indolent and careless ease.

On making our second trip to the bay we took care to be better provided with the means of attack and defence. We had now three revolvers, three shot-guns, one rifle, and a pair of pistols, so we could laugh at any attempt at violence.

On arriving at the creek, opposite the 'Gut,' we dug for water, and finding a good supply at five feet, we decided to form our camp. We were busy cutting up a dugong caught the first night, when a hail came from the bush, and a mob of blacks appeared. They turned out to be the same party who had been the cause of our anxiety during the previous visit. They had evidently watched for our return from town, had seen us sail past, and had followed us up with unerring instinct. At the sight of the dugong they yelled and laughed with delight, crowding round, begging some flesh, and jabbering excitedly. They became such a nuisance that, having cut off what we required, we gave them the carcass on condition that they took it right away. In a short time they had cut it up with their tomahawks and carried it off. Some had masses of the entrails hanging from their necks, which looked very horrible.

The following morning we had another dugong, and of course a crowd again came round; but this time we gave nothing for nothing. We wanted bark for our hut; so we made a bargain, and in a few hours sufficient bark was delivered, which was paid for with the remains of the dugong, to which we added a couple of plugs of tobacco by way of *douceur*. Our prompt and liberal payment created confidence, and we made it a rule never to break our promise; whether as payment for work done or punishment for a fault committed, our word was good, and thereby much trouble was avoided. I recall one instance. One day Phillips detected one of the blacks stealing some trivial thing by picking it up with his toes and passing it into his hand behind his back. The darky was too quick to be grasped, so Phillips contented himself with saying he would kick him at the first opportunity. It was a fortnight before the culprit ventured into the camp, no doubt thinking the affair was forgotten. He sat on his heels at the fire to put a live-coal in his pipe—certainly a grand position for a kick. Phillips came behind and lifted him clean over the fire. The look of consternation changed to a grin when Phillips told him what it was for. Having paid the penalty, he came again to the fire without the slightest show of anger or fear, and lit his pipe, whilst Phillips, lighting his own, told him in a friendly way that when 'white man says a thing he means it.'

To protect our hut we built a fence basketwise with branches of the 'honeysuckle,' the leaves of which, as they dry, become very firmly fixed to the stem, and when quite dry emit an almost metallic sound on being moved, so that it was almost impossible for any one to push himself through without being heard. Inside, at the head of each stretcher, was a small table and lamp, so that when we retired for the night we could read. Sometimes we discussed literature, science, or theology. From town we always brought a budget of English papers, from the *Times* to *Punch*, which were thoroughly digested. The company being congenial, and our mode of life such as nature requires for health, the process of living was a real pleasure; in fact, it was a happy blending of the freedom of the blackfellow with the mental activity of the civilised man. We always had our meals at the camp-fire. Our standard fare of dugong was varied by turtle, fish, and crabs.

During our stay of seven or eight months at this camp the blacks never left us but once, and that was to take part in the Bunyia-Bunyia feast, of which more later on. The attraction of dugong seemed to overcome for a time their hereditary propensity for wandering. Their camp was about two hundred yards away, and seldom were we without visitors. These would be chiefly men and young 'gins.' Of married 'gins' only a few came to our camp; their state of slavery is too severe and their social conditions too stringent to allow of much visiting. The unmarried 'gins' have apparently perfect liberty to go about as they like and do as they please, and rarely were there less than six or eight of these dusky belles present. And merry, happy children of nature they were, full of fun and frolic; they kept the camp alive by their chatter and laughter, and many a bit of tobacco they used to wheedle from us by their sprightly, coaxing ways. There was one we used to call Venus, on account of her perfect physique; an artist would have been delighted to have her as a model, for her unconscious artistic posing was full of grace and refinement. All of them appeared in what Trilby would call 'the altogether;' for neither girls, women, nor men wore even a loin-cloth, the only exception being that some of the married 'gins' wore round the waist a girdle of fringe, apparently of opossum-fur; but it could not have been worn as a covering.

It has been mentioned that the only time the blacks left us was to attend the Bunyia-Bunyia feast. Though the indigenous pine-apple only bears its fruit once in three years, yet the feast

is an annual function. It is held in the Bunyia-Bunyia Mountains, some fifteen miles south-south-west from our camp, and, as far as I understand, the feast has never been seen by white men. The blacks from all round the district assemble there once a year; but whether the tribal gathering is to celebrate certain initiatory secret rites, or whether it is merely a festal meeting to feed upon the fruit, or both, I am not sure; but in either case it seems certain that cannibalism is practised, probably as a grand concluding ceremony.

How we came to know the tribe was going away must be told, for the blacks gave us no intimation of their intended departure. One day a 'gin' who was nursing a fine, fat baby came to our camp. I spoke to her, and remarked upon the plump child. She said, 'Yeow-i [yes], this fellow b'long like-a Bunyia.' To my further questioning she hesitated to reply; but her tongue being loosened by a promise of tobacco, she informed me that they were going to the Bunyia-Bunyia feast and 'plenty-corroboree,' that her child was one of those selected to be eaten, and that only female babies were selected 'plenty.' This 'gin' expressed no sorrow at her child's forthcoming fate; in fact, it seemed to me that she was a little proud of the distinction that had fallen to her lot. I presume the child was eaten, for on the return of the tribe this 'gin' had no baby with her. They were away about a fortnight, and the camp was peacefully calm, even to dullness. We missed the merry, laughing girls and their innocent fun; but more we missed the tribe as scavengers, for we were obliged to tow the dugong carcasses out to the tidal way to prevent their becoming a nuisance.

At this camp we caught dugong only by nets, which is very tame work compared with harpooning, of which more later on.

In going up the creek to feed, the hungry and wary dugong rarely fall into the snare; but when they have gorged themselves to repletion, their self-contentment on the return journey induces a careless, indolent, don't care feeling very detrimental to their safety, and they are then apt to blunder into the 'belly' of the net. Feeling the obstruction, they naturally turn, when, should a flipper get entangled, they sign their own death-warrant; for the more they struggle to get free the more they fatally envelop themselves in the toils, and, as the firmly anchored foot-rope prevents their rising to the surface to breathe, death by drowning soon ensues. The nets were visited in the early morning, when, if a dugong was caught, the task of clearing it was sometimes long and tedious. I have known one so entangled that it took a couple of hours to free it; on the other hand, I have seen one captured only by a flipper. The body, having been towed to the landing-place and rolled up the beach by the willing blacks, was stripped of all flesh and fat outside the skeleton and abdominal membrane; the fat was carefully separated from the lean, cut into small pieces, and put into a cauldron over a slow fire, when gradually the fat-cells burst, liberating a translucent oil, which when strained and sealed in drums was ready for market.

(To be continued.)

THE WOOING OF TEZALIA.

CHAPTER III.

FOR the next three weeks pressure of business at the mine kept Crayton from the ranch. A cablegram from England had told him he was to delay shipment, as the silver-market had fallen, but to increase his stock with all speed in view of a sudden rise.

And so day and night the chimney belched forth smoke, polluting the pure atmosphere of the sierra, while the boys toiled in the sun, bare to the waist.

In that busy time Crayton slept at the mine; the journey to Molenga was a long one, and time precious.

Then came a lull in the work, and he entered the office one morning dressed for riding.

'Paston,' he said, 'I am going down to Molenga to-day. I may not be back to-night.'

As he rode through the gulch the thought of seeing Tezalia filled him with pleasure. Crayton was a silent man, and, like most of those who are silent, impressionable; and he had not forgotten the night upon the veranda when Tezalia had sung and played to him.

At Molenga he rode straight into the ranch. An elderly servant answered his summons. 'The Señor Vellos is out.'

'And the señorita?'

'She is in, señor.'

'Then would you tell her Señor Crayton is here, and would like to speak with her?'

He saw the old woman shuffle away, and a moment later heard Tezalia's voice telling her to admit him. She came herself to meet him.

'Señor,' she said, holding out her hand, 'it is three weeks since you have been here.'

He bent down and touched it with his lips. 'Duty has kept me away, señorita,' he said. 'That and nothing else would detain me.'

She made a grimace. 'You Englishmen,' she said, 'you fight well, and you make the most beautiful excuses!'

He looked into her face, and, their eyes meeting, she dropped hers with a blush.

'It is true, señorita,' he said.

'And now you are here you will stay the night, and ride back in the morning as before?'

'If you will allow me.'

She studied his face for a moment, her head on one side, while her lace mantilla cast shadows across her own features—shadows which accentuated the mockery in her eyes.

'I think I have forgiven you enough for that, señor,' she said.

Crayton bowed. 'A thousand thanks, señorita!' Then he suddenly remembered. 'My horse is outside.'

Tezalia walked on to the balcony. 'Garcia!' she called.

A small boy, sunburnt and ragged, responded. His appearance was ludicrously out of proportion to the name he bore.

'You will take the señor's horse to the stable and attend to it.'

'Yes, señorita,' he replied, and vanished quickly.

She led the way into the *sala*. 'We will go on to the veranda, señor,' she suggested, standing by the open window, her hand upon the curtain; 'it is cooler there.'

Crayton followed her, and they sat down side by side in two lounge-chairs. The sun had not reached its zenith, and it was still cool. A refreshing wind blew upon them, bearing with it the scent of the hay lying gathered in a field near by. The sierra was bathed in sunshine. Down its slopes they saw a man riding towards Molenga, along the path Crayton had ridden. They both watched him in silence. Suddenly he vanished, to reappear at another point in the road.

'How quickly a man disappears!' said Crayton, speaking his thoughts aloud.

Tezalia glanced at him quickly. 'Yes, señor,' she said. For a moment she paused. 'I heard that you had trouble—that you were shot at as you rode through the sierra after leaving us.'

Crayton laughed light-heartedly. Danger past was forgotten by him within a few minutes. 'Some man shot at me—and missed.'

'So you are here to-day.'

He glanced at the girl. She was leaning towards him.

'Señor,' she said, 'I have lived in Molenga nearly all my life. Will you take my advice? Trust no one.'

'No one?' echoed Crayton, wondering at the vehemence with which she spoke.

'You do not know them as I do. They do not know the meaning of truth. Besides, you belong to the silver company, which draws money out of their hills; therefore you are an enemy. And they know what to do with an enemy in Mexico.'

'They shoot him—from behind a rock.'

'Yes,' said the Señorita Tezalia. 'Promise me,' she went on, 'that you will trust no one.'

'Not even you?' he queried, treating her warning lightly.

Tezalia was a girl of moods, and in answer to his jest there came into her eyes that look of mockery. 'No one, I said, señor,' she replied.

Crayton leant towards her. 'There is one woman I shall always trust. I would trust her with my life, my honour.'

A step sounded in the room, and turning sharply round, Crayton encountered the gaze of Señor Vellos. He leapt to his feet.

'So you have risked the danger to come and see us again?'

'In the first moment I have had to spare.'

'Then business at El Nitro mine is good?' said Señor Vellos. 'Yet you have not made any shipment lately.'

'No,' responded Crayton; 'the market has been bad, so we have been holding our stocks; but we may ship at any moment now.'

Señor Vellos nodded. 'The silver-market is like everything else. Even the men upon the sierra grumble that no wealthy travellers have been their way lately, and that they will have to turn honest in order to make a living.'

'It is an ill wind that blows nobody any good.'

'It is a very good one that can reform a Mexican bandit,' responded the señor.

For the greater part of the afternoon Crayton sat with the señor; then, the latter having to ride into Molenga, he sought out the señorita.

He found her in the garden, stretched in a hammock, reading a book. For a moment he watched her unobserved, and the sight of her youthful beauty sent the blood coursing madly through his veins. She was lying in a position which showed to the best advantage the curves of her exquisite figure. From beneath a muslin skirt he caught a glimpse of a dainty ankle. The branches of the trees beneath which the hammock was slung cast light shadows across her face.

Suddenly she looked up and caught sight of him. She lazily shut the book. 'Then you have finished business, señor?' she said.

'Yes,' replied Crayton.

He advanced to her side, and smiled upon her as she lay in the hammock. Men spoke of her as Tezalia the flirt, and he wondered as to the truth of the assertion.

'I wanted to spend the day with you, señorita,' he said. He gently set the hammock swinging to and fro. 'This reminds me of England,' he said.

Señorita Tezalia had been in England. 'You have a song there,' she said. 'Let me see, what is it called? "The Girl I left behind me." How would she like it if she knew what you are doing?'

'There is no girl in England who would mind at all,' replied Crayton.

And although Tezalia smiled upon him with a smile that might mean so much or so little, she was glad.

'You believe me?' said Crayton.

She looked at him provokingly. 'Yes, perhaps,' she answered.

He bent over her. 'I want you to believe me, Tezalia,' he said, calling her by her Christian name for the first time.

She looked at him, but before his eyes hers fell, the mockery died away from her face. She felt her heart beating wildly. Of a ready tongue, she could find no words with which to answer him.

Gently he took her hand in his, and she let it remain there, and so to them both there came love—to the one who had never thought of it, to the other who had dallied with it.

Amidst the falling shadows they sat and talked; then from the house there came the sound of a bell, and Tezalia rose.

'We must be going in,' she said; 'father is calling me. He always rings that bell when he wants me.'

As they entered by the balcony a figure passed out of the *patio*, and mounting a horse, rode towards the sierra. It was the figure of Miguel, and there was a scowl on his face; for through the trees he had caught a glimpse of Tezalia and the Englishman side by side, and had seen a smile upon the girl's face, and knew it had arisen from words Crayton had spoken.

As the road entered the sierra it became narrower and rocky.

Riding more slowly, Miguel whistled; then he reined in.

From the rocks above came an answering call, and a voice hailed him. 'Is that you, Miguel?' it said.

Miguel made no response, but stood silent, outlined in dark relief against the skyline.

Climbing down the side of the rock, the man stood by his side. He was a half-bred Mexican, torn and dishevelled in dress, villainous in appearance. A couple of knives were stuck in his belt, and by their side showed the butt of a revolver.

Then Miguel broke silence. 'To-night,' he said, 'we attack the mine, so you will gather the men. The manager is staying with Señor Vellos.'

'That is well,' answered the half-breed.

'I would give half my days to have him here, so that I could shoot him!' said Miguel hatefully. The look on his face was not pleasant, and he swore softly and fluently in many tongues.

(To be continued.)

IN DOCKSIDE DOSS-HOUSES.

By the Author of *Leaves from the Diary of a Tramp.*

'WHAT'S up?' I asked a man standing on the kerbstone. I had just landed from the steamer *Marchioness* at the London docks, and in a side-street not far from the pierhead I noticed a crowd of men. Thinking there was something the matter, I of course wanted to know what was up.

'There's nawthin' up,' answered the man. 'That's th' shippin' office. Them's British sailors. British sailors!' he repeated contemptuously. 'Lot o' blasted dagoes *I* calls 'em. There were a band in Cathays Park this mornin' playin' "Britannia Rules the Waves." There's Britannia for you! Britannia metal, that's what they are; work for anythin', an' eat anythin', an' live anyhow, an' take as much backslack from a cocky third as would make a Britisher pick a spanner up. That's why "skips" likes 'em—'cept in a storm.' And, with a snort of disgust and an eloquent ejection of tobacco-juice, he moved on. He was a fireman out of a job, so of course he was prejudiced.

It was indeed a strange crowd—bulge-lipped negroes, dungaree-clad and wonder-eyed Lascars, mongrels of the Levant, light-haired Finns, stalwart Swedes, Russians, Turks, Greeks, French, Germans, and squint-eyed yellow men were all represented in it, and seeking berths. They were, as my tobacco-chewing kerbstone-acquaintance said, representatives of the British mercantile marine; but where were the British? Occasionally a couple of mates came along, weather-beaten, keen-eyed men; but of the men for'ard few were English. I am not going into the why and the wherefore of that. I am simply stating what I saw.

The cosmopolitan character of the crowd, however, made it interesting, and I stood in the midst of it for some time, studying the men who go down to the sea in ships. Many of the faces were brutal, low, telling of violent passions; faces you would not care to see down by the docks if darkness had fallen and you were alone; others bold, reckless faces of men who had faced death often with a laugh.

I turned into a broad street, and was walking along, thinking what a curious compound our merchant marine was, when I noticed that the other side of the street was composed almost wholly of shops, and over each shop window was hung a large flag. I crossed the street, and saw that they were sailors' doss-houses—the temporary homes of the cosmopolitan crowd I had just left—with signboards on which were written invitations in many strange tongues. Here a Chinese, there a Jap, then, more surprising still, an

Esquimaux; and so it went on, until it seemed as though every people on earth had in this long street a *pied-à-terre* where the sea-wanderers could forgather and smoke and drink and gamble and talk of the homeland. It was quite a relief to come across a signboard intimating that British and Scandinavian sailors could be accommodated with beds at prices ranging from sixpence to one and sixpence per night. I found out afterwards that only the prices were varied; the beds were all alike.

I was in funds, so I determined to try the comfort of the sixpenny bed. The ground-floor was a cheap eating-house, so to reconnoitre the ground I went in and ordered tea and bread-and-butter. I put down half-a-crown in payment. The man gave me two shillings and fourpence change. 'Is that right?' I asked. 'What you mean?' he said. 'You hat cuppa tea, one penny; bret-un-butter, one penny—two-un-fo'pence chaannsse.'

I pocketed the change, speechless. I could not understand it then. Afterwards I was told that the cheapness was simply bait for the homeward-bound seaman. He goes in, engages a bed, lives very cheaply, is treated well, enjoys himself; and if during his stay he makes a friend who is willing to pilot him round, and in the process relieve him of his money—well, who can blame the landlord? When a man is cleared out, his landlord will generally keep him until he gets another ship; but the landlord takes in return the man's advance-note, and so makes a good profit over and above the other transaction.

One night I was in the café attached to a foreign boarding-house. The only other customers were two young fellows—one English, with the frank, open manner that is very often the swindler's only asset; the other a Swedish sailor. Both had glasses in front of them, and as fast as the sailor emptied his glass the other filled it again from a whisky bottle on the table, though I noticed that he drank very little himself. The spirit soon began to take effect, and the man began to talk about his relations, then about the voyage just ended.

Suddenly he put a handful of gold on the table. 'What tink of dat?' he asked. 'Twelf monts' pay.' Then in a maudlin tone he began to talk about how much he was going to send to his mother, how much to his sweetheart. 'Put it in your pocket,' said the other. 'Don't be a blank fool! If you go swankin' about with it like that you'll soon get picked up. Come on out and get some fresh air, or you'll be drunk.'

He helped the Swede to his feet, and they went out.

Later the Swede rushed in, terribly excited. The usual thing had happened. They had gone to the pierhead together. The Swede had fallen into a drunken sleep on one of the benches, to awake alone, with empty pockets.

I often spent a night in a sailors' doss-house; it was interesting—quite a Continental tour on the cheap.

One evening I could quite imagine I was in a low-down Spanish *posada*, for the room was gaily decorated, the walls were hung about with gaudy oleographs of bull-fights, in the place of honour a portrait of King Alfonso, and all around me Spaniards playing strange games, gambling, drinking, singing, dancing. Suddenly there was an uproar among the card-players. A table was overturned; ugly-looking sailors' jack-knives were flashing; one man was bleeding from a cut on the arm. Others interfered; the storm died away; the injured arm was bound up, and the game resumed as though nothing had happened. There was no thought of the police—it was a matter concerning themselves alone; but I noticed one of the men nod in my direction. A few minutes later he crossed over to me, and in excellent English told me that perhaps I had better go, as they didn't care for spies about when gentlemen of Spain (!) settled their differences; and I did not trouble much about the order of my going.

I spent nights in several other foreign houses in the east end of London. After a night spent in a Greek house I quite understood why shell-backs call Greek ships the dirtiest afloat. I was often told that Greeks, while by no means overflowing with courage, never forget or forgive an injury, and I came across an instance of this. I was checking a grain cargo at Spillers & Baker's, and, leaving the docks, was walking along Bute Street with a Greek member of the crew who had promised to be my sponsor at the Greek boarding-house. Near the Cory Home we passed an officer, and my companion burst into a flood of abuse. Then he told me that six years before the officer had knocked him down with a spanner, and he had not been in port with him at the same time since. Three days later the officer was stabbed in the back as he crossed Barry Dock in the direction of Culley's Hotel, and neither he nor any one else had seen his assailant. I thought of the Greek—and shuddered.

Probably the most interesting of my visits was to a Chinese boarding-house. I didn't spend the night there, however. I should never have got in at all, for I tried unsuccessfully many times, had not luck thrown me across the path of a Chinaman who was being man-handled near Roath Dock by a couple of drunken men. I chipped in, and the men ran; and learning that the Celestial was the keeper of a boarding-house in Bute Street—he had just been seeing some of his compatriots aboard—I took advantage of his evident gratitude by asking him to show me over his place. He consented, though very reluctantly. His wife, a very good-looking girl, didn't appear to be more than seventeen, and the place was full of Chinamen. In one room I counted twenty-five lying about in all attitudes, seemingly

without nerves. One young fellow was asleep, with his chin over the rail at the foot of the bed. In one room there were a number lying around a little lacquered table on which stood a spirit-lamp. I watched one of them roasting a speck of opium on the point of a long needle, and then placing it in the orifice of a very fat pipe. Two puffs and the smoke was over. As I once heard an English sailor remark, 'A —— lot of trouble for blamed little smoke.' In another room was a man waving a joss-stick and jabbering prayers; but I only got a glimpse of him. I was hurried out, and I was not sorry to go. I had had quite enough of a Chinese doss-house.

OUR 'DAILY.'

I sing of News, and all those vapid sheets
The rattling hawker vends through gaping streets.
CRABBE.

AMID all the marvellous imaginings, conceptions, and inventions of this prodigious age, when the very air we breathe is becoming a highway, the daily paper stands out as one of its greatest wonders. In no other line do we get such extraordinary value for so little outlay: the latest news from every quarter of the inhabited globe, and an agreeable miscellany of some dozen or more super-royal pages of readable, instructive, and entertaining matter, frequently embellished with illustrations.

Those who ne'er deign'd their Bible to peruse
Would think it hard to be denied their news;
Sinners and saints, the wisest with the weak,
Here mingle tastes, and one amusement seek.
This, like the public inn, provides a treat
Where each promiscuous guest sits down to eat;
And such this mental food, as we may call,
Something to all men, and to some men all.

Were it not for their advertisements, of which we shall have something to say later on, it would, of course, be impossible that 'these poor bits of rag-paper with black ink on them,' as Carlyle facetiously termed them, should be delivered at our door a hundred miles and more from their source for a humble copper. What a contrast to eighty years ago, when each individual sheet was taxed with a fourpenny stamp, though certainly the papers were carried free of charge by the Post-Office! They were, of course, of much smaller bulk than they are to-day, or Lord William Spencer, of astonishing mnemonic power, would not have won the wager he laid to repeat the entire contents of one by rote without the omission of a single word.

When we come to count the cost of upkeep of a sumptuous edifice fitted with elaborate and costly machinery, the salaries of a small army of editors, sub-editors, and correspondents, down to the meanest printer's devil, the expenditure on material, on telegrams, and transport, the profit made by the newsagent and street-hawker, besides a hundred and one incidental expenses, and find that there still remains in many cases a substantial profit for the proprietor or shareholders, it is no exaggeration to speak of the daily paper as a marvel.

It opens, as a rule, with a 'Hatch, Match, and Despatch' column, which furnishes curious reading from time to time. 'On the 19th inst., at ——, the wife of —— of a son. "Not unto us, but unto Him be the glory."' Not knowing precisely what this means, we think it safer to offer no comment.

Lady Balfour of Burleigh tells an amusing story that a friend of hers had the fortune, or misfortune, to have three sets of twins, and as each pair arrived the parents puzzled their brains to discover suitable names for them. The first pair (girls) were christened Kate and Duplicate; the second, a brace of boys, Peter and Repeater; and the third, also boys, Max and Climax.

After the announcement of a marriage in the *Times* many years ago appeared the following: 'John ii. 2. Australian, Indian, and American papers please copy.' Turning to this chapter and verse, we read: 'And both Jesus was called, and His disciples, to the marriage.' *De gustibus non est disputandum.*

There was a mythological fiction that Jupiter made men and women in pairs, like the Siamese twins; but in this way they grew so powerful and presumptuous that he cut them in two, since when the main business of each half has been to look for the other. That a certain few have been successful in their quest is proved by the following combinations culled from various papers during the last two decades: Veal—Ham, Hooker—Lyne, French—Chalk, Bait—Bass, Day—Week, Hill—Dale. On Mudd—Mayden an acquaintance of the writer composed these clever lines:

Lot's wife, 'tis said, in days of old,
For one rebellious halt,
Was turn'd, as we are plainly told,
Into a lump of salt.
The same propensity of change
Still runs in woman's blood,
For here you see a case as strange—
A Mayden turn'd to Mudd.

The poet of the 'In Memoriam' column bids fair to afford as much amusement to the world as his predecessor, the poet of the tombstone. Respecting a worthy lady long since dead, a north-country paper recorded that she was

A loving wife, and mother dear,
A faithful friend, whom God did fear.

Before leaving this page we may mention a

few appropriate names met with in the police and other reports: Sanctuary, a clergyman; Uncle, a pawnbroker; Birch, a schoolmaster; Lush, wine and spirit merchant; Remnant, a widow; Bacchus, a drunkard; Sword, an officer.

'Curiosity is the appetite of the mind; it must be satisfied or we perish,' wrote Bishop Horne more than a century ago. 'Amongst the improvements, therefore, of modern times, there is none on which I find more reason to congratulate my countrymen than the increase of knowledge by the multiplication of newspapers. With what a mixture of horror and commiseration do we now look back to that period of our history when a written letter came down once a week to the coffee-house, where a proper person with a clear and strong voice was pitched upon to read it aloud to the company assembled upon the occasion! How earnestly did they listen! How greedily did they suck down every drop of intelligence that fell within their reach! Happy the man that carried off but half a sentence; it was his employment for the rest of the evening to imagine what the other half might have been.' Seventeen hundred years before this, Pliny had stated that *est natura hominum novitatis avida*, and there is no gainsaying that a relish for everything in the shape of news, be the matter of it what it may, is deep-rooted in the human heart; and should it embody anything in the shape of a secret or a dash of scandal the greater the relish. But besides what is included under the generic term 'news,' many are the miscellaneous ingredients that 'our daily' spreads abroad, furnishing for the amusement of the general public some smart parliamentary gibe, clever legal joke, amusing episode at some public meeting, or post-prandial *bon-mot* that would otherwise have been limited to the enjoyment of those actually present. We give a few examples.

When Lord Goschen was in the Lower House he was always the particular *bête noire* of Mr Labouchere. The sight of the Jew banker seemed to act as a kind of intoxicant on 'Labby,' who always let fly, sometimes effectively enough. On an Irish night the Minister had delivered a bitter denunciation against boycotting. Up sprang the member for Northampton. 'Boycotting! Did the right honourable gentleman say boycotting? He has but to turn to his own history for its justification, for are we not told that the Jews had no dealings with the Samaritans?' The House roared, and even the victim smiled at the aptness of the quotation.

Not long since a portion of the ceiling over one of our police courts became loose and fell with a crash. The presiding magistrate wittily exclaimed, '*Fiat justitia, ruat* ceiling,' which, arising as it did directly out of the occasion, was distinctly justifiable.

The father of Nicholas Longworth, who recently married Miss Alice Roosevelt, gave a dinner many years ago to the poet Longfellow, who thus prefaced his return thanks: 'My friends, attention has been called to the similarity between the name of our distinguished host and my own; but I would like to emphasise this distinction that "*worth* makes the man, and want of it the *fellow*."'

At not a very distant meeting of the Salvation Army a woman stood up to testify to her conversion, and with great earnestness denounced her former ways. 'I was very foolish and vain,' she said; 'worldly pleasures, especially the fashions, were my only thought. I was fond of silks, satins, jewellery, ribbons, and laces. But, my friends, I found they were dragging me down to perdition, so I gave them all to my sister.'

Unconscious humour often lightens the parochial business of the Easter vestry. A discussion at Frant the other day on the question of insuring the gravedigger drew from the chairman a remark as to the difficulty of obtaining a quorum. This complaint aroused the attention of one member, who promptly exclaimed, 'Well, then, I think it is about time we bought one of those things for ourselves.' This remark, which dissolved the vestry in laughter, recalls the familiar story of the gondola which a certain council proposed to purchase for the ornamental lake in their park. 'Why not,' suggested a member, 'purchase two, and see if they will nest?'

The advertisements are in one respect the most valuable part of a newspaper, for by them we are enabled to judge of our manners better than from almost any other criterion. To some they may seem profitless literature; yet there are grains of wheat to be gleaned even on this chaffy heap. Some winters back a Tewkesbury paper published the following: 'Monumental Work in Marble, Granite, *on* Stone. Splendid Designs of Marble Monuments just ready for the Coming Season, at Extraordinary Low Prices,' &c. We naturally ask ourselves what season—the 'flu' season, or was it the festive season?

An equally cheery announcement appeared in a Glasgow paper: 'James Hodge continues to sell burying crapes ready made; and his wife's niece dresses dead corpses at as cheap a rate as was formerly done by her aunt, having not only been educated by her, but perfected in Edinburgh, from whence she has lately arrived with all the newest and best fashions for the dead.'

This somewhat similar name reminds us of Jamie Hogg's boast that he never read the leading article in a newspaper, 'but,' he used to say, 'I devoor the adverteesements, which, besides lettin' ye ken everything that 's gaun on in the kintra respectin' the sellin' an' nifferin' o' property, baith in houses an' lan's, are to my mind models o' composition, without ae single unnecessary word, for every word 's paid for, an'

that gi'es the adverteeser a habit o' conceese thocht an' expression better than a logic class.' At that time there was a duty of three and sixpence on everything, however trifling, that assumed the character of an advertisement. This was reduced to one and sixpence in 1836, and wholly abolished in 1853, since when their number has increased enormously.

In a letter to his intimate friend Ellis, Macaulay wrote from Tunbridge Wells during August 1853: 'I send you some exquisite lines which I saw placarded on a wall the other day. The versification and diction seem to me perfect. Byrom's "My time, O ye Muses!" is not so complete in its kind:

Although it is wrong, I must fairly confess,
To judge of the merits of folks by their dress,
I cannot but think that an ill-looking hat
Is a very bad sign of a man, for all that;
Especially now, when James Johnson is willing
To touch up our old ones in style for a shilling,
And gives them a gloss of so silky a hue
As makes them look newer than when they were new.'

It is decidedly annoying to be hoodwinked by a catchy title or introduction; but very recently a well-known paper opened its news paragraphs with the announcement, 'The Bishop of Ripon is going on the stage;' but on reading further it transpired that his lordship's appearance would be for one afternoon only, to read Coleridge's *Fears in Solitude* at a Haymarket matinée which was to be given to pay off the debt on the purchase for the nation of that poet's cottage at Nether Stowey.

Such trickery, like the framing of a contents-bill, is a special art. 'Indecent' is an elastic word. Some years ago, when a learned bishop was pushing a Bill through the House of Lords, a noble peer complained of the 'indecent haste' with which the manœuvre was being conducted. Next day an enterprising sub-editor gave over his contents-bill to the line: 'Charge of Indecency against a Bishop.'

There was an evening when many people thought the late Lord Salisbury's political career was over, though he was but half-way through it. It was the evening, which some may remember, when the neighbourhood of Charing Cross was excited by a newsboy shouting, 'Resignation of Lord Salisbury!' within a day or two of his return from the Berlin Congress. Such an announcement naturally created a great sensation; but those who hurriedly bought the boy's papers found no startling news to support his cry, until the ingenious vendor pointed in triumph to an item stating that 'Lord Salisbury has resigned the chairmanship of the Hertfordshire Quarter Sessions.'

The Athenians appear to have had a drastic law for punishing disseminators of false news. Plutarch narrates how one day a stranger landed in the Piræus and went to a barber's shop to be shaved, where he reported the naval disaster of the Athenians under Nicias. The barber no sooner heard it than, before the stranger could communicate it to any other person, he ran into the city, and it was known to all in the 'lathering of a chin.' Trouble and dismay seized all who heard it, and the magistrates immediately summoned an assembly; but when the barber was interrogated he could give no clear account of his informer. They, deeming it to be what Ben Jonson termed 'news of doubtful credit, as barber's news,' caused the unfortunate man to be fastened to the wheel for torture. The news, however, turned out to be true. It is interesting to note that so long ago as 414 B.C. the barber's shop was a centre of gossip.

THE SPELL.

When grief is keen and new,
And conquering death shadows Faith's faltering wings,
And seems to hide from view
The soul escaping from all mortal things,

There is an old-world spell
That grants fresh courage in the stricken hour,
Performs the miracle
That bids the mortal trust immortal power.

Go forth before the dawn,
And in a meadow rich with tender green
Await the coming morn,
Alone, and confident in the unseen.

Unloosen there your hair,
And pause barefooted on the dewy grass,
Kneeling as those in prayer
Who wait the moment when a god shall pass.

Then, when a gleam of light
Shall outline sombre, far-off purple hills,
Before the first bird's flight
Or earliest memory of the grief that kills—

Then, so the Seers foretell,
While waiting barefoot in the silvery dew,
If cast aright the spell,
The under-world will give a sign to you.

A woman—radiant, bright,
Between the earth and the approaching dawn—
In the faint primrose light
Will watch with tranquil eyes while day is born

Answering the urgent spell,
With sorrowing eyes that hide all mystery,
From deeps of nether hell
Stands there the pale, calm Queen Persephone.

Turned towards the reddening sun,
That slowly rises with the giant powers
That scatter hopes new won
From resurrection of the hidden flowers;

Then gone the vision rare,
To where grim darkness future springs enfold,
But a narcissus fair,
Where she stood, blooms in ivory and gold.

THE CALL OF THE SEA.

By F. G. AFLALO.

EVER since the *Argo* sailed hopefully for the Euxine, 'set free and smitten by the western breeze,' men have fared forth to explore distant seas with or without some such ulterior object as the quest of the Golden Fleece. Apart from the genuine spirit of adventure which inspired the bulk of polar exploration, the motives of these dangerous voyages were proselytism or plunder. Gold took the Spaniard into the West, spices beckoned the Portuguese to the East. The Cross had to be carried among the heathen of the New World, and Spain combined militant Christianity and commerce with a zeal that led at once to her own aggrandisement as a colonial power and the early extinction of the unfortunate native races with whom she came in contact.

As Seneca had foretold, Thule soon ceased to be the last point of land on the map. Britain, at one time on the outskirts of civilisation, became the half-way house between the Old World and the New. Having crossed the Atlantic, the adventurous Spaniard next thrust farther into the sunset, and took the Pacific in the name of His Most Christian Majesty. The open water round the North Pole attracted a glorious succession of intrepid navigators, most of them in search of the North-West Passage. This, having baffled a score of sea-captains of first rank—among them Frobisher, Davis, Baffin, Behring, Cook, Parry, Ross, and Franklin—was eventually navigated by Amundsen in the *Gjoa* (1903–7); and the North-East Passage had meanwhile (1878–79) been accomplished by Nordenskjöld. The consummation of all this heroic Arctic enterprise was finally reached by the expedition which had as its sequel Peary's recent appearance before the Royal Geographical Society at the Albert Hall.

Marine biological research was the inspiration of some of the most notable expeditions of recent years; but the *Fram*, *Discovery*, and *Nimrod* were engaged in purely polar surveys. The first of these was equipped by Nansen (1893–96), who pushed his way farther north by two degrees fifty minutes than any of his predecessors. She was a comparatively small vessel, so constructed as to be lifted rather than crushed by the nip of the ice. Nansen, aiming less at the magnetic pole than at a systematic investigation of the unmapped region surrounding it, completed his journey with sledges. His programme had at the outset been condemned by experts as too ambitious, but he appears to have carried it to its logical conclusion. The *Discovery*, Captain Scott's vessel, left Cowes in the summer of 1901, and was away in south polar waters until the autumn of 1904. Previous efforts to penetrate the mystery of the Antarctic had been made by Gerlach in the *Belgica* (1897–99), and by Borchgrevink in the *Southern Cross* (1898–1900); but Scott wintered nearly five hundred miles farther south than any one before him, and, with Shackleton and Wilson for company, made sledging journeys lasting more than two months, and taking the intrepid trio nearly four hundred miles away from the ship and within four hundred and fifty of the South Pole. It was in July 1907 that the *Nimrod* left London under command of Mr (now Sir Ernest) Shackleton, and she was absent until March 1909. In the interval her commander had established a southern record to match that of Nansen in the north. Climbing glaciers and pushing indomitably over the pack, he and his party came within one hundred and ten miles of the South Pole, where he planted the flag presented to him for the purpose by Her Majesty Queen Alexandra. Incidentally the party ascended the volcano Erebus, and made interesting discoveries of coal-measures, throwing new light on the prehistoric climate of those frozen regions. Commander Peary has since surpassed Nansen's record in the north, and there is every reason to hope that, with the expedition which left these shores last June, Captain Scott may do as much for the British flag in the southern hemisphere.

Although zoological material of some importance was accumulated on these expeditions, their primary objects were geographical. Some other voyages only less famous than those to the Poles, however, were intimately associated with biological research. Among the most successful of these forays on the ocean fauna were the surveys undertaken on the coast of South America by the *Beagle*, the second of which (1831–36), to Patagonia and Tierra del Fuego, will always be famous if only in memory of the distinguished naturalist who accompanied it. In enumerating the company of the ship, Captain

[*All Rights Reserved.*]

(afterwards Admiral) Fitzroy—now remembered chiefly in connection with an improved form of barometer—mentions the interesting fact that a Cambridge professor, on being applied to, 'named Mr Charles Darwin, grandson of Dr Darwin the poet, a young man of promising ability, extremely fond of geology, and indeed all branches of natural history.' Little did the worthy sailor foresee at the time that, whereas he himself and the poet would have to content themselves with a modest niche in the *Dictionary of National Biography*, the name of the 'young man of promising ability' would be uttered with reverence in a score of languages, and would still be in men's mouths when Macaulay's New Zealander gazes on the ruins of St Paul's!

Another important zoological expedition was that of the *Marchesa* (1882–84) to the coasts of Kamchatka and New Guinea and to the Sulu and Aru Islands, under the leadership of Dr Guillemard and Mr Kettlewell, who brought back valuable collections of birds-of-paradise and other forms, both Papuan and Malayan.

Without exception, however, the most notable zoological voyage was that of the *Challenger* (1872–76), in the charge of Captain (Sir George) Nares and Professor (Sir) Wyville Thomson. The *Challenger* circumnavigated the globe, establishing off the coast of Japan what was then a record in deep-sea soundings—namely, four thousand five hundred and seventy-five fathoms; though this was exceeded near the Kermadec Islands, in the South Pacific, in 1896, by a record of five thousand one hundred and fifty-five fathoms. The published results of this wonderful expedition, occupying fifty volumes, and taking fifteen years to produce, described a great number of forms new to science.

Thus, then, for profit or glory, for commerce or the conversion of the heathen, for academic geographical research, or for the better understanding of its zoological secrets, the sea has called men throughout the centuries; and when its call falls on deaf ears the human race will have parted with that spirit of adventure which is written in such splendid episodes in its history.

PETER AND JANE.

CHAPTER XII.—*continued.*

A BARE-LEGGED boy on a lean pony was seen approaching them in a cloud of dust. The pony's short canter made his pace as easy as a rocking-chair; and Lara's son, who rode him, was half-asleep in the heat. The post-bag dangled from his saddle, and the reins lay on the pony's neck.

'Any letters?' said Peter in Spanish, and the boy handed the bag to him. The mail-boat from England, which was run on purpose to carry Jane's weekly letter to him, had brought the big square envelope with its usual commendable punctuality, and Peter chose it out from the rest of the letters, and handing Purvis a packet which belonged to him, he gave the bag back to the boy, who cantered along with his bare legs swinging until he disappeared into the level glare of the setting sun.

Peter let his horse amble on slowly, and read his letter while he rode.

'I must push on, I think,' said the quiet voice of Purvis beside him. 'There are one or two things which, I gather from my letters, I must put straight at the *estancia*. I hope to have definite news to communicate to you before long.'

'Thanks,' said Peter, giving him a nod. 'You will let me hear from you as soon as you know anything?' He turned his horse homewards, and Purvis rode on alone.

'If he has found my brother,' quoth Peter, 'Purvis has done his job, and I can't complain; but he has got to settle the thing up without all this confounded mystery, or else he can leave it alone. There is one thing perfectly clear. Edward himself knows nothing about his parents or his prospects, or he would have claimed the property long ago. Now, how has Purvis found out about the man what he doesn't know himself? Where has Purvis got his clue? He doesn't want me to meet my brother yet: looks very much as if our friend Purvis were going to make some sort of bargain with the heir, whoever he is, before he (Purvis) allows him to know the truth about himself. Well, the affair will be judged by English lawyers when we get home, and if it is a case of blackmail, for instance, English people are not very fond of that sort of thing, so Purvis may not be able to make such a good bargain as he thinks.

'Of course the chain of evidence may be perfectly simple. Purvis has probably got hold of the name of whoever it was who brought Edward here, and has traced him somewhere, and has got the whole story from him. My mother always had an unlimited supply of money; she could have settled a large sum on the people who looked after him, and of course it is evident that some money must have been paid, though the lawyers could find no trace of it amongst her papers. The only other hypothesis is that it is a case of some extraordinary aberration of memory, and that, the child she disliked having been removed, she forgot about him altogether. All my life I never remember hearing him mentioned; and as my mother did not return to Bowshott until I was six years old, very little may have been said to her that would recall the fact of the boy's death.

'It is the beastly uncertainty of it,' he continued, as he rode slowly home on the dusty

track which was the apology for a road across the camp. 'If the estate pays me sufficient to live upon I needn't grumble; but Purvis must give me an account of what he has been doing, and put me in possession of the facts of the case. One always distrusts the middleman, and wonders if he is making a good bargain on both sides. A small man like Purvis always tries to be important, and to make every one believe that he alone holds the key to mysteries, and that no one can get on without him. I don't at present see how he can defraud either me or my brother, even if he wants to; but I am not going to be content with hints or suggestions, as if I were living in a penny novelette.'

He rode on through the heat, that rose like a palpable gas from the scorched ground, until the little *estancia* house hove in sight again. He found that Toffy and Ross were still enjoying their afternoon siesta. There was not a bit of shade anywhere, and the sun seemed to burn through the roof until the very floor was hot to walk upon. His thoughts went back to Purvis in his tweed clothes and his bowler hat with the pugree on it, and he wondered how he fared in the scorching heat. Probably the anæmic little man hardly knew what it was to be too hot. He used to ride over the camp when even the peons did not show their heads out of doors, and his hands were always cold and damp to the touch. Peter drank some tea, and sat down at little Mrs Chance's writing-table in the drawing-room and began to answer Jane's letter. There was a feeling of storm in the air, and he envied the two men sleeping luxuriously in the corridor.

'When you have been out here a year or two,' said the sleepy voice of Ross from the depths of a long cane-chair, 'you will find that letters are not only impossible, but unnecessary. No one expects to hear from one after the first month or two, and if one did write there would be nothing to say.'

'When my creditors get too troublesome,' said Toffy, also waking up, 'I shall emigrate here and lose my own address. With strict economy, one might live very cheaply in Argentina.'

Lara's boy, who had come on with the letters, waited to ride back with the bag to the far-distant post-office; and the Englishmen at the *estancia* stood and watched him, a tiny figure on his tireless little Argentina pony, riding away eastward until once more a cloud of dust swallowed him up. The humble postman seemed to form a link with home, and in three weeks' time the letters which they had confided to him would be safely in the hands of those to whom they were written in England. The pony's unshod hoofs made hardly any sound on the turf as he cantered off, and Lara's boy, in his loose shirt and shabby clothes, and his bare feet hanging stirrupless on each side of the pony, disappeared like a wraith. There was a week to wait before he would come again with any more letters.

'I wish the storm would burst or blow over,' said Ross; 'the heat is worse than ever to-day, and it doesn't seem as though we were going to have a cool night.'

'Even the peons look curled up,' said Toffy, looking at a group of men picturesquely untidy, with loose shirts, and scarlet *boinas* on their heads, who lounged against the *palo á pique* of the corral.

'What idle brutes they are, really!' said Ross; 'and they 're always ten times worse when Chance is away. Look at those bits of paper littering the place!' he went on fussily. 'Now I know that these men have been told thousands of times not to let things fly about like that. But it saves them trouble when they clean a room to sweep everything out of doors, and then leave it.'

Probably most men who own property have an inherent dislike to seeing scraps of paper lying about; the sight suggests trippers and visitors' days, and Peter stepped down from the raised corridor, and with his stick began poking the bits of paper into the powdery mud which was all that at present formed the *estancia* garden.

'I believe we might paper the whole house with Purvis's telegrams,' he said, laughing, as he shoved a bit of coloured paper under the ground.

'Salter,' he said to himself—'Salter. It sounds like the agony column at home. Well, Ross and I had better stop acting as scavengers for the household, or we may learn too much of Purvis's domestic affairs.'

He stopped poking with his stick; and, although he laughed, he was as much annoyed at having seen the name on the telegram as he would have been had he inadvertently seen another man's hand at cards.

The storm blew away in the night, and in the morning the sky was a heavenly blue so brilliant that it could not be overlooked. In the early morning the mimosa-trees threw cool shadows to westward, and little paroquets, making their flight from bough to bough, screamed overhead. On the *estancia* work began early; some one had to lasso a *novillo* for the pot, and the *rodeo* looked like a seething, bubbling cauldron with its moving mass of cattle. The easy paces of the horses, on which all the work of the place was done, made riding a matter not of exercise at all; and the only thing necessary was to duck heads to avoid the mimosa-boughs and to guide the horses round holes and stumps in the ground at an easy canter. The *novillo* was lassoed and the sun began to be sultry when the three men rode back to breakfast, congratulating themselves that, as the day seemed likely to be hot, there was not a great deal of work to be done, at least until the cool of the evening.

'Is that Purvis?' asked Toffy, as they approached the house and tethered their horses by the simple expedient of throwing the reins over their heads and letting them trail upon the

ground. 'When, in the name of the prophet, does that fellow sleep?' It was barely ten o'clock when they rode back to breakfast, and Purvis must have started on his ride almost at dawn.

'Hullo!' said Ross, greeting him with a certain kindliness which a very big man will show to one who is small and weak, even if he has growled at his appearance a moment before. 'Hullo, Purvis, where have you come from, and when do you get any sleep?'

'I don't think that sleep is very necessary to me,' said Purvis; 'and I generally find that I work just as well when I have only two or three hours' rest.'

'That 's very odd,' said Toffy amicably.

'I came back about my little boy,' said Purvis. 'I have to go down to Buenos Ayres, and I want to know if I may leave him here with you?'

Ross assented; and Toffy remarked that he believed, with training, he himself might make a very fair nursery-maid.

'Things are a little bit disturbed at my place,' said Purvis. 'I have so many mixed nationalities down there, and they don't get on well together, and are difficult to manage. I would rather not leave Dick, if you could have him.—Dick will be a good boy—no?' he said, speaking in the questioning negative so common in Argentina, and addressing the pale-faced little boy in a manner far too babyish for his years.

Dick made no promise; but feeling, boy-like, that he never quite knew what being good involved, he wriggled uneasily in his chair. His father laid one of his hands on the boy's dark hair and the other beneath the delicately pointed chin, and turning up the little face towards him, he kissed it with womanish affection.

'When will you get a train?' said Ross presently, as they sat at breakfast in the hall. 'You can't catch the one to-night, and there 's not another for two days. Your best plan would have been to send us a wire about the boy, and to have taken your own steamer down to Taco; it would have saved a long bit of riding.'

'I wanted to say good-bye to my little one,' said Purvis.

'Well,' said Ross hospitably, 'you are welcome here till your train starts.'

'I must be off to-night,' said Purvis. 'If I start at eight this evening I shall catch the train at one A.M. at Taco.'

'You will be dead, Purvis!' said Peter.

Chance had once said that Purvis was the only man he knew who had no sense of fatigue and no sense of fear. 'It 's quite true,' he said when there was a murmur of astonishment from his listeners; 'and, much as I dislike the man, I have never known him to be afraid of anything. It may, of course, be due to a lack of imagination on his part; but I myself believe that it is the result of having been so frequently in tight places. I don't believe he can even handle a gun; and yet if he were surrounded and mobbed, he would probably only blink with his watery eyes or help himself to another tabloid.'

Purvis left his horse in the shade of the *paraiso* trees during the day, and after dinner Peter cut some sandwiches for him, and gave him a flask of whisky—a piece of hospitality which he would in all probability have offered a man who was going to hang him. He had been nurse and guardian in one to Toffy at Eton, and his care of the delicate boy had given him an odd sort of thoughtfulness which showed itself in small and homely acts like these.

'When I return from Buenos Ayres,' said Purvis, 'I hope to be able to put before you the facts which will enable you to identify Edward Ogilvie.'

'You are quite sure you have got them?' said Peter briefly.

'I am almost certain,' said Purvis.

'Of course,' went on Peter, 'you understand that everything that you bring before me will have to be thoroughly investigated by lawyers?'

He was half-sorry that he had spoken sharply when Purvis replied with his usual quietness, 'That goes without saying.'

'I dislike anything sensational,' Peter said; 'and this is a case in which I much prefer that all evidence which you get shall be brought direct to me. To be suddenly confronted with my brother might be very interesting from the point of view of an Adelphi audience; but then, you see, we are not in a theatre at present.'

'The facts in this case,' replied Purvis, 'are quite exceptional; you will allow this, I think, when you know them, and you will then appreciate the fact that it was necessary to get the whole of the evidence quite clearly established before making the final results known to you.'

'We have hardly time to argue the subject,' said Peter, 'seeing that your pony is at the door. The solicitor in Buenos Ayres whom Sir John Falconer recommended to me will meet you here any day you like to name, and we can go into the matter thoroughly with you.'

'That would be the most satisfactory plan,' said Purvis, raising his weak eyes to Peter. 'Meanwhile,' he said, 'my expenses in this matter have been considerable; perhaps you could kindly look at my account before starting?'

'No,' said Peter shortly, 'I could not. I am not in the habit of looking over my accounts by moonlight in the garden.'

'A hundred pounds on account,' said Purvis, 'would enable me to bring this important matter to a conclusion. Without that, I fear, I am powerless.'

It ended in Toffy and Peter putting their available cash together, and giving Purvis seventy pounds; and the clerkly man of ink produced a stamp and a stylographic pen from his pocket, and made out the receipt on the little dining-room table, and handed it to Peter.

'Thank you,' said Peter, relenting a little. He was annoyed with himself for the sense of irritation which Purvis produced in him. After all, he had asked him for his assistance, and Purvis was giving it to the best of his ability. He went as far as the door with him, and said, 'If the claim is established, remember I should like to see Edward Ogilvie as soon as possible. Wire to me all particulars, and be so good as to convey to him that we are anxious to do the right thing by him. I should not like him to feel, for instance, that the fact of his existence was any cause of resentment with any of us.'

'It is he, perhaps, who will feel resentment,' said Purvis.

'Perhaps,' said Peter, resisting an inclination to speed Purvis's departure.

(To be continued.)

WITH THE BLACKS OF WIDE BAY, QUEENSLAND, IN 1862-64.

PART II.

A SAD and tragic incident now occurred that caused us to leave this camp altogether. As we lay in our hut one night there arose in the blacks' camp a great noise and shouting; apparently they were fighting. In a minute or two, however, all was silent; then in about two hours we heard them holding a corroboree, which lasted far into the night. The two circumstances mystified us; and when in the morning none of the tribe came to our camp, we walked over to see what was the matter. The scene that presented itself was ghastly, for close to the remains of a central fire lay a human head, apparently that of a woman; it was scorched and distorted, and the face partly stripped of the flesh. Scattered round about were the remains of the arms, legs, and trunk, picked quite clean, while a few yards away lay the entrails on a sheet of bark. It would be impossible to portray the feeling of horror and disgust that welled up within us, and we turned from the ghastly relics and went back to our camp. Shortly afterwards some girls approached us, and we got out of them what had happened. It seemed that one of the men wanted to take a young 'gin' to his *gunyah* as his wife. She resisted, and in the quarrel that ensued he speared her. That evidently was the first row we heard. Then came the preparation for the feast, and the corroboree was their jollification during the banquet. The sickening feeling of horror was intensified when the girls told us who the unfortunate victim was. It was one of their companions—one with whom we had so often laughed and joked, and who but yesterday evening had helped to keep our camp alive with her merriment; yet at that moment she was passing through the process of digestion inside those wretches near by. The thought was too horrible; it got on our nerves, and we felt an inclination to vomit. We went off our food, and the imagination created such a tension that on the second night we all agreed we would stand it no longer. Go away we would. We made up our minds to go harpooning in Tincun Bay, south of the 'Gut.'

On our arrival at Tincun Bay we were met by a body of about sixty blacks, who welcomed us in a most unmistakable manner. Our fame as dugong-hunters, and probably our custom of fair dealing, had evidently preceded us. As we jumped ashore we were surrounded by the men, who volubly and excitedly told us, 'Plenty cabon youngon sit down lik'a Tincun, my word.' For a bit of fun we spoke slightingly of Tincun as a place for dugong. 'Baal [no] youngon, no good.' 'Yeouw-i,' they yelled in an excited chorus, 'cabon you catchum plenty!' and more in the same style. At last we consented to try Tincun, and told them to take the things out of the boat, at the same time indicating the place of our temporary camp. Never was a boat unloaded in quicker time, and at the finish quite as quick was the supplication for tobacco.

Tincun Bay is essentially a harpooning-ground, and here we put up a hut on the same principle as our last one, and lived there fifteen or sixteen months. Various channels run up towards the head of the bay, and in these the *Zostera* grows very thickly. As the dugong works its way up with the flowing tide, browsing here and there, by the time it has gorged itself, as is its nature, it is a considerable distance from the main tidal-way—its path to its home, the ocean.

Early morning high-water is the best time to go in pursuit, for it is then the dugong begin to come down the channels and play about. Of course the principal man in the boat is the harpooner. Next in importance before the quarry is struck, but the most important after the delivery of the harpoon, is the steersman, with his twenty-foot steer-oar. His duty, when the attack with the spear is being made, or when the dugong is in its death-flurry, is to keep the boat free from the maddened animal's tail. The steersman must possess a quick eye and clear judgment, as well as a strong arm, for the difference between a good, strong sweep of the oar and a poor and hesitating one may mean a smashed boat or a broken neck or leg.

Starting at dawn, we pulled with muffled oars to the mouths of the channels. If the surface was ruffled by a breeze a black-fellow was taken, as he could detect a dugong rising in the distance quicker than ourselves. Upon espying one we gently pulled towards it in perfect

silence. The harpooner, standing in the bow, motions his directions to the steersman with his hand; and as we approach the place where he judges the dugong may rise he poses the harpoon aloft, ready to strike. This is a trying time for the harpooner, as perhaps the dugong while below may change its direction and come to the surface forty or fifty yards away from the place it was expected. But we must follow, and still the harpoon must be held aloft, for if it were raised each time we approached, the quick-sighted animal would see the movement, and with one stroke of the tail vanish. The quarry we are following seems to wander here and there; but, like sleuth-hounds, we follow on and on. At last it rises within striking distance, and instantly the harpoon is 'home' between the ribs. With a great plunge the dugong rushes away at its highest speed, the coil of the harpoon-line diminishing very rapidly. The harpooner jumps down and seizes the bow-oar, and we all pull our hardest to lessen the jerk when the line is run out, for if the line broke we should lose line and harpoon as well as dugong. The line running out safely, it is 'in oars,' and away we go across the bay at a good rate. Gradually, however, the pace slackens, and our prey soon stops from want of wind and the loss of blood. Again we pull gently up, coiling the line carefully for a second run. The dugong is then speared with a heavy lance shaped like a Zulu assagai. Another plunge, and again we are towed at a quick rate, but not far. Again we pull up and send the spear 'home.' The end is now near, and we hasten it with more spear-thrusts. It is now that the clear judgment and strong arm of the steersman is specially required, as the dugong in its death-struggles plunges about in all directions, the tail lashing the water into foam and raising columns of spray ten or twelve feet high. Presently there are some final spasmodic swishes of the tail, and all is still.

The body is then secured and towed to the landing-place, amid the exuberant joy of the blacks.

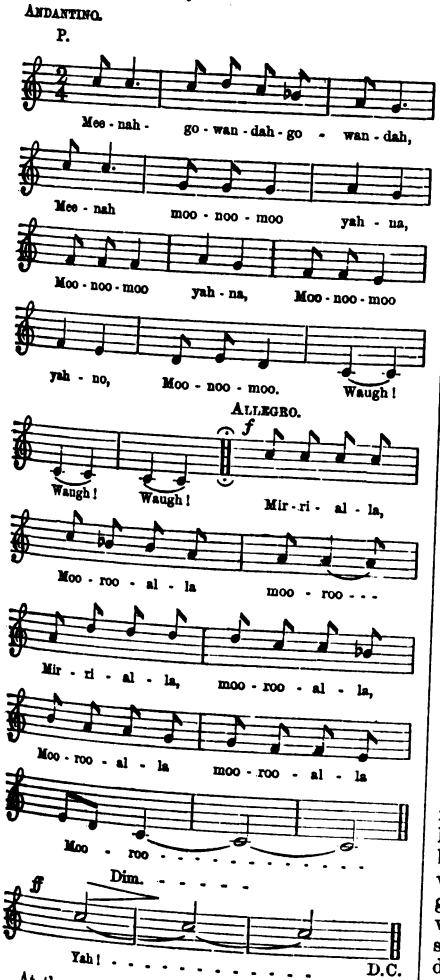
The amicable relations existing between our sable neighbours and ourselves were in no instance disturbed during our long stay at Tincun. It would indeed have shown an absence of the very rudiments of common-sense on their part had it been otherwise; for were we not the source of a good, steady supply of food as well as luxuries? Another great factor that made for peace was that though of female chastity as we understand it they have not the slightest idea, we never violated their only idea of morality—that of the rights of property—by any interference with their women. The unmarried girls belong to the father, the 'gins' to their husbands. The father may sell his daughter, or the husband his wife, either temporarily or permanently, the women themselves having no voice at all in the matter. But woe betide a 'gin' for any infraction of her husband's right over her as his property! She would be clubbed or speared, most likely to death, in which case she would invariably be eaten.

Our camp-fire was made the centre of attraction or market-place of the little community; it was also the 'block' where the dusky beauties exhibited their various charms, and where the young buck-nigger sometimes paraded himself, painted and armed for a fight which he did not want, and which never came off. The married 'gins' also visited us; and to these we gave more consideration, knowing their terrible experience of life. Their slavery is of the most abject and brutal nature. Their savage consorts spear them through the leg or knock them down with a waddy with or without provocation. They are absolutely the property of their husbands, who do what they like with their own. These 'gins' returned to their *gunyahs* much happier, for we always gave them a good feed and a bit of tobacco. The chief gatherings in the market-place were at supper-time, and for an hour or more the laughter and merriment were continuous. On our retiring to our hut they departed; but generally a posse of the dark-skinned belles would take up their quarters for the night, and sleep round the fire.

If our neighbours held social gatherings at our camp, we occasionally had a little diversion which we called 'going to the theatre.' We arranged with two or three of the older blacks for a corroboree at the small cost of a few plugs of tobacco. At the appointed time we forgathered at the 'Australian Hall of Varieties.' The stage, a small opening in the forest, was lighted up by about twenty small, blazing fires, the flickering gleam of which showed the limbs of the surrounding trees in pleasing relief to the deep gloom of the bush beyond. These fires were arranged in a semicircle, and facing the arena was the orchestra, consisting of about a dozen 'gins' and as many girls in a row behind them. The 'gins,' who were seated on their heels, played the drum, while the girls made what music or noise they could by clashing boomerangs together. The drum-like sound made by the 'gins' was produced by joining the hands together so that the palms formed a concavity, which when struck rapidly and violently upon the hollow formed by the lower part of the abdomen and the closely pressed thighs, produced a hollow, booming sound not unlike that of a drum. The orchestra also sang in concert with the dancers. Behind the musicians were ourselves, while round about, in varied groups, were the unemployed members of the camp. At a signal the dancers jumped into the arena with a yell, and arranged themselves in a line. Their bodies, freely painted in various quaint devices with white, black, yellow, and red pigments, presented a hideous appearance, and they clashed together their boomerangs and shields as the chant or song required. It

is quite beyond my power to give a correct idea in detail of the varied and fantastic movements of the corroboree; but one thing I admired above all, and that was the perfect time in which the motions were made, and they moved as one man.

I give here the exact words, tune, and time of one of their corroboree songs. The words are spelt phonetically.



At the words 'Mee-nah-go' they sway to the right, clashing their weapons aloft; then at 'wan-dah-go' they sway to the left; and so on alternately until 'Waugh!' at each repetition of which they jump high, coming down with a thud. The second part is rendered in much quicker time, and, instead of swaying, two short, quick jumps are made; thus, at 'Mir-ri-al-la' two jumps to the right, 'Moo-roo-al-la' two jumps to the left, and so on until the last 'roo,' which is given in a prolonged diminuendo; then, raising both arms aloft, the 'Yah!' is given as a yell, with diminuendo, gradually merging into 'mee-nah-go-wan-dah,' as before.

At the close of the performance tobacco changed hands and the curtain fell. The general effect of these dances given amid their original surroundings was far from unpleasing, while the songs, pitched in a minor key, had a cadence both weird and melancholy.

A blacks' camp is a marvellous negation of all accepted ideas of what human habitations should be. The *gunyahs* are mere break-winds made with bushes; but in the rainy season sheets of bark are substituted, which, simply leaning against sticks stuck in the ground, afford poor protection for a family even when huddled together. Of sanitation they absolutely know no more than the animals of the surrounding forest. Their cooking is of the rudest kind, the fish or wallaby being thrown on the fire and merely scorched in the flame, when it is taken off and devoured in its more than half-raw state. They know nothing of any cooking utensils. Whilst feeding, the 'gin' sits behind her lord and master, and has to be content with what he may choose to fling to her over his shoulder; any request for more would probably be answered by a swish of the waddy. The women often have to provide for themselves by spearing fish or grubbing for roots, and they may frequently be seen out in the bay, standing in their frail bark canoes waiting patiently for an opportunity to spear a sting-ray or other fish.

A pleasant change it was sometimes to accompany the tribe on a wallaby-hunt. A large tract of country to the south of Tincun Bay was their hunting-ground. The tribe would leave the day before the drive, while we, with three or four old blacks, pulled across the bay at dawn next morning. The arrangements for the cordon were completed by the time we arrived, as the forward movement began at once. During the whole time of the march they all sang out a peculiar note, neither a cry nor a song, but of a bell-like character, very clear and musical, the object being to keep the cordon in proper form. On we marched towards the objective, the cordon gradually closing in and the music increasing in volume. At first only occasional wallabies were started, and were easily driven in the required direction; but soon the numbers increased, and they began to show signs of fear, rushing backwards and forwards, but ever being driven in the fatal line of least resistance—that towards the objective. As the cordon pressed closer and closer their fright became maddened terror; frenzied rushes to escape were made, when some few got away, others were killed, and the rest driven back. Soon the two ends of the cordon came in touch; and the excited blacks, with demoniac yells, rushed towards the centre,

clubbing and spearing the frantic animals as they endeavoured to pass. When all was over, the women and children scattered to collect the game, while the elders came round us with their everlasting request for tobacco. Perhaps fifty or sixty head would form the 'bag,' affording a big gorge that night, and only the bones would remain in the morning. Under circumstances of this kind I have seen a man, whose terribly distended stomach declared his gluttony, rolled over and over by his fellows to relieve the pain.

One day an old black came to our camp, and taking Edwards aside, had a mysterious talk with him. Edwards said the old fellow had told him a fight had taken place that morning, and that one of the combatants had been killed—speared. As usual, they were going to eat the body and have a corroboree that night. The old man offered to take Edwards with him for a plug of tobacco; only Edwards could go, and on no account must anything be said about it. Edwards consented, and some time after dark the old man put in an appearance, and they went away together. On his return Edwards gave us an account of what he saw. It was in effect as follows:

'The old man conducted me by a considerable detour to the back of the blacks' camp, where he placed me behind a bush. I was strictly enjoined not to move away or in any way expose myself. Though I was about seventy yards off, I could command a fair view from my place of concealment. In the centre was a fire, alongside of which, and well within the range of the heat, lay the body. Apparently the skin had been removed, and the flesh had assumed a grayish colour. Round about were eight or ten small fires, and outside these the women and children were congregated in one place, and, so far as I know, took no part in the proceedings. Presently the old men, amongst whom I recognised my guide, approached the body and began cutting off the limbs, pieces of which they flung on the small fires to cook; then there was a scurry of the younger men, and in a few minutes the trunk was cut in pieces and tossed on the fires. The sight was too sickening. I turned away my head, for a kind of fainting feeling came over me, and a considerable time elapsed before I could summon up courage to look again. When I did so I saw them busy eating, and picking the bones. Suddenly one got up and commenced capering and yelling in a most excited manner; then he was joined by others, until all the men were engaged in a wild dance, singing and yelling. Amid this excitement I was touched on the shoulder by my guide, who said, "White-fellow go now. Black-fellow get 'im plenty mad, plenty fight; white-fellow go;" and I was not sorry, for the scene appeared as one from hell.'

Often at Tincun we were visited by small parties of Fraser Islanders. They always spoke of 'plenty youngon sit down lik'a Stewart Island,' and begged us to come and camp there. Having lost our boat in the great flood at Maryborough some six months before, and our present one being too small for harpooning, we decided to try Fraser and Stewart Islands for netting.

We lived among the Fraser Islanders for two or three months. Our relations were peaceful and friendly enough, but circumstances were against us. We could get no good water; it was all discoloured by the roots of the ti-tree, and looked like strong tea, having an unpleasant, astringent flavour. Dugong were few and far between. A restless feeling now grew upon us, and we resolved to disband.

Before closing I should like to mention a tragic but interesting incident that occurred on Fraser Island a few months after we left it. In Maryborough there was a timber-getter known as Yankee Jack, who had lately set up a pine-camp on that island. He was 'boss' over eight or ten as rough a set of men as could be found, and that meant a great deal in those days. Yankee Jack came to me one day and asked if I would lend him my rifle and sword-bayonet. He said he found the blacks very troublesome; and as several of his men had been wounded by spears, and he had great difficulty in getting them to go into the bush to cut pine, he wanted more guns to defend the camp. I asked him what sort of treatment the blacks had received from his men. He admitted that often promises to pay for labour had not been fulfilled, that instead of the stipulated tobacco they had received curses, and that at first several of the 'gins' had been outraged. But now no women came to the camp; while the men haunted the bush near, making it unsafe for any one to leave the camp even for a short distance. I lent him my rifle, and that was the last I ever saw of Yankee Jack.

I will continue with the account given by Jack Barry, one of the men: 'Yankee Jack and myself started for Maryborough to get supplies. Opposite the river we encountered a heavy gale from the west, against which we could not pull, and we drifted across the southern end of Hervey's Bay, and were close to Fraser Island, when the wind dropped. Yankee Jack said we would land and have breakfast. We saw a couple of blacks coming down the beach. Yankee Jack went towards them to get some fire, while I turned to the boat to get out the billy and things. I heard a cry, and, looking round, saw Yankee Jack lying on the sand with a spear in his eye. One of the blacks came up and gave me a blow with his waddy, which I warded off with my right hand, and the waddy went between my fingers and split my hand; the next blow I warded with my left, and the waddy broke my arm; the third blow struck my head, and I became senseless. When consciousness returned I found the water lapping round me. My dazed condition just allowed me to realise

that I must somehow move from the rising tide, or drown. This I succeeded in doing, and by-and-by I recovered sufficiently to crawl a few yards up the beach. I was perfectly naked; and I saw Yankee Jack lying dead, naked also. The boat was gone, and I was quite alone. I crawled under the mangroves, fearing the blacks might return. My left arm hung useless; my right hand had stopped bleeding, but the pain was very great; while my head—oh, my head! I lay among the bushes until dark, when I started to walk to camp. Walk! I could only stagger a few yards at a time. It took me two nights to walk six miles. I hid in the daytime. What I suffered from sand-flies and mosquitoes cannot be told. I managed to reach the camp, though nearly dead.'

Shortly after, the pilot-cutter came and took us to town. Two days later a steamer from Gladstone to Maryborough passed the scene of the murder, and the body on the sand was seen by the officer on the bridge. A boat was lowered, and the remains, much decomposed, were buried. The circumstance was reported to Mr Sheridan, the P.M., who at once sent the pilot-cutter to bring off the men.

A cursory comparison between the methods employed by ourselves and Yankee Jack's party in dealing with the blacks will show why such opposite results ensued. Justice and consideration as naturally beget peace and goodwill as outrage and fraud are followed by bloodshed and terrorism. The instinct of retaliation and revenge is inherent in man, though less under control in the savage than in the civilised races. Unfortunately for primitive peoples, they first come in contact with the fringe of civilisation, the component units of which are often drawn from the dregs of society, who, finding themselves beyond the reach of the law, give rein to their brutal instincts; wrong is done, revenge follows, and a war of extermination ensues. The history of Tasmania and the cruel acts perpetrated upon the blacks in Queensland should bring a blush of shame to the cheek of every right-thinking man. It is sad to think that these cruelties would seem to have been too often connived at by the ruling powers.

But whether kindly or unkindly used, it is evident that in a very few generations these primeval inhabitants of this rich country will have passed entirely away.

THE WOOING OF TEZALIA.

CHAPTER IV.

AFTER an early dinner, at which Señor Vellos had pledged his friend deeply in wine, the wine of Spain, his native land, Tezalia and Crayton sat together upon the balcony. The night was brilliant; a clear moon shone upon the fields and on the road which led from the sierra. In a clear sky thousands of stars twinkled and shone like the lights of a distant city. A guitar lay at the girl's feet, where she had laid it after playing.

'If all life were like this!' she said softly. The morning had come, and with it the man. Love had entered her life, and her soul responded to its call.

'Then,' said Crayton, with a wisdom deeper than he knew of, 'we should tire of it. It is hours such as these which make life worth living, and the memory of them which helps us through the darker days.'

As if in confirmation of his words, a horseman suddenly appeared riding along the road which led from the sierra, galloping as fast as his horse could bear him. His figure stood out clear and distinct in the moonlight against the rocks, and as he approached the sound of his horse's hoofs became audible and every moment more distinct.

A sudden fear gripped the girl's heart. Crayton had risen, and, leaning against the balcony, was staring at the advancing figure.

He turned. 'Tezalia,' he said, 'I am wanted. It is one of the men from the mine. I must have my horse saddled at once.'

A few minutes and the rider was on the balcony, while his horse stood beneath with heaving flanks and glistening with sweat.

'Yes?' said Crayton.

'Can you come at once, sir?' said the man. 'The mine is raided. There was a band of men firing upon it as I left.'

Tezalia was watching her lover. 'The men of the sierra!' he said. 'In five minutes I can be on the road. But you will want a fresh horse.'

'Come with me,' said Tezalia. She led the two men down the garden to the stable, and pointed to a stall where Crayton's horse was stalled. 'There is yours,' she said. Then, holding the lantern she had brought above her head so that its light was cast around, 'Take your choice, señor,' she said. 'Any one of them is yours.'

Drummond chose a large chestnut with powerful shoulders, the most likely-looking horse for the task which lay before it.

In less than five minutes the animals were saddled. Leading them to the gate, Drummond mounted his and held the bridle of the other, while Crayton and Tezalia stood in the shadow of some bushes.

Crayton was loading his revolver. When he had finished he put it back in his belt.

'Good-bye, Tezalia,' he said.

The girl came slowly towards him, and the moon, shining upon her face, showed it pale and drawn.

'God keep you!' she said softly.

Crayton held out his arms, and she came to them. For a moment she lay there silent; then, 'I was thinking of your words, dear one,' she said. 'It is the memory of nights such as this which makes life worth living. I shall never forget.'

'Nothing will happen,' he said, answering her unspoken thoughts. 'We shall attack them in the rear; and a Mexican is like a Spaniard—he does not relish blows given in the open.'

'I pray God not,' answered Tezalia.

Crayton bent down and kissed her, then arm-in-arm they silently walked to where Drummond stood waiting with the horses.

A last murmured adieu, and Crayton mounted. Another second, and the two men were galloping along the dusty road which led to the mountains and all that they contained.

Tezalia stood motionless, watching them until they reached the gulch which led to the sierra and were lost to sight; then she turned away with a sigh. Love coming to her had taught her many things, among them that there is no joy without pain.

Walking across the balcony, she noticed the two chairs as they had left them, and the guitar neglected on the ground. She smiled softly; here the lesson had been learned, and it is sweet, whatever sorrow it may bring.

Then she drew aside the curtain and passed into the *sala* beyond. On the table lay a letter addressed to her in her father's writing. It contained only a few words, telling her he had been called away.

After reading it she put it down mechanically, only half-realising the contents. Greater thoughts filled her mind.

Walking slowly, she crossed the room and sat down on a couch, from which she could see through an open window to the sierra. Her eyes were fixed upon it, her thoughts at the silver-mine with the man who had taught her of love.

She was awakened from her reverie by a step in the room. She looked up.

Miguel stood on the threshold, his hand resting on the door for support, while he swayed dizzily from side to side. His head was bound, and the linen was stained a deep crimson. His face was white and his eyes heavy. Staggering across the room, he sat down on a chair with a sigh.

Tezalia rose. 'You are hurt, Miguel?' she said, crossing to his side.

His eyes lighted up as they rested upon her. 'Wounded, señorita,' he said; 'but it is nothing—a mere scratch.'

Tezalia looked at him. A fearful thought flashed through her mind: the raid upon El Nitra mine, her father's sudden departure from home, and Miguel's arrival—wounded.

'Wounded! Where—how?' she asked. The words came through lips suddenly grown dry.

Miguel was half-unconscious and heedless of what he said. He nodded in the direction of the sierra. 'Up there—at El Nitra. Those Englishmen shoot like the devil. There were twelve dead when I left.'

'And my father?'

Miguel's eyes gleamed. 'He has gone to the town to get more men. Then he will go to the mine. And we shall win, for he has a brain, has your father; whereas I'—— Miguel finished the sentence with a shrug of the shoulders.

'When will he be there?' asked Tezalia.

'Not for another hour, señorita,' answered Miguel.

Tezalia's brain was working quickly, and a sudden gladness seized her. One can do much in an hour. She ran to the door. 'Nita!' she called out.

In response to her call an elderly woman shuffled along the passage. 'Señorita!'

'Miguel is wounded; you will see to him. But first you will call Garcia.'

'Garcia?' said the old servant.

'Garcia,' affirmed Tezalia. 'I want him to saddle my horse. I am going for a ride.'

'Señorita! At this time of night!'

Every moment was precious. One lost might mean that a heavy sin was laid at her father's door. Tezalia stamped her foot. 'Yes, I am going for a ride, so you will call Garcia.'

Shaking her head ominously, the old woman shuffled off to do her mistress's bidding. In a couple of moments Garcia, the small, brown-faced, merry-eyed boy, appeared.

'Garcia,' said Tezalia, 'I want you to saddle my horse; and I have a present for you if it is done quickly.'

Garcia worshipped his mistress, and he worshipped also the money which he knew she would give him. Before the last words had left her lips he had vanished.

She hurried to her room and there put on a long riding-cloak and a small black fur hat. By the time she reached the hall again her horse stood awaiting its rider. Slipping a gold coin into the expectant Garcia's hand, she mounted.

He bowed. 'Thank you, señorita,' he said with a grandiloquent air.

Tezalia motioned him to loosen the bridle, and urged her horse along the road which led to Molenga.

Molenga is a straggling town, possessing only one street worthy of the name. Along this Tezalia galloped. At the northern end there stands a large, two-storied white house.

Riding into the *patio*, she dismounted. 'The Señor Loria?' she asked.

'But yes,' answered the servant.

'Tell him the Señorita Vellos is here, and must speak with him at once.'

A moment and Señor Loria appeared. He was a tall, dark man. In his veins there ran a mixture of many bloods, and it showed upon his features. The owner of a large ranch, he was also leader of the Vigilance Committee.

'El Nitra silver-mine is being raided to-night. Father has gone to their help, and I want you to call out the Vigilance Committee.'

Loria listened. 'Has your father many men with him?'

'I do not know,' answered Tezalia; 'but there are over a hundred attacking the mine.'

Señor Loria was of an adventurous nature, and for weeks the Vigilance Committee had had little to do. The hanging of three men for cattle-stealing had reduced crime to a minimum in Molenga.

'In half-an-hour I shall have the boys out,' he answered.

'Then I will wait and ride with you,' answered Tezalia.

'You!' Señor Loria looked at her in astonishment. 'It will be no place for a lady. There will be fighting.'

'And my father will be there. My place is near him should he be wounded. Besides'—— Tezalia stopped.

Señor Loria watched her closely. 'Besides?' he said tentatively.

'I mean to go,' answered Tezalia.

'That ends the matter,' responded Señor Loria. 'But, believe me, señorita, you will be sorry.'

In the *patio* of Señor Loria's house there hung a large bell which summoned the Vigilance Committee. Its deep-sounding notes heard at night told Molenga that trouble was abroad, and brought the womenfolk to their windows so that they might see the men galloping to the señor's house, where they met.

Señor Loria set it ringing. Like a huge church-bell it sounded, calling its children not to worship but to the punishment of another's sin. Tezalia watched it swinging to and fro, while a small boy, one of the señor's house, mechanically pulled the rope.

Within five minutes the first man answered the summons.

Señor Loria awaited him in the *patio*, booted and spurred.

'El Nitra mine is raided,' he said shortly in explanation. 'Those brutes who infest the sierra are a disgrace to the little civilisation we do possess. We must teach them a lesson to-night that will keep them quiet for a month.'

Tezalia heard the words with horror. On the one side was the man she loved; on the other her father, who would be brought to everlasting disgrace were the truth discovered. In her hands, and hers alone, lay the power to save the life of the one and the honour of the other.

Before the half-hour allowed by Señor Loria had passed thirty men stood in the *patio*. They heard with misgiving of Tezalia's intention to accompany them, and vainly tried to dissuade her.

'It will be no picnic, señorita,' said one; 'there will be firing.'

From somewhere amidst the folds of her cloak Tezalia drew a revolver. 'And I can shoot fairly well. If you stay still, señor, I will pierce a hole in your hat just where that bow is.'

The Mexican turned away with a short laugh. 'You have completely convinced me, señorita,' he said.

And so Tezalia rode with the Vigilance Committee.

(To be continued.)

ON THE WINGS OF THE WIND.

ON a sunny Sunday of October, when Berlin looked its brightest, I watched the start of the most sensational Gordon-Bennett balloon-race ever run. The spherical balloons tailed away on the wings of a north-west wind, and every one predicted that they would land forty-eight hours later in the midst of the Bulgarian troubles then imminent. Lo and behold! the wind veered round in the night, and most of them dropped in or near the North Sea. A week later I stood in the Place de la Concorde, and saw the latest thing in dirigible balloons manœuvring over the Louvre. In no way the sport of every air-current, like the pear-shaped vehicles of Berlin, this gigantic sausage turned and tacked and crossed and recrossed the gleaming Seine at the will of its owner. Here indeed was an airship with possibilities, and not just a fragment of wind-drift. The difference between the two seemed to throw new light on those 'British' birds which authorities like Mr Harting 'fairly claim as rare stragglers to the British Isles.'

The majority of these stragglers are just the sport of the wind. But for westerly winter gales the British list would be the poorer by half-a-hundred feathered windfalls from the New World. No one in his senses would believe that the buff-breasted sandpiper, or white-throated sparrow, or American 'robin' would deliberately and of set purpose start on an eastward voyage across the Atlantic any more than he would believe that three of the Gordon-Bennett balloons purposely dropped in the sea. Why should the birds do so, with nothing to gain in the way of food or climate? All their instincts would have to be at fault to inspire such an enterprise, and instinct does not betray its owner in this fashion. They are just carried willy-nilly on the wings of

the wind, not straight across the ocean in the track of steamers, but rather after the fashion of sailing-ships, with many a tack and detour, first reaching Scandinavia, and thence our north-east counties.

Those who have made long sea-voyages know something of these storm-tossed vagrants. One of the few episodes that vary the monotony of long weeks of sea and sky is that of little land-birds, such as wagtails and flycatchers, taking refuge in the ship's rigging. These small wayfarers are usually discovered in the early morning watch. Sometimes the little stowaways avail themselves of the vessel's hospitality for an hour or two only, after which, rested and refreshed, they boldly take wing again, only perhaps to find themselves sadly out of their reckoning, since in the meanwhile the ship has reached broader seas. Occasionally, however, they are enrolled in the ship's company and taken to the port of destination. In one case, at any rate, a dozen white-winged crossbills fell in with a vessel east of Newfoundland. These were secured in cages and brought to Europe. Two escaped off Queenstown, and two more near the Mersey, to be recorded in due course as genuine American visitors! On the other hand, a female flycatcher once joined the *Minneapolis* off the Scilly Islands, and was taken to New York. Just after the vessel passed Sandy Hook she flew ashore, either to enter into matrimony with an American cousin or to make a meal for a Long Island cat. *Quien sabe?*

To regard these gifts of the wind as British is as reasonable as to regard an English castaway who should reach the coast of New Guinea on a spar as a Papuan. The analogy may unfortunately be pushed farther; for just as the shipwrecked mariner would in all probability be murdered by natives on arrival, so too the wind-borne Americans promptly fall victims to the silly cupidity of ignorant folk, who think that the place for an uncommon bird is the inside of a glass case in the local museum.

ALMIGHTY VOICE.

PART I.

FAR away, in the great North-West of Canada, five hundred miles from Winnipeg, nestling between the forks of the great Saskatchewan River, is the village of Duck Lake, which has the rather unenviable reputation of having been the scene of more than one savage Indian rising, which, though not attended by much loss of life, gave the inhabitants a very uncomfortable scare; for the wild Indian on the war-path, with his hideously painted face, his blood-curdling war-whoop, and the traditions of a thousand cruel ancestors behind him, is apt to send a thrill of fear through the bravest heart.

In Duck Lake there is a small barracks for the mounted police, that splendid body of men who fearlessly face danger and death to vindicate the majesty of the law over the vast, sparsely inhabited North-West. The very knowledge that a mounted policeman might turn up at any hour of the day or night at a settler's shack to see that all was right has kept many a desperado from his purpose of robbery or worse; for did he not know that no stouter heart ever beat, and no better horseman ever strode horseflesh, than the mounted 'bobby' of the prairie? The mounted policeman was clothed with the authority of the law to apprehend or kill as he saw fit. The law wisely allowed him to use his discretion in a critical situation; it chose its man, and then gave him practically a free hand. Consequently there were no half-measures in his work. The desperado, whether white or red, knew that if he came to hand-grips with this muscular minion of the law he would probably get the worst of it; so he kept clear of him by keeping clear of what he protected, and the settler slept comfortably in his bed.

A short distance from the village is the Indian reserve, the home of the tribe of the Blackfeet.

When the Canadian Government took possession of the land it assigned the most fertile tracts to the Indians; the rest was sold to the whites. There are numbers of reserves dotted over the broad Dominion, where the original owners of the soil live for the most part in contentment. In all these peaceful reserves, however, there are restless spirits who chafe under the injustice they think the whites have done them in taking away their land. There was a time when the proud red man was lord of all he surveyed. Hunting and fishing and fighting were his pastimes. He scorned the menial, bestial work of tilling the soil; and he scorns it still, spending his time in good-natured idleness, lolling in the door of his hut, living on the bounty of the Government and what he can pick up by trapping and basketmaking. Christianity is making an impression on him, it is true; but many of the Indians of the North-West are still pagans, worshipping the totems of their tribes, believing in a hereafter which will fulfil the ideal of the Indian's heart—a perpetually happy hunting-ground.

When I was there the leader of the restless spirits on the Blackfeet reserve was a young Indian who was proud to be known by the sonorous name of Almighty Voice. When I knew him, or knew of him—for I had a wholesome fear of the man with the loud name, as every one had—Almighty Voice was about

twenty-seven years of age, and was the strongest and most daring, and withal the cunningest, ruffian it was ever man's lot to meet. But what a man he was! One never sees a member of his own species, be he red man or white, with features and form and physique such as Almighty Voice had without a feeling of admiration and something akin to pride. People in the olden time were proud of Saul for his stature; so those who knew this mighty Indian felt the same sense of pride in him. Spirit and will and natural affection had become perverted to make him a desperado; but as you looked at him you only saw the Creator's design of a perfect man perfectly carried out. Almighty Voice could not have been less than six feet two inches in height, though his heelless moccasins, and the absence of anything in the shape of a hat, and his faultlessly moulded form made him look somewhat less. His thick, coarse black hair fell into a natural parting in the middle and came down to his shoulders, taking away from the width of a prominent, low, massive forehead, and causing his strong, oval face to look much longer than it was. His eyes were black and piercing, nose slightly bent downward, the mouth inclined to be wide, with thin lips upon which no stranger ever saw a smile. The whole appearance of the face gave the impression of strength of will, but otherwise it was quite inscrutable. One always wondered what thoughts were surging behind the great brow; but no play of the muscles of the face ever gave you an inkling of them. You could make no mistake about the man's immense bodily strength when you looked at the strong neck arching away on either side to join the heavy, sloping shoulders and deep, roomy chest. The limbs were long rather than massive, but hard and muscular from constant exercise. When Almighty Voice spoke the tone was deep and mellow, but under the passion of excitement or anger it was like the bellowing of a bull.

Almighty Voice's theory was that the white man was an intruder, and everything he had belonged to the Indian by prior right. The white man had taken the Indian's land and raised his cattle upon it; but the land still belonged to the Indian, and consequently the cattle which fattened upon it were his, so he simply took what was his own. But the fact that the law had an ugly way of calling this stealing made the Indian cunning. No one ever saw Almighty Voice steal. One by one the settlers lost their cattle, and, watch how they would, they could not find out how or where they went. Almighty Voice covered up his tracks so well that no one suspected him of being the thief. The wily redskin's thefts were carried out over a large area; and he never stole from the same herd twice, except after long intervals.

Something had to be done, so the settlers applied to the Government to send the mounted police to trace the losses to their source and bring the culprit or culprits to justice.

At this time Major Baxter had charge of five mounted police, whose headquarters was at Duck Lake. Baxter was a man of iron nerve, great perseverance, and more than ordinary acumen in tracing crime. All felt that if any one could find out the cause of the thefts he was the man.

PART II.

MAJOR BAXTER lost no time in thoroughly scouting the surrounding country for some scraps of information that would eventually enable him to lay the thieves by the heels. From the first he shrewdly guessed they would be found on the Blackfeet reserve. For it was well known to these Government officers that there were several young Indian braves who held revolutionary ideas, with Almighty Voice at their head; they had no respect for the white man's property or the white man's laws. This would never have been known outside the Indian territory but for one thing—the Indian's love of whisky (or 'fire-water,' as he calls it). Under its influence all his natural reserve and caution break down. When Almighty Voice and his companions had the good luck to be able surreptitiously to indulge in the forbidden nectar, they had let fall certain hints that the whites had pieced together to their disadvantage. Thus Baxter, whose subtle brain was ever sifting the little wheat there was to be had out of the chaff of gossip, had some ground for making the reserve his first region of inquiry. In most cases he was met by a shake of the head, which means, 'I don't understand your language.' Few Indians will own up to a stranger that they can speak English, but will turn and jabber in Indian to their nearest companion, though they usually know all you are saying.

The moment the policeman entered the reserve the Indians knew what his business was, yet no babes were ever more innocent than they. Almighty Voice and the Man-that-Creeps—his companion, who followed the big Indian like his shadow—and some others who were known to speak English, knew nothing of what was going on in the outside world. As for the suspected cattle-thefts, they had never heard of them. Baxter kept his best ally carefully concealed in the inside-pocket of his coat; he well knew he had the means to make some redskin tell him what he wanted to know when he chose to use it, but he refrained from doing so till all other means had failed. White men were not always so scrupulous. The law imposed a heavy fine upon any one convicted of treating an Indian or of selling intoxicating liquor to him; but, notwithstanding, they would play upon his weakness to rob him. A rascally white would now and

then go to the reserve with an old pair of boots on his feet and come back with new ones. His *modus operandi* was to select an Indian with a new pair, ply him with whisky till he was drunk, and then walk off with the red man's new boots, having carefully left his old ones on the feet of his sleeping victim. He quieted his own conscience, if he had one, with the dictum that exchange was no robbery, explaining to his friends, when asked where he had got the new boots, that he had made a sleeping trade, of which all knew the meaning.

Though the major could get no one to give him any information that would help him, he noticed a few facts. Almighty Voice and the Man-that-Creeps neither hunted nor fished nor ever appeared to do any work, yet they were evidently well fed and their lodges were stored with meat. Where did it come from? No one would say. Baxter had his suspicions, and decided to watch, telling his Indian friends that he had had a pleasant visit among them, and would come back in six moons' time and again smoke the pipe of peace with their braves. With these friendly assurances he lulled them into a sense of security and left them.

About two miles from the reserve was a high, conical hill, densely overgrown with trees and shrubs, known as Horton's Bluff, of about nine or ten acres in extent. It is one of the providential features of the prairie that there should be scattered about over its surface, like islets in a lake, these wooded hills or bluffs. It is here that the settlers come for their wood for burning, rails for fencing, and for the timber required for the implements and utensils used in the economy of the prairie farm. All the rest of the landscape is quite void of trees or shrubs or anything approaching a hill.

From the top of Horton's Bluff there was an uninterrupted view for at least ten miles in any direction. It was here that Major Baxter placed two of his scouts, with instructions to watch the reserve, and on no account let any one leave it without at once reporting to him at Duck Lake. The moon was at the full, and every object was visible upon the closely cropped prairie all round the reserve. The two troopers kept a sharp lookout by turns; but nothing more than a stray dog had been seen, and the watchers thought the night must pass without their having anything to report. But at last, when the gray shadows of the approaching morning hung most thickly over the ground, they saw two stealthy figures pass swiftly from the reserve along the trail that led northward, past the very foot of the hill on which they were concealed, and rapidly fade away in the distance. The travellers passed so near that the watchers had a good look at them, and each whispered to the other as soon as it was safe to do so, 'Almighty Voice and the Man-that-Creeps.' The Indians were unmounted and apparently unarmed, except that each carried a long, heavy cudgel. They were travelling in Indian file, bent forward, and with that lope peculiar to the redskin, half-walk and half-run, which he can keep up for a whole day without slackening. Baxter's men lost no time in acquainting their chief with what they had seen. That evening the chief carefully posted his men in the edge of the bluff close to the trail along which the Indians had passed. There was no doubt that they were on one of their raiding expeditions, and would probably return that night along the same route with their booty. The plan was to wait till the thieves were passing their hiding-place, when two of the men were to fling themselves upon the Man-that-Creeps, while Baxter and the other three were to do the same to Almighty Voice. They hoped to be able to handcuff them whilst they were off their guard. At any rate, they flattered themselves that six men were more than a match for two, if one *was* Almighty Voice; yet one and all dreaded rousing the latent strength of the big Indian.

Hour after hour passed until nearly midnight; no sounds had been heard but the barking of the Indian dogs and the distant howl of the prairie-wolf. Soon, however, there reached their ears a steady thud, thud, growing each moment louder, from the northern trail. Their trained sense told them what it was—the round trot of a heavy beast. And they could soon make out the quick pad, pad of moccasined feet behind.

The watching men's hearts beat quickly as they heard the Indians draw near. Each one felt that he was about to have the fight of his life. One of the thieves, they knew, they could easily take; but what of the other? Might not the strength of six men be bound up together in the massive, compact frame of Almighty Voice? Such were their thoughts, but there was no time to indulge them for long.

At a word from Baxter they flung themselves upon the unsuspecting red men. The two told off to capture the Man-that-Creeps had quite enough to do, and it was a considerable time before they were able to leave him, bound, to go to the assistance of their sorely tried brethren. Almighty Voice had gone down under the first rush and impact of the four police, but only for a moment; with a whoop that echoed from the bluff far over the prairie the great Indian sprang to his feet as though the four strong men clinging to him were only so many leeches, who might draw a little blood, but whom, in turn, he could easily crush if he could get at them properly. Two tried to pinion his arms from behind; Baxter grasped him round the neck; whilst the fourth grasped at the Indian's legs, thinking to throw him down, only to receive a kick that sent him quite ten feet away—to give no further trouble. Wrenching his right hand loose, that held the cudgel, and springing sideways, free from his three antagonists, Almighty Voice dealt three swift, crushing blows with his

stick, and Baxter and the other two knew no more. At that moment the two men who had just bound the Man-that-Creeps came up to assist their friends. The first went down at once under a blow from the terrible cudgel; but Johnson, the remaining man, grasped the Indian's stick before he could raise it for a second blow, and, jerking it from his hand, closed with him. Johnson was immensely powerful, and had never yet met the man he could not master. Almighty Voice was winded with his exertions, whilst the trooper was comparatively fresh; so the contest was not altogether unequal.

Backward and forward the two men swayed and strained, without either gaining any perceptible advantage; yet the Indian's greater powers of endurance were gradually wearing down the white man's strength, who would soon have been at his mercy, when Baxter, rousing up from his temporary insensibility, saw how matters stood. If the Indian once mastered Johnson, as he soon would do if something were not quickly done to prevent it, then he knew that not one of them would return home to tell the tale. He saw the Indian's cudgel lying close to him, where Johnson had flung it. Managing to reach it, he dragged himself to where the two men were struggling, and with all his remaining strength brought it down upon the back of Almighty Voice's skull. The blow laid the Indian senseless upon the ground. The two men then bound him so that he could not resist when his senses returned.

Almighty Voice had fought a great fight. No other man in the whole of the North-West could have well-nigh overcome six mounted police, practically single-handed; but, like many another in the world's contests, he was beaten at the post by the weight.

PART III.

THE condition of the six police after the terrible fight at Horton's Bluff bore ample testimony to the prowess of Almighty Voice. One had an arm broken, and three went with bandaged heads for a week; though Major Baxter and Johnson had nothing worse than an aching head and a bruised body from the severe mauling they had gone through, and were able to take their prisoners and wounded back to Duck Lake, where, after Almighty Voice's head was bound up, he was securely handcuffed and placed in the police-barracks, with a trooper to guard him, till he could be sent to the jail at Battleford to await his trial.

The Man-that-Creeps was at once released; he was known to be only a tool in the hands of the real offender, and it was thought that when separated from him he would give no further trouble. Besides, the Canadian Government deals more leniently with Indian offenders than with whites; caution is exercised to avoid a race-feud between the white settlers and their neighbours. As to Almighty Voice, he would receive justice; of this the Indians could not complain.

Baxter was proud of his capture; his night's work would mean a step up the ladder. He little thought of the fate that awaited him! With the utmost fidelity an Indian will requite a kindness shown him; but woe betide the man who he thinks has done him an injury! Almighty Voice knew it was Baxter's blow that had stunned him on the very eve of victory, and robbed him of his liberty; he made no complaint, but sullenly brooded over it and waited for an opportunity of revenge.

Two days must elapse before he could be sent to Battleford. The first night passed quietly, during which the Indian neither moved nor spoke. After a day's rest, the same man returned to guard his captive for the second and last night.

In outward appearance Almighty Voice was completely cowed. Hour after hour he sat till past midnight, when his chin dropped upon his breast, and his loud, regular breathing indicated that he was asleep. The policeman set to guard him had been cautioned not to take his eyes from the Indian for a moment, but he was by this time very drowsy. What could the sleeping Indian do? So he thought, and dropped his head on his arms on the table at which he was sitting, and was soon fast asleep—though still watching, in the fancy of his dream.

All the time Almighty Voice seemed to slumber one eye was open just enough to see all that his guard was doing. When he knew him to be well asleep he gave two silent tugs with his powerful wrists, and the stout chain of the handcuffs quietly snapped in the weakest place with no more sound than the shutting of a watch. In a moment he was beside the sleeping man, took the keys from his pocket, unlocked the door of the barracks, and was gone. The unconscious watchman knew nothing of what was passing till he was roused the next morning by the day-guard come to relieve him. 'Where is Almighty Voice?' was what both asked. It did not take long, however, to discover how the wily Indian had tricked his guardian and regained his liberty.

Major Baxter was furious when he heard what had taken place. All the labour and skill and daring of himself and his company were thrown away unless the Indian could be recaptured. He lost no time in summoning Johnson to his assistance, and the two rode away to the reserve to try to find the missing man.

Almighty Voice had not run away, but had quietly gone back to his home. When Baxter and his companion drew near they saw him standing by a fire outside his lodge, leaning upon his rifle and talking to some other Indians who were with him. Baxter at once called upon the Indian to surrender; but the answer

was, 'If you come any nearer I will shoot.' The chief of the mounted police was not going to be put off by what he believed to be only bluff on the part of the Indian; so, leaving his horse with Johnson, he went forward on foot to take his prisoner, when, without a word, Almighty Voice raised his rifle to his shoulder and fired, killing the major instantly.

Two years passed away; every effort had been put forth by the mounted police during this time to bring the murderer to justice. The country was scoured for hundreds of miles round, but no trace of him could be found. Some said he must be dead—drowned, it was thought, in trying to swim the Saskatchewan in his haste to escape; others said he had probably joined some tribe of Indians far away, and would never come back. But the chief of the local police who had succeeded poor Baxter was of a different opinion. He had cultivated the acquaintance of Almighty Voice's mother, and shrewdly guessed, from the manner of the old squaw when spoken to about her son, that she knew where he was. He kept his suspicions to himself, however; it would have caused a panic amongst the white people if it was thought that Almighty Voice was ever likely to come into the neighbourhood again. Yet the chief was convinced that the outlawed Indian was in communication, in some way, with his people on the reserve, and would sooner or later come back to his old haunts.

. . . . . .

When the news came that Almighty Voice had returned, the local police and most of the able-bodied men of Duck Lake and its surroundings went out to hunt the Indian outlaw and take him dead or alive. Neither life nor property was safe whilst he was at large.

Almighty Voice, taking two other bad Indians with him, had in the meantime gone to Horton's Bluff, where he decided to make his last stand. Driven to bay, he was a desperate man; and all knew he never would be taken alive, and, what was more, would sell his life dearly. The police and volunteers quickly drew a cordon round the bluff to prevent escape. But how were they to take their man? All three of the Indians were known to be armed with modern rifles. At first the besiegers tried to parley. Almighty Voice was invited to surrender, being told that he would be fairly tried, and would probably at length be pardoned, whilst if he resisted he would certainly be shot. Then his two companions were promised their freedom if they would deliver up Almighty Voice; if not, they would receive no quarter. But not a syllable did any of the Indians answer. At last it was decided to rush the bluff. Twelve civilians from Duck Lake volunteered for the dangerous expedient. They started in, and were last seen running amidst the trees and thick scrub, with their rifles at the ready, toward the centre of the hill, whilst their friends outside eagerly listened for any sounds that would tell them what was taking place. Soon seven shots rang out in rapid succession, and five of the volunteers came running back to say that seven of their number had fallen. They had seen no Indians; but from some place of concealment they had been fired upon, and not a shot had missed. After a short time two wounded men crawled out, saying that three had been killed outright, and two were so badly hurt that they could not move. It was too dangerous, whilst the light remained, to risk more men's lives in trying to bring out the wounded. A brisk rifle-fire was therefore kept upon the part of the bluff where the Indians were thought to be concealed, to prevent them from coming back to kill the wounded men; whilst a cannon was sent for from Battleford, with all haste, to shell the bluff.

All the rest of the day, from one o'clock till seven in the evening, the poor fellows who had been shot down but not killed lay helpless, suffering tortures from pain and thirst. When the darkness came on and they could not be seen, those who had escaped unhurt crept in and brought out their wounded and dead comrades.

At ten the next morning the cannon arrived and the firing began, the whole of the bluff being thoroughly raked by the bursting shells. Again volunteers went in, crawling this time warily through the thick undergrowth. They came first to the blood-stains left by their dead and wounded comrades. What brave fellows they were! All had risked their lives, and some had lost them, for the public safety.

A little farther on they came upon the three Indians, all lying dead in their rifle-pit; a shell had pitched right into the pit, where it burst and did its deadly work.

The volunteers, in the beginning, would never have ventured to rush the bluff if they had known of the Indians' clever strategy. With only their heads showing out of the pit, and screened by the underbrush, they could pick off their enemies without disclosing their own whereabouts.

Thus ended the career of Almighty Voice, one of the most notoriously strong and fearless men the North-West of Canada had ever known. One incident will suffice to show his indomitable courage. During the first afternoon of the siege, when those outside were keeping up a steady fire upon the centre of the bluff, his leg had been broken by a chance shot. Whilst most in a similar condition would have given up in despair, Almighty Voice had bound up his broken leg with a rough splint, cut a rude crutch, and during the night had dragged himself round every yard of the edge of the bluff, seeking some unguarded point to escape. The bursting shells had driven him at last to the rifle-pit as the only place of safety, but even here his Nemesis had overtaken him.

THE HEART OF THINGS.

By Henry Leach.

London, Yesterday.

NOTHING is more likely than that there will be more crimes committed in this country during the present year than during any previous period of twelve months beginning with January and ending with December. There will also be less complaint from the suffering public. The list of offences against society and the law will be swollen chiefly by thefts and burglaries accomplished with careful intention and by well-practised system rather than by misdeeds of the savage and vulgar kind arising from bad instincts, degenerate natures, and uncontrollable excesses of passionate feeling, in which class are to be included bodily injuries maliciously inflicted by men upon men and women, manslaughter, and murder. Probably the proportionate increase of these crimes will be greater in London than in other parts of the kingdom. Such predictions may be made with a very good confidence by those who are well acquainted with some of the circumstances and tendencies of the time in regard to criminal affairs and the attitude of the general public towards them. It was shown in a blue-book that was issued recently that the number of persons who were tried for indictable offences in the year 1909 was nearly seventy thousand, which exceeded any previous year except the one immediately before it, when there were about a thousand more. The figures for last year are not yet available; but in the light of the circumstances and tendencies which have been referred to one should be prepared for another very probable increase—a record. Trade depression and shortage of work for the humbler classes are not enough to account for the growth of these criminal statistics; indeed, it is doubtful whether they should be allowed as the reason for any part whatever of the increase, since such conditions of trade and labour tend only to the committing of comparatively minor, and in a sense more excusable, offences such as the stealing of food and clothing needed for immediate use; and in a large proportion of cases there is a reluctance on the part of the sufferers—either through their sense of compassion or their desire not to be inconvenienced any further with a business which generally cannot be mended, and had therefore better be ended as quickly as possible—to prosecute. It is held also that the rising crime-rate is not due to an increase of habitual and regularly professional criminals. It is simply that criminality of a more or less casual kind has been more prevalent in the community; but of course, in the processes of time and habit, many of the offenders in these cases must develop into regular criminals.

* * *

The prophecy of a substantial increase during the present year is based partly on the general tendency towards increase as shown in the figures which have been published, and partly upon the fact that this year is to be one of great excitement, disturbance from the normal state of life, more numerous and prolonged absences of people from their homes, and a greater laxity of precautions for the safety of their belongings. This is because of the Coronation, which will bring the people from the country to London as nothing else has done since the Coronation of the late King. The crowning of the monarch, and all the attendant ceremonies, celebrations, and displays, make the spectacle of a lifetime; and, happening as they do when London is at its best and brightest, they constitute a reason for coming up to town for a visit of a few days or weeks which is appreciably stronger than the reasons afforded in other seasons. Months ago, when the winter was only just begun, there were indications in London that a larger crowd of visitors was expected and was being prepared for than ever before. Apartments were even then being engaged very extensively for the summer months; and so noticeable was the demand in this respect that large numbers of people of a speculative disposition, particularly middle-aged and elderly ladies of the spinster and widow varieties, determined upon becoming temporary boarding-house keepers, and prospected about the suburbs, making seductive offers to private householders to take their furnished places from them for periods of from three to six months at rentals considerably higher than are generally obtained. London is more attractive as a show-place and a holiday resort in these present times than it has ever been before; and it is a circumstance that is becoming well understood and appreciated by the people outside, who realise that this year it must be most particularly

[*All Rights Reserved.*]

attractive. Getting about the town is an easier, cheaper, and quicker matter than it used to be in days not long gone by, and the result is that more can be seen and done in a given space of time, and at less cost. Then there is more to see and more to do, and the attractions are better fitted to modern moods and tastes than was once the case. The change in some respects may not be altogether for the better; but it is certain that the proportion of visitors who are happiest in doing a round of calls at Westminster Abbey, St Paul's Cathedral, the Tower, the National Gallery, and an exhibition of waxworks is vastly smaller than it was in the closing days of the last century. Well, then, all this emptying of the provinces and the filling of London means that country homes will be left in a state of half or no protection, and people nowadays have less hesitation and less fear in this matter than their parents had, inasmuch as burglary insurance is a far more general thing. It also means that with all the crowds and crush in town, and all the hurry, excitement, and resulting carelessness, and all the ignorance of the various enterprising methods of metropolitan thieves, the latter will be busier and almost certainly more successful than during any previous season. No doubt they look forward to the Coronation with eagerness, in the belief that they will reap such a harvest as will keep them in a state of contentment for some time afterwards. The Coronation will be a good thing for all except the resident Londoner, who becomes more and more tired all the time of his Metropolis being turned upside-down, of its being more frequently invaded by more and more millions of sightseers from outside, and of the conditions of his existence being made more restless and uncomfortable. Not less in their loyalty and desire to display it on all suitable occasions than others are, the proportion of Londoners who will escape from town and rest themselves in quiet places until all the excitement is over will assuredly be a large one.

* * *

If the race itself is not degenerating, how does it come about that in modern times there should be great increase in crime, a most disquieting thing, and one which, considering the increasing perfection of our civilisation, seems to be so utterly unreasonable and tantalising? One explanation is given in a preface to the blue-book to which reference has been made, and it may very likely be that this is the chief and the truest explanation, new as it will be to the majority of people who are brought to consider it. Mr H. B. Simpson, of the Home Office, is responsible for it, and the essence of his statement is that crime in this country nowadays is virtually encouraged by the sympathetic attitude which is adopted by the public and the Press and writers in general towards criminals of all classes. Mr Simpson says that no intelligent person can have failed to notice the marked growth during the last dozen years of a strong sentiment of compassion for the criminal. Among the various outcomes of this sentiment have been mitigations of prison discipline, the Probation of Offenders Act, and the establishment of the Borstal system. In the long-run these efforts towards the reclaiming of the criminal to the ways of honesty and industry may be fruitful in good; but the public sentiment at the present time in favour of making the lot of the criminal a happier and easier one than it is or has ever been undoubtedly, as Mr Simpson urges, goes far beyond these efforts. There is commonly something in the nature of a sub-conscious feeling in favour of the abolition of all punishment of the criminal in each individual case; by which one means that though the public will state very plainly and very loudly that it is all in favour of adopting the most rigorous measures for the prevention of crime, it is a scandalous thing that in our excellent and well-managed England in these splendidly civilised days there should be so much of it, and that the public is all in favour of adopting the most painful of the boiling-oil methods for the punishment and suppression of the parasites of society, yet at the same time, as each new crime of a sensational character engages the public attention, there is a scarcely disguised feeling of sympathy with the man who is in the dock or ought to be there. The people become interested in him, and then, through a very loose and maudlin way of thought, they arrive at the stage of a kind of ignorant pity and at least a half-desire that the villain may go free. They conceive him to be courageous, ingenious, daring, and enterprising, and they find much excuse for him in the hardness of his lot and the provocation that he received. When a hue and cry is raised for an unarrested murderer, and the home and foreign police are searching for him everywhere for several days or even weeks in succession, there are always many nice people to say what a dreadful thing it must be to be hunted in this way, the whole world against the fugitive, and his life depending on the maintenance of his freedom; and beneath the surface of the mind there is a hope half-formed that the 'poor beggar' may escape in the end, and nothing more be heard of the wretched business. If the great general public had its way, most of the murderers and malefactors would be stalking the land in open liberty, and, so far from suffering for their sins, would be having something done for them all the time, and would be in receipt of greater ease and pleasure in their lives than if the records of their conduct had been perfectly clean. This may appear to be a strong proposition, but it is undoubtedly the truth. During recent years there have been several murder trials which have excited unusual public interest, and have been reported to the extent of whole pages every day in the newspapers by reason of the fact that the devilish cunning and ingenuity of the accused

have been such that it has been impossible for the law, with all its resources, to establish that clinching proof which is necessary for conviction and punishment, and the murderer having held his own in this terrific battle, there have been sighs of relief upon his ultimate success. When he has gone free he has been made much of, has been made an object of almost affectionate interest, has been given employment of a most highly remunerative character, earning as much in a week as he would have done in six months or more if he had not committed his crime. In such cases as we refer to now there could not be the slightest doubt in the minds of ordinarily sensible people, nor was there any doubt in the minds of the misguided sympathisers, that the objects of their concern were really guilty; but just one small particle of clinching legal proof was wanting, and so the villains were saved for themselves and given a certificate of 'Not guilty.' Surely in the light of various trials that have taken place in recent years we do require in England a third alternative verdict of 'Not proven,' as there is in Scotland, notwithstanding certain objections that are urged against it. Then in the most recent times there have been murders of a peculiarly atrocious character, the perpetrators of which, although they were duly convicted and put to death, would almost certainly have suffered a far less drastic fate if the jury had been the entire general public, each adult person having a vote, such were the absurd feelings of compassion stimulated. One cites murder cases because the offence and the punishment are each the worst in general estimation; but it is the same in regard to other crimes of the most serious character that attract the public attention, such as great forgeries, remarkable swindles, and burglaries done on the most extensive plan and in the most scientific manner. The people are full of pity for a bank clerk who has been robbing his employers for years because he explains that he has a wife and children, and after his first undiscovered offence those subsequent were committed only with the object of getting himself straight again. A little while since the readers of the papers were fascinated by the tale of how a man went to several banks in the course of one day and cashed worthless cheques drawn by himself for large sums at all of them, explaining to each manager how his account was being transferred from another branch to that one. This was considered to be splendid, and there was great public sympathy with the perpetrator; while it was suggested that the banks deserved all that they had suffered, for that they should have a system which would have rendered such frauds as this and all others quite impossible.

* * *

But most of all do the public like a daring burglar, one of the kind who plan great hauls worth ten or twenty thousand pounds, and who, as they imagine, are men of fine breeding, education, and excellent instincts, who spend most of their time during the day in London clubs reading the speeches that have been made in Parliament, and in the most immaculate evening-dress leave a box at the opera in order to meet some of their colleagues and proceed as soon as convenient to the jeweller's store in Piccadilly or Bond Street which is their next objective. Such men of the fancy are not considered as burglars at all. They are heroes, brave and clever gentlemen of the most perfect taste and manners, who are often considerate and generous to the point of weakness and absurdity in what they take away and what they leave for their victims, and the manner in which they carry out their operations. Their admirers have a feeling that these fine fellows would certainly be very delighted to die for their country on any occasion that was presented to them for doing so. Yet of course there are no more redeeming features in the characters and actions of the best and nicest of our modern burglars than in those of their predecessors. Perhaps they are cleverer; for burglars, like other people, must move with the times, and they have come to understand that it pays best not to look in the least like a cracksman when not professionally engaged. It does seem that in these dull days, when there appears to be so little that is romantic in the ordinary affairs of life, the weary public, harder working all the time, tries to envelop all these mere crimes, all that are simply disgusting, with an atmosphere of romance; and while this attitude is held and even encouraged, as in some ways it is, according to Mr Simpson, by those who are responsible in a measure for the guidance of public opinion, it is clear that the inducement for new recruits to join the ranks of the thieves and burglars must be considerable, and the danger not by any means exaggerated in the arguments and conclusions that Mr Simpson has laid in his report. He says that in the magazines and newspapers, that are ordinarily regarded as reflecting public opinion, articles on crime and punishment are commoner than ever they were, and the sentiment expressed towards the criminal is almost universally compassionate and often sympathetic to an extent that no previous generation has shown. 'From some of the expressions used,' he says, 'it might almost seem that the reading public is on the side of the criminal as against the law. Tales that would be unhesitatingly rejected if they were told by a beggar in the street appear, when urged from the dock as an excuse for theft, to be received with much readier credulity.' He quotes a case of a man who was fined for trespassing on a railway, and who pleaded that he was gathering flowers to lay on his father's grave. But it was shown that his father had been dead for five years, and that the son was in the company of known poachers. The plea, however, took the sympathetic fancy of the public and the papers, and the story went on

from one to another, getting better and better from the offender's point of view all the time, until at last it appeared in America with large headlines intended to mock at this sample of British justice thus: 'Plucked Flowers for Father's Grave, and Eleven-year-old Boy is Jailed.' Mr Simpson urges that of all influences for the repression of crime the most potent is exercised not by the courts nor the police nor the prison authorities, but by public opinion. A community that no longer resented crime, he says, and had learned to feel nothing but compassion for the criminal, would in the course of time inevitably find itself faced by a flood of criminality against which police and prison authorities would struggle in vain; and, though we are far at present from any such catastrophe, he considers it permissible to suggest that the steady increase of crime during the last ten years is largely due to a general relaxation of public sentiment in regard to it. To pose as being the victim of society rather than the enemy of it is becoming a much commoner thing with convicted criminals than it used to be. It is, by the way, shown in this blue-book that the real victims of the majority of thieves are not the richer classes, as the sympathisers with the victims might like to fancy, but the poorer ones. It is easier to rob the poor than the rich, and no sentiment stands in the way of the thief and the burglar in the prosecution of their objects, despite the fine feeling in such matters that is displayed by some of the hero-criminals of fiction.

* * *

How clubs and club-life in London have changed from the state in which they were some fifty years ago, or even less than that—say twenty years! They are altered just as the entire character of life in London has been altered through its having been made faster, noisier, more crowded, and in a manner less private for the Londoners themselves as the result partly of the tube-railways, the motor cars and omnibuses, and all the more modern aids to quick travelling and communication. London has become more open to everybody, and so it is less liked by the old Londoners, and their little private companies and societies are being broken up. The same sets of persons do not forgather at the same places regularly in the afternoons and evenings as they used to do for their fine conversations and arguments and their parties for wine and cards. All the sympathies and affinities seem broken, and the spirit of restfulness and repose has gone with them. In the old days men always knew whom they were almost certain to find at their clubs at any given time, and they repaired there themselves accordingly for the social entertainment that was most agreeable to them. Then it was necessary for any Londoner of education, attainments, or any pretensions whatever to anything in the nature of social position to belong to one or two of the best clubs, and these institutions were of the most exclusive character. A man was more careful about taking an acquaintance whom he did not know most thoroughly into one of his clubs even than he was of taking him into his home, and it was not always an easy matter for the most irreproachable individual to become elected to these societies. That is what they were really—societies, and it was the people that belonged to them that mattered most, whereas in the present days the people for the most part count less and less, and the buildings in which they assemble and the furniture which they use for their comfort for more and more. So now it is the clubhouse that is everything and the members that are not so much, and there are probably not half-a-dozen clubs in London that are in any full sense exclusive, while it is a matter of common report that some of those with famous names and great traditions are in the position of being practically touting for members. Although their histories are so splendid, their clubhouses and their conveniences are not the grandest of their kind, and therefore they are not doing well. Clubs are not indispensable to London men as they used to be. They often get as much of that kind of social intercourse as they desire at the golf-clubs and at such institutions as Ranelagh; and the week-end out-of-town system having become so prevalent, the clubs suffer for this reason also. Except, then, in the case of a few clubs that do preserve something in the nature of the old exclusiveness, conveniences and elaborate comforts are everything. There has just been completed in Pall Mall, the land of clubs, a building which in its exterior appearance, its interior appointments, and its membership is a splendid monument to the abolition of the old spirit of club-life and the sound establishment of the new one; and before the name of the place is mentioned let it be most carefully and exactly stated that nothing in the least way derogatory to its excellence in all respects or its status is intended in these preliminary remarks. There cannot be a doubt that it answers to modern requirements as other clubs do not, as is sufficiently indicated in the fact that before its doors were opened it had more members on its books, and members for the most part of good social position, too, than half-a-dozen other clubs that were leaders under the old conditions, but are now languishing for men who will join them. It is the Royal Automobile Club that is referred to, and its very description is suggestive. The club has, indeed, been in existence for some years, housed in Piccadilly; but it is only now that it comes forward to the greatness that it has dreamt of from the beginning, and takes possession of the magnificent new clubhouse in Pall Mall that it has had specially built for itself. Without a doubt it is the most splendid clubhouse in the world, and it is difficult to imagine

how anything superior of its kind can ever be established, even in America, where they have such a way of improving on our best efforts of this kind.

* * *

It stands on the site of the old War Office, and in a line with the Carlton, Reform, Travellers', and Athenæum Clubs, and the building has cost a quarter of a million sterling, while another forty thousand pounds has been spent on interior furnishings. Besides the ordinary ground-floor, the lower ground-floor, and a basement, there are five other floors; and the architecture, which is in Louis XIV. style, is very effective. As to the various rooms, it can really only be said that there are apartments for everything, and that they are all very grand. The restaurant measures ninety feet by thirty-five, and it contains five large eighteenth-century paintings by Hubert Robert, which have been obtained from an old French château at a cost of two thousand pounds, and which are here arranged as panels. The main clubroom is the same size as the restaurant, and is decorated in Georgian style, the ceiling being an exact reproduction of the original Georgian ceiling at the old War Office, which was carefully removed by the decorators and artistically reproduced in this new building. There are nine paintings by Hondekoeter and Morrow in the room. One of the most striking features of the building is the vestibule, which is encircled above by a gallery of Roman architecture, while beyond it is a richly decorated lounge or lecture-hall done in Louis XIV. style, the ceiling being painted. There is a stage at one end of the room which can be used for lectures, concerts, or dramatic performances, and at the other end is a minstrels' gallery, while the floor is of oak and is suitable for dancing. Then, besides a committee-room, members' dining-room, library and silence-room, billiard-room, card-room, associates' room, strangers' room, many other apartments reserved for special purposes, and a large number of members' bedrooms, there is a photographic studio with dark room and printing and enlarging room, a marble swimming-bath measuring eighty-six feet by thirty, with Grecian columns and soffits of coloured mosaic, a gymnasium, racquet-court, Turkish bath, miniature rifle-range, &c. All the appointments represent the very last word in luxury and convenience. Thus the members' bedrooms are all beautifully furnished in mahogany, with thick carpets; thirty-five of them are fitted with private baths, and many with their own telephones. Altogether there will be over three hundred telephones in the building, and twenty trunk-lines will be available. Of course all the rooms will be electrically lighted, and it has been reckoned that eighty-seven miles of electric wire have been used in the building. But perhaps more remarkable than any of these features is the huge kitchen, in which it is said that a mass-meeting could very comfortably be held. It is divided into ten different departments, one each for the butcher-meat, poultry, oysters, fish, *hors-d'œuvres*, ices, fruit, pastry, vegetables, and bakery. There is a separate room for each, and all of them will have access to a central room from which the director and the *chef* will control the work of the day. The said director is M. Ménager, who was for twenty-seven years *chef* to King Edward, and the *chef* is M. Thorre, a Parisian, who is said to rank among the first six cooks in Europe. The Royal Automobile Club was originally started by a little band of eighty enthusiasts in a small suite of rooms at Whitehall Court in 1897. Now it has some six or seven thousand members, and it is believed that in a little while the number will reach ten thousand. It is altogether really a very wonderful institution and a very wonderful building. The pediment over the portico facing Pall Mall represents a woman surrounded by four cherubs, one of whom is holding the wheel of a motor-car, while the chief figure is evidently explaining something. It is supposed to represent Science inspiring the allied trades. It is very suitable to its place; and indeed, to suggest one more 'remarkable feature' of this building, it has to be said that it is wonderful how perfect taste and good art have been displayed throughout, despite the extravagance of luxury and the newness of it all.

PETER AND JANE.

CHAPTER XIII.

TOFFY was hovering about the dining-room waiting for Peter as he turned and went into the house again, and said, 'All this is a bit rough on you, Peter.' And Peter assented with a nod.

The two men went into the little drawing-room to collect pillows for the long chairs in the corridor where they were going to sleep, and Peter went to a side-table to turn low a lamp which was adding to the heat of the room. 'I say,' he said, 'didn't you mean these letters to go?'

'Haven't my letters gone?' said Toffy. 'How on earth were they forgotten?'

'Toffy,' said Peter, 'when I meet you acting as a sandwich-man in Piccadilly, without a rag to your back or a shilling to your name, I shall say nothing more encouraging to you than "It is just what I expected."'

'But Ross always told me to leave my letters

here when I wanted them posted,' said Toffy, scratching his head.

'It's an extraordinary thing,' said Peter, 'that you ever have a pillow to lay your head on; and you don't get that unless I heave it at you and prevent other fellows grabbing it! Who's got your motor-car at home now? Some one, I suppose, to whom you lent it, and from whom you won't a bit like to ask it back. Are you getting any rent at all for Hulworth,' he went on, his wrath increasing as he spoke, 'or are you letting it slide for a bit because your tenants are hard up? Would you have a picture, or a bit of cracked china, or a bottle of wine left if they had not been all tied up by some cunning ancestor, and looked after by executors? What has become of your horses? Why are you always put to sleep in the billiard-room of a hotel or in the pantry, when other fellows get a decent bed provided for them? Why do they give you a room over the stables when country houses are full, where the coachman's wife asks you if you would like a little hot water in the morning, and regrets that the chimney doesn't draw very well? You were born that way, I suppose,' finished Peter hopelessly. 'I don't believe you were ever allowed a cradle if your nurse wanted it for any one else.'

'I rub along all right,' said Toffy apologetically.

'Look here,' said Peter, 'I'll ride with these letters after Purvis, and get him to post them; he'll get down to Taco in time to catch the mail, and I can easily overtake him on the *bayo*.'

The Englishmen had learned to call their horses after their different shades of colour, in the usual Argentine way; and the one Peter spoke of was a big dun-coloured brute, three-parts English-bred.

Toffy protested, but Peter was obstinate. He had been worried and unsettled all day, and he believed that it would be a good thing to have a ride over the camp; besides which, Toffy's letters had taken a good two hours to write, and Peter guessed they were important. He could easily overtake Purvis with them before he should reach La Dorada.

'I'll sit up and trim the lamp, like a faithful wife, until your return,' said Toffy.

'You'll go to bed, you ass!' shouted Peter. He was outside the house fastening the girths of his horse as he spoke, and now he swung himself into the saddle and sent his horse forward with the characteristic quick movement of a hunting-man.

The long ride in the moonlight did him good. The intensity of the clear light had something strange and wonderful in it, touched with unearthliness. Night with its thousand secrets whispered about him, and he felt very small and insignificant riding alone under the great silvery dome of heaven, hushed with a sense of the far-away and with the mystery of its innumerable stars. Now and then he came across a herd of cattle standing feeding in the short grass of the camp, their shadows showing black beside them, or a startled *tropilla* of horses would start at the sound of the *bayo's* hoofs. He took a short-cut through the mimosa-woods, where the ground was uneven. His horse picked its way unfalteringly as it cantered forward, though Peter had to stoop very often to save his head from touching the low branches of the trees. Overhead some parakeets, disturbed in their slumbers, flew from tree to tree, their green wings and tiny red heads turned to strange colours in the moonlight. He got away through one of the rough gates of the *estancia* out into the open camp again, where the earth was full of a vast stillness about him, and the stars pulsated overhead to the unspeakable music of the night.

And now he began to expect every minute to overtake Purvis, and he strained his eyes eagerly for the solitary figure of the horseman. He knew he was riding a much better horse than the one Purvis was on, and still he failed to overtake him. The track on which he rode was clear enough, and his horse knew the way to La Dorada as well as any peon on the place. Peter took out his watch and looked at it in the moonlight. It was a quarter to twelve o'clock, and he was already at the little settlement, close by the river, where some Italians and Spaniards lived. He recognised one of the ill-built small huts as the place where Juan Lara dwelt, and he drew up to ask whether Purvis was ahead of him or not, and whether the post-boy had started with the mail-bag for the train yet. A Spaniard with a dark face answered his knock, and told him that no one had passed that way to-night, also that his boy had left much earlier in the afternoon with the mail-bag. He suggested that the traveller should come inside and wait until his friend should overtake him; and as there was plenty of time, Peter resolved to rest his horse, and then to push on to Taco if Purvis did not turn up. Lara's wife came to beg him to enter. She was an old woman before her time, and had reared a large family in the tiny confines of this little hut. Peter took off his soft felt hat, and stooping below the little doorway, went inside. The Spanish language was an inherited instinct from his mother, and he congratulated Lara's wife on her skill in washing shirts, and made some conversation with her.

The place which he had entered was poor enough; it was built on a mud floor, and was entirely devoid of furniture save for a ramshackle bedstead with spotless linen upon it and a couple of chairs. There was a tiny shrine with an image of the Virgin in the corner of the room; before it burned a halfpenny night-light, and round it were ranged in a row a number of paper match-boxes with little coloured pictures upon them. They were French match-boxes, which opened with a spring formed of elastic, and below the pictures were jokes of a doubtful description.

Neither Lara nor his wife knew anything of the French language; the empty paper match-boxes, with the horrible jokes upon them, were offered faithfully before Our Lady. They were the best the man and his wife had to give, and they were the only decorations in the room.

The woman dusted a chair for Peter, and set the other for her husband, and she herself sat down upon the edge of the bed. They were both glad of visitors at whatever hour they arrived, and in the solitary life of the camp a belated horseman may often ride up after dusk.

Peter explained that it was Señor Purvis, who owned the big *estancia* down at La Dorada, whom he was riding to overtake.

'He had better not ride about too much alone,' said the Spaniard. 'There are some long knives about, and the señor is a short man.'

'What is the trouble on the estate?' said Peter.

But he could get no information from Lara. 'He had better take care,' the man said. 'Señor Purvis would be safer if he were to sail away in his steamer, and be gone for a month or two.'

'He has a mixed lot of men on his *estancia*, has he not?' Peter asked.

'Yes,' said the man; 'but they are mostly Spanish, and the señor, for all his Spanish tongue, has not got a heart that understands the people.'

'You don't think anything can have happened to him?' Peter asked.

He reflected that the road was an open one all the way, and he must have seen if there had been anything like a disturbance; but in the end a certain apprehension for the safety of the man made him think that he had better push on and hear if there was any news of him at Taco. There might be some path or track to the riverside of which he knew nothing; and if that bypath existed Purvis would certainly take it, however circuitous it might be. There seemed to be some curious obliquity about him which made for crooked ways, and in any case Peter did not want to miss the mail with Toffy's letters. He said good-night; and hearing no news of the traveller at the quay, he rode on until he reached the small, unfenced railway station, set down apparently promiscuously on the solitary plain. There Lara's boy was waiting with his mail-bag, and after a time the sleepy stationmaster began to bestir himself, and a cart came in, with five horses harnessed abreast, carrying some freight. Still there was no sign of Purvis, and Peter had to give his letters to the guard when at last, with a shrill whistle, the train came into the station.

It was very odd, he reflected, and he began to wonder whether Purvis was in danger, and to be vaguely disturbed by what the people in the hut had said to him. Ross had told him many tales of how Englishmen had been murdered out here. There was the case of poor Wentworth, whose Spanish wife had held him down when he had tried to escape, and whose own major-domo had shot him at the door. There was the other case of young Seely, who was found one morning with his throat cut and his pillow drenched with blood. No one knew anything of the matter, of course. The Spaniards keep their secrets well. No one was ever brought to justice; and the affair, which would have made a sensation at home, only horrified a few English neighbours near the *estancia*. But the feeling against Purvis seemed to be something much deeper than personal jealousy or mere greed for gold dollars. There was a storm brewing, and no one knew when it would burst.

'Purvis will have to look out,' reflected Peter; and he wondered where on earth the man had got to to-night. He wished he could give him some sort of warning; but he reflected that Purvis knew far more about the state of affairs than he, Peter, did. No one could tell Purvis much about Argentina that he did not know already.

The dawn was breaking as Peter rode slowly homewards, and a pale pink light was in the sky. His horse ambled slowly along, never mistaking his way or making a false step on the rough, uneven ground, but swinging along at an easy canter and getting over an immense distance without much distress to himself. The moon, in a sort of hushed silence, was climbing down the arc of heaven as the sun rose to eastward. The pale light touched the surface of a *tajamar* as he rode past it, and the trees beside it threw still, sad, faint shadows into its quiet depth. Over the western *monte* a lordly eagle with hushed wings rose majestically overhead, and some *biscachas* popped in a noiseless way in and out of their holes. The air was cool and fresh now, and some trees began to rise up unexpectedly out of the ground in the gray light.

He began to get sleepy with the easy motion of the horse, and the endless line of plain around him was wearying to the eye as the sun rose upon it. Well, he would get into camp before it was very hot, and that idiot Toffy would probably be sitting up for him.

He laughed softly to himself as he saw a flicker of light in the window that looked towards the track, when at last he drew near the little *estancia* house. It was like Toffy to remember to put a lamp where he could see it! It was worth while taking a midnight ride for such a good fellow, although Peter had a very good notion of what was in one of the letters, and entirely disapproved of its contents. The last mail had brought news that Horace Avory was ill, and Peter knew quite well that Toffy had written to Mrs Avory. Of course she was not the wife for him; she was very delicate, and no longer very young, and she had a plain little daughter of ten years old. Still, Peter supposed that the marriage might turn out pretty well in spite of obvious drawbacks; and Heaven knew that Mrs Avory, in her

own sad, tearful way, had fought very bravely against poverty and loneliness and unhappiness, and that she loved Toffy with her whole heart. But why, now that things seemed to be arranging themselves in a satisfactory manner, should Toffy be in the blues, and lie awake during the greater part of the hot nights?

He drew up at the door of the *estancia* house when the sun was becoming hot, and Toffy appeared in his pyjamas and prepared a cup of coffee on a stove of patent construction for which he claimed admiration every time it was used.

'Thanks, Peter,' he said briefly. 'I was writing to Mrs Avory by this mail, and she would be disappointed if she did not hear from me. Did you overtake Purvis?'

'No, I didn't,' said Peter; 'and what's more, he didn't go by the mail train to Buenos Ayres!'

'What a queer chap he is!' said Toffy. 'You never know where to have him. That can't be him coming back now?' he said, looking from the small window at two riders who came cantering up to the door.

'Is it? Yes! No, it isn't,' said Peter, going over to the window. 'But I'll tell you who it is, though. It's Dunbar, and he's got a *comisario* of police with him! Now, what in the name of wonder do they want here?'

The two riders dismounted at the gate and came up the little path through the garden to the door. They walked stiffly, as though they had ridden for a long time, and their horses, tethered by the gate, looked used-up and tired.

Dunbar hardly paused to shake hands. 'Look here,' he said; 'E. W. Smith is here, and he's wanted!'

(To be continued.)

DOES THE STATE DISCOURAGE THRIFT?

By HERBERT H. BASSETT, F.S.S., Editor of *Fenn on the Funds*, *Bradshaw's Railway Manual*, &c.

LET me say at the outset that there is no political purpose underlying this article. It concerns itself neither with death-duties, income-tax, nor the Budget, but with those one hundred and sixty-four thousand persons whom the Postmaster-General, in an unexpected outburst of publicity, told us the other day had used the Post-Office Savings-Bank as a medium through which to purchase Consols and other Government securities.

I have before me three of the little, brown, paper-covered books issued by the Post-Office Savings-Bank. One is dated 18—; no, on second thoughts, I will not give the precise date, but it is between twenty-five and thirty years ago. The second one is dated 1903, and the third one is quite modern and fresh. These books contain, at the end, certain rules under the heading of 'General Information respecting the Post-Office Savings-Bank,' and they may, therefore, be taken as indicating the information which three successive Postmasters-General deemed it important and essential that depositors in the Post-Office Savings-Bank should know.

The oldest book records the fact that ordinary deposits of one shilling or any number of shillings up to £50 may be made, and that 'deposits will also be received for investment in Government Stock.' In the second—and shall we say middle-aged?—book there appears printed in black letters as a first rule the following: 'I. The Post-Office Savings-Banks are established by Act of Parliament, and *every depositor* has the direct security of the State for the repayment of his deposits.' Rule II. states that the banks are open from 8 A.M. to 8 P.M. on weekdays; and Rule III. records that 'any sum from one shilling upwards, but excluding pence, is accepted as an ordinary deposit, subject to the limits prescribed by law. *Deposits are also received for investment in Government Stock*, and for the payment of premiums for Government Life Insurance and Government Annuities.' (The italics are mine.) Rules IV. to XX. deal with other general information, and Rule XXI. says: 'Depositors in the Post-Office Savings-Bank may invest their deposits in any of the following descriptions of Government Stock—namely, *Two and Three-quarters per cent. Consolidated Stock (1903)*.' (*Note.*—I have italicised the name of the stock, which is the officially correct description of what is popularly known as Consols.)

Here, then, we have two specific advantages of the Post-Office Savings-Bank—firstly, that *every depositor* has the direct security of the State for repayment of his deposits; secondly, that *depositors* may invest their deposits in Consols. And the State emphasises in black-faced type the fact of the repayment.

Stripped of any underlying reservation, these statements convey to the man who is uneducated in investment matters the belief that every pound he passes over the counter of his village post-office will be paid to him cent. per cent. when he comes to demand its repayment. The banker, the financier, the wealthy upper class, the average middle-class man, perhaps know better. But the Post-Office Savings-Bank was not established to meet the needs of these classes. It was established by special Act of Parliament to meet the requirements of the poorer classes who could only save penny by penny, in days when there was no Education Act, and it was the exception to find an aged workman who could write and read, let alone understand or appreciate at their proper worth the careless drafting of official rules.

Was any one misled by these statements into believing that money deposited with the Post-Office for investment in Consols would be paid back? This is, of course, difficult of proof without questioning the thousands of depositors who deposited money a score of years ago; but we have excellent evidence that one Postmaster-General at least was not satisfied that the department had made its position clear. In the third and modern savings-bank book which lies before me I find there has been unobtrusively introduced the following small paragraph: 'The Post-Office cannot undertake to advise depositors as to their transactions, its position being that of an *agent* only; nor is the Postmaster-General liable for any losses which may be sustained owing to a fall in the price of stock between the dates of purchase and sale.' Important as this clause is, it is not given the dignity of being put in the black-faced type with which the department announces that all depositors have the security of the State for the repayment of their deposits.

How stands the man who five-and-twenty years ago placed his money in the Post-Office Savings-Bank for investment in Consols? We will take the not uncommon case of John Smith, an artisan, married, aged twenty-five, earning thirty shillings to thirty-five shillings weekly as an unskilled mechanic. Of frugal habits, he put in the Post-Office Savings-Bank a few shillings per week in order that he might have a 'nest-egg' when an old man. In twenty years this deposit would have amounted to over £200, and in accordance with the rules of the Post-Office Savings-Bank he would be required to cease depositing money or put the amount in Consols. He therefore orders in 1888 that the money be transferred to Consols, and he duly becomes the possessor of £200 of Consols, yielding him an annual income of £6. A few months after his investment he finds the Government have arbitrarily reduced his income from £6 to £5, 10s. per annum. Fifteen years later, when he has become sixty, he finds it again arbitrarily reduced to £5.

It may here be mentioned that in the Savings-Bank books issued in January 1903 Consols are described as paying 2¾ per cent.; and there is no indication that in March 1903 they would be reduced to 2½ per cent., although every Stock Exchange in the kingdom was careful to describe them at that time as subject to interest reduction.

Let us return to John Smith at the present day, aged sixty-seven, and growing beyond work. Finding the money he gets from his savings dwindling as he grows older, he determines to buy an annuity, and upon inquiry he finds that for £200 the Post-Office Savings-Bank will buy for him an annuity of about £22, 10s. per annum, or about 8s. 8d. per week. Upon this amount, with occasional light jobs to do, he can just manage to live decently in his cottage, and he sends in his application for the repayment of his savings deposited with the Post-Office Savings-Bank and duly invested under their care in Consols. John Smith receives, after the lapse of a few days, during which the official mind is dumfounded by the idea that any man can have misunderstood them, a notification from the Postmaster-General that his deposit of £200 represented by his investment in Consols has been reduced to £160! John Smith is further referred to the clause in his Post-Office Savings-Bank book that the Postmaster-General cannot be liable for the loss.

John Smith tremblingly replies that there was nothing of this nature stated in his book when he deposited money with the bank, but there was printed in bold letters the fact that *every depositor* would be repaid.

John has no redress, however, and finds that his depleted deposits will bring his annuity down by 1s. 6d. per week, which represents just the difference to him between living comfortably and merely existing.

Even John Smith is not so badly off as his neighbour Thomas Brown, for Thomas did not save his £200 until 1897, and when he wanted to buy an annuity with his money he found he only received £140 back out of his £200 originally saved.

And that describes in plain language how the State, through the medium of the Post-Office Savings-Bank, has encouraged the practice of thrift for which it was established by Act of Parliament.

The recent discussion which has taken place respecting the popularisation of Consols affords an enterprising Postmaster-General an excellent opportunity to solve the difficulties which beset the Government in the constant fall in the price of Consols, and at the same time give to those thrifty persons who have deposited money in the bank that encouragement which the Act under which it was established desired them to have. The present rate on deposits in the savings-bank is 2½ per cent. This money is invested by the Bank Department in Consols and other Government securities yielding 3⅛ to 3$\frac{3}{16}$ per cent., thus netting to the savings-bank a profit of ⅝ to $\frac{11}{16}$ per cent. In 1909 there was due to depositors the sum of £164,596,065, as against £135,549,645 in 1900, when Consols stood at a higher figure. The £29,000,000 sterling which represents the difference, having been invested in Government securities at a depreciated price, should have yielded in annual profit ⅝ per cent., or £181,250 per annum. On the total sum reinvested the profit should amount to over £4,000,000 sterling, representing the difference between the interest the Post-Office pays its depositors and receives from its reinvestments in Government securities. As the Post-Office Savings-Bank is established not to make a profit but to encourage saving, it should, on equitable

grounds, raise its rate of interest from 2½ per cent. to 3 per cent. This would encourage such increased deposits as would necessitate the investment of large sums in Government securities until such time as the demand raised the market value of Consols to 83, and put it thereby on a 3 per cent. level, at which it would permanently remain so long as the same rate was given to depositors by the Post-Office Savings-Bank.

THE WOOING OF TEZALIA.

CHAPTER V.

CRAYTON and his companion rode in silence until they reached the gulch. Then Crayton reined in his horse. Ahead lay the pass like a narrow path; steep on either side rose the rocks, slightly converging far above their heads. Here and there grew a bush throwing a dark shadow across their path in the moonlight.

'In half-an-hour we should be there,' he said. 'How many men are there?'

'About fifty,' answered Drummond.

Crayton nodded his head. 'Then we have only one chance. We must stay in the shelter of the rocks, where they cannot see us, and fire upon them. They are arrant cowards these men; but if that does not scare them we must make a bold dash and ride through them to the compound. Have you many cartridges?'

'About thirty.'

'So have I. Well shot, they should account for twenty men.' Then Crayton relapsed into silence again, and the only sound was the ringing tap, tap of the horses' hoofs upon the hard road. Every now and then a smile passed over his face. He was thinking of Tezalia, and the hours they had spent together on the balcony. It is such hours that make life worth living, and the memory of them which helps one through the darker days.

Suddenly he drew himself together. 'Did you hear that?' he said. Faintly from the distance there came to them the sound of rifle-fire.

'Firing!' responded Drummond.

'Thank God,' said Crayton, 'they haven't been able to rush the men yet! I was afraid we should be too late.' He urged his horse forward.

For another mile they rode on, the sound of firing becoming more distinct each yard; then in the distance the road opened out, and Crayton drew his revolver.

Seeing this, Drummond did the same.

Nearer came the opening, until they could distinguish the buildings of the mine, and a figure galloped across the opening—one of the raiders.

Crayton turned to his companion. 'If he saw us,' he said with a hard laugh, 'we are dead men.'

Still the firing continued—the rattling volley from the Mexicans and answering shots from those within the mine.

A hundred yards separated them, and they could plainly see the bricks of the low wall which surrounded the compound. The sound of voices came to them. Once a scream of agony rang out. Crayton slowed his horse down to a walking-pace and flung back his riding-cloak.

As the path widened out they crept into the shadow of the overhanging rocks. Before them stretched the whole scene. On the ground lay some half-a-dozen Mexicans, while the others, numbering nearly fifty, directed a steady fire upon the mine.

The manager's house was in darkness, but every few seconds a spurt of fire showed from one of the upper windows.

The raiders galloping to and fro made aiming difficult. Then one rode within a few yards of the two men lying in ambush. Crayton raised his revolver and fired. The man gave a scream of fright, and rolled off his horse on to the ground. The animal, suddenly released of its burden, galloped madly away.

'Quick—as fast as you can fire!' said Crayton.

The two men quickly poured a volley of shots into the body of Mexicans. For a moment confusion reigned amongst them; one was wounded, and lay writhing upon the ground.

'Reload!' said Crayton. He filled the chambers of his weapon with fingers shaking with excitement; then, raising it, he started firing again.

Near the compound-walls was a tall man riding a black horse which tossed and plunged with fright.

Drummond marked him out and aimed carefully. The man fell without a sound.

Suddenly six of the raiders wheeled their horses round and galloped towards where the two men lay in hiding.

Crayton saw their intention. 'We must ride past them,' he said, 'and get our horses over the wall. It is our only chance.'

The wall, barely four feet in height, was a hundred and fifty yards ahead of them. Urging their horses forward, they galloped into the open. The raiders advancing to meet the two men were taken by surprise, and Crayton and his companion fled past them.

A few seconds, and bullets began to rain around the two men. The wall was only a few yards distant, and they steadied their horses for the leap.

For a second they stood outlined in the moon-

light, then they were safely on the other side. Crayton felt his animal kick the top as it cleared the wall. Turning the horses, they guided them towards the rear of the manager's house. Then they dismounted and tied the animals to the door of an outhouse.

The door leading into the house was locked. Putting his shoulder against it, Crayton burst it open, and ran upstairs to the room where his friends were.

'Thank God you have come!' said Paston, who was in his shirt-sleeves, bending over the sights of a rifle. His face was grimed with dirt, his hand bleeding from where a jagged piece of broken glass had cut it.

In a corner half-a-dozen rifles were stacked. Crayton picked up one, loaded it, and took his place at the window.

'They 've tried to rush the wall three times,' said Paston, 'but we made it too hot for them. If they do get over, I 've prepared a little surprise for them.' He pointed to a switch at his side.

'A mine?' said Crayton.

Paston grinned. 'Yes; I've put half-a-dozen charges of dynamite there. It'll blow them all sky-high.'

A volley drowned the last words of his sentence. Shots spattered upon the wall outside; one broke through the only pane of glass which remained in the frame.

Paston laughed. His was an optimistic nature. 'For a healthy life,' he said, 'give me a post in a Mexican silver-mine!'

Crayton's attention was arrested. Through the opening leading to the road by which they had travelled from Molenga galloped a small body of men—some thirty.

The Mexicans greeted them with shouts.

'It's all over with us now!' said Paston.

A fresh volley rang out. Bullets entered the room and passed over the heads of the kneeling men.

'Don't fire,' said Crayton. 'They may think they have killed us all, and we shall lure them to the wall.'

Paston pointed to a man standing alone. He was tall and broad-shouldered. Something in his attitude struck Crayton as being familiar.

'I must settle him,' said Paston. He raised his rifle and fired. The man swung round in the saddle, clutching at his breast. As he did so the moonlight fell upon his face.

'My God!' said Crayton. It was Señor Vellos. He stared at the figure lying prostrate on the ground, a mad despair, a wild rage in his heart. The señor was in league with the raiders, actually leading them against the mine, while he supposed Crayton was a guest at his house.

'Oh Tezalia!' said Crayton, as he saw the part she had played. He remembered the look she had given him, the words she had used when she asked him to stay for the night—to stay for the night so that he might be out of the way whilst her father led the raiders!

Paston heard his ejaculation, and, glancing at him, saw a strange look on his face. 'What is the matter?' he asked.

'That man you have just shot is Señor Vellos.'

'Who is Señor Vellos?'

'The Mexican at whose house I was staying to-night.'

The death of their leader, the Mayor of Molenga, filled the Mexicans with fury. Shot after shot rained upon the kneeling men. It was courting death for one of the defenders to raise his head above the sill in order to take aim.

'It is strange how they keep away from the wall,' observed Crayton.

As he spoke he heard a wild shout, and then rapid firing coming from an easterly direction.

Looking out of the window, he saw the raiders in full flight, while behind galloped another body of men in pursuit. Some tore wildly down the gulch, others fled to the open country, hoping to reach the hidden paths which lie to the west of the sierra.

'The Vigilance Committee have come!' he shouted to those within the room. 'I wonder who has brought them.'

As if in answer there stood beneath the window a thin, girlish figure riding a brown mare. In her hands she held a revolver.

'Tezalia!' cried Crayton.

The girl looked up to the window from which the sound of the voice came.

'Señor!' she called back, and held out one arm beseechingly.

Crayton rushed from the house and over the wall. 'Tezalia!' he cried again.

Tezalia had dismounted and stood leaning against her horse, swaying dizzily.

'I got them here in time,' she said, and smiled happily up into his face. Her own was white and drawn.

'You brought the Vigilance Committee here!' he said, drawing her to him. 'You brought them here!'

A sudden happiness surged over him. And Tezalia knew that he had found out.

'I didn't know—about father,' she said; 'before God I didn't, señor—not until to-night, after you had left, when Miguel came to our house wounded, and he told me. You know Miguel?'

Crayton nodded.

'And so I went for the Vigilance Committee. It was the only way to save you.'

'And I thought—— Oh, forgive me, Tezalia!'

Tezalia smiled. 'This is one of those hours which is worth living, dear one,' she said.

Then a sudden thought struck her, and she asked the question Crayton feared. 'Have you seen father?' she said.

'Yes, dear,' he replied. 'He has had an accident.'

'Is he dead?' asked Tezalia in a low voice.

'Yes,' replied Crayton simply.

Tezalia clutched at his coat and looked up into his face. 'Tell me,' she said; 'you—didn't—shoot—him?'

'No, no!' replied Crayton.

Tezalia gave a little sigh of relief. 'I am glad of that,' she said.

She was silent for a moment, then spoke her thoughts aloud. 'Perhaps it is as well. Who knows? I should have had to make my choice after to-night. And I should have chosen you, dear one, for I love you.'

And so ended the wooing of Tezalia.

As she herself had foretold, the day had brought with it the man. It had brought her sorrow, but it had also brought happiness—the greatest happiness the world can give.

THE END.

THE MONTH: SCIENCE AND ARTS.

THE RAILOPHONE SYSTEM OF WIRELESS TELEPHONY ON TRAINS.

A PHASE of human activity which has occupied the attention of many inventors is the devising of a simple system for maintaining wireless telegraphic and telephonic communication with moving trains. Numerous experiments have been made in the United States, Belgium, and Germany, as well as in this country; but the success hitherto achieved has not been sufficiently convincing to warrant commercial exploitation. An inventor in the Midlands, however, appears to have solved the difficulty, judging from the eminently satisfactory results of tests made. In this invention the method is adopted of encircling a railway carriage with two frames of wires for sending and receiving messages. Along the side of the track is carried a continuous wire, similar to that used for telegraphing purposes, which may be buried or carried on low posts, and which links up with stations and signal-boxes, as well as with the trunk telephone and telegraph systems of the country. In the carriage an ordinary telephonic instrument is installed, and the electric oscillations are transmitted or received by either of the above-mentioned wire frames carried beneath the coach. The system is described as wireless inductive, so that the pulsations produced in the sending wire frame are reproduced by induction in the wire running parallel with the track, and *vice versâ* for inward messages. There is no metallic communication between the coach and wire, and it is stated that the messages are transmitted with unerring accuracy, irrespective of travelling speed. The system has been subjected to prolonged and exacting tests, and found highly efficient. It is stated that for railway operation it is distinctly valuable, inasmuch as it enables orders to be transmitted to a train crew while the train is in motion, and can be adapted to perform the duties of a signal—trains carrying such apparatus, when on the same track, being adjusted to receive automatic indication of the fact after they have entered a certain zone or approached within a prescribed distance of one another, which can be made of any length, thereby giving the respective drivers ample audible intimation of their danger. It also enables a passenger while travelling to transact any business he may hear of, and to keep in speaking-touch with his office the whole time. The development of this ingenious system will be watched with deep interest, inasmuch as the results so far achieved point to the fact that a stage of greater reliability and efficiency under all conditions has been reached therewith than has been accomplished, so far, with other devices.

A SIMPLE CONVEYER FOR WAREHOUSES.

Some more expeditious means of handling goods in warehouses, whether they be crates, boxes, bales, or what not, has long been necessary to supplant the slow, antiquated methods of doing this by manual labour, especially in regard to transit between building and street. This has been found in a new type of simple conveyer that has recently been devised, and which is now in successful operation. It comprises a number of trestles supporting a continuous series of wheels or rollers, carried on two rails like a light, narrow-gauge railway. The wheels are employed when boxes have to be handled, and the rollers for bales and crates. The system works entirely by gravitation, a fall of about thirty inches in one hundred feet being advocated. Demonstrations with this simple appliance have sufficed to prove that goods can be expeditiously and safely transported by this means, and that sharp curves can be negotiated successfully. In a lofty building where goods have to be discharged from different levels the same system is adopted spirally, the gradient being so arranged that the descending goods do not acquire an unnecessary downward impetus. The conveyer has been adopted on one of the wharves of Thames-side, and another larger installation is in operation at a Belfast factory, this latter plant handling packages weighing up to five hundredweight. The system is stated to be far cheaper and more efficient than the ordinary belt conveyer, the cost of installation being very low.

A NEW SYSTEM FOR SIDE-BERTHING SHIPS.

For the purpose of extending the facilities of slipways for berthing small vessels such as river-steamboats, an ingenious method has been evolved and put into operation on the river Hooghly near Calcutta, and it appears to have been successful to a striking degree. The inventor is Mr Thomas Reid. The invention enables any existing slipway to be so adapted that the expense of its adoption is reduced to the minimum. Briefly, it consists of laying transverse beams on either side of the slipway to the edge of the wharf, these beams being equipped with rails. The vessel is hauled up the transporter-slip in the usual manner, and when it has reached the upward limit of its travel, the carriage supporting the vessel is hauled sideways, special arrangements being provided to prevent the vessel from slipping off the side-berth, since this naturally has a declination to the water's edge. It will be seen that the efficiency of a slip is appreciably increased, inasmuch as two or more vessels can be accommodated on either side of the main slip by which vessels are transported from the water, at the same time leaving the slipway to be used in the ordinary manner. Experience on the Indian waterway has shown that the time required in docking and side-berthing a vessel, or *vice versâ*, is about forty-five minutes. The system, first installed in a Calcutta shipyard, has enabled the company to whom it belongs, and who have a fleet of three hundred and fifty river-steamers, to keep their ships in a far higher state of repair than was formerly possible. Owing to its success, the Port Commissioners of Calcutta have adopted the system, and are constructing a slipway which will enable six vessels to be dry-docked at one time. There are many places in these islands where analogous conditions exist, but where only one boat can be dealt with at a time, and such should present excellent openings for the use of this method, since it enables the vessels to be overhauled with greater facility and to be maintained in a state of efficiency.

AN INTERESTING SIDEREAL WATCH.

An interesting horological, sidereal novelty has been perfected by the Rev. Daniel B. Marsh, D.Sc., F.R.A.S. The watch contains many ingenious features, and is conceded to be a striking example of timekeeping mechanism. It is adjusted to five positions, fully jewelled with twenty-one rubies, compensated for temperature, and owing to the special construction of the face-mechanism there is no lost motion in the hands. The watch has been acquired already by the leading observatories of Canada, and is being manufactured in Switzerland, the watchmakers of that country alone having proved equal to the delicate nature of the task imposed, so as to bring it within the reach of all.

THE SLAUGHTER OF THE EGRET.

Though humane royal personages have sternly tabooed the use of the aigrette as a feathered decoration for my lady's head-dress, the slaughter of the heron continues practically without diminution. And this ceaseless warfare in the interests of fashion has extended to other birds. According to the American Society for the Prevention of Cruelty to Animals, the heron whose plumage was in such keen demand has been almost exterminated; and this is not surprising, seeing that relentless hunters thought nothing of killing hundreds per day, one party of six having massacred over a hundred thousand of these graceful birds in a single season. The humming-bird is now the magnet of the hunter's quest, owing to its dainty plumage; but in order to secure the brilliant hues of this little denizen of the air it is essential that the bird should be skinned alive. One American woman contracted to supply a Parisian house with twenty thousand bird-skins at one and eightpence apiece, and to satisfy her greed for gold stripped a whole island of its wealth of feather, no bird being safe from the depredations of the hunters she employed at fivepence a skin. As the hunt generally takes place while the birds are nesting, the havoc wrought is far greater than might be supposed, for the young fledglings die from starvation, and all to meet the inexorable demands of feminine vanity! In this country, although the aigrette and other bird-plumage, owing to the vigorous humanitarian campaign, have fallen somewhat into disfavour, imitation creations of wings and plumes are tolerated; but the majority of these, though sold as artificial, are as a matter of fact genuine—another glaring instance of the fraud of the label, which can only be met by stern legislation.

COTTON-PICKING BY MACHINERY.

Owing to the extreme laziness of the negro in the cotton-fields of the Southern United States, inventive effort has been centred for many years on the perfection of a method of picking the cotton by mechanical agency. It has been a puzzling search, since the conditions to be fulfilled are exceedingly difficult. The inventor of the book-typewriter, however, has apparently achieved success, and from the present trend of development it would appear that the doom of the coloured cotton-picker is sealed. The machine has been tested very severely for two years, and it has been found that the mechanical hand will pick the bushes not only cleaner but far more expeditiously than the human hand, one machine drawn by two mules and driven by one man accomplishing as much in a single day as has hitherto been done by forty niggers. Moreover, the machine picks the ripe cotton only, and does not injure the green cotton or

the flowers in any way in so doing. The picker is a machine not unlike a small traction-engine, the mechanical hands taking the form of a double row of bristle brushes about fourteen inches long by one and a half inches wide, spinning rapidly in such a manner that the brushes grip the cotton-plant at the ground-level, travel over the plant in a vertical direction, and in so doing cause the ripe cotton to cling to the bristles without affecting the other foliage of the plant in the least. The brushes after they have passed over the plant travel to a receptacle where the cotton is stripped from the bristles, the brushes passing out thoroughly cleansed, to repeat the cycle of operations.

A HUGE GRAIN-ELEVATOR.

One of the wonders of western Canada is the huge grain-elevator that has been planned at Fort-William, on the shores of Lake Superior, to warehouse the wheat raised on the Dominion's thousand-mile farm stretching from Winnipeg to Edmonton. When completed this huge warehouse will hold no less than forty million bushels, and it is being erected by the Grand Trunk Pacific Railway to meet the demands of the farmers scattered along their system. The first section has been completed, and has a capacity of over three million bushels. It is a gigantic enterprise, for the site on which the warehouse is being erected was formerly forest, while millions of cubic yards of earth have had to be dredged to permit vessels to approach and moor alongside it. The wheat is raised by an elevator, and after being weighed is dumped into huge, hollow cylindrical columns or wells twelve feet in diameter, while above are large hoppers capable of weighing up to two thousand bushels at one time. The cars enter the base of the building, and the grain is unloaded by power-driven shovels into a huge hopper, and subsequently conveyed by elevators which are capable of handling fifteen thousand bushels per hour. The building is fitted with cleaning, screening, and drying machinery, and so forth. Vessels to be laden are moored alongside the elevator, and there are six chutes, each of which can direct a stream of fifteen thousand bushels of grain into the holds per hour. In the elevator everything is of huge design, and the whole is electrically driven. This elevator is to the wheat-grower on the prairie what the Bank of England is to the financial Metropolis. The farmer gathers his crops, and as fast as the wheat is threshed hurries it to the small elevator at the nearest railway station. On delivery he receives a certificate acknowledging the receipt of so much of such-and-such a class of grain. The certificate is issued by the Government, and represents virtually so much sterling, although no sum of money is stated on the face of the bond. The piece of paper can be negotiated if the farmer desires to realise; or he can hold his grain, which is transferred from the small station elevator to the principal warehouse at Fort-William, where it is kept, on his paying insurance, storage, and other charges, until the highest market price is reached, when he sells. Such is the simple system upon which wheat is negotiated by millions of bushels in the Far West.

THE PLEA FOR AN INTERNATIONAL SCIENCE LANGUAGE.

The tendency towards a common tongue whereby people of various nationalities might be able to correspond and converse intelligibly with one another has been revived by Professor Donnan in a strong plea for an international language of science. He has collected and translated a series of essays written by the most celebrated luminaries of Europe upon this perplexing question, for in the development of science the need of a common comprehensive tongue is more essential than in any other ramification of human endeavour. Up to a few years ago, comparatively speaking, science was well supplied in this respect, for Latin was the vehicle for spoken and written communications in science; but the development of the latter brought about the abandonment of this practice. Efforts to the same end have been made by the creation of universal languages such as Esperanto and Volapuk, but these have now gone the way of all others, and are as dead as Greek. The failure of Esperanto and Volapuk is attributed by Professor Lorenz to 'want of rational development' and the fact that they contain too much arbitrariness. On the other hand, the society which was formed in Paris at the time of the last International Exhibition to investigate this problem, and which has pursued its activities unceasingly meanwhile, has now come to the conclusion that it is possible to evolve an auxiliary or universal language, with a regular structure, which can be employed directly without any liability of mistakes occurring. To this system has been applied the generic name of Ido. It is stated that Ido as a medium for the transmission of thought between various nationalities is astonishingly successful, being strikingly lucid and free from any liability to confusion or distortion. The tests that have been made with this new tongue among scientific men—and the reduction to one common understanding of such complex subjects as scientific communications is admittedly one of the most severe tests that can be imposed upon any form of universal tongue—have proved generally so satisfactory and promising that there appears to be a consensus of effort among scientists of all European nationalities to establish it, at first for their own work. Ido is supported in this campaign as being the auxiliary tongue most susceptible of continuous improvement without any prejudice to its future use. It is pointed out that music and mathematics have been reduced to a universal status, and that there is no

reason why reasoning and communication, be it either expression in writing or conversation, should not be whittled down to a common basis.

EFFICIENT PROTECTION AGAINST SEA EROSION.

Some two or three years ago, owing to the extraordinary ravages of the sea among the cliffs to the east of Brighton, the East Sussex County Council experimented with a ferro-concrete system of groins that had been evolved. Five of these structures, each five hundred feet in length, were erected to test the system, and it was found that the work could be carried out at a cost of four shillings and threepence per cubic yard, which compared very favourably with the cost of timber groining. It was found that the new works achieved the desired result, as the erosive effect of the water was checked and there were early signs of shingle accumulating on the foreshore. Satisfied with this initial experiment, the authorities contracted for the erection of ten similar groins near Rottingdean, where the sea was wreaking considerable havoc. A similar satisfactory result being observable at this point, another section of the shore is now under protection, while a sea-wall on the same principle is being erected.

FIRELESS COOKING-STOVES.

A system of cooking comestibles, or keeping in a heated condition those which have already been prepared, has been devised, and has aroused considerable attention, especially in regard to its application to railway trains. The stove, which has neither fire nor gas, is based upon the ingenious utilisation of a non-conductor of heat. The outer vessel is wrought in aluminium, and the vessels employed for culinary purposes are of the same metal, with aluminium locking covers. The necessary heat is supplied by radiation from several hot plates, which are inserted in the cooker, and the arrangement is such that several dishes can be cooked simultaneously. It is stated that not only is this system, so far as it applies to railway travel, free from all danger, but that it represents a saving of 70 to 90 per cent. in the fuel-bill, while one charge of the plates is sufficient to keep the contents hot, or to cook them, during a journey of several hundred miles.

THE MANCHURIAN BEAN.

The *Japan Herald* has drawn attention to the fact that Manchurian beans were formerly used only to make tofu, miso, and soy. About fifty years ago Chinese near Tiehling and Kaiyuan first produced oil from them by a process similar to that employed for sesame and linseed. This oil was used for fuel and for cooking, and the residual for bean-cake fodder. In the winter of 1908 it began to be exported into Europe, where it was found to be better than cotton-seed for fuel, soap-making, and feeding cattle. This success has marvellously increased the area devoted to the growing of the beans, and has caused the farmers in the north of Manchuria to give up wheat-raising. The Shantung farmers discovered that bean-cake was a first-rate fertiliser, and after the war with China this bean-cake was largely exported to Japan. The oil is used in Manchuria for lighting, lubricating, and cooking, and in south China in making waterproof cloth, paper umbrellas, and lanterns, and is often mixed with lacquer for making varnish and printing-ink. The Chinese hit upon the principle of rotation of leguminous with cereal crops quite accidentally, without knowing anything of its scientific explanation.

THE LINKING UP OF RAILWAY SYSTEMS.

Every year witnesses further progress in linking up the great railway systems and bringing the outlying regions of the world in closer touch with the great centres. What is called the Pan-American Railway seems now within possibility of completion. This may enable the traveller to go by rail from Canada or the United States in North America to Buenos Ayres or Santiago in South America. The railway link through Mexico to Guatemala has been completed, and south, according to *Hazell's Annual*, there is only now the gap in Bolivia between Potosi and Tupiza to be filled, and connection could be made through the Andes to the Argentine system. At the end of last year it was reported that steps had been taken to promote the construction of a railway across Persia to link up the Russian and Persian railway systems. From Baku, on the Caspian, it is proposed that a line should go southwards along the shores of that sea to the Persian frontier, and by way of Resht to Teheran, whence it would be continued by Kerman to the Seistan frontier of Baluchistan, and on to Nushki, where it would connect with the Indian railways. This, it is anticipated, might give communication between London and Bombay within a week.

NEW EARTHQUAKE RECORDER.

In the new Magnetic Observatory at Eskdalemuir, Dumfriesshire, there has recently been fitted up an instrument to record the motion of the earth produced by an earthquake, however distant the earthquake may be from the observatory. The inventor of the instrument is Prince Galitzin, the Russian scientist. The instrument consists of a horizontal pendulum suspended by wires, so that when the framework, which is attached to the earth by a pier, is moved the pendulum is forthwith set in motion. In the absence of friction, however, such a pendulum would vibrate too long, and this fault has been corrected in the Galitzin pendulum in an ingenious manner by allowing a copper plate attached to the pendulum to move between the poles of a strong magnet. The introduction of friction has one disadvantage: it reduces the sensitiveness of the apparatus, but

by a second clever application of electro-magnetic theory, Prince Galitzin has overcome this trouble. Mr G. W. Walker, the superintendent of the observatory, has invented an electrometer for the measurement of electrical forces. He has also devised an original construction for ascertaining the 'electric potential' of the atmosphere.

THE TUCHMAN DISTANCE GAS-LIGHTER.

Users of gas for lighting purposes will be interested in the very useful appliance for lighting gas at a distance by means of an electric spark which is made by the Herbert Tuchman Manufacturing Company. The whole apparatus is compact and inexpensive, and may be used with existing fittings and be applied to any number of lights, and when once installed costs practically nothing for upkeep, as there is no permanent bypass-jet used. The apparatus consists of a small dry battery which generates a current of four to six volts, and measures about twelve by six by three inches, and is capable of serving any number of lights up to five hundred. To each burner is affixed a patent valve-tap which can be opened or shut as desired by means of a switch, and this can be fixed at any convenient place in the room, its connection with the battery and the valve-tap being made with ordinary bell-wire. The switch has two buttons, the first of which, on being pressed, opens the gas-way, and at the same time makes a very hot spark at the point of the burner which sets it alight; the second button when pressed shuts off the gas. To obviate the trouble and expense of using insulated wire in the wiring, the current from the battery is altered by means of a trembler, and is transformed to high tension by passing it through a transformer which is fixed to each valve-tap. The transformer is made of a core of laminated soft iron surrounded by a short coil of thick wire and a long coil of thin wire; the spark-leads are of stout sparking wires with steatite insulators, and the spark emitted is of the same strength as is used for firing explosive mixtures for internal combustion, and cannot miss fire. The whole apparatus is neat and compact; the valve and transformer, being quite small, do not show any apparent indication of their presence on the fittings. For lighting private houses the whole installation can be fitted quite cheaply, as the one battery will do for any number of burners required, and it is then only a matter of the cost of valves and switches. The battery may be placed in some out-of-the-way place out of sight. The Tuchman system can also be used with advantage and economy in works, mills, factories, &c., where a large number of burners require to be lighted simultaneously, in which case the electric valves are not used, the gas being controlled from the ordinary main gas-tap; or every room or floor may have a tap of its own, each burner being fitted with the sparking contrivance only. When lighting, all that it is necessary to do is to turn on the main gas-tap and then operate the switch, and the gas is immediately lighted.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

THE WINDS OF APRIL.

I'm weary of the city, with its ceaseless toil and strife;
With the loud, insistent humming of its busy human hive;
Where love itself is often but a bitter-sweet of life,
And the honey is not always for the lips of those who strive.

I'm tired of dull brick houses, each its neighbour's counterpart—
Even the window-blinds must 'match' all along this narrow street;
And I find no room within them for a hotly beating heart
That throbs towards the country where the ways are wide and sweet.

If I close my ears a moment to the hubbub of the town,
To the newsboys' strident voices and the motors whizzing by,
I can hear the winds of April calling softly from the down,
And the lark's exultant music in a space of clear blue sky.

If I shut bewildered eyes on the ever-restless crowds
I can watch a mountain-river slipping gently to the sea,
Or pick out the little homestead, nestling almost in the clouds,
Where I know my mother watches, and often prays for me.

Oh the freshness of the meadows! Oh the beauty of the trees!
Oh the fragrance of the blossom that the winds of April kiss!
Can mill or mart or counting-house give pleasures such as these,
And haunts where men do congregate so great a joy as this?

E. MATHESON.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

THE WHITE APRONS.*

By WILLIAM LE QUEUX.

IN FIVE CHAPTERS.—CHAPTER I.

I CAN never look upon the white embroidered apron worn by a domestic servant-maid without experiencing a twinge of horror. The most dangerous and exciting moments of my adventurous life were directly connected with a white apron. Indeed, I often think my escape was a providential one.

A secret-service agent meets with many curious and amazing adventures, but none in my whole career was more remarkable than the Affair of the White Apron.

I was at home, idling away the bright spring days in the club, and resting after a long and tedious mission, a search after information which had carried me three times across Europe and back again. Paris, Constantinople, Petersburg, Palermo, and Amsterdam were among the places to which I had paid flying visits; and I had, a week ago, stepped from the train on to the platform at Charing Cross, my soft hat over my eyes, coat-collar up, dirty, unshaven, and fagged out.

I had not been altogether unsuccessful, but I had not obtained what I desired. I was dissatisfied with the result of my efforts, and had next day expressed my regret to the keen-eyed chief, Sir Charles Houghton, as I sat with him in his room at Whitehall.

But he had only laughed, saying, 'Never mind, my dear Morrice; don't grumble. You'll do better next time. One can't achieve success every time, you know.'

'I should have got at the truth had I not had the misfortune to meet that infernal Belgian face to face in St Mark's Square at Venice.'

'He recognised you, eh?' and the chief smiled. 'He is not exactly a friend of yours, is he?'

'Not after the affair of the Triple Alliance, when, as you recollect, I got early information of Austria's intentions,' I said. 'As one of the chief spies in the employ of our friends the enemy, he has just cause to hate me, I suppose. The moment I set eyes upon him in Venice I knew that all my efforts had been in vain.'

'Bloch is a dangerous man,' Sir Charles said. 'He has twice been charged with murder; and on both occasions, thanks to the protection afforded him by his employers, he has succeeded in getting off. Curious that some Powers should employ criminals in their confidential service!'

'Yes,' I remarked. 'Have we not proved beyond doubt that poor President —— —— was murdered by means of a poisoned cigar, and have not other deaths recently occurred which are full of strong suspicion?'

Sir Charles sighed gravely. 'Yes, Morrice,' he answered, stirring slightly in his padded chair, 'you are right. The recent death of one European monarch, at least, was not due to natural causes. You know to whom I refer, eh?'

I nodded in the affirmative. It was an extraordinary story—one to which we would not give credence had we not investigated it and proved conclusively that the dead monarch had been deliberately assassinated. Truly the unscrupulousness of certain of the great Powers is unbounded. The man jeered at to-day as a 'scaremonger' is the man who suspects the truth. Government is carried on and territory extended with just as deadly a cunning to-day as ever it was by the Venetian Republic or the Holy Roman Empire. The *cabinet-noir* of every chancellerie could furnish some amazing truths, many of which are known to us at Whitehall. We speak of them guardedly, just as Sir Charles had spoken of them. It is to combat these clever intrigues, carried on against England by men and women who are past-masters of the art, that we are ever fighting, ever defeating them with their own weapons.

It is, I admit, the fashion to laugh when we refer to England's rivals. But I often wish that those who sit at home at ease, smoking their pipes and reading their ofttimes misleading newspapers, or those ladies who lounge so comfortably in their own drawing-rooms, smiling at the very idea of foreign soldiers sleeping on their chesterfields, could have one single glance at certain files of amazing evidence locked away in the great safes in our rooms at Whitehall. Assuredly their faces would blanch at what is written there in black-and-white—of the slow and deliberate plans which certain enemies have formed for the purpose of destroying us. Sneer,

laugh, jeer as you will; but assuredly the day of Imperial Sassonia's might is fast approaching.

It was this point that I had discussed with Sir Charles.

'Yes,' he said, 'our latest information on the subject I placed before the Cabinet at the meeting yesterday. But, alas! it was not treated with due seriousness. The Government are too much occupied with Budget squabbles and internal affairs to think of national defence.'

'And the money of Sassonia has done much to stir up all this party bickering. Goldberg's revelations to us opened our eyes,' I remarked. 'That list of well-known Englishmen receiving money from the Sassonian secret-service fund is very instructive. I wonder what the British public would think if we published the list in the Press!'

'Ah,' exclaimed the chief, 'if we only *dared!* But, alas! our department must remain ever a secret one. Its very existence must be unknown. The information we gain is for the eyes and ears of the Cabinet alone, not for the general public.'

And so I had retraced my steps to the St James's Club, full of deep reflections. No man in England was more alive than myself to the grave peril in which the nation was now placed.

I flung myself into one of the big arm-chairs, and sat gazing thoughtfully across Piccadilly to the fresh spring greenery in the Park. Outside, many carriages and cars passed and repassed, for the season was in full swing. Men came and went, most of them foreign diplomats, men I had met in the various capitals of Europe. They nodded me greeting, for they saw that I, a constant wanderer, was home again.

Three days went by, and I went out calling a great deal.

On the fourth, when I entered my rooms to dress for dinner, my man handed me a note which he said had been brought by hand, and for which he had signed a receipt.

It was in the usual familiar gray envelope which looks suspiciously like a tradesman's bill. Tearing it open, I found another envelope, a thin-paper one, sealed and marked in red ink 'Secret' in a bold, round hand. Within was a brief note from Sir Charles, saying that a rumour had just arrived, addressed to me at the department, that Sassonia had instituted *pourparlers* with Balkania with the object of making a secret treaty between the two Powers, and instructing me to leave London that night and endeavour to obtain accurate knowledge of the confidential negotiations actively in progress.

The extreme seriousness of the situation I at once realised, for if such secret treaty were signed, then the whole of Balkania's defences, her new navy, her great Dreadnoughts, and her shipbuilding yards would be at the disposal of our fickle friends who were our secret enemies. Long ago we had surmised that the dozen or so new battleships and destroyers of Balkania were destined for the augmentation of the imperial navy of Sassonia; and I saw that, on the signature of such a treaty as that declared to be in progress, England would be in a position of gravest peril, and might be attacked at any moment.

Our only safeguard now lay in obtaining immediate knowledge of the exact clauses of the treaty before its signature. Our Government might then act with such tact and firmness that Balkania would be compelled to decline the tempting offers of her neighbour.

I cast myself into my own grandfather-chair—which, alas! I so seldom occupied—and re-read the letter written in the chief's own neat hand.

'I have a command to Windsor this afternoon; therefore I cannot see you,' he wrote in conclusion. 'I, however, leave the matter entirely in your hands, to act with caution and discretion, and to get at the exact truth. I have instructed Verney to meet you at the mail to-night at Charing Cross, and put himself at your disposal. And I wish you every good-luck in your mission; for, recollect, the safety of England depends upon its success.'

The safety of England! Had we not discussed that self-same subject in his room at Whitehall only four days ago? His command to Windsor showed with what gravity the situation was viewed in high quarters. And to me was this most important piece of secret service entrusted!

I told my man what I wanted, and while he was packing I scribbled a few letters—regrets for invitations I had accepted—and crossing to the 'Berkeley,' ate my dinner alone.

Then, at nine o'clock, as the dusky London twilight was fading and the lamps began to glimmer, the Continental express slowly carried Verney and myself out across the Thames—out abroad again, whither we knew not.

Teddy Verney, a tall, thin-faced, well-dressed man, with a dark-brown moustache and the air of a Guardsman, was a born adventurer, just like myself. His father had been British Consul in Smyrna; hence by birth he was a cosmopolitan, and spoke seven or eight languages. Alone in the first-class compartment, beneath the dull lamp, we sat together discussing our best *modus operandi*.

We were going to Paris as the first stage of what we felt would be a long journey, and the main issue we had to decide was, in what direction should we seek the information so urgently desired?

'Berlin is useless,' Verney declared as he lit his cigarette, a special brand which he always got from Petersburg. 'We're both far too well known there.'

'In any case, wherever we go, we shall have Bloch to contend with,' I remarked. 'He probably already knows that we've left London, and his agents will be watching us.'

'Then we'll watch them,' replied my com-

panion with a light laugh; 'and it will be a case of his wits pitted against ours.'

I was silent. That little, undersized, black-bearded Belgian, Adolphe Bloch, though perhaps not quite so shrewd and ingenious as our own chief, Sir Charles Houghton, was a criminal, and entirely unscrupulous. The Intelligence Department of Sassonia employed him because of his remarkable success as secret agent while in the Russian service. The whole of the marvellous system of the espionage of Sassonia all over Europe was at his disposal, and no secret seemed safe from him. The Sassonian Government pay, and pay handsomely always, for exclusive information.

I smoked and pondered for a long time. At last I decided.

'We will go to Vienna first,' I said. 'In Paris they will only hear rumours, and rumours do not interest us.'

'All right,' responded my companion cheerily, for he was ready for anything. 'I was there only a fortnight ago — over the Stolberg affair.'

Then we lapsed into silence as the train roared on through the darkening night towards Dover Pier.

The sun was again up when we arrived at the Gare du Nord in Paris, and drove down the Rue Lafayette to the Hôtel Chatham, beyond the Opera, where I find myself perhaps a couple of dozen times each year.

I had decided not to go on to Vienna till evening, having resolved first to see a man named Lemaire who was in the French Ministry of Foreign Affairs, and who often sold us information.

I sent him a *petit-bleu*, and at noon he met me in the Grand Café. His reply, as we sat in a corner, was a negative one. Not the slightest rumour had as yet reached the Quai d'Orsay concerning the proposed agreement. Indeed, he was highly surprised when I suggested it.

Verney had gone along to the Embassy; and I, left alone, strolled up the Rue de la Paix, uncertain now how to act. I was at a loss to know what channel in which to search. Suddenly a suggestion occurred to me; and, turning back into the Rue Daunou, I went to the telephone.

Half-an-hour later I entered a taxi-cab and drove along the Champs Elysées into the Bois, where I alighted at the Restaurant Armenonville, that gay rendezvous where the Parisienne takes her *apéritif*. Many people were already there for luncheon; but I sat beneath the trees and waited until ten minutes later, when a smart motor-car drove up, and from it stepped a fair-haired and exceedingly chic young lady, dressed in the latest *mode* and with exquisite taste — Mademoiselle Françoise Orliac, of the Renaissance Theatre.

She smiled merrily from beneath her large black hat as, advancing, she held out her well-gloved hand to welcome me.

'Well, my friend Hugh,' she cried in excellent English, 'this is really a pleasant surprise! But there! you are always so erratic in your movements. One never knows where you may be.' And she seated herself at the table before me.

It was pleasant there, beneath the trees. Few people were in our vicinity; therefore we could talk without eavesdroppers.

She chatted gaily with all the *verve* of the true Parisienne, for she was one of the most popular of the younger actresses, and her photograph in the newest hat or the newest costume looked out at one from almost every newspaper. The great Paris dressmakers and modistes paid her to wear their hats and gowns on the stage, in the Bois, at Monte Carlo, or at the races. Little Françoise Orliac, who acted in comedy with such clever piquancy, was a figure in the gay world of the French capital, and was the centre of a very large circle of admirers. She was, I knew, acquainted with a certain man regarding whom I desired some information.

So, when she had gossiped on, telling me a quantity of the latest scandal, I presently leaned towards her and asked in a serious voice, 'Tell me, Françoise, do you happen to know a person named Gaston Martin?'

For a few seconds she hesitated. 'Do you mean the man who was in the colonial service out in Senegal?' she asked, glancing at me.

'Yes. He was Secretary-General. You know him, then?'

'Why?'

'I want to ascertain something about him.'

'Why are you so inquisitive?' she asked, looking at me with some curiosity, unaware of my true *métier*.

'I want you to tell me what you know concerning him,' I said. 'I'm making inquiries on behalf of an old friend. Is he married?'

'Yes. I visited at his château of La Guerche, near Nevers, last year. His wife is an extremely nice woman. I knew her in Paris, having given several recitals at her house.'

'He is well off, I understand?'

'Apparently.'

'When you were at the château were the other guests all French?'

'Why?' she asked.

'Well, I was wondering if there might have been any Sassonians among them,' I said.

'There was a certain Herr Siegel, who made himself extremely pleasant to me — a short, middle-aged man with a dark beard, and a sword-cut upon his right cheek.'

(To be continued.)

BRITISH RULE IN INDIA.

By Sir A. H. L. Fraser, K.C.S.I., Ex-Lieutenant-Governor of Bengal,
Author of *Among Indian Rajahs and Ryots.*

CONSIDERABLE attention has been directed recently to the effect of our rule in India and to its principles. When Mr Bryan, once candidate for the presidency of the United States, was travelling round the world, I had the honour and pleasure of entertaining him at Belvedere, my official residence as Lieutenant-Governor of Bengal. He visited Calcutta and Bombay, so as to see something of Indian administration; and I had one or two long conversations with him. He asked me a number of questions, and placed before me a good deal that he had heard from members of the National Congress with whom he had been brought into contact during his brief tour in India. As we passed from one subject to another, the impression grew on me that his inquiries indicated convictions already formed unfavourable to our position in India. I therefore ventured to say to him, 'I believe, Mr Bryan, you are not so much looking for information as for arguments to justify the abandonment of the Philippines by your own Government.' He brought his hand down emphatically on the table, and said, 'I don't think that the United States ought to hold the Philippines. A democracy cannot govern other races through a bureaucracy.' This view may be shared by not a few Americans, and by some even of our own people; but it is certainly not a view generally accepted in our country.

We feel that we cannot give up the position which we occupy in India, involving as it does both privilege and responsibility. There may be, there manifestly are, difficulties connected with our rule in India; but it has been thrust upon us by circumstances which were probably always beyond our control, and which cannot now, at all events, be set aside. We find ourselves apparently of necessity in the position which we occupy, and we cannot abandon it. We have to discharge its responsibilities and to perform its duties. It may be that experience will show that a democracy cannot govern a dependency like India. If so, there are many who will believe that this fact may be accepted as discreditable to democracy. It has not been so hitherto in our country. But if the Home Government should become fussy, distrustful, and prone to interfere unduly with the men on the spot, Mr Bryan's judgment of the capacity of a democracy may be found correct. I do not believe it: if it were so it would be deplorable.

It is unanimously admitted by all whose opinion is worth considering that we are not in India merely in our own interest or to exploit its weaker races for our own advantage. We are there to maintain the peace, to secure progress, to give to the peoples of India the benefits of our civilisation, to educate and to elevate them. As was well stated in the great despatch of 1854 on education in India: 'It is one of our most sacred duties to be the means, as far as in us lies, to confer upon the natives of India those vast moral and material blessings which flow from the general diffusion of useful knowledge, and which India may, under Providence, derive from her connection with England.' We have a sacred trust to which we cannot be disloyal without dishonour.

In judging of the consequences of British rule to India, we must bear in mind one very important fact—that is, that there is no Indian nation. One hears a good deal nowadays of the 'national' spirit in India, and of the 'national' views of Indian questions; but there is not yet any Indian nation. India is of vast extent, with an area almost, and a population just, equal to the area and population of Europe without Russia. It is peopled not by one nation, but by many. The different races of India, occupying different parts of that great country, differ amongst themselves as much as do the nations of Europe. Some of them have much in common, with not a little that is peculiar to each, like the Latin races in the south of Europe. Others differ from the rest as much as the Teutonic from the Latin races. In language, history, religion, traditions, and character, these differences are clearly manifested. They ought not to be forgotten. Those who recognise them feel that the withdrawal of British rule, if that could be imagined, would be the signal for disorder, the probable precursor of anarchy and bloodshed, the indefinite postponement of the civilisation and elevation of the Indian peoples.

At the same time it ought never to be forgotten that there is one thing that all these peoples share—namely, the British government of the country, and that the fact of the existence of this bond of union must itself tend to modify the position of things in India. The divers peoples in the different parts of that country are held together by the authority of the British Government which is over them all. The principles that underlie the government of all the provinces of India are practically the same. Details must differ because of the different circumstances of the different provinces; but essential principles are the same throughout. There is also in every province a small body of educated persons who know something at least of the English language; and a man may

travel throughout India and make his way with a section of the educated community through the medium of English alone.

It must, however, be borne in mind that, despite all the efforts which Government has made since the Crown assumed the administration of India half a century ago, education is still confined to a very small precentage of the people. The last census figures show the number of males per thousand able to read and write in any language whatever for the principal provinces to be only: for Madras, 119; for Bombay, 116; for Bengal, 104; for the Punjab, 64; for the United Provinces, 57; for the Central Provinces, 54—that is, the figures for males were for these provinces from 5 to 11 per cent. For females the figures per thousand are: for Madras and Bombay, 9; for Bengal, 5; for the Punjab, 3; and for the United Provinces and Central Provinces, 2—that is, from one-fifth to nearly 1 per cent. Since the last census there has, of course, been considerable progress; but these figures, which are the latest at present available, present a sufficiently accurate idea of the true state of things in regard to education. It need not be said that those who know English form only a small part of those who are thus described as able to read and write. The figures sufficiently indicate that the practical bond that unites the different peoples of India in thought and interest is very much less than the superficial observer would be inclined to believe.

Now, amongst these peoples, with their different history, character, and languages, and their tendency to stand aloof from, or even to be inimical towards, one another, it is the function of the British Government to keep the peace, and to foster the progress of education, of social and industrial advancement, and of civilisation. One of the first principles that a righteous Government placed in such a position must realise is this: that it is bound to govern in the interests of all the peoples of India. Furthermore, experience very soon leads the man who works among the people to realise that he must also govern in the interests of all classes of the people. The caste system in India wars against anything like homogeneity and community of interest even in the same locality. There are conflicting interests amongst the different classes of the people. Just government has to concern itself with all of these. It is necessary for the officers of Government to know the people, to go about amongst them constantly, to understand their customs and their circumstances, and to endeavour to promote justice and well-being among them. Government must fail in its duty if it governs in the interest of one class or of one people, amidst so many classes and so many peoples with divergent interests. It is easier to understand the necessity of this than to realise how difficult the task must be to any man who is not actually living among the people. There is thus considerable danger from any attempt to govern India from a distance.

There is one duty incumbent on the Government to which attention in this country has been very specially drawn of late. That is the duty of securing the co-operation of the people of India in their own government and giving a share in the administration of the country to Indians who may prove themselves to be fit to take such a share. The principles laid down in regard to this matter by those responsible for the government of India have been clear and decided ever since the great proclamation of Queen Victoria in taking over the government of the country. In that proclamation it was promised that 'Her Majesty's subjects, of whatever race or creed, shall be freely and impartially admitted to offices in her service, the duties of which they may be qualified by their education, ability, and integrity to discharge.' This solemn promise must be faithfully kept, because it is of vital importance that the Indian peoples should retain their confidence in British good faith. No class of the people ought to have any justification for entertaining or expressing a doubt as to the faithfulness of the British Government.

My experience of thirty-seven years in India is that, although there may be sometimes difference of opinion amongst less experienced officers in subordinate positions as regards the obligation to employ Indians wherever they are fit for employment, there has been no hesitation on the part of the supreme Government or the local Governments in loyally carrying out this promise of Queen Victoria. It is mainly in regard to executive office that the observance of the promise must be tested. Judicial appointments do not involve the same power or responsibility as executive appointments do. Now, when I went to India there was no Indian holding an executive appointment higher than that of assistant magistrate in any part of India with which I am acquainted. When I left India, Indians were holding appointments in every grade of the service from that of assistant magistrate to membership of the Board of Revenue, which stood next to the Lieutenant-Governor of Bengal in dignity. It is my conviction that this far-reaching change was brought about as rapidly as was consistent with the necessity for finding men really fitted for the high appointments to which they were thus to be promoted.

It must be borne in mind that no man ought to be appointed to an executive office merely because he is a Hindu or a Mohammedan. If the question is one of representing the people in legislative councils or in local boards, then a man is properly selected because he belongs to a particular class or is concerned with a particular interest which ought to be represented. He will speak for that class and fight for that interest. That is why it is desirable to appoint him. But

if it is a question of appointing to executive office, such a consideration is altogether mischievous. A man ought to be appointed to executive office because he is fitted by his education, ability, and integrity to discharge its duties. He is not to fight for a particular interest or for a particular class, but he is to hold the balance justly between conflicting interests and different classes. The Government which governs in the interests of all and not in the interest of any particular section of the community is bound to see that the men whom it appoints are fit for the office to which it appoints them. It must not listen to the loudest voice; but it must give at least as careful consideration to the interests of the much more numerous classes who are silent and uninfluential. Hitherto this has been the policy of Government; and it is extremely gratifying to find how often the people of the country ask for a British officer to be set over them locally, because they believe in his impartial and earnest desire to secure the interests of all. The confidence of Indians in the justice and good intention of British officers generally has hitherto been very clearly marked.

There is another very striking fact to be borne in mind in regard to the administration of India which is sometimes lost sight of. There are in India a large number of native states, of greater or less importance, which together occupy about one-third of the total area of India, and have an aggregate population of over sixty-eight millions. These states are not British territory, and their peoples are not British subjects. The native ruler in each case governs his own state. He is maintained in his position against his neighbours and against the unruly amongst his own subjects by the power of the British Government, which is the suzerain authority over these states. The relations between the supreme Government and these states are regulated by treaties and *sanads*. The general principles which underlie those relations are briefly these: (1) that the ruler shall be maintained in his position and dignity, and permitted himself to govern his own subjects; and (2) that he shall recognise his responsibility to the supreme Government for a just and beneficent administration of his state, and shall receive advice from the responsible officers of Government in regard to that administration.

The second principle is essential; for the British Government could not justly lend its power to the maintenance of the authority of a chief without some guarantee that his rule was reasonable, just, and beneficent. It is clear that there are great possibilities for good in this system. The native rule is maintained, and the principles of British government are infused into that rule. Peace, which is necessary to the progress of civilisation, is secured; but it is secured with due regard to the interests, not of the rulers only, but of the peoples whom they govern. It is clear, also, that it is of the utmost importance to secure officers of uprightness, wisdom, and tact to represent Government in its dealings with these rulers. The Government of India has hitherto been singularly fortunate in securing a succession of excellent officers for this work. It is of great importance that the relations of the Government of India with these feudatory chiefs should be of the kindliest and most cordial character. Dignity and sympathy, firmness and courtesy, should be blended in the maintenance of these relations. Lord Minto's administration of this part of the work entrusted to him has been an excellent example of what is required in this respect.

It is a somewhat striking thing that one of the last acts of Lord Minto's administration was to raise a nobleman of the United Provinces, the Maharajah of Benares, to the position of a feudatory chief. The difficulty might easily have been raised that the Government of India was handing over some of its own subjects to an Indian prince; but that difficulty would have been a purely theoretical one. The Maharajah had formerly held the position of a feudatory chief; and as to the people, they will be governed in accordance with native ideas, but also in accordance with British principles; and there is little doubt that they will be as happy under the new régime as they were under the old. The attachment of the people to their own rulers is well known. There is no doubt that they value the security for peace and good government which the supremacy of British authority gives in India; but they know and esteem their own rulers, and willingly submit themselves to their authority. No one who realises the importance in India of governing according to Indian ideas will doubt the propriety of the step taken in this case by Lord Minto's Government.

It does not seem to me to be necessary to say much about the reforms which have been introduced by Lord Minto's Government, with the sanction of the Secretary of State, in the Imperial and Provincial Councils. These reforms, in so far as they deal with the increased representation of the peoples of India in the Legislative Councils, and with more effective representation of the different classes of His Majesty's Indian subjects in these councils, can, it seems to me, produce nothing but good. They introduce no new principle into the government of India; but they make a very decided step forward in the course of self-government, which had been adopted long before, and has been more or less distinctly before the Government of India since the proclamation of Queen Victoria.

In regard to the change in the Executive Councils, it is clearly and entirely consistent with the principles of Queen Victoria's proclamation, which have been already explained, that high executive offices should be given to men, irrespective of their race or creed, who are found

fit to discharge the duties of these offices. It is, therefore, a matter of great congratulation that there have been found Indians fit to assume office in the Executive Council of his Excellency the Viceroy and in one or two of the Provincial Executive Councils. There is no new principle involved. Fit men have been found, and they have therefore been appointed. At the same time it must be borne in mind that the qualification for executive work is not a racial one, and that it is, as already indicated, as mischievous to appoint a man to executive office merely because he is a Hindu or Mohammedan as it would be to debar him from such office on that account. The one qualification for executive office is fitness.

I do not like the phrase one so often hears about the 'dominant race' in India. When one has lived for many years in India he realises that there is no dominant race. There is a dominant Government: that Government is the British Government; but the European and Indian are in India equal before the law. The British Government lies under a tremendous responsibility. It has to govern in the interests of all classes: of Hindus, Mohammedans, and Christians, of high caste and low caste, of agriculturists and traders, of ignorant and educated, and of Indians and Europeans. One great curse in India is racial prejudice, a prejudice not confined to Europeans as against Indians, or Indians against Europeans, but also a prejudice which affects the relations of the different races of India with one another. The one lesson that long life among the people of India teaches is to recognise the common humanity of us all, and our common rights and duties as subjects of a great, powerful, and beneficent Government. Those who endeavour to stir up race or religious animosity in India are enemies of the peoples of India and of the sound administration of its Government. That which is the glory of the British Government in the past, and the justification of its maintenance in the future, is that it has done, and will do, all that is possible to overcome racial and religious prejudice, and to unite the peoples of India in efforts to advance the interests of the country generally, and to push forward on the path of progress and civilisation.

A liberal policy in regard to education and the employment of duly qualified Indians in the government of the country must be steadfastly pursued. But false expectations must not be encouraged; and the principle must never be forgotten that we are not in India for the advantage of any one class, however influential, but in the interests of all classes. These interests have to be carefully studied and carefully safeguarded. It will be a long time before India can be regarded as ready for anything like complete self-government. Meanwhile the duty lies on the British Government to preserve the peace without which there can be no real progress, and to aim at the diffusion of useful knowledge among the peoples generally, so that they may be fitted more and more fully for the position to which they will more and more aspire—with a natural and reasonable aspiration—among the civilised nations of the earth.

PETER AND JANE.

By S. MACNAUGHTAN, Author of *The Andersons, The Fortunes of Christina Macnab*, &c.

CHAPTER XIV.

'FIRST of all,' said Peter, 'who is E. W. Smith, and why the dickens should you imagine he is here?'

Dunbar gave him a quick look. 'Is any one here?' he asked.

'No one but Ross and Christopherson and me,' said Peter. 'Purvis was here; but he left for Buenos Ayres last night, and I have no idea where he is now. I saw the train start from the station at Taco, but he was not in it.'

'Purvis is in a tight place,' said Dunbar dryly.

Ross, hearing voices in the drawing-room, wakened up, and now appeared with ruffled hair and still clad in his sleeping-suit. He suggested refreshments, and sat down to hear what Dunbar had to say.

Peter's face had a queer set look upon it. Where another man might perhaps have asked questions, he showed something of his mother's reserve, and was never more silent than when a moment of strain arrived. He began in a mechanical way to make two fresh cups of coffee, and poured the steaming mixture from the tin saucepan into the cups. 'The day of reckoning seems to have arrived for Purvis,' he said; and then added lazily, 'Poor brute, he had his points.' Purvis was a common adventurer after all! And he had got close upon two hundred pounds on the plea of having some knowledge which was simply non-existent. Peter could see the whole thing now. This cock-and-bull story of the missing man having been discovered was really a very simple ruse for getting money, and the last seventy pounds which he had been fool enough to pay had been wanted to help Purvis to get away.

'I must search the place thoroughly,' said Dunbar. He finished his coffee hastily; but the need of ascertaining whether or not any one was

concealed in the little *estancia* house or in the outbuildings was a matter of only a few minutes.

'If he 's got away again,' said Dunbar, 'I 'll eat my hat!'

'Purvis is a slippery customer,' said Ross; 'but he has lived peaceably and openly for a considerable time. If he is wanted, you have only to ride up to his door and arrest him.'

Dunbar cleared his throat. 'You mind,' he said, 'the story of the *Rosana* which I told you on board the Royal Mail Packet when we were in the River Plate coming up to Monte Video?'

'I remember,' said Peter briefly. And Ross nodded his head also; every one in Argentina knew the story of the wreck of the *Rosana*.

'I knew,' said Dunbar, 'that E. W. Smith could not die.'

'Smith being Purvis, I take it?' said Toffy.

'Yes,' said Dunbar, 'or any other *alias* you please. He is a fair man now, with a beard, isn't he? Well, on board the *Rosana* he was a clean-shaven man with dark hair; but you cannot mistake E. W. Smith's eyes, though I hear his voice is altered.'

'Are you in the police out here?' Peter asked, with a glance at the *comisario*, to whom he had just handed a cup of coffee.

'No, I'm not,' answered Dunbar, with his usual economy of speech. 'I'm from Scotland Yard, and I want E. W. Smith on another count. But I 'll come to that some other time. I must be off now.'

'Your horse is done,' protested Ross, 'and you are pretty well done yourself.'

'I 'm not that far through,' said Dunbar.

'Why not send a wire to Buenos Ayres and wait here until you can get a reply? Purvis may have got on board the train somewhere else, and be at Buenos Ayres now.'

'Yes, that will do,' said Dunbar. He despatched his telegram by one of the peons, who rode off with it across the camp. In spite of fatigue, Dunbar, with his nervous energy unimpaired, looked as though he would have liked to ride with the telegram himself. Reflecting, however, that there was considerable work still before him, he submitted to stretching himself on a *catre*, and after a short doze, a bath, and some breakfast, he took up again the thread of his story.

'I 'll not bother you with an account of E. W. Smith's life,' he remarked, 'although there is a good deal in it that would surprise you. I 'll keep to the story of the *Rosana*, as time is short.'

Mr Dunbar took his faithful friend—his short pipe—from its red-lined case, filled it with tobacco, and began to draw luxuriously.

'The *Rosana* sprang a leak after her first day out, on her run down the coast, and was lost in twenty fathoms of water. She carried only one boat, and that boat was seen by myself half-burned, but with a bit of her name in gold-leaf still visible on her bows. Tranter was the captain of the *Rosana*, and E. W. Smith was clerk and general manager. Every one knew he cheated the company who ran the boat, and cheated the captain too, when he could; and it generally suited him to make Tranter drunk when they were in port. Well, he reaped his profit, and I suppose a good bit of it lies at the bottom of the sea. He was a man who always kept large sums in hand in case of finding himself in a tight place. Did I mention,' said Dunbar, 'that he could not row owing to a stiff arm? Though, of course, Tranter could. But Tranter was wanted for steering.'

'I don't understand the story,' said Ross, leaning forward. 'You say that Tranter and this man Purvis, or Smith, escaped from the wreck, and that Purvis could not row?'

'I am coming to that,' said Dunbar, unmoved. 'Observe, the *Rosana* carried one boat. She had lost her other boat by an accident, it seems, and the one that remained was not much bigger than the dinghys men use to go to and from the shore when they are in harbour. Tranter was the first to discover, one dark night, that the *Rosana* was leaking badly; and the hold was half-flooded before any one knew anything about it, and the *Rosana* was settling by her head. Smith and the captain, it seems, were armed, or armed themselves as soon as the state of affairs was known; and before the rest of the crew were awake four men were ordered to man the boat and bring her alongside. The hatches were closed down with the rest of the crew still below; and if there was a scuffle, two armed men were perfectly capable of keeping order. Smith and Tranter got into the boat, and were rowed ashore in safety. If the whole of the crew had tried to board her there is no doubt no one would have been saved, for there were a good many hands on the steamer, and the rush to the one boat would have swamped her. The men who manned the boat and pulled ashore were doubtless glad to save their lives at any price; but they might make it exceedingly unpleasant for the two survivors of the wreck did they make their story known. They were cross-bred natives, whose lives were of no great value to any one but themselves, and there was an easy way for two armed men to silence them on a lonely shore without a soul near.'

'It 's a sickening story,' said Ross, getting up and walking towards the window; and he clenched his big hand.

'How,' said Peter keenly, 'has the story leaked out?'

'Because,' said Dunbar, 'sometimes at a critical moment men do their work badly, or perhaps a native knows how to feign death before his life is actually extinct. Dead men tell no tales, but wounded men don't have their tongues tied in the same way.'

'So one of the men lived to tell tales,' said Peter, leaning forward in his chair; 'and Purvis, who has been here for some time past, is the hero

of the story. It is a blackguardly tale, Dunbar; and, thank God, I believe it would have been impossible in England!'

'I don't pass judgment on my fellow-men,' said Dunbar. 'Life is sweet, perhaps, to some of us, and no doubt the whole crew would have swamped the boat; but'——

'But, all the same,' said Toffy, 'you don't mean to let Purvis-Smith have a very light time of it when you do get him?'

'No, I don't,' said Dunbar.

Ross went out through the door of the little drawing-room on to the corridor, and went to see about some work on the farm. The *comisario* drank his coffee, and Dunbar waited restlessly for his telegram.

After breakfast he and Peter slept for a time, for both were dog-tired, and the day was oppressively hot. In the afternoon a telegram came to say that no news had been heard of Purvis, and he was believed to be still in the neighbourhood of La Dorada.

'If he is,' said Dunbar, folding up the telegram and putting it into his pocket, 'I think our future duties will be light. The man who has come to light and told the story of the wreck of the *Rosana* is a native of that favoured spot where already our friend Purvis is not too popular. God help the man if they get hold of him!'

'His little boy is here now,' said Toffy, starting up. 'He came here to leave him in safety.'

Dunbar was writing another telegram to know the whereabouts of the steamer.

'Then,' he said, 'the story is probably known, and Purvis is aware of it, and has gone north. He daren't show himself near his *estancia* after this.'

They began to put the story together, piecing it here and there, while Dunbar continued to send telegrams.

Ross strolled in presently to discuss the matter again. 'I don't believe,' he said, 'Purvis is far off.'

'He is a brave man if he is anywhere near La Dorada,' said Dunbar.

'Purvis is a brave man,' said Ross quietly.

Peter was silent. Only last night he had had good reason to believe that the mystery of his brother's existence was going to be cleared up. But, with Purvis gone, the whole wearisome business would have to begin again. Why had he not detained the man last night, even if he had had to do it by force, until Purvis had given him all the evidence he possessed? Peter could not blame himself for not having done so. Purvis had declared that he was going to Buenos Ayres for a couple of days only, and it would have been absurd to delay him in order that he might give information which perhaps he did not possess. Still, surely the thing had been too cleverly worked out to be altogether a fraud! His thoughts worked back again to the belief that Purvis had got hold of his brother, and had extracted a great deal of information from him, and was only delaying to make him known to Peter until he had made the best bargain possible for himself. As Peter looked back on all the talks they had had together, there was something that convinced him that Purvis's close application to the search had not been made simply with a view to extracting some hundreds of pounds from him, but that the man's game was deeper than this. Purvis was far too clever to waste his talents in dabbling in paltry matters, or in securing a small sum of money for himself. He was a man who dealt in big figures.

That his dishonesty was proved was beyond all manner of doubt, and the only thing was to watch events and to see what would now happen. If Purvis gave them the slip, what was to be done in the future?

'I believe he will try to save his steamer,' said Ross after a long silence.

Every one was thinking of the same subject, and his abrupt exclamation needed no explanation.

'If he could trust his hands he might,' said the *comisario* in halting, broken English; 'but I doubt if they or the peons have been paid lately.'

'Besides, on the steamer,' said Toffy, 'he could be easily caught.'

'Yes,' said Dunbar, 'if he knows that we want to catch him—which he doesn't. He is afraid of the people at La Dorada now; but he is probably unaware of the warm welcome that awaits him in Buenos Ayres.'

Dunbar went to the door again to see if there was any sign of his messenger returning from the telegraph-office. The sun was flaming to westward, and Hopwood had moved the dinner-table out into the *patio*, and was setting dinner there.

'He will do the unexpected thing,' said Ross at last. 'If Purvis even says he is going to sit up late, I know that is the one night of the week he will go to bed early.'

They went out into the *patio*, and Ross swizzled a cocktail, and they fell to eating dinner; but Dunbar was looking at his watch from time to time, and then turning his glance eastward to the track where his messenger might appear. It was an odd thing, and one of which they were all unaware, that even a slight noise made each man raise his head alertly for a moment as though he might expect an attack.

The sun went down, and still no messenger appeared. They sat down to play Bridge in the little drawing-room, and pretended to be interested in the fall of the cards.

'That must be my telegram now,' said Dunbar, starting to his feet as a horse's hoof-falls were plainly heard in the stillness of the solitary camp. 'Well, I'm blessed!' he said. He held the flimsy paper close to his near-sighted eyes, and read the message to the other men sitting at

the table: 'Smith or Purvis at present on board his own steamer in mid-stream opposite La Dorada. Fully armed and alone. Crew have left, and peons in revolt. A detachment of police proceeds by train to Taco to-night. Join them there and await instructions.'

'I thought he would stick to the steamer,' said Ross at last.

'And probably,' said Dunbar, 'he is as safe there as anywhere. He can't work his boat without a crew, but if he is armed he will be able to defend himself even if he is attacked. I don't know how many boats there were at La Dorada, but I would lay my life that Purvis took the precaution of sending them adrift or wrecking them before he got away.'

'What is to be the next move?' said Peter.

'I suppose we shall have to ride down to Taco to-night,' said Dunbar. 'Yon man,' he finished, in his nonchalant voice, 'has given me a good bit of trouble in his time.'

'It seems to me,' said Ross, 'that you can't touch any business connected with Purvis without handling a pretty unsavoury thing.'

'Now I'll tell you an odd thing,' said Dunbar. 'I have had to make some pretty close inquiries about Purvis since I have been on his track, and you will probably not believe it if I tell you that by birth he is a gentleman.'

'He behaves like one!' said Ross shortly.

'If I had time,' said Dunbar, 'I could tell you the story, but I see the fresh horses coming round, and I must get away to Taco.' He was in the saddle as he spoke, and rode off with the *comisario*.

The three men settled to a fresh game, but spoke of other matters besides the cards.

'A boy,' said Hopwood, coming in later, 'has just ridden over with this letter, sir.' He presented a note to Peter on a little tray, and waited in the detached manner of the well-trained servant while Peter opened the letter.

The writing was almost unintelligible, being written in pencil on a scrap of paper, which had become crushed in the pocket of the man who brought it.

'It is for Dunbar, I expect,' said Peter, looking doubtfully at the name on the cover. He walked without haste to a table where a lamp stood, and looked more closely at the address. 'No; it's all right; it's for me,' he said.

At first it was the vulgar melodrama of the message which struck him most forcibly with a sense of distaste and disgust, and then he flicked the piece of paper impatiently, and said, 'I don't believe a word of it!' His face was white, however, as he turned to the servant and said, 'Who brought this?'

'I will go and see, sir,' said Hopwood, and left the room.

Peter, with the scrap of paper in his hand, walked over to the Bridge-table where the others were sitting, and laid the crumpled note in front of them. 'Another trick of our friend Purvis!' he said shortly.

The two men at the card-table bent their heads over the piece of note-paper spread out before them. Ross smoothed out its edges with his big hand, and the words became distinct enough; the very brevity of the message was touched with sensationalism. It ran: 'I am your brother. Save me;' and there was not another vestige of writing on the paper.

'Purvis has excelled himself,' said Ross quietly. —'It's your deal, Christopherson.'

Toffy mechanically shuffled the cards and looked up into his friend's face. 'Is there anything more?' he said; and Peter took up the dirty envelope and examined it more closely.

There was a scrap of folded paper in one corner, and on it was written in his mother's handwriting a note to her husband, enclosing the photograph of her eldest son in a white frock and tartan ribbons.

Peter flushed hotly as he read the letter. 'He has no business to bring my mother's name into it,' he said savagely; and then the full force of the thing smote him as he realised that perhaps his mother was likewise the mother of this man Purvis.

'Have a drink?' said Ross with a pretence of gruffness. It was oppressively hot, and Peter had been riding all the previous night. Ross mentioned these facts in a kindly voice to account for his loss of colour. 'It's a ridiculous try on,' he said with conviction; and then seeking about for an excuse to leave the two friends together to discuss the matter, he gathered up the cards from the table, added up the score in an elaborate manner, and announced his intention of going to bed.

(To be continued.)

DRESS FOR THE KING.

WHILE so much has been said in recent times, and perhaps not unnaturally, about the panoply and magnificence of kingship—and more will be said as the time for the Coronation draws on—it has happened here and there that there have been some curious inquiries as to the taste and habits of King George in the matter of his clothes and uniforms, the extent of his wardrobe, how it is managed, and so forth. This curiosity, after all, is not so idle as some may fancy, for with King Edward it was certainly the case that in many important respects he set the fashion for men in this country; and not in this country alone, for when he was abroad at the

German spas, and also when he went to Paris, the people of those places noticed with great closeness what he wore and how he wore it, and forthwith to the best of their and their tailors' and hosiers' ability they copied him. The fact is that King Edward was commonly regarded as the best-dressed man in Europe, and so he was accepted as the leader of masculine fashion, not in England alone, but almost everywhere. Take a case in point. It was King Edward who some years ago invented a modification of the ordinary frock-coat for summer wear, the fronts of which were so cut away that they would hardly meet across the chest, and were held together when necessary by a link connecting with a button. One remembers also that one time, when he was staying at Marienbad, it was noticed that his late Majesty wore a red tie every day, and forthwith all the hosiers in Vienna made a great display of red cravats in their windows, and called them King Edwards. The news was telegraphed to different places; Paris went in for red ties; and later in London also the red tie became a favourite, but not to the same extent as on the Continent. It was King Edward, too, who first popularised the white vest-slip; for if he was not the very first man to wear it in this country, he was the first who was noticed to do so, and then the future of the new slip was no longer in doubt. But here it might be said that as a general thing the King discarded it long before his death. In some other matters of dress, involving possibly a great upheaval in established custom, his late Majesty was very cautious lest by example he should influence the men of his country towards a new fashion which might not be altogether to their liking, and cause much inconvenience. Thus it was not until he saw that the double collar, which has now been so popular for many years, had become thoroughly established that he took to it himself, and so set the seal upon it. If he had never done so, it is quite likely that, despite the excellent start that it gained, it would not have survived as it did.

Besides uniforms, he had about two hundred suits at Windsor Castle, Buckingham Palace, and Sandringham, and it was certainly the fact that he had a larger wardrobe than any other monarch in the world, and it might very well have been that, with one kind and another, he had more suits than any other man alive.

Notwithstanding the fact that he was responsible for the fashion, and the great care which he exercised in the selection of his clothes, King Edward was at times disposed to be very unconventional in his attire, and the more so when he was not really interfering with or guiding fashion. Thus it was noticed that on one occasion, when he was at Goodwood races, he appeared one morning wearing a white hat, lavender gloves, and a pink shirt, which most smart men would have regarded as a rather dangerous combination, though the general opinion was that he looked quite well in this attire; and another time, when he was at Marienbad, he was observed on the platform of the station wearing a green cap, a brown overcoat, pink necktie, gray shoes, white gloves, and knee-breeches. Both of these incidents —if it is right to refer to them as incidents— happened in the early years of his reign; towards the close he was disposed to be a little less original.

Now, it is hardly likely that King George will be quite so much of a force in sartorial affairs as was his royal father, for the good reason that he does not think so much of dress, and is strongly disposed to be quite conventional in his attitude towards it; but one must hasten to add that, of course, His Majesty takes the utmost care at all times to be strictly correct in every detail, and his taste, while careful in its sobriety, is quite perfect. The King can do no wrong, so it follows that what the King wears must be correct and in the best fashion. But His Majesty is not disposed to take advantage of his high estate in this matter, and generally follows the lead of others; and the chief tailors of the West End will watch his appearances with rather less interest, not to say anxiety, than they did those of the first gentleman in the last reign. He has, of course, every variety of clothes for town wear, each kind for the most part being several times repeated; while for country wear, especially on the sporting side, his wardrobe is perhaps quite the equal of that of the late King. As is well known, however, His Majesty is a very keen sportsman in those pursuits which involve wandering over the moors and hills with a gun in his hand, and he displays more interest in the selection of his shooting-suits than he does perhaps in any others; while it may be added, as an interesting and pleasing circumstance, that he always exercises the utmost effort toward giving help to home industries in the matter of the cloths he selects, most of them being in the nature of homespun tweeds.

Then, as befits his strong naval interests and training, he has probably more naval uniforms than any other man. Indeed, the Kaiser is the only ruler who emulates him in this matter; for not only have these monarchs a very large wardrobe of uniforms for the naval and other maritime purposes of their own country, but each holds complimentary naval rank in foreign navies, and has complete sets of uniforms accordingly. Also, King George is honorary colonel in many foreign regiments, in addition to holding similar rank in several of our own. King Edward had no fewer than thirty-three such appointments; and if his successor has not as yet so many, it must be remembered that time and circumstances have so far hardly been adequate to allow of his completely filling the position occupied by the late monarch in these

matters. In the case of the chief foreign naval and military appointments, it may be mentioned that four uniforms—that is to say, full dress, undress, mess kit, and overcoat—are usually necessary. Then there are the full robes of the Knights of the Garter, of St Patrick, and of the Thistle; and His Majesty belongs to various home and foreign orders of chivalry, for each of which there are special collars and decorations.

Taking care of a kingly wardrobe of such proportions is naturally a very big business, and the two valets who have charge of it, acting under the guidance of the superintendent of the wardrobe, have enough to do in brushing, folding, and arranging the different items from time to time, and seeing that they are always properly pressed and ready for wear. It has been said of King George, as it was of the late King, that he never wears the same suit twice; and just as this was untrue of King Edward, it is considerably more so in the present case, His Majesty having a distinct partiality for certain clothes that have lost most of their newness, and sometimes gives them up reluctantly. On an average, perhaps from twenty to thirty suits of one kind and another are discarded in each year and their places taken by new ones. Some of the old suits are given away in quarters where they will be much appreciated for the service they will do as well as for the more obvious reason—which latter, as is known, would not be advertised. Such as are not given away in this manner are generally regarded as the perquisites of the valets.

A part of the King's apparel which receives the closest attention is his footwear, which is chiefly, if not entirely, made by a very eminent firm of boot and shoe makers in St James's Street, London. His Majesty has boots for most of his different uniforms, as well as walking boots and shoes, shooting-boots, and evening shoes in great variety. These are made from the very highest quality of selected material on specially modelled lasts; and such is the care that is exercised in the workmanship that as much as fourteen and fifteen shillings a pair is paid to a workman for doing nothing more than attaching the soles to the uppers.

HOW PIERRE LE GRAND TOOK THE SPANISH GALLEON.

By Commander E. Hamilton Currey, R.N.

SOON after the discovery of America, Pope Alexander the Sixth gave the whole of that continent to Spain, except Brazil, which he presented to Portugal. This is probably the most munificent gift on record, the present of a continent not being an everyday affair. As it did not belong to the Pope, we can admire his audacity as well as his generosity, and also the cool assurance of the Spanish and the Portuguese, who took the Roman Pontiff at his word, and assumed sovereign rights over the territories so kindly bestowed upon them. Very definite ideas prevailed in Spain at this period of the value of the discoveries of Amerigo Vespucci and Christopher Columbus. It hardly required the generosity of the Pope to convince contemporary Spaniards that the New World was a gold-mine to be exploited for the benefit of the Peninsula, and for her benefit alone. The attitude of the Pope thus chimed in usefully with the ideas of the laity, and accordingly an edict was issued from Madrid excluding not only all foreigners from access to the newly discovered land, but also all subjects of the Spanish Empire not of Spanish birth. Such a decree was foredoomed to failure. The English and the Dutch from the first treated it with contempt, and were very soon imitated by the French, with the result that the Spanish Main became a sort of battle-ground in which the only rule that was recognised was that of the strongest. During the seventeenth century, while the nations were nominally at peace, their subjects waged perpetual war upon one another in this corner of the earth, which was the resort of some of the most desperate characters from the Old World. It was certainly no place for the timid in which to adventure themselves, as at the beginning the Spaniards employed *guarda costas* with instructions 'to destroy all strange ships and to take no prisoners.'

In 1654 Jamaica was captured by Penn and Venables, and from that date until the Peace of Ryswick in 1697 the buccaneers, as the pirates of the Spanish Main came to be called, were at the height of their maleficent activity. Whatever blame, however, is to be meted out to these sea-rovers must be shared by all nationalities alike, as, twenty-nine years before, the English and French, owing to the increasing value of trade in these waters, planted a colony side by side in the island of St Kitts. This venture proved very successful, and the English also occupied the adjacent island of Nevis. In 1629 a Spanish fleet swooped down upon these now flourishing colonies and destroyed them utterly with fire and sword. When, therefore, the English acquired Jamaica and made of it a strong place of arms, reprisals were the order of the day.

The buccaneer was the product of his age, and derived his name from the French word *boucanier*, used to denominate the men who made a livelihood in the island of Hispaniola by killing the wild cattle which abounded, and curing the meat by the *boucan* process,

which consisted in laying it upon *boucans* (or gratings constructed of green sticks) and exposing it to the smoke of wood fed with fat, bones, and offal of the carcass, and trimmings of the hide. This work was the hardest imaginable, and none but the roughest and strongest of the old-time pioneers could stand the inevitable hardship involved. When, therefore, a piratical enterprise was afoot, with its promise of unlimited booty, who so handy for the work as the desperate hunters whose motto was ever, 'A short life and a merry one'?

In the days of which we speak the Spaniard was the enemy, and against him English, Dutch, and French combined; the buccaneers indulging in a sort of private war against the subjects of His Most Catholic Majesty. When that potentate complained of their depredations, the King of England replied 'that such men did not commit those acts of hostility and piracy as subjects of His Majesty, and therefore His Catholic Majesty might proceed against them as he thought fit.' The King of France said the same thing, and added 'that he had no fortress or castle in Hispaniola, neither did he receive one farthing of tribute therefrom.'

To the reputable, and disreputable, mariners who frequented the Spanish Main at this time there were added in 1661 a new class of colonist, as in that year powers were given to Justices of the Peace 'to dispose of felons condemned to death for small offences, single men and women found to be sturdy beggars, and loose, disorderly people, by sending them to the plantations.' About the same time proposals were made for better accommodating the plantations with servants, and for 'constituting an office for transporting thence vagrants, rogues, and all idle persons, felons, vagabonds, gipsies, and loose persons who remain here noxious and unprofitable.' John Style, a prominent inhabitant of Jamaica, writes to Secretary Lord Arlington on this subject with considerable emphasis. 'Why should not His Majesty,' he says, 'send out to a colony one family from each parish, as the Romans did—not your convict jail-birds or riotous persons rotten before they are sent forth, and at best idle and only fit for the mines?' In 1666 a resolution was passed in reference to the Scotch rebels which added considerably to the population of some of the colonies. All the Scotch rebel officers and ministers were ordered to be hanged; of the common sort one was hanged, one in ten forced to confession (whatever that might have meant), and the rest were sent to the plantations.

It will be seen from the foregoing that of desperate characters there were no lack from whom to choose; and the West Indies swarmed with felons, jail-birds, proscribed men, refugees, every sort of person, in fact, whom misconduct or ill-luck had banished from his native shores. These men could make their living in but very few ways; there was the calling of the mariner, and there was that of the *boucanier*, in both of which there was no chance but to obtain a bare living wage for an almost intolerable existence. Being what they were, and being where they were, is it to be wondered at that they flocked to the standard of the skull and cross-bones, the life beneath which flag, if it meant desperate toil and terrible danger, still offered the compensation of booty to be spent in that wild debauchery which was the only form of pleasure that they knew?

It is somewhat of a strain on the imagination to picture the lives led by the buccaneers. To us it is all so remote, so fantastic, the idea of men whose whole lives were passed in scenes of horror and bloodshed, who knew of no home save the stifling 'tween-decks of a piratical craft, who were bereft of kindred, whose frames were iron and whose hearts were as cold as chilled steel, whose recompense for all the hideous privations which they underwent was mad license which left them bankrupt in purse and shattered in health. Very naturally he who aspired to lead these wild spirits must have possessed some touch of greatness, some of that incommunicable gift of leadership which impresses itself upon his fellows. Stained as they were by crimes so horrible that the gorge rises at the very recital of them, we cannot for all that withhold some meed of admiration for the leaders of the buccaneers. Pierre le Grand, Alexandre, Montbars the Exterminator, Bartholomew Portuguez, Michael le Basque, Roche Braziliano, Lewis Scott (who took Campeachy), John Davis (who plundered Nicaragua), Van Horn, Gramont de Graaf (who in 1683 sacked Vera Cruz), Mansfeldt (who in 1664 designed the forming of an independent Buccaneer State with a government and a flag of its own), and, last and greatest of all, Sir Henry Morgan (who took Panamá), were all men who, in a time of turbulence unparalleled, rose to the summit of the piratical hierarchy. Their names alone serve to show us of what diverse nationality they were; and if they differed, as all men must differ, they were alike in that one supreme attribute of courage which counted for more than aught else in the times in which they lived.

John Esquemeling was a servant of the West India Company of France, and as such was sold to the Governor of Tortuga, as was apparently the custom of the day. He set sail from Havre de Grace in the year 1666, and found that he had decidedly not bettered his condition, as he was treated with so much cruelty by his new master that he fell dangerously ill. Fearing that he would die, the Governor sold him to the surgeon for seventy pieces of eight. He recovered, and was given his liberty on condition of his paying one hundred pieces of eight when he was in a position to do so. Being now at

liberty, he decided, he says, 'to enter with the wicked order of the pirates or robbers of the sea.' This he did, and remained with them until 1672. This circumstance would have been unimportant had it not been for the fact that this obscure Dutch pirate was a man of education, with a considerable literary gift. He wrote his experiences in Dutch, and his book was translated into English, French, Spanish, and Portuguese. The preface by the English translator is decidedly quaint, as his admiration for the feats of the buccaneers is by no means tempered by horror at their atrocities. He says: 'We have here half the book filled with the unparalleled if not inimitable adventures and heroic exploits of our own countrymen and relations whose undaunted and exemplary courage when called upon by king and country we ought to emulate. The author, though a stranger to our nation, yet with that candour and fidelity has recorded our actions as to render the metal of our English valour to be the more believed and feared abroad than if these things had been divulged by ourselves at home. From hence, peradventure, will other nations learn that the English people are of their genius more inclinable to act than to write, seeing they as well as we have lived unacquainted with these actions of our nation until such time as a foreign author to our country came to tell them.' Considering the fact that the buccaneers and all their ways and works had been specifically disavowed by the King of England, the touch about 'when called upon by their king and country' savours decidedly of the comic.

The pirates of the Spanish Main proceeded on early Christian principles in one respect; that is to say, they had all things in common, and all salaries and remunerations were decided upon before setting out on a cruise. The captain, shipwright, and surgeon all enjoyed fixed salaries; the crew were paid *pro rata* according to the success of the enterprise. There was also a graduated scale for all wounds and injuries received, which was as follows: right arm, six hundred pieces of eight or six slaves; right leg, five hundred pieces of eight or five slaves; left arm, the same; left leg, four hundred pieces of eight or four slaves; one eye, one hundred pieces of eight or one slave; finger, the same—all to be taken out of the common stock gained by piracy. The division was made in shares: the captain received six times the share of a seaman, the other officers in proportion to the importance of their services. The value of the piece of eight varied; but we find in Pepys's *Diary* for May 11, 1663, that he records his disputing with Sir G. Carteret as to whether the piece of eight was worth four shillings and fivepence or four shillings and threepence. Speaking of the money current in these latitudes at this time, we find that the pistole was worth one pound three shillings and ninepence, and the doubloon was worth two pistoles, or two pounds six shillings and eightpence.

That there was hatred deep and bitter between the Spaniards and the English in the seventeenth century in the West Indies is undeniable, the embers of the flames kindled by Philip the Second of Spain and his Invincible Armada still blazed up fiercely at the least provocation; but the warfare between Spaniard and Englishman at this date and in these latitudes had nothing in it of a national character, except in so far as the French and the English coalesced to despoil the Spaniard. In the history of the buccaneers, the Spaniard was as a rule fighting for what he had got; the Frenchman and the Englishman were fighting to despoil him of what they considered to be his ill-gotten gains. There is one thing which stands out prominently in the annals of the buccaneers, which is that the feats they performed were so incredible that it is lucky they have been set down by eye-witnesses, or no one would be found to give them credit.

Somewhere about the middle of the seventeenth century—the exact date cannot be given—there floated on the bosom of the waters off Cape Tiburon, on the western shore of the island of Hispaniola, a great Spanish galleon, having on board a vice-admiral of Spain. The tropic night had fallen, and in the carved and gilded saloon underneath her poop the vice-admiral, with a company of officers and highly placed persons, sat at his wine. Some played cards, others speculated vaguely on the length of the voyage just begun; everything on board indicated the peace and security likely to obtain on a great ship which flew the proud banner of Leon and of Castille. She carried three tiers of guns, so mounted that they could be fired right ahead and astern as well as on the broadside, and her company numbered at least one hundred and fifty men. It was a dark but starlight night, with a rhythmic swell which caused the vessel to roll slightly; as she did so the heavy yards groaned in their slings, and the hull was filled with the strange, creaking noises so well known to those who have sailed the seas in ships built of wood. If there were a watch on deck that night, they were asleep; for what harm could come to them in a stark calm in sight of their own island of Hispaniola? They had reckoned without the sea-wolves, who in those days had made but few demonstrations of their power, and whose exploits so far had been confined to the capture of unfortunate mariners who were in no case to offer a stout defence; these had had their ships rifled, and they themselves had been made to walk the plank; but the fate of such as they did not disturb the vice-admiral at his bottle or the card-players at their game.

Pierre le Grand had been out for ten days; he had sailed in an undecked boat from an obscure coast port with the object of some safe and easy capture which would mean present wealth to

himself and the twenty-eight men and the surgeon by whom he was accompanied; but one blazing day had followed another, and no sail had risen above the horizon to gladden the straining eyes of the slowly famishing crew; for they had but a bare six days' provisions aboard when they started, half-rations had given place to quarter ones, and now, many, many miles from port, grim starvation stared them full in the face. The last drop of water on board had been served out just at sunset, and as this was being done the great Spanish galleon hove in sight. Pierre knew her for the *Madre de Dios*, and that she was conveying great wealth to Spain; but he was also aware that an attack upon her would be almost, if not quite, the act of a madman. Desperation, however, is the mother of mad deeds, and the case was desperate indeed. Long before Pierre and his crew could hope to reach any port friendly enough in which to revictual they would be dead of hunger; another day and they would have lost their senses from thirst. There was but one decision to take, and Pierre—veritably 'le Grand' on this occasion—took the bold course.

Far away in the east a sickle moon hung in the sky over the distant peaks of Hispaniola; but it was too faint even to temper the darkness of the tropic night. Crouched over the tiller of his boat, Pierre conferred long and anxiously with the surgeon, while his men rested idly on their oars.

At last the muttered colloquy ended, and Pierre spoke aloud: 'Is it not that we starve, messieurs?'

There came an answering growl of assent.

'We perish with thirst. Is not that so?'

Again the hoarse, indistinguishable murmur.

'*Vaya*, there is but one way out of troubles—we must take yonder galleon.'

There was a gasp of stupefied astonishment, as indeed there might well be.

'She carries three tiers of guns,' said one.

'There are on board of her one hundred and fifty men at the least,' wailed another.

'We shall be food for the Inquisition,' objected a third.

'Silence!' came the strong voice of the master-spirit, 'and attend to me. All that you have said is true; it may be even less than the truth. But what did I, Pierre, promise to you all when we set out?—that I would lead you where great booty was to be had. But did I not say from the first that I wanted none who were not prepared to fight for that which they coveted? Is not this truth?'

There was a deep-throated growl of assent.

'Therefore,' the voice proceeded emphatically from the dark, 'choose your fate: either to make one great effort and take that admiral's ship, or die—as ye otherwise will die—of thirst and hunger. I have said.'

There fell a silence as of the grave, of that grave which seemed to yawn so widely for these desperadoes whichever way they might turn.

And then one spoke. 'I have no more holes left in my belt; they are all taken up. Also, I would give a handful of doubloons for a drink of muddy water; there is wine on board the galleon, and I—I would sooner die by the pistol or the knife than rot in this accursed boat.'

'And you others?' came the voice from the stern-sheets.

'We also,' came the response.

Pierre drew a deep breath of relief; he knew that, could he but string them up to the fighting-pitch, in their present desperate plight, there were no odds that would stop them. They fought to escape the Inquisition, the tortures, and the dungeons of Spain. He made no outward manifestation of feeling, however, but gave an order that the oars should be muffled. This was instantly obeyed, some of the men tearing up their shirts for the purpose, remarking that either they would never want shirt more or else the crew of the galleon could supply all deficiencies.

Slowly and rhythmically did the galleon swing back and forth on the oily, windless swell; the masts creaked in their steps; the heavy yards ground noisily in their slings; the thick hempen rigging slackened and tautened as she rolled. Under her high forecastle the watch slept, and on the poop-ladder the officer on watch nodded and dozed.

Nearer and nearer crept the sea-wolves in their miserable boat with which to combat this monster of the deep; very quietly they rowed, almost holding their breath, for Pierre wanted them fresh and strong for that mad rush over the bulwarks by which alone they could hope for surprise and success. In the carved and gilded cabin the admiral and his company drank their wine and played their game at cards with that high seriousness becoming to such noble *caballeros*.

Hernando Cortes, as we all know, burnt his ships in order that none among his company should have any means of escape should they so desire. It is unlikely that Pierre le Grand had ever heard of the conqueror of Mexico, for book-learning was far to seek among the desperadoes of the Spanish Main; therefore the action which he now took is probably free from the odious charge of plagiarism. The boat was nearing her antagonist now, and Pierre again held a muttered colloquy with the surgeon, who was a man of gigantic size and strength, and as the leader ceased speaking the surgeon stood up in the stern-sheets of the boat. In one hand he held a huge wooden mallet.

'Listen once more, my children,' came the strong voice of Pierre. 'To-night no man shall go back.' He half-turned his head to the surgeon, and uttered one more word: 'Strike!'

The surgeon hove the mallet high above his head, and then through the darkness came the sound of a dull, rending crash; with one blow he had stoved the boat's planking at the water-line. Next moment Pierre had stuffed his jacket into the hole, through which the water was already pouring. Now only a short hundred yards separated the boat from the galleon, but such was their amazing good-fortune that even yet they were undiscovered. With oars double-banked, the frail and sinking craft tore through the intervening space as fast as human muscle could send her. Pierre had deferred his final stroke, that of disabling the boat, till the last minute. There could be no repining now; all that remained for the sea-wolves was to conquer or die.

They actually got alongside and were over the bulwarks before any one was aware of their vicinity; indeed, so unexpected was the attack that had they dropped literally from the skies the surprise could not have been more complete. The surgeon, still grasping the mallet, was first over the side, and alighted almost at the feet of the officer on watch, who dozed on the ladder leading to the poop. The mallet swung high in the air, and the next moment the brains of the luckless man were scattered over the quarter-deck. The watch on deck, roused from their slumbers by the ferocious yells of the pirates, stumbled forward to inevitable death; unarmed, they fell before the knives and pistols of their pitiless foes, and in less time than it takes to tell the tale the upper deck was converted into a shambles. More sleep-dazed men came struggling to the main-hatch, to be met with knife and sword, with pistol and club; they were beaten down from whence they came, falling in ghastly heaps at the foot of the companion. Then the hatch itself was found, and they were imprisoned below. An attempt to rush the fore-hatch met with a similar repulse from the deck, and then that avenue of death was also closed from above. Into the carved and gilded cabin of the admiral dashed Pierre, with his faithful surgeon and three others at his heels.

At an outrage so unparalleled as for any one to enter these sacred precincts uninvited and unannounced, the captain rose, filled with cold fury. 'By all the saints,' he began, 'what is the meaning of this?'

But the pistol which Pierre held in his left hand was fired full in his face at a foot's range, and his all but headless corpse fell over the card-table. All started to their feet, but they were covered by the pistols of their assailants, and one by one recognised that their case was hopeless. They were led on deck and pinioned. The sea-wolves were victorious; they had taken the galleon of Spain, a feat which would be absolutely incredible if it did not happen to be true.

In all the blood-stained annals of the Spanish Main this feat of arms stands by itself; not even the capture of Panamá by Sir Henry Morgan trenches so closely on the realm of the impossible, and he who carried it out is known as Pierre le Grand.

Among the buccaneers of this period we can as a rule trace a great similarity. They fought for booty and slaves; and if they returned in triumph, laden with spoil, the doubloons and pieces of eight were spent in reckless and violent debauchery which left them, as we have said before, bankrupt in health and pocket. But of such folly as this Pierre le Grand was incapable. All we know of him in the future is that he landed as many of the Spaniards as he could, retaining only sufficient on board to assist him and his men to work the galleon home to European waters. These he reached in safety, and he then, as far as is known, abandoned the profession of piracy and settled down to live a respectable life. We who live in the comfortable security of the most peaceful of centuries have no sympathy with the methods, the ways, and the works of the adventurers of that bygone age; but even we can admit that if ever a bold buccaneer was justified of his prey, it was the man of whom we have written; and that it was not altogether inappropriate that he should have come down to us throughout the ages under the pseudonym of Pierre le Grand.

ALMOND-BLOSSOM.

SURELY it is, to those who love her best,
The long year's loveliest hour
When, down in sheltered valleys of the west,
The almond bursts to flower.

One day agone, and from the sky's chill gray
Spring's promise gave no sign,
Whilst every wind-swept hilltop bade the day
Its secret hope resign.

And yet to-day—ah, miracle of grace!—
Behold a world made new,
A happy countryside which lifts its face
To laughing skies of blue.

The cry of lambs, which came from off the hills
With plaintive notes of pain,
To-day with rapture every valley fills,
Voice answering voice again.

See where it flushes on the almond-bough—
Rejoice, O world, and see!—
The fair pink blossom which is earnest now
Of all that is to be:

Flower, fruit, and foliage, all the garden bears
Of flame and scent and hue,
The blossomed coronal which summer wears—
The almond shows it you,

Just as you read within a young child's eyes
The promise which they hold,
And see outspread far scenes and glittering skies,
The coming days of gold.

ANDREW MARVELL.

By E. Beresford Chancellor.

AMONG the names of English worthies which would seem to hold on to fame with an ever-loosening grasp is that of Andrew Marvell, poet and satirist, a man who in his day attracted the notice of his contemporaries in a very marked degree, but who in these later times is known —where he is known at all—chiefly by the euphonious charm of his name. Born in 1621, he died in 1678, so that his not uneventful life was passed during a period which was perhaps the most eventful in English annals. Indeed, he seems to have been one of those whose natural levity and sprightliness were sobered by contact with circumstances in which there was either too little or too much of both.

During his college days (he was at Trinity, Cambridge), Marvell, whose natural abilities had already declared themselves, was destined to become the objective of Jesuitical intrigue, and is even said to have been inveigled to London by the emissaries of that Church, which sought to recruit its ranks from among the ablest of the rising generation. That he escaped their intrigues is well known; but, as one of the writers who have dealt with his career puts it, 'he seems to have been beset by more formidable enemies in his own bosom;' which, being interpreted, means that he neglected his studies and gave so much license to his desires that he was regarded as having forfeited the consideration of his college, where, however, he is said to have taken his B.A. degree in 1638.

A period of travel followed, during which he visited Rome, and for the first time met Milton, then residing in the Eternal City, whose life-long friend he was to become. In the intervals of sight-seeing Marvell began his career as a satirist, and from this period date his attacks on Flecknoe and that Lancelot Joseph de Maniban who was one of the earliest to attempt the delineation of character from handwriting. But more serious duties were in store for Marvell; and, as a result of Milton's efforts on his behalf, he became assistant Latin secretary to Bradshaw, whose notoriety as the presiding judge at the trial of Charles the First has outlived his undoubted capability as a lawyer. His new post brought Marvell under the notice of Cromwell, and when a tutor was required for Dutton, the Protector's nephew and ward, Marvell was selected for the post; four years later he attained the more important position of assistant Latin secretary, with Milton, to Cromwell. It would have been strange, considering how closely his lot was thrown in with the politics of the time, had not Marvell looked to the House of Commons as a fresh field for his activity; and, in effect, he sought the suffrages of Hull, which town he represented from soon after Cromwell's death to the end of his own life, a period of nearly twenty years. His duties must have been no light ones, for we are told that he was accustomed regularly to send his constituents, every post-night during the sitting of the House, an account of its proceedings, together with such comments as might be illuminative to those whom he represented; in a word, he took his duties seriously, and when it is added that he kept a sharp eye on local interests and held himself apart from faction, enough will have been said to show that he was a member of whom his constituents might well be proud. It is interesting to know that Marvell was one of the last of those who received payment for their services in the House, the rate being two shillings a day for borough, and four shillings for county, members.

In 1663 he again left England, this time as secretary to the embassy, headed by Lord Carlisle, which visited Russia, Sweden, and Denmark; but this seems to have been the only occasion on which his parliamentary duties were seriously interfered with, as for the remainder of his life he was a close and industrious parliamentarian. The letters which Marvell wrote to his constituents afford valuable and interesting, often amusing, sidelights on the course of parliamentary procedure and those unforeseen incidents to which the contending opinions of many men invariably give rise. Disputes between the two Houses were of frequent occurrence; the levying of grinding taxes, the upsetting of trade and commerce, the introduction of trivial and often absurd measures—these were then, as now, matters of grave concern to those who had the welfare of the nation at heart and were not moved by selfish considerations. Marvell was one of those who stood for constitutional government, and he has been identified with Cromwell's drastic

[*All Rights Reserved.*]

upheaval because he was the friend of Milton, and saw in the Protector the one vital force able to quell disorder and anarchy, rather than because he was a willing witness to the dethronement and execution of the king. Indeed, he was essentially monarchic in feeling, and had Charles acted constitutionally Marvell would have remained one of his firmest supporters. The point is worth insisting upon, because events caused Marvell to take a side with which he was only in sympathy in so far as that side stood for the evocation of law and order out of disorder and lawlessness. That he was looked upon unfavourably by the Court is natural enough; under such a condition of social life as then obtained an honest and upright man could hardly have been regarded by that dissolute society in any other way than one of fear and uncertainty; obviously no upright or honest man would have wished to be otherwise regarded. But if Danby feared him, Rupert was his friend, and even Charles the Second showed him as much respect as it was in his easy-going nature to show any one. The famous interview in which the Minister, on behalf of his master, tried to bribe the patriot is too well known to need repetition (it has, too, been made the subject of a well-known picture). It once and for all showed the Court that it was beyond even its power to soften a poor man by golden gifts, as the Court had long before learnt that it was useless to attempt bullying one who was both single-minded and fearless.

Marvell's works are to-day read only by the curious; even the names of them are strange in the ears of the multitude. The one on which his fame chiefly rests is the *Rehearsal Transpros'd*, which had its origin in his controversy with Parker, afterwards Bishop of Oxford, in 1672. Marvell had for his opponent a man whose intolerance and bigotry were notable even in an age when bigotry and intolerance were carried to extreme lengths; he afforded fair game for the poet's invective, and Marvell, who hit hard with a biting satire and an incisive parry and thrust, found in the Churchman, whom Burnet the broad-minded and Father Petre the Jesuit regarded with equal diffidence and disfavour, an easy if not a worthy prey. Parker emerged from Marvell's hands such a ridiculous figure that even the Court was perforce obliged to acknowledge it, and to join in the ridicule of his enemy.

Four years later Marvell in his *Mr Smirke; or, the Divine in Mode*, tilted no less successfully against Dr Turner, who had attacked Croft, Bishop of Hereford, whose *The Naked Truth; or, the True State of the Primitive Church*, impartially enjoined forbearance and charity on both sides, a doctrine hardly likely to be pleasing to the intolerance then rampant in high ecclesiastical places. Marvell's judgment on Croft's work may be summed up in this beautiful passage: 'It is a book of that kind that no Christian can peruse it without wishing himself to have been the author, and almost imagining that he is so; the conceptions therein being of so eternal an idea that every man finds it to be but a copy of the original in his own mind.'

One other controversial piece, emanating, as has been well said, from Marvell's disinterested love of fair-play, deserves mention. This was his defence of John Howe the Nonconformist from the unfair attacks of various opponents. It is said to be very scarce, and is perhaps chiefly important as further indicating the temperament of its author, which urged him, like some literary knight-errant, to go forth and defend those who were in any way afflicted or distressed.

As a poet, Marvell is chiefly characterised by his love of nature, by a classic delicacy of presentment, and by a certain measure of that wit which so appealed to the gentle Elia; but his verse exhibits many of those conceits which are to be found so liberally scattered throughout the work of the poets of this period. Some of his best poems have been embalmed in the *Golden Treasury*, where 'Thoughts in a Garden,' one of his most charming and freshest efforts, is to be found. In 'The Fair Singer,' 'The Emigrants,' and the 'Coronet' may be found enshrined many tender lines and beautiful thoughts; but Marvell's genius can hardly be said to have succeeded in sustained effort, and probably his most famous and pathetic lines were those he wrote on Charles the First, which have such a haunting beauty:

> While round the armèd bands
> Did clap their bloody hands,
> He nothing common did or mean
> Upon that memorable scene;
> But with his keener eye
> The axe's edge did try;
> Nor call'd the gods with vulgar spite
> To vindicate his helpless right,
> But bow'd his comely head
> Down, as upon a bed;

while Tennyson, as we know on Fitzgerald's authority, considered as 'sublime' the two lines in his 'Coy Mistress' running:

> But at my back I always hear
> Time's wingèd chariot hurrying near.

Marvell's name does not enter so largely into contemporary literature as one might suppose. Evelyn says nothing about him, and Pepys, in a single allusion, merely remarks on one of his satires that it 'made my heart ake to read, it being so sharp and so true.' His close connection and friendship with Milton, of course, did no little to add to his fame; but when Landor wished to give us an imaginary conversation between the two men he showed them deep in a discussion on the art and structure of comedy; and not the burning questions of the times, but 'the proper and requisite unities' formed the staple of their discourse.

As a man, Marvell was characterised by a deep-seated, though by no means a stern or severe, morality; his integrity earned him the

name of the 'British Aristides.' When he saw sham and falseness he hit hard at them; and the fact that he was not always delicate or restrained in controversy (as he always was in his poetical effusions) is perhaps rather to be traced to the period in which he lived than to his own character, although his passionate vehemence in the cause of right and justice would in any age have made him a fearless and redoubtable satirist. Mr Rogers, in an essay on Marvell in the *Edinburgh* for January 1844, says of him that 'amidst corruption perfectly unparalleled he still continued untainted. . . . The integrity and patriotism which distinguished him in his relations to the Court also marked all his public conduct. . . . He seems to have been as amiable in his private as he was estimable in his public character.' And these admirably chosen words may be regarded as an essentially true epitaph.

The most complete edition of Marvell's works was that edited by Dr Grosart, in four volumes, during the years 1872–74; and Mr G. A. Aitken made a carefully chosen selection in 1892, and again in 1898. The earlier editions comprise the folio issued in 1681, to which a preface was contributed by his widow; while nearly a hundred years later—to be precise, in 1776—another edition was published by Captain Thompson. In 1832 John Dove brought out his *Life of Andrew Marvell, the Celebrated Patriot; with Extracts and Selections from his Prose and Poetical Works*, a duodecimo volume on which Henry Rogers based the article already referred to. Many of Marvell's satires which had been circulated in manuscript were collected in *Poems on Affairs of State*, which was first printed in 1689, but it is on his lyrical poems, many of which contain such tender beauties, that his fame as a poet chiefly rests.

PETER AND JANE.

CHAPTER XIV.—*continued.*

DUNBAR and the *comisario* had now put a long distance between themselves and the *estancia* house. The silence of the hot night settled down with its palpable, mysterious weight upon the earth. The stars looked farther away than usual in the fathomless vault of heaven, and the world slumbered under the burden of the aching solitude of the night. Some insects chirped outside the illuminated window-pane, as though they would fain have left the large and solitary splendour outside and sought company in the humble room. Time passed noiselessly, undisturbed even by the ticking of a clock. To have stirred in a chair would have seemed to break some tangible spell. A dog would have been better company than a man at the moment, because less influenced by the mysterious night and the silence and the intensity of thought which fixes itself relentlessly in some particular cell of the brain until it becomes fevered and aches horribly.

A little puff of cooler air began to blow over the baked and withered camp; but the room where the lamp was burning had become intolerably hot, and the mosquitoes, which had been contemplating the wall thoughtfully throughout the day, began to buzz about and to sing in the ears of the two persons who sat there.

'Curse these mosquitoes!' said Peter, and his voice broke the silence of the lonely house oddly. He and Toffy had not spoken since Ross left the room, and had not stirred from their chairs. But now the feeling of tension seemed to be broken. Toffy began to fidget with some things on a little table, and opened, without intention, a carved cedar-wood workbox which had remained undisturbed until then. He found a little knitted silk sock inside the box only half-finished, and with the knitting-needles still in it, and he closed the lid again softly.

Peter walked into the corridor and looked into the silver night. There was a mist rising down by the river, and the feeling of coolness in the air increased. He leaned against a wooden framework of wire netting and laid his head on his hands for a moment; then he came back to the drawing-room. 'Do you believe it?' he said suddenly and sharply.

'I suppose it's true,' said Toffy. 'God help us, Peter; this is a queer world!'

'If it were any one else but Purvis,' said Peter with a groan. He had begun to walk restlessly up and down, making his tramp as long as possible by extending it into the corridor. 'And then there is this to be said, Toffy,' he said, beginning to speak at the point to which his thoughts had taken him—'there is this to be said: suppose one could get Purvis out of this hole, Dunbar is waiting for him at Taco. He will be tried for the affair of the *Rosana* and other things besides, and if he is not hanged he will spend the next few years of his life in prison. It is an intolerable business,' he said, 'and I am not going to move in the matter. One can stand most things, but not being mixed up in a murder case.'

He walked out into the corridor and sat down heavily in one of the deck-chairs. There was a tumult of thought surging through his mind, and sometimes one thing was uppermost, sometimes another.

If it were possible to get down the river in a boat to the steamer, there would of course be a chance of bringing Purvis back before it

was light; but if he did this he would have to start within the hour. The nights were short.

But then, again, he would be compounding a felony; though in the case of brothers such a law was generally put aside, whatever the results might be.

There was very little chance of an escape. Every one's hand was against Purvis now, and there was the vaguest possibility that he could escape to England. The heir to Bowshott would be doing a life sentence in prison, and that, after all, was the best place for him.

But then he, Peter, was the next heir. That was the crux of the whole thing—he, Peter Ogilvie, was the next heir. If anything were to happen to his brother he would inherit everything.

A man in prison, for instance, could not be the inheritor of anything. Well, his brother must take his chance down there on the steamer. He had been in tight places before now, and no one knew better how to get out of them. He had some money at his command. Let things take their chance.

Yet if Purvis did not inherit, he, Peter, was the next heir.

That was the thought that knocked at him, to the exclusion of nearly everything else: he would benefit by his brother's disgrace. Bowshott would be his, and the place in the Highlands, and Jane and he would be married.

He paused for a moment in his feverish survey of events. To think of Jane was to have before one's mind a picture of something absolutely fair and straightforward. A high standard of honour was not difficult to her; it came as naturally as speaking in a well-bred manner or walking with that air of grace and distinction which was characteristic of her. Such women do not need to preach, and seldom do so. Their lives suggest a torch held high above the common mirk of life. Peter had never imagined for a moment that he was in the least degree good enough for her; but, all the same, he meant to fight for all he was worth for every single good thing that he could get for her.

His brother had a son. His nephew was in the house now! Peter laughed out loud. The boy had had a Spanish mother; Purvis's present wife was an English woman at Rosario.

Peter reflected with a sense of disgust that, he and Purvis being fair, it might even be said they resembled each other in appearance, and he wondered if he would ever hold up his head again now that he knew that the same blood ran in the veins of both, and that this murderer with his blood-stained hands was his brother. And what in Heaven's name was the use of rescuing a man from one difficulty when he would fall into something much worse the next?

Finally, there was nothing for it but to remain inactive, and let Purvis escape if he could, but to do nothing to help him. Time was getting on now; another half-hour and it would be too late to start.

Perhaps the real difficulty resolved itself round Jane. Jane, as a matter of fact, had taken up her position quite close to Peter Ogilvie this evening in the dark of the tropical night. There were probably devils on either side of him, but Jane was certainly there. She looked very beautiful, and there was not a line in her face which did not suggest something fair and honest and of good worth.

But suppose the man turned out to be an impostor after all? Then Dunbar had better treat with him. The chain of evidence was pretty strong, but there might be a break in it.

Peter could not go alone down the river; Ross and Toffy and Hopwood would have to come too, to man the four-oared boat; and some one would have to steer, because the river was dangerous for navigation and full of sandbanks and holes. Why should he involve his friends in such an expedition to save a man who had sneaked off from a boat and left his friends to perish, and shot in cold blood the men who had rowed him to safety?

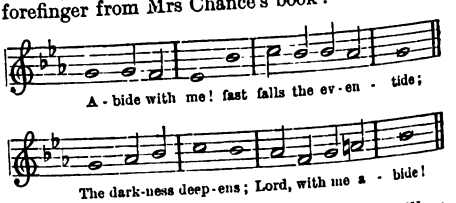
Before God, he was not going to touch the man, nor have anything to do with him!

Half-an-hour had passed. In twenty minutes it would be too late to start.

Jane drew a little nearer, and just then Toffy laid down the book which he had been reading and strolled about the room. Perhaps he wanted to show Peter that he was still there and awake, and in some way to comfort him by his presence, for he sat down by Mrs Chance's piano and picked out a tune with one of his fingers.

The devils beside Peter became more imperative and drew up closer, and told him that it was his own sense of honour that made him loathe his reputed brother and turn from him in disgust. He said that the letter that had reached him was all part of Purvis's horrible sensationalism and his lies, and that no earthly notice should be taken of it; also, that it would be sheer madness to risk his own life and his friends' for this contemptible fellow. Jane, on the other side—possibly an angel, but to the ordinary mind merely a very handsome English girl—stood there saying nothing, but looking beautiful.

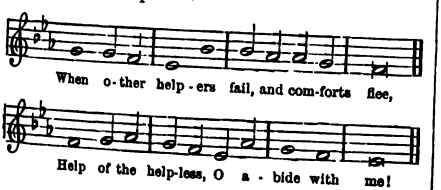
Toffy continued to pick out the tune with his forefinger from Mrs Chance's book:



It all came before him in a flash: the village church, and the swinging oil-lamps; he and

Jane together in Miss Abingdon's pew, and Mrs Wrottesley playing the old hymn-tunes on the little organ. He could not remember ever attending very particularly to the evening service. He used to follow it in a very small Prayer-book, and it was quite sufficient for him that Jane was with him. He had never been a religious man in the ordinary sense of the word. He had wished with all his heart, when his mother died, that he had known more about sacred things, but they had never seemed a necessary part of his life. He knew the code of an English gentleman, and that code was a high one. The youngsters in the regiment knew that he was as straight as they make 'em; but he had never inflicted advice or had a moment's serious conversation with one of them.

Another ten minutes had passed, and left only five minutes to spare; but Jane was smiling a little, and Toffy was fingering out quavering notes on the old piano:



Life seemed to get bigger as he listened. There were no such things as difficulties. One just had to know what one ought to do, and then to try to do it. No man must pit himself against a mean mind, and act meanly by it. Each had his own work to do, and what other men did or left undone was their own business. His brother was in a mess, and he had to help him out of it whether he deserved it or no; not weighing his merit, but pardoning his offences and just helping him in his need. The glories of life might fade away as the old hymn said, or they might last; but all that each man had to do so long as he remained here was to do justly, and love mercy, and walk humbly with his God.

The angel and the devils—if they existed at all—fled away and left one solitary man standing alone, fighting for the sake of honour and clean hands.

The clock struck ten, and the time was up.

Peter went inside and laid his hand on Toffy's shoulder. 'Let's start,' he said, 'if you are ready.'

'All right,' said Toffy, shutting the piano. 'I'll go and get Ross.'

They were in the boat now, slipping down the stream in the dark. The current in the river was strong here, and the boat glided rapidly between the banks. There was hardly any necessity for rowing. Christopherson sat in the stern with the tiller-ropes in his hands, and Peter reserved his strength for the moment when they should get to the broader part of the river where the stream did not race as it raced now. On their way back they would, of course, avoid the upper reaches, and would land lower down when they had their man well away from his own place. Peter rowed stroke, and Hopwood and Ross rowed numbers one and two. The steering probably was the most difficult part of the business, especially in the present state of the river, and any moment they might go aground or get into some eddy which might turn the bow of the boat and land them in the bank. Rowing was still easy, and Peter was husbanding every ounce of his strength for the pull home. None of the men spoke as the boat slipped down between the banks of dry mud on either side of the river. Some reeds whispered by the shore, and a startled bird woke now and then and flew screaming away. The moon shone fitfully sometimes, but for the most part the night was dark, and the darkness increased towards midnight. Once or twice the breeze carried the intoxicating smell of flowers from the river-bank. It was difficult for Toffy, although he had been down the river many times, to know exactly his bearings. They passed a little settlement on their starboard-hand, and saw a few lights burning in the houses.

'That must be Lara's house,' said Peter. 'We will land here on our way back, and get some horses and ride over to the *estancia* in the morning.'

The settlement was the last place on the river where Purvis's steamer plied, and there was a small jetty piled with wheat waiting to be taken away. Here the river was broader and much shallower, with stakes of wood standing up at regular intervals to show the passage which the little steamer should take.

'We should not be far from La Dorada now,' said Toffy, steering between the lines of stakes; 'but I can't see any signs of the steamer in this blackness.'

In the daytime the river was a pale mud-colour, and very thick and dirty-looking. The moon came out for a moment and showed it like a silver ribbon between the gray banks.

'Easy all!' said Toffy, sniffing the air. 'We must be near the canning-factory at La Dorada.'

The horrible smell of the slaughter-house was borne to them on the river, and there were some big corrals close by the water, and a small wharf.

'It reminds me,' thought Toffy, 'of the beastly beef-tea which I have had to drink all my life.'

'Good heavens,' cried Ross, 'they are firing the wharf! Purvis's chances are small if this is their game.'

There was not very much inflammable stuff at hand; the wood of the wharf kindled easily, but the wheat burned sullenly and sent up gray volumes of smoke.

'Steer under the bank,' said Peter. 'We don't want to be seen.'

Toffy steered the boat as near the shore as the mud would allow; and as the wood of the wharf burned more brightly he could see some men running to and fro confusedly every few minutes, and then making off farther down the river.

'They'll fire the steamer next!' said Peter, and then bent to his oar, and the boat swung away into the middle of the stream again.

The darkness seemed to increase in depth before the dawn; it was baffling in its intensity, and seemed to press close.

'Way enough!' sang out Toffy, for quite unexpectedly the little steamer, tied to a stake in mid-stream, loomed up suddenly before them. The men shipped their oars with precision, and Toffy caught hold of one of the fender-ropes.

'Are you there?' he called up to the deck from the impenetrable darkness.

As he spoke Purvis appeared at the top of the little gangway, dressed in his clerkly suit and bowler hat.

'You are just in time,' he said in his thin, high voice, without a trace of excitement in it. 'When the light dawns they will find their boats; and even now we may have to hasten.'

'Get on board,' said Ross roughly, 'and don't waste time!'

'I can't sink my steamer in this shallow part of the river,' said Purvis gently, 'and I haven't the means of blowing her up; but I will now go below and overturn the lamp in my cabin, and the boat and all that is in it will not be very long in being consumed.'

'Stop that lunatic!' yelled Ross, as Purvis turned to descend into the cabin. 'There's a boat coming up; I can hear the oars distinctly behind us. We'll be overtaken if there's a minute's delay!'

Peter, who was next the gangway, sprang on board the steamer and stumbled down the companion in the dark.

'Purvis,' he shouted, 'you'll be shot in cold blood yet if you don't look out!'

Purvis had collected a few odds and ends and laid them on a pile of shavings in the middle of the cabin; the oil-lamp with which he was to ignite the pile was in his hand.

On the top of the pile Peter saw a large tin despatch-case inscribed with his mother's name.

'Hullo!' he said quietly; 'I think I'll take this.'

For a moment he imagined that Purvis's hand moved with suspicious suddenness towards his revolver-pocket. In the next he had run up the companion staircase and swung himself into the boat, and Peter jumped into his place as the sound of rowing and the splash of oars were heard behind him. Toffy rowed the bow-oar now; and Purvis, who knew every turn of the river, took the tiller-ropes.

'I can't row,' he said, in his plaintive voice, 'but I can steer better than any of you.'

The man's composed and unruffled serenity was still undisturbed although the rhythmic beat of oars behind them was growing nearer and nearer, and the creaking of the leather in the rowlocks could be heard distinctly.

'I have a revolver,' said Purvis, 'and dawn is not yet quite upon us.'

The boat had still the start of the other, and the darkness helped them. Purvis knew every yard of the river, and could have steered in the thickness of a London fog. His pale eyes seemed to have something in them of the quality of a cat's as he peered through the dense gloom and guided the boat unerringly.

There came a faint light on the surface of the water. They could dimly see the stakes in the river, and could hear the beat of the oars in their wake. It was a race for the Italian settlement, where they would be safe, and where the other boat, seeing the lights from the houses, would probably fall behind.

Peter had rowed stroke in the Eton boat, but Toffy had always been too delicate to be a strong rower; the other men had splendid staying-power, but no particular skill. Still, Ross knew Peter's stroke, and the steering was faultless. Not a yard of way was lost on their long chase, and as the four rowers warmed to their work the excitement of it prevailed over every other thought. Purvis himself and all his meannesses were forgotten. It was a race, and that was all, and four men's hearts leapt to it.

The other boat seemed to be drawing nearer. The morning was dawning mistily, and the pursuers seemed to be getting out of their course for a time.

Peter swung to his oar in excellent form; and Purvis, with the tiller-ropes in his hands, gave way to every leap of the boat, bending his short, spare body in time to the stroke of the oars as he sat in the stern.

'If we are overtaken we will make a fight for it,' he said.

'Naturally,' said Peter briefly, between the long strokes of his rowing.

'They'll probably catch us up in the next hundred yards,' said Purvis. 'I should think that they are armed, and the day is breaking.'

He turned round in his seat as he spoke, for there was a broad, straight piece of river before them, and as the boat came on he pointed his revolver uncertainly in the mist and fired.

'Confound you,' roared Peter, 'don't draw their fire yet! Probably our best chance is that they don't know for certain where we are.'

But Purvis had fired again. There were some uncertain shots in return, and one struck the gunwale of the boat by Peter's side.

'That was a near thing,' he said to himself under his breath. And then the old feeling of

protection for the 'young un'—the delicate boy who had been his fag at Eton—stopped his grim smiling, and as another shot whizzed past them he yelled out suddenly, 'Lie down, Toffy! Get down into the bottom of the boat!'

And quite suddenly Toffy did as he was told.

Peter rowed then like two men, but the river ran more quickly now, and the shallows were more dangerous, and the steering was more difficult.

By Jove, how well Purvis knew the navigation of it! He had the tiller-ropes in his hands again. He made a feint to go under the bank as though to land, and then shot suddenly into mid-stream. The other boat followed in their wake. Purvis's knowledge of the currents was probably well known, and it was safe to follow his lead. The boat and the men in it could be clearly seen now.

But what, in the name of Heaven, was Purvis doing? It almost seemed as though he were trying to lose the little bit of way that they had gained in advance of the others, and for one moment a horrible sense of the man's unscrupulousness came over Peter Ogilvie, and he wondered even now, in the midst of the chase, whether it might not be that Purvis was playing them false.

'I'll shoot him before he can sing out if he is!' thought Peter to himself as the boat was steered on to the very edge of a shallow again, and then made off into the middle of the river. 'Look what you are about!' he cried out, seeing in the wake of the boat the uneven, circuitous route by which they had come. 'For God's sake steer straight if you can!'

And then he saw a smile on Purvis's face—the usual watery, mirthless smile, and the pale, wide-open blue eyes; and, looking back, Peter saw that the boat behind them had overturned in the stream, and the men who had been in it were struggling to the bank, while the boat itself was carried rapidly down with the current.

He eased his rowing then, and, getting his breath, he laughed out aloud. The spirit and excitement of the chase had been good, and it was successfully over.

'Look here, you can get up now, Toffy,' he said.

He turned round in his seat and shipped his oar with a jerk. '*You devil*,' he said slowly, '*you must have seen him hit!*'

He bent over the poor boy stretched out in the bottom of the boat, and felt his heart, and found that it still beat. He loosened his neckcloth and sprinkled water on his face, while the two other men fell to their oars again, and rowed the boat, as the day dawned, to the little Italian settlement, and carried Toffy into the house of the Argentine woman who burned candles to the Virgin and stuck French paper match-boxes round her shrine. They carried him into the hut and laid him on the humble bed, and Peter dressed the wound as well as he knew how, while Hopwood in an agony hovered round him, and Ross was sending here and there to try to find a doctor.

No one knew what had become of Purvis; no one cared. Each was trying with all his might to save a life very dear to them all which was slowly ebbing away.

The sun was up now, and the long, hot day was beginning; but still Toffy had never spoken, and still Peter kneeled by his side on the mud floor of the hut, easing him as he could, giving him water to drink or bathing his forehead. There was not much that he could do for him; but he felt that Toffy was conscious, and that he liked to have his old friend near him. Peter never altered his position as he kneeled, for his arm was under the dying man's head, and it seemed a more comfortable place for it than the poor Argentine woman's hard pillow.

Toffy lay with wide-open eyes, and there were great beads of perspiration on his forehead, which Hopwood wiped away from time to time. He breathed with difficulty in short gasps, and still he had never spoken. It came upon Peter with a horrible sinking of the heart that he might die before a doctor came, and without saying one word to him. All the compunction of a heart that was perhaps unusually womanly and tender was raging within him for not having taken better care of the boy. He wanted to say so much to Toffy, and to beg his forgiveness and to ask if there was anything in the world he could do for him, and he hoped wildly and pitifully that Toffy was not in pain. But the dying man's eyes were fixed on the bare walls of the hut and on the little shrine of the Virgin in the corner of the room, and it seemed now as if the mistiness of death were settling upon them, and that they saw nothing.

Ross went restlessly to and fro, now entering the room for a few minutes, and then going out again to scan the distant country to see if by any chance the camp-doctor was coming.

When Toffy at last opened his eyes he went and stood outside the hut, and some instinct caused him to bare his head for a moment, for he felt that some great Presence was in the room.

Just at the end Toffy spoke; his voice sounded as though it were a great way off, and almost as though it came from another place. 'Is Kitty there?' he said.

'No; it is me, old man,' said Peter thickly. He heard Hopwood beginning to sob, and he bent lower to hear what Toffy should say.

'Give her my love,' said Toffy.

Peter was holding the boy's head up now, for his breathing was becoming more difficult, and he stooped and kissed him on the forehead. He felt the chill of it, and, startled, he called out, almost as one calls out a message to a friend

departing on a journey, raising his voice a little, for Toffy already seemed a great way off, 'I never knew—I never knew, Toffy—that you had been hit, or I would have stopped.'

'I didn't want to spoil the race,' said Toffy. 'I don't often win a race,' he said, and with that he died.

(To be continued.)

CONCERNING RHUBARB.

By Algernon Warren.

AMONGST the various medicines which are now imparted in more palatable form than of old, rhubarb is conspicuous. The sugar-coated compound rhubarb pill has ordinarily no great terrors for the young, and the compressed rhubarb, ginger, and soda tablet still less. The time-honoured Gregory's powder, which comprises rhubarb, ginger, and magnesia, still continues to have its *clientèle*. Tincture of rhubarb, however, which still lives odiously in the youthful remembrances of many a senior, is neither sold over the counter nor yet prescribed to anything like the former extent. A dose thereof used to be considered such an objectionable infliction that nineteenth-century writers not infrequently made allusion to it as one of the grim incidents of childhood. In the *Lives of the Lindsays*, for example, Lady Anne Lindsay evidences that corporal punishment did not weigh down the balance against this potion in the opinion of her severe mother the countess, who, when her six children, on running away from home, were brought back before they had succeeded in reaching a neighbour's house some three miles off, 'declared that on this occasion whipping was too good for us, and that we should each have a dose of tincture of rhubarb to teach us to stay at home—a punishment classically just in its degrees, as the eldest, consequently the most guilty [this was the Lady Anne herself], had the last and most offensive glass of the bottle.' Particularly nasty dregs continued to be a frequent concomitant of a bottle of medicine until well past the first half of the nineteenth century, when the standard of physic-compounding was materially altered for the better through the passing of the Pharmacy Act of 1868.

'Few medicines are more extensively used than rhubarb; few are more reliable or safer.' So wrote Dr Spencer Thomson in the early fifties in his much-prized and subsequently many-editioned—there were thirty-four editions up to 1900—*Dictionary of Domestic Medicine*. But it is questionable whether he might not have added at that time, 'few medicines are more disliked by children,' although perhaps the rhubarb concoctions of that day may not have quite equalled doses of aloes or of 'black draught'—that is, compound mixture of senna—in point of nastiness.

The multiplicity of new drugs in modern times has certainly made rhubarb, as a domestic remedy, less of a household word than it used to be. Cascara bark, for example, has superseded it in many of its former uses. No longer, as in Dr Thomson's earlier days, do men dressed up as Turks pervade our great cities selling what they called 'genuine Turkey rhubarb,' a misleading appellation given to the drug because it was first imported from the Levant, although owing its origin to China and Tibet. Neither is it now at all a prevalent custom—although some still follow the practice—for people to carry pieces of rhubarb-root in their pockets to suck or nibble at intervals. In the heart of London, however, one may see to this day dried and prepared rhubarb hawked about by itinerant sellers of medicinal vegetable products. Inasmuch as this drug plays a part in numbers of quack nostrums, it is fortunate that its effect is usually far less harmful than that of many other ingredients. A quack, for example, will often resort to compounds mainly composed of aloes and rhubarb; and as an excess of the former is almost invariably more lastingly prejudicial to health, it is fortunate for his deluded customers when he lets the latter predominate. To illustrate the more violent action of aloes, it may be observed that rhubarb does not play a tithe of the part that aloes does in veterinary treatment. It is used slightly for certain bird-remedies, and figures in some medicines for calves. But there was no rhubarb, for instance, included in the list of medicinal and surgical requisites which were supplied by the British Government to those veterinary surgeons who were attached to ships used for carrying horses to South Africa during the Boer war.

At one time it was thought something of a witticism to suggest that the English country innkeeper's champagne was 'grown on his own bushes.' The more uniform recognition of special brands, however, would cause that inference to fall somewhat flat nowadays; and in like manner the introduction of an abundance of cheap vintages from abroad since the commencement of the 'Gladstone claret' period has done away with much concocting of home-made more or less alcoholic beverages; but rhubarb wine was certainly an early Victorian association. To give an illustration. Some sixteen to twenty acres of land near Bath were then planted with rhubarb for the express purpose of making wine, and the product was subsequently sold at the well-known Bath establishment of Messrs Fortt, of Milsom Street.

The common *Rheum rhaponticum*, or garden rhubarb, grown in England lacks the medicinal properties of the *Rheum palmatum*, or Chinese rhubarb—that is, the rhubarb of commerce used for pharmaceutical purposes—which is produced in China or the region near it; although it has been given other appellations which the *National Standard Dispensatory* thus concisely explains: 'Formerly, as a result of treaty arrangements, the very choicest of the Chinese product was exported *viâ* Russia or Turkey, its selection being controlled by the Russian Government, so that there was technically a Turkish or Russian variety; but this arrangement long ago ceased to exist.'

For many years the term 'East Indian' has been applied to those imports of Asiatic rhubarb, and 'trimmed as Turkey' used to be a frequent specification of wholesale druggists when indicating the highest-priced quality of whole rhubarb in their catalogues. For while Russia controlled the rhubarb-market special care was taken in the preparation of much of the Chinese article, so as to present it in flat pieces of uniform shape and excellence. The root-stocks, which are now generally imported in cases of about one and a half to two hundredweight, have ordinarily a more or less rounded appearance. Formerly 'flats' and 'rounds' used to be spoken of to distinguish the imports of this drug.

An interesting article on Chinese rhubarb was contributed to the *Chemist and Druggist* of 1st September 1906 by Mr E. H. Wilson, in which he indicates, as the result of personal investigation, that the bulk of commercial rhubarb is furnished by one species (*Rheum officinale*), the chief source thereof being the wild, mountainous region of the Sze-chwan, on the Tibetan border, where it is usually dug up during the first half of September and the month of October. He states further: '*Rheum officinale* has a distinct stem, not very long, but thick; and this, I was informed, was considered better than the roots. It is severed from the roots, cleansed, the bark and crown removed, and then split transversely, or more commonly longitudinally, into pieces four to six inches long. Very often a hole is bored through the pieces and they are strung on a cord and dried under the eaves of the houses. The roots vary in size, and are often very large. These roots have all the weak laterals removed, and are cleaned, roughly trimmed, cut into lengths, and often divided longitudinally. Sometimes a hole is bored through them and they are strung up beneath the roofs of houses immediately, or they may be partly or wholly dried in the sun or on heated stones.'

The saying that 'appearances are deceitful' may be applied in a measure to powdered rhubarb. For the ground root of the lower-priced English-grown article, which is inadequate for recognised pharmaceutical purposes, is often used to adulterate the imported and more valuable Chinese drug; and inasmuch as, when both are ground, the former, under ordinary conditions, presents the brighter yellow tinge of the two, the ignorant are wont to be attracted thereby. Ground commercial rhubarb also used frequently to be adulterated with powdered starch, but reduction of market value and enhanced analytical inspection have alike been instrumental in diminishing that form of sophistication.

THE WHITE APRONS.

CHAPTER II.

I WAS silent for a moment. The description of the man had attracted me, though the name was entirely unfamiliar.

'You say he had a sword-cut upon the cheek. Was there also a small cicatrice just under the left ear?'

'Of that I'm not exactly certain,' was her reply. 'But you seem intensely interested in those people and their friends. If you really are, I dare say I could assist you further, Hugh, for the foolish Sassonian became extremely attentive to me. While I was at the château, and before we parted, we exchanged photographs.'

'You have his picture!' I cried eagerly. 'Can I see it?'

'Yes; at my rooms. If you will come with me after luncheon I will show it to you.'

I finished my meal and swallowed my liqueur with undue haste, for I was anxious to see the portrait of Herr Siegel. Certain suspicions had become aroused, and I was anxious to verify them.

At last she called her motor-car, and carried me off to her elegant little flat in the Avenue Kléber, where, in her dainty, pale-blue-and-gold *salon*, she drew a cabinet photograph from a drawer and placed it before my eyes.

I held my breath. About that hard, sinister countenance there could be no mistake. My suspicions were verified. The man who had posed to her as Herr Siegel was none other than my arch-enemy, Adolphe Bloch!

'You say that he was on very friendly terms with Gaston Martin?' I said.

'Yes; and especially with madame, who was always loud in his praises.'

At this I pricked up my ears. Could it be that the ingenious spy of Sassonia was obtaining secret information from madame, and paying her well for it? What, I wondered, could Martin's wife know?'

'Who was madame before she married?' I inquired.

'Well, nobody exactly knows,' was my little hostess's reply. 'She was a widow, and came from the Midi.'

When she had taken off her hat and gloves, she seated herself at the grand piano, and sang for me in her clear, well-trained voice a little *chanson* of which she knew I was fond—Theodore Botrel's 'En Chantant:'

Une troupe, à travers les rues,
S'avance en fredonnant gaîment:
Ce sont les nouvelles recrues
Que l'on emmene au Régiment.
'Adieu, mère! Adieu, mon Yvonne!'
On est triste et joyeux pourtant:
Aussitôt que le clairon sonne,
Le soldat part en chantant,
Tra la la la, tra la la la!
En chantant!

Ohé, petit bleu! Vite à l'œuvre!
En hâte apprends ton dur métier!
Gaîment le brave gâs manœuvre,
Astique tout le jour entier;
Il pivote, il trime avec rage
Sans s'arrêter un seul instant;
Pour avoir du cœur à l'ouvrage
Le soldat trime . . . en chantant!
Tra la la la, la la la la!
En chantant!

She was very dainty and ineffably charming. When she had finished and faced me again she exclaimed with a laugh, 'Why, Hugh, how very serious you look!'

'Do I?' I laughed. 'I was only thinking.'

'Of what?'

'Of the original of that photograph you have showed me.'

'Oh, of the Sassonian! I had quite forgotten all about him,' she laughed lightly.

Next instant I grew serious again, and asked whether she had seen Herr Siegel since she left the château near Nevers.

'Once. He called here once, and took tea with me.'

In an instant the truth flashed upon me. If he had been there, he would most certainly have noticed my photograph, which, in a silver frame, stood upon a side-table a few yards from where I sat.

'And now that I recollect,' she added, 'he saw your portrait, and asked about you. He was quite as interested in you as you are in him.'

'I am interested in that man, Françoise, because he is my bitterest enemy, that is all,' I replied in calm earnestness. 'If that man could take my life in secret he would do so.'

She stared at me, astounded at my words. 'Why should he take your life, Hugh?' she asked. 'What harm have you done him?'

'Well, no very great harm,' was my rather lame response. 'His dislike of me is very intense, that's all.'

'It must be intense if he would deliberately kill you,' she said. Her brightness had instantly vanished, and she looked into my face with unusual seriousness.

'I would warn you against him, Françoise,' I said. 'He is not a man whom you should have as a friend.'

'He is no friend of mine,' she answered quickly. 'He gave me his picture as souvenir of our visit to Nevers, and I gave him mine in return. That was all.'

'What did you tell him concerning myself?'

'Very little. He seemed far too inquisitive,' was her prompt reply. 'But, curiously enough, I have seen him once or twice in Paris lately. I could have sworn it was he, and yet he somehow seemed different.'

I smiled within myself, but said nothing.

'Indeed,' she added, 'I thought I saw him only yesterday, as I drove in the car along the Avenue des Acacias.'

'Are you certain it was he?' I asked quickly.

'I feel positive. He was dressed in a dark-blue serge suit, and was walking with a tall, thin lady in black. He saw me, but stared as though we never had met.'

'He's a very good actor,' I remarked, smiling.

'There is some mystery concerning him—I'm sure there is! Tell me about it,' urged Françoise with sudden feminine curiosity.

'Well,' I said, 'I think he is not exactly all that he pretends to be, that's all.'

'There are assuredly a good many similar men about Paris,' she laughed.

Then, as I sat listening to her light, amusing chatter, I reflected that if Adolphe Bloch were in Paris, it must be with some specific object. Was he, I wondered, visiting his friends the Martins? If so, why was he on such friendly terms with madame, the mysterious widow from the Midi?

When I left my little friend's pretty apartment I sought Teddy Verney, and gave him certain instructions to remain in Paris and investigate Gaston Martin and his friends; while I, at ten o'clock that same night, turned into my narrow sleeping-berth on the Vienna express, where I lay for hours pondering as the train tore along toward the eastern frontier.

The days I spent in the Austrian capital were entirely uneventful and fruitless. Sir George Armfield, our ambassador, had, of course, heard the rumour of the Sassonian intrigue, but was as ignorant of the actual details as myself. We could glean no information, so perfectly was the secret preserved.

On the fourth day I received a telegram from Verney in Paris, asking me to await an important letter he had posted, and two days afterward I received it. A surprise it proved for me—namely, that he had ascertained that Madame Martin, the widow from the provinces, was none other than Freda Marcus, the well-

known female secret agent of Sassonia, who for the past three years had suddenly disappeared from our ken.

The truth was now plain. Madame, in consequence of her recent marriage with Martin the high official, was now in touch with all sorts of French officials, from whom she gathered certain secrets which, in due course, she handed over to the ingenious Bloch, who, without a doubt, had cleverly engineered that remarkable channel of information. The combination of Freda Marcus with Adolphe Bloch was, indeed, a formidable one.

I sat alone in the severe councillors'-room at the Embassy, and for a long time pondered. If Sassonia had a secret, then it was known to this pair of spies, whose cunning and ingenuity were unparalleled.

What Verney had discovered, however, seemed to prove that Bloch had been in Paris to collect the information gained by his colleague, and not in connection with this most recent and serious piece of Sassonian intrigue.

By telegraph I called Verney to Vienna, and as I sat with him on the night of his arrival he related how he had watched the house of the Martins, and had seen madame meet Bloch at a small café off the Boulevard des Italiens. Martin himself was apparently in entire ignorance of the true calling of Herr Siegel or of his wife's connection with the Sassonian secret service. He was a patriotic Frenchman of the old school, proud of his connection with officialdom and of his cross as *officier* of the Legion of Honour.

'Bloch left his hotel—an obscure one near the Gare du Nord—three hours before I left Paris. He had only a handbag, and after paying his bill walked out and disappeared,' Teddy said.

'Gone direct to Berlin, in all probability,' I said.

'There was no through train for six hours; therefore I do not think he went to Sassonia. He crossed to the railway station, thence took a cab to another hotel in Paris more probably.'

'We must keep our eyes about us, old fellow,' I said; 'for if he or any of his agents see us, then our game is up, as mine was in Venice only a week or two ago.'

'I quite understand, Hugh,' laughed my devil-may-care friend; 'but now we know his method of work in Paris I hope we may be able to circumvent him.'

I said nothing regarding my dainty little friend of the Renaissance Theatre. I had through her discovered the presence of our enemy; but I could not believe that she, an old friend, could have any further connection with the intriguer.

That day I had received an urgent telegram in cipher from the chief, a message which asked for some information, however meagre. What could I reply? I had none. I had been utterly unsuccessful. The mission I had been sent upon was an absolutely bewildering one. The nation's peril was hourly increasing. The signature of that dastardly treaty might mean disaster for the British nation!

Surely our service is full of romance, and one meets with as much adventure as in an African forest. I confess that I looked around me staggered. Such a secret—a secret which had for its object the destruction of the greatest empire the world had known—would no doubt be very carefully kept. Only those whose integrity had been tried and tested would be entrusted with it, and even then only those whose direct interest it would be to preserve it. It was no ordinary diplomatic secret, but one known only to two emperors and their immediate advisers.

Our information had, the chief explained, been sent to me by a certain foreign princess; but she could obtain nothing tangible. The facts which she had sent me, and which had been received by the chief in my absence, were only shadowy, and without any kind of confirmation. She had watched certain events, and had jumped to a conclusion which we knew, alas! to be a correct one.

The whirl and bustle of those broad, handsome streets of Vienna caused my brain to reel. Usually I possess a clear head, but on this occasion I felt confused and helpless. Whither should I seek the truth?

I had established the fact that couriers were daily travelling backward and forward between the two capitals, thus betraying an unwonted activity; but it was impossible to get at any of the despatches exchanged between the Sassonian Imperial Chancellor and the Balkanian Minister for Foreign Affairs.

Suddenly, one afternoon, while I was idling with Teddy in the 'Europe,' in the Stephans-Platz, it occurred to me that if the proposed political move had for its object the extension of Sassonian influence towards the Bosphorus, as was likely to be the case, then some details might probably be known down in Constantinople. The Emperor of Sassonia being the avowed protector of the Sultan, the latter would no doubt be made aware of the proposed agreement.

This thought decided me, and two hours later we left in the Orient express bound for Constantinople.

When, in two days' time, I sat with the ambassador in his great, handsome room overlooking the pretty gardens, I learnt that during the last week the Sassonian ambassador had called at the Sublime Porte on several occasions, and had been closeted with Tewfik Pasha, at that time the Sultan's Minister for Foreign Affairs. On the previous day his Excellency had also had audience with His

Majesty Abdul Hamid, a fact which lent additional colour to my surmise.

Now, both his Excellency Tewfik Pasha and the Secretary-General Noury Bey were my intimate friends; therefore next day I drove down to the Sublime Porte—that long, shabby, tumble-down building in which the Government offices of the Imperial Ottoman Empire are situated—and after being handed the usual coffee and cigarette in the waiting-room, I was ushered into the presence of the controller of Turkey's foreign relations.

His Excellency, a polite, white-bearded old gentleman in frock-coat and fez, was one of the most enlightened of Turks, who during the period I had been attached to the Embassy had been extremely kind to me. From him I had received many favours.

He rose and took my hand as I entered, greeting me warmly. Then, leaning back in his writing-chair, he made inquiry for several mutual friends in London. I smoked the exquisite cigarette he offered me, and chatted on many political subjects, gradually approaching the German policy in the Near East.

'France is always scenting trouble,' laughed the old Minister. 'But here, on the Bosphorus, all is quite tranquil. The old parrot-cry of war in the Balkans is at last dead, thank goodness!'

I wondered whether he had said that in order to allay my suspicions. He, like others, believed me to be a diplomat. He had no idea that I was an active member of the Secret Service.

'I heard in Vienna, a week ago, that there was a likelihood of some agreement with Sassonia,' I said casually.

He looked into my face shrewdly with those black, penetrating eyes for a second, and answered, 'Rubbish, my dear friend! There can never be one.'

'Is that honestly your opinion?' I asked.

'Of course. Such an idea is altogether ridiculous,' he said. 'Why, what would it mean? The crushing of England! The other Powers would never allow it—never!'

'Sassonia would not, I fear, consult the other Powers,' I replied. 'In any case, such an agreement would be a guarantee to Turkey against encroachment.'

'Exactly, and perhaps the return to her of the lost Balkan provinces,' he added.

I held my breath. Had he unconsciously referred to the subject nearest his heart—the regaining of those Balkan provinces as a result of the new secret treaty? Could this be the bait held out by the Emperor of Sassonia to his friend the Sultan? To be a good diplomat one must be an accomplished liar. I knew well that he had not spoken the truth when he had poohpoohed the idea of a Sassonia-Balkanian agreement. I knew now that he was fully aware of the terms which Germany offered.

For a full half-hour we discussed the situation, but he was as silent as an oyster as to the secret proposals which, I felt confident, had been placed before him, and which he in turn had conveyed to his imperial master at the Yildiz. Somewhere in that room, I reflected, there was, no doubt, a copy of that confidential document, sight of which I was so anxious to obtain, and knowledge of which they were awaiting so eagerly in London. I looked longingly at those two great green-painted safes. It was tantalising to be so near the truth and yet to remain in ignorance; and, assuredly, continued ignorance would mean danger to the British Empire.

Even as I sat there the messenger in fez brought in the card of the Sassonian ambassador; but, with a Turk's disregard of time, his Excellency merely said, 'Say I will see him soon,' and continued chatting with me.

Then at last I bade him farewell, and, walking to another part of the building, found my old friend Noury Bey, to whom I put certain questions—to which, however, I only received veiled replies.

One fact, however, I had established—namely, that Sassonia had offered Turkey a great inducement if she raised no protest against the new understanding.

That same evening, at sundown, while crossing the Galata Bridge, I overtook two ladies, evidently tourists, accompanied by a short, thickset man in a dark-gray flannel suit and straw hat. In an instant I recognised him. It was the ubiquitous Adophe Bloch!

(To be continued.)

PROGRESS IN THE ARGENTINE.

THE present position and possible future of the South American states are of the greatest possible interest to our country and the Colonies, which have over five hundred million pounds sterling invested in these republics, yielding an annual interest of over twenty-five million pounds sterling. The total value of the exports and imports for the Argentine alone in 1909 was one hundred and forty millions sterling. The centenary celebrations of this republic, with the successful exhibition, opened the eyes of many people, and dissipated the impression that nearly every part of South America is uncultivated, disease-laden, and almost always in a state of civil war. Buenos Aires, the second Latin city in the world, has a better service of electric tramways than London. Most of the large cities are modern

in style, and possess all the latest improvements. While cosmopolitan, the bulk of the inhabitants are cultured and highly educated, though life continues rough enough on the pampa and in the mining-camps. The Argentine, too, with its population of six and a half millions, is the greatest exporter of food-supplies to this country, the world's greatest producer of linseed, and one of the greatest growers of wheat. Of cattle-owning countries it takes the third place, of the sheep-owning countries it is surpassed only by Australia, and as one of our trade customers it also takes a very high place.

Some idea of how Argentina has borrowed ideas from many European countries was shown in the Health Section of the International Exhibition recently held at Buenos Aires. Amongst other things there was an exhibit of a portable disinfecting apparatus, mounted on an automobile, while a group of lay figures dressed in uniform, and with respirators, stood apparently ready with a spray-pipe to enter a tainted house and combat with infection. A corps of *disinfectadores* can be transported by road or rail. An ambulance department, with hospital beds, and wagons for transport, was a surprise in a Spanish-speaking country. Then there was a section showing the mosquito under many aspects, and a model up-to-date dairy-farm. The public health and cleansing departments in Buenos Aires are very efficient. Thus the new race blended of the Spanish conqueror and the American Indian in the Argentine, supplemented by Italian and other elements, shows none of the lethargy and absence of business faculty of the Spaniard. Here an aging Latin nation is 'renewing her mighty youth.' Droughts and locusts are drawbacks; but the enormous extent of country gives variety of climate, and to some extent immunity from disaster.

The Spaniard and the Italian are still paramount, and the countries are not recommended without reservation to the British emigrant who possesses only small capital, and is desirous of living by his own labour on the land. The Italians, Spaniards, and coloured labourers will work at a smaller rate of remuneration than he will. Still, there is no country with a more agreeable climate, wages are high for tradesmen, and any man, or still more any woman, who would wait at table would be assured of a comfortable livelihood. Servants are abnormally scarce and dear, and one with a six months' character is looked upon as a treasure. Swarms of reapers come from Spain, as Irishmen used to do to Great Britain, and return with a small fortune of about thirty pounds each in their pockets. We are told that 'if we make allowance for different standards of comfort, it would be correct to say that any man who is willing to work hard with his hands can live in Argentina in as great comfort as the worker in any country in the world.'

No one need remain ignorant of these countries. Mr Charles W. Domville-Fife has written a concise account of their conditions and resources, with the laws relating to Government concessions, entitled *The Great States of South America* (G. Bell & Sons, London). It is at once geographical, topographical, and commercial. Of other recent authorities we have two books by W. H. Koebel on *Modern Argentina* and *Argentina Past and Present; The Argentine in the Twentieth Century*, by A. B. Martinez and Dr C. Pellegrine; and *The Argentine Republic*, by A. S. Pennington. And of its kind there could be nothing better than *Argentina*, a comprehensive account of the country by W. A. Hirst, with an introduction by Major Martin Hume, added to Mr Fisher Unwin's South American series. It is of the most practical nature. Consul G. Niederlein has issued a pamphlet bearing on the possibilities in the Argentine of cattle-breeding, industry, and trade. The *Times* had a special Argentine number, December 28, 1909; while the editor of the *Money Market Review*, E. H. C. Oliphant, visited the Argentine for the sake of his special jubilee number of April 16, 1910.

The country has now unbroken railway connection from the Atlantic to the Pacific by means of the Transandine Tunnel, while another tunnel through the Andes connecting the Argentine with Chili has been authorised. The growth and development of the chief towns, Buenos Aires, Rosario, and Bahia Blanca, now notable for wheat exports, have been steady. Mr Hirst sketches the possibilities of ranching and grain-growing in the unbroken plains extending from the Atlantic seaboard to the foot of the Andes, and terms it the greatest undeveloped grain and pasture region in temperate climes, destined to be one of the great countries of the world. Mr Hirst says: 'No country known to me impresses upon a visitor from Europe so forcibly as the Argentine the unlimited possibilities of the soil. . . . Whichever way one turns, fresh evidences of fertility are forced upon the attention: cattle standing knee-deep in pasture; sheep growing fat at fifty to the acre; leagues of ripening corn, equal to any on earth, growing upon virgin soil; flowers to which we are accustomed in England as tender shrubs developing here into robust, blossoming trees; and fruit-orchards flourishing, solid miles of them, prolific beyond belief, within a short distance of Buenos Aires, where only a few years ago nothing but wild scrub and tangled forest existed.' The Gaucho, or native of Indian and Spanish descent, has played an important part in the development of the country, and created the cattle industry.

The Italians have found it a country after their own hearts, and now outnumber the Spaniards in the population of nearly six and a half millions, followed in descending numbers

by Russians, Syrians, French, Austrians, Hungarians, Germans, British (who are low in the list, though high in influence), and Portuguese. Since 1902 more than nine thousand Russians and Poles have settled at Apostoles, and arrangements have been made to settle some thousands of Finns in the same district. An interesting settlement is that of the Welsh farmers at Chubut, in Patagonia. Rawson is the official capital of this colony of five hundred souls, five miles up the Chubut River. Trelew is the largest town. In some of the churches and chapels the services are in Welsh. A Jewish Colonisation Association has acquired a considerable amount of land for settlement.

Buenos Aires ('Good Airs'), which stands on the right bank of the estuary of La Plata, with a population of over a million, had a reputation for dirt and discomfort early last century. 'What a misnomer!' said one traveller; 'the good air of the town is the stench thereof.' Since 1872 splendid public buildings have been erected, parks opened, and many of the worst rookeries have been cleared out. This cosmopolitan city is very Spanish, without Spanish sleepiness, and there are evidences of great wealth and prosperity, with love of display. It has been called another Paris; 'the streets hum with gay chatter, and the unbroken prosperity of many years helps to maintain the general good humour.' For the Jockey Club the entrance fee is three hundred pounds; there is an English Club and an English Literary Society; while polo, cricket, football, and tennis have their devotees. The electric cars are cheaper and faster than in London, for one can ride eleven miles for an equivalent of twopence; while the congestion in the narrow streets will be relieved by the comprehensive scheme for electrically operated subways. The Anglo-Argentine Tramways Company has begun a tunnel between the port and the Western Railway Station. Few things are cheap, and in hotels and elsewhere there is an absence of those small comforts which cost little save trouble. The streets are perfectly straight and intersect one another at right angles, the pavements are full of life, and there are rows of equipages; beautiful women, 'daintily attired and bejewelled, flit from shop to shop, and the pride of wealth and luxury flaunts itself as bravely as in Paris or London.' The magnificent river, the Parana, is twenty miles wide at Rosario. Though heavily protected, manufactures have not yet made great progress. The ability and interest of the newspapers are warmly praised by Mr Hirst.

Two hundred and ten miles above Buenos Aires, on the Parana, is Rosario, a growingly important town, the second city of the Argentine. The streets are wide, with large parks, and it is more open and picturesque than Buenos Aires. Here are situated the workshops of the Central Argentine Railway. An English engine made at Hunslet in 1875 is still doing good work; American engines are said to go to the scrap-heap in three years. When Brazil, Paraguay, and Bolivia are linked up with Rosario and Buenos Aires, Rosario will be even more commercially important. It will increasingly serve the maize, linseed, and cattle industries, and the mines. Santa Fé, the capital of a province, has about thirty thousand inhabitants. Bahia Blanca, on the coast, will in the future be the great port for grains. Mendoza, three thousand feet above sea-level, at the foot of the Andes, has been compared with Damascus for its old-world charm; it is like a large park, with its conduits of clear water, side streets, and banks lined with trees. Cordoba, four hundred and thirty-five miles from Buenos Aires, is an important railway centre, and has connection with Bolivia by a line running north through Jujuy. In the neighbourhood of Tucuman sugar, tobacco, the vine, and yerba maté are cultivated. This last yields the beverage which takes the place of our tea or coffee. Tucuman, Salta, Cordoba, and Parana, Mr Hirst thinks, will always have sufficient wealth to be of importance in themselves, and with more immigrants be a very flourishing part of the republic.

A single man earning about two hundred and fifty pounds a year may have to spend one hundred and twenty pounds on board and lodging and a few simple luxuries. Simple luxuries are cheap; clothes and tobacco are dear, and house-rents are high. Butcher meat is nearly as dear as in England, and not so good, as the best carcasses are exported. A tailor's cutter may receive twenty-five pounds a month, and a tailor twelve pounds ten shillings. Printers and compositors get twelve pounds a month, and lithographic engravers nineteen pounds; carpenters have seventeen pounds ten shillings a month, a blacksmith eight to nine shillings a day; and commercial travellers receive nine pounds a week, with an allowance of one pound a day, exclusive of railway charges.

Fabulous prices have been paid for stock for breeding purposes. No expense is grudged in this direction, and the Argentine is at present the best market in the world for thoroughbred cattle. The produce from King Edward's 'Diamond Jubilee' stallion in the first year fetched thirty thousand pounds. For a Shire stallion three hundred and eighty pounds has been paid, two hundred and eighty pounds for a Clydesdale, and three hundred and twenty pounds for a ram. And were we to set down the prices at which some cattle changed hands the figures would look incredible.

When Baron Justus Liebig suggested about 1859 that instead of killing cattle for the hides and tallow, and leaving the carcasses to rot on the ground, an extract of beef might be made from them, he laid the foundation of a great and

profitable industry, since known as Liebig, Lemco, and Oxo. A beginning was made in Uruguay in 1865, where the company now owns seven estancias, with ten in the Argentine and nine in Paraguay. In the splendid climate and healthy open air conditions there is less than 1 per cent. of tuberculosis amongst cattle. The factory at Colon, in Entre Rios, shows none of the dingy conditions and ugliness of a European factory. It is, says Hirst, rather 'a palace of health.' The killing season begins in January and ends in June, during which period a quarter of a million beasts are killed. The firm of Liebig owns and rents over a million acres of land in Uruguay, Argentina, and Paraguay for cattle-raising.

The Kemmerich Company (1884) purchased estancias and built a factory at Santa Elena and Entre Rios. The Bovril Company bought this factory, and that of San Javier, with a large block of land. The final stages in the manufacture of bovril take place in London. From one hundred and thirty to one hundred and sixty thousand head of cattle, mainly Durhams or shorthorns, are kept on the pampa. The best parts of the beef are used in the making of bovril, for which some eighty thousand to a hundred thousand cattle are annually slaughtered. There are now at least eight freezing establishments.

In Buenos Aires spring begins in September and lasts to the middle of December, followed by summer, which extends to March; autumn lasts till the end of May, and winter the rest of the year. The winters are cold and the summers are hot. In Southern Patagonia the climate is cold and inclement all the year round. Some of the best parts of Argentina have a deficient rainfall. The four divisions are Patagonia, the Andine region, the Gran Chaco, and the Pampa, the central region of rich land and fine pasture, where magnificent red-and-white cattle stand knee-deep in fresh pasture. Argentina at first attracted less attention than the other states because of the absence of silver and gold. Its true wealth in agricultural produce now stands revealed to all the world. The early Spanish colonists were only allowed to trade with the mother-country. Now the tables are turned; the Argentines are essentially teachable, and welcome foreigners, and send many of their children abroad to be educated. Nominally the Roman Catholic religion is paramount; but amongst the hard-working population the spiritual side of things is neglected, and Mr Hirst says there are unexampled openings for missionaries. The Allen Gardiner Mission of the Church Missionary Society has made its mark along with others; but we are told that if religious indifference spreads downwards, the Argentine, like France, may see her population dwindle, her army decay, and may be prevented from taking a high position among the world powers.

For information regarding the condition and resources of the other South American states Mr Domville-Fife's book may be recommended. The position of each state is given, with laws, regulations, and conditions relative to Government concessions. We are told that British Guiana only needs the capitalist, the planter, and the miner to make her not only a prosperous agricultural colony, but also one of the world's greatest producers of precious metals and stones. Rio de Janeiro is now one of the healthiest cities in the world. Three-quarters of the world's production of coffee is exported, mostly from Santos. The staple industry of Parana state, Brazil, is the production or maté, which employs thousands of labourers. The culture and collection of rubber is the staple industry in the whole of Amazonia, Para and Manaos being the great ports of shipment. The recent extraordinary increase in the demand for rubber greatly benefited the industry. The export in 1909 had a value of nearly nineteen millions sterling. Besides rubber-gathering, Bolivia has great mineral wealth and six different means of communication with the coast. The climate in Sorata Valley is described as one of unsurpassed salubrity. Chili has every variety of climate in her long, narrow country, and there is now railway connection with the Argentine by means of the Transandine Tunnel. She has valuable nitrate-fields, with gold, silver, and copper mines. Peru grows coffee largely, cotton, and rubber. Paraguay is famous for its groves of yerba-trees from which the maté tea is derived. The climate of Uruguay is very healthy, and the country is noted for cattle-breeding and sheep-farming.

Whatever part we may still play in the development of South America, Mr Hirst concludes that 'the building up and consolidating of our position in Argentina is one of the proudest exploits of English industry.'

THE DEAD HAND.

By the late Lieutenant-General R. BARTER, C.B.

It beckons you to go away with it.—*Hamlet*, I. v.

IT was the night of 20th September 1857, the year of the great Indian Mutiny, and the scene a street in Delhi, the city which had seen the blood of so many of our poor, defenceless countrymen, women, and little children shed like water only the previous May by the ruthless villains and perjured sepoys, who had traitorously turned upon those from whom, as a rule —and I speak advisedly and with knowledge—

they had received the greatest kindness and consideration. That there were some officers in the East India Company's army who were harsh and stern with their men, and who in turn were looked upon by them with little love, there is no denying, but these men were the exceptions, and were few and far between; for, as a rule, the officers and their wives well deserved the familiar, loving names, *ma*, *bass* ('mother,' 'father'), by which they were universally spoken of by the men before Satan entered into them, and secret agitators seduced them from their allegiance and eventually led them to do the awful deeds which made the name sepoy a synonym for all that was vile, bloody, and treacherous.

The siege was over. After four long months of never-ceasing strife day and night in the furnace-heat of the hottest part of the year, and during the stifling, enervating rainy season, the city was at last stormed, and after six days' fighting in the streets was entirely in our possession—on, as I have said, the 20th of September. The regiment to which I then belonged had been ordered that morning to occupy the Ajmere gate of the city, which we had done accordingly, and proceeded to make ourselves as comfortable as circumstances would permit, our principal care being to remove to places of safety the large quantity of powder, a great deal of which lay loosely scattered about the place, with numbers of live shells which had been collected in the works surrounding the gate to be used against any of our force who might be employed in the neighbouring suburb of the Stebzee Mundee (or Green Village), so called from the numerous orange-groves and other gardens with which the houses there were surrounded.

All day we worked, making our new quarters as safe as we could. The powder and shells were put away into cellars and out-of-the-way places, while what powder was lying loosely about was deluged with water; and, all smoking having been stopped, we considered ourselves pretty safe from a blow-up, an experience which some of us had undergone a few days previously in the Moree Bastion, and had no desire to have repeated.

At last night came on, and with it a stillness to which we had long been unaccustomed; to the roar of the guns, the screaming and bursting of shells, and the ceaseless rattle of small arms succeeded a solemn silence. We were, some of us, occupants of a kind of mosque in rear of the battery which was in front of the Ajmere gate protecting the entrance, and, sitting on the steps, had chatted quietly until the talk lapsed into whispers, and a snore here and there announced that, worn-out by the day's work, more than one had sunk under the influence of the drowsy god. At last my chum, who had been sitting near me for some time in silence, got up, saying he could not remain any longer without a pipe, and proposed that we should take a stroll through the streets and enjoy a smoke before seeking rest on the hard stones of our tenement. No sooner said than done. I jumped to my feet, and having got a corporal and four men to accompany us with loaded arms in case any lurking traitors might have remained about, off we set on our ramble. The night was calm and still; and, though there was a perceptible smack of the approaching cold weather in the atmosphere, in the narrow lanes of the vast city the air was hot and stifling, and the smell of villainous saltpetre mingled with that from the festering corpses which lay about, some singly, some in little heaps, did not make our walk over-pleasant; so as soon as our pipes began to wax low we began to think of returning to headquarters. Though there was no moon, it was not what we in England would call a dark night; the stars shone brightly, and nights in the tropics are not so dusky as at home, so that we could see well eighty or one hundred yards around us, and on entering a fairly broad street leading towards the Ajmere gate we saw some little way on a pile of corpses where evidently there had been some hot contention during the street fighting. The stillness was somewhat uncanny, not a sound being heard but our own and the measured footfalls of our escort, when suddenly I felt my arm seized by my companion, who in an awed whisper said to me, 'My God, did you see that?' I, too, had seen what he referred to, and we all halted, gazing at it, and I could hear the click of the locks of the men's firearms as they made ready to fire if necessary.

From the summit of the pile of corpses rose a man's hand and arm; it beckoned to us, and then dropped down; again it rose, beckoning, and fell; and again it did the same. In the solemn, drear stillness of the night, with such ghastly surroundings, it was an awesome sight, and little wonder it caused our small party to halt and our pulses to beat faster, used as we were to fearful sights and to death in many dreadful shapes. It suddenly flashed upon my mind that some poor wretch in whom life yet remained lay amongst the dead, and that he wanted assistance to get away from his fearful position; so I said, 'Come on, men; it's some one wanting help,' and we all moved forward. As we did so, a large pariah dog sprang from the pile of corpses and made off down a by-lane, and an examination of the dead bodies showed how he had been employed, and what had caused our scare. He had been tearing at the body to which the beckoning hand belonged, and, tugging at the shoulder in the steady, persistent way I had often seen others of his species employed on the carcass of a defunct buffalo, had caused the arm to rise and move as if beckoning to us to come on. It was a gruesome sight, and we were none of us sorry to return to our stone couches for what remained of the night.

Chambers's Journal
SEVENTH SERIES

SOME MOROCCO COAST-TOWNS.

By H. A. BRYDEN.

MOROCCO—steadily falling into decay, and harassed by the thought that sooner or later it must pass under European influence—is at the present day one of the most fascinating studies for the European traveller. The last and greatest stronghold of barbaric Islamism, its power is but the shadow of that once wielded by those sultans whose empire extended from Spain to the Sudan and from the Upper Niger to the Balearic Islands.

Owing to the unsettled state of the country, travel by Europeans in the interior of the land of the Moors is now not only extremely difficult, but attended with considerable risk. Fez and Morocco City (Marakesh) are almost the only inland cities which can now be attained, and even to them the journey is not altogether without hazard. There remain, however, the Atlantic coast-towns, all of which are extremely interesting, and which can be visited without great difficulty by the wandering Briton desirous of traversing a somewhat less hackneyed route than is now to be found in crowded Europe. These towns lie in the following order upon the Moorish coast-line: Tangier, Larache, Rabat, Casablanca, Mazagan, Saffi, and Mogador. With the exception of Tangier—which from its proximity to Gibraltar (only about three and a half hours' steam) is within the last few years becoming certainly affected by European influences—in all these coast-towns the Moor is to be seen dressed in the same habit and pursuing exactly the same mode of life that has seemed good to him for the last thousand years. His towns, walled, gated, and marvellously picturesque, are never-failing objects of interest to the curious and inquiring mind. Here is to be seen the very life depicted in the *Arabian Nights*, untinged by modernity and untainted by those European influences which are so rapidly destroying the old and simple ways of life which obtained in more barbaric times. A visit to these ancient Moorish towns is a revelation indeed to the average traveller, jaded with the resources of civilisation and tired of wandering in the streets and galleries of European cities. It is worthy of note that in all Morocco, save for the railway between Melilla and the mines of Beni-Bou Ifrouk, mules, camels, and asses still convey to the coast and inland all the merchandise of the country. At Tangier several hotels are now to be found, one of them, the 'Cecil,' just outside the town, overlooking the bay, affording excellent modern accommodation; and on the hill behind the walls European houses are beginning to chequer the landscape.

Tangier itself is, however, still largely oriental. When the traveller lands at the jetty he is besieged by a fighting band of donkey-boys, all striving furiously for custom. A ride through the narrow streets will convince the spectator that here indeed is to be found the ancient Moorish life only just beginning to be awakened by the influences of Europe. The embattled walls and gateways are as picturesque as when the English garrison held the place in the days of Charles the Second. At the summit of the town, just before you enter upon the crowded *soko* or market-place, a one-eyed Sudanese snake-charmer will probably claim your attention. His exhibition is a somewhat horrible one, the writhing snakes being allowed to fix their fangs in his tongue and nose, often drawing blood in the operation. The same magician, by merely blowing upon a bundle of straw and shavings, quickly produces a quite respectable fire. This man would be, surely, an invaluable camp-servant when one was travelling inland!

Passing through the *soko* (a large open space, where crowds of people are buying and selling a wonderful variety of useful produce), the traveller goes out into the country, and passing the encampment of the Sultan's troops, and returning to another part of the town, presently rides through a grand old Moorish gateway and inspects the prison and the entrance to the Court, where the Kadi administers the thing which is so ridiculously called justice in Morocco. The prisoners are a piteous spectacle, fettered as they are with cruel chains and dependent for their subsistence, for the most part, on the alms of the charitable. A saunter through the town reveals narrow streets densely crowded with Moorish folk, and the passing traveller must needs be prepared to give way here, as in other towns of Morocco, to heavily laden mules and camels, and perspiring and excited drivers yelling '*Balak! balak!*' ('Have a care!') to all and sundry who may bar their progress. Bazaars in plenty are to be met with; but the English traveller may be warned that a good deal of

[*All Rights Reserved.*]

rubbish is to be found in Tangier, and that farther down the coast genuine Moorish curios, such as knives, pottery, leather-work, jewellery, and costumes may be picked up at more reasonable prices than here. In normal times Tangier is no bad place to stop at; good riding-horses are to be procured, and the smooth sands of the bay and various pleasant rides to Cape Spartel and other places invite the traveller. But of late, it is to be remembered, things have been very unsettled, and a ride of more than a few miles beyond the walls is not always safe, unless, indeed, the European is accompanied by a soldier or two, for which luxury, of course, due payment has to be made. At Tangier, as in all the maritime regions of Morocco, the climate is magnificent; the wonderful sunshine is tempered by a clear, dry, bracing atmosphere, in which open-air life can be enjoyed, as in South Africa, to the utmost.

As you proceed south-westward down the Atlantic coast, the first port reached after Tangier is Larache—properly El Araish—a picturesque walled town lying about forty miles below Cape Spartel, and dominated by an ancient and frowning fortress. This place was once held by the Portuguese, and afterwards by the Spaniards, but has long since reverted to its original owners, the Moors. In 1830 the Austrians, having a quarrel with the Sultan of Morocco, landed a force from their naval squadron with the view of taking the town. Their troops were, however, very severely handled by the Moors, and scarcely a survivor escaped to tell the tale of disaster. Two other unsuccessful attempts have been made on Larache, one by the French in 1765, the other by the Spaniards in 1860. The river here, the Wad-el-koos (the Bow river), the Lixus of the Romans, has a formidable bar, and owing to the surf it is not always easy to land. For this reason Larache is not so often seen by Europeans as other coast-towns of Morocco. The roadstead is an open one, like nearly all the Atlantic towns of this country.

Rabat, about a hundred miles south of Larache, is an important city, well placed upon cliffs of gray and ruddy rocks above the Bou-Ragreg river. Across the river lies the sister-town, Sallee, once the very hornets' nest of all this coast, the haunt of the famous piratical rovers who scourged the seas as far even as Ireland. Robinson Crusoe, it will be remembered, was captured and made a slave by a Sallee rover. The Sallee inhabitants have still a somewhat sinister reputation. They do not invite the presence of Europeans, and the traveller thither is as likely as not to be stoned by children, if not by the grown-ups of the town. Even until the early part of the last century the Sallee pirates remained a terror to small merchantmen and to villages on the Spanish littoral; and the main business of our embassies to Morocco even so late as the year 1800 was the ransoming of hundreds of British captives taken prisoners by the infamous rovers of Sallee. Rabat is the headquarters of the manufacture of Moorish carpets, for which it has long been famous. Here also are buried most of the Morocco sultans, including Muley-al-Hassan, father of the last possessor of the title. Rabat is well worth a visit; it is a wonderfully picturesque place, and is quite one of the most famous of the ancient strongholds of Islam. The surf here, as at Larache, is, however, often formidable, and landing and returning to the ship is not always an easy matter.

Casablanca, which is usually the next stopping-place after Tangier, is better known in Morocco by its Moorish name, Dar-al-Baida. Both names have the same signification—'The White Houses' or 'The White Place.' Casablanca, viewed from the sea under the brilliant sunshine of Africa, its whitewashed houses and high walls offering glittering contrast to the blue of the sea and sky, is in truth a white place. The city was built by the Portuguese in the sixteenth century upon the ruins of a much more ancient town named Aufa. It lies on one of the flattest parts of the Moorish coast, a vast plain, much of it under cultivation, surrounding it on the north, east, and south. Abandoned by the Portuguese, the place was rebuilt and fortified by the Moors in the middle of the eighteenth century. Its walls are twenty feet high, and three gates—the Rabat, the Marakesh, and the Sea Gate—give access to its important trade. These gates, according to Moorish custom, are carefully closed at night, the governor, with whom the keys remain, being responsible for the safety of the inhabitants. Casablanca has a population of some twenty thousand, and is the busiest seaport in Morocco, being admirably situated for the growing trade of the central portion of the kingdom. Its narrow and crowded streets, as the European traveller wanders through them, are thronged with Moors conveying merchandise to and from the harbour. Like all the other parts of the Atlantic littoral of Morocco save Mogador, this is an open roadstead, and in a fresh westerly wind a good deal of difficulty is experienced in taking in and discharging cargo. There is a pleasant European club here, built in the Moorish style; and there are one or two hotels. At the British post-office in the middle of the town the young English post-mistress sits at her work protected by a sort of cage of large iron bars—a curious commentary on the normal insecurity to be found in Morocco at the present day. Outside the walls is a busy market-place, crowded with tribesmen from the interior, vending their wares of grain, cummin, and other seeds; and beans, wax, fruit, forage, and other commodities. Here you may see the professional story-teller, accompanied by a musician, amusing a good-humoured and deeply interested audience. Camels, mules, and asses are plentiful everywhere. Now and again a cavalier, on a well-caparisoned horse, carrying a long native gun or

a modern rifle, is to be noticed. Beyond the market-place are one or two pleasant houses belonging to Europeans, set amid beautiful gardens. To one of these gardens the white traveller is very courteously granted access. Altogether, Casablanca, as one of the busiest emporiums of the Moorish empire, is well worth a visit. Some very good shooting is to be had not far from the town, chiefly among wild-fowl, snipe, and partridge, the latter being the beautiful Barbary partridge, one of the handsomest of all the family. Casablanca has during the last three years been rather prominently before the public owing to the French and Spanish occupation and the fighting around the city. It has, in consequence of these events, lost something of its pristine native Moorish characteristics.

Azimoor, one of the most picturesque and most typically Moorish towns on the Atlantic coast-line, lies about ten miles north-west of Mazagan, and is well worth a visit. It is not, however, included by the Sultan as one of the ports at which Europeans can trade, and no vessels call there. To reach Azimoor one lands at Mazagan, and there procuring a horse or mule or camel, makes one's way overland. It is a pleasant ride, the fresh Atlantic bounding the view westward; and the few Europeans who make their way to Azimoor seldom find reason to regret the journey. Here is to be found the shrine of the patron saint of Azimoor, Moulai-ben-Shaib, 'curer of ills.'

Mazagan, built by the Portuguese in the early years of the sixteenth century, still shows in its massive, embattled stone walls and frowning forts what a strong place of arms the Lusitanians of that period made for themselves. But in truth, as the history of our own troublous occupation of Tangier in Charles the Second's reign shows, the strongest walls and the stoutest hearts and arms were required in those days to keep the fierce and untamable Moors at bay. By the middle of the eighteenth century the Portuguese had had enough of Mazagan; and on their abandoning it to its fate in 1769, the Moors took possession. Here, as you land, still stand, grim and inexpugnable, the great walls of rich, red-brown stone and an ancient mole to testify to the works of these ever-famous colonisers. All this coast from Cape Spartel to Mogador is extremely fertile; and at Mazagan, if you happen to land towards the end of the rainy season—say in March—you will find magnificent crops flourishing outside the town, and acres of wild flowers, of which a lovely purple iris carpeting the red soil for miles is one of the most striking. From Mazagan a very pleasant ride can be taken outside the town, and horses and mules, or camels if required, can be obtained without great difficulty. There is a quiet hotel here maintained by a Frenchwoman, who keeps the place beautifully clean, and furnishes a quite respectable lunch at a reasonable price, with some sound Bordeaux wine thrown in. Mazagan is thoroughly Moorish, quite unspoiled by European influences, and the markets, bazaars, and streets are well worth visiting. Tourists will scarcely need reminding that in Morocco, where the Moslems are the most fanatical in the world, the mosques are absolutely closed to Europeans. The presence of the hated Nazarene—for after all the Moors only tolerate us in their country—in one of these edifices would be an insult which would require a good deal of expiating. The troubles at Marakesh some three years since, and the expulsion of all Europeans from that city, remind us that these people are easily roused, and that they desire nothing more fervently than to see the detested white man out of their country. The fear of retribution alone prevents this consummation. In the coast-towns, where a considerable portion of the Moorish population is engaged in a lucrative trade, this sentiment is a good deal tempered by personal and selfish considerations; and no doubt, as Morocco becomes slowly opened up, the inhabitants of the interior will gradually become habituated to the presence of Europeans. But the opening up of Morocco can scarcely be effected without much bloodshed, and it is to be feared that the 'pacific penetration' of the French into this perturbed and harassed land is at present but an idle dream.

The great Atlas mountain-range, inhabited chiefly by the Berbers, the aboriginal denizens of this country, is to this day almost unexplored by Europeans. Here and there small pieces of this mighty range have been visited; but the Berbers are extremely jealous, and resist the advance of the white man into their territory *vi et armis*. In the same way all mineral exploration in Morocco is absolutely taboo, and the mining-engineer or prospector daring to open up ground does so at real peril of his life or liberty.

Saffi—next along the coast-line, a few hours' steam from Mazagan—another strong-walled town perched upon a steep hillside, is, viewed from the sea, marvellously beautiful. There is an air of delightful mystery about this ancient place, founded, historians say, either by the Phœnicians, Carthaginians, or the masterful Goths. This air of mystery is somewhat heightened by the fact that, owing to the strong surf at the roadstead, landing is not always feasible. Nevertheless, I strongly advise the traveller to make the attempt. Saffi repays exploration, and if a sovereign or two is taken, even if return by boat to the ship is impossible, the journey to Mogador can be made by road on horseback or on a good mule, and the ship can be met on the following day. Saffi, also, is the nearest port for Marakesh (Morocco City), and the journey to that famous and ancient city, about ninety miles, can best be made from this place. Like all the walled towns along this coast-line, Saffi was once taken and held by the acquisitive Portuguese. This

happened in 1507; but some three-and-twenty years later the garrison had to be withdrawn for the defence of Mazagan, and the town seems to have been thenceforth abandoned to the Moors. At the top of the town stands the citadel, while somewhat to the right is a strong and picturesque castellated palace—strong, that is to say, according to the ideas of three centuries since. A modern ship of war would batter any of these Moorish coast-towns to fragments without any difficulty. This palace, known as Dar Sultan, now partly in ruins, has a rather curious history. It was built, says an authority, Mr R. L. N. Johnston, 'according to tradition to gratify an Irish or Scotch girl who for many years occupied the post of favourite sultana at the Moorish court.' To the north lies the striking headland of Cape Saffi; and upon the green of the cliff, verdant when I last saw it by reason of a most bountiful season of rains, stands a glittering white shrine, the tomb of some holy man much venerated of the Moors. Saffi is always beautiful, and always seems to be guarded by a heavy surf. Even on the calmest day, when the lazy Atlantic scarcely responds to the faintest breath of wind, the long, smooth rollers still break magnificently on the yellow sands, and fret and spume with milk-white sheets of foam against the rock masses below the palace walls of Dar Sultan.

Five and a half hours' steaming southward from Saffi brings one to Mogador, the most southerly, and to my mind by far the most interesting, of all the Moorish coast-towns. Mogador, whether viewed from the sea or land, is a most striking and picturesque city. It lies upon a flat, rock-guarded promontory, against which the furious Atlantic rollers break in heavy weather with magnificent effect, and is surrounded by high, crenellated walls, guarded by obsolete guns, many of them mouldering into real Moorish decay. Its minarets and towers and flat-topped houses, all spotlessly white under the hot sunshine, fairly dazzle the eye. The anchorage lies in a little bay, guarded by a rocky island, and in rough weather the passage between this island and the promontory on which Mogador stands is perilously narrow. To the right of the town rise immense dunes of blown sand; behind these are low hills clothed with dwarf forest, tamarisk, and other shrubs; and behind these again, some forty miles away, appear, in wonderful grandeur, the snow-clad peaks of the towering chain of Atlas.

Mogador, known to the Moors as Souirah, or 'The Picture,' is a big city, having a population of some twenty thousand inhabitants. It possesses a very considerable trade of its own with Marakesh, Soos, the Sahara, and even the far-distant Sudan. Hither, striding patiently along the flat, sandy shore-line to the south of the town, come long strings of camels laden with all sorts of produce from some of the wildest and remotest parts of Africa. Here, too, in the markets and streets, you may see, in addition to Moors and Berbers, wild tribesmen from many other regions of Africa—native traders from Timbuctoo, wild-looking fellows from Soos, negroes from the Sudan and even from distant Senegal. It is a strange mingling of races. Moorish Jews are, of course, always in evidence, as they are at all the Morocco coast-towns; down-trodden and oppressed as they ever have been, and still are, their marvellous instinct for money-making enables them to evade and defeat the hearty detestation and the repressive measures even of such hard masters as the Moors. Mogador is one of the pleasantest and most healthy spots, and has one of the most perfect climates in Africa; and some day, when Morocco settles down to a calmer existence and a more stable government, I believe it will attract many visitors from Europe as a pleasure and health resort.

Excellent shooting is to be got no great way from the town among wild-fowl, partridge, quail, snipe, woodcock, bustard, and wild-pigeon; and the sea-fishing is excellent. Mr Ratto, a well-known resident and keen sportsman, has opened capital sporting headquarters, the Palm-Tree House Hotel, a few miles out towards the hills, where in reasonably settled times good sport is to be had with wild boar and feathered game of all kinds. In fine, Mogador is the pleasantest and probably one of the safest halting-places for the traveller on the Moorish coast. All the towns that I have mentioned are as accessible to English ladies as they are to men.

The best way to see this part of Morocco is by the Royal Mail steamers, which make the voyage once a fortnight, calling at Gibraltar and Tangier, and thence steaming south, they stop usually for a day at most of the five Moorish ports. On leaving Mogador these vessels return to England by way of Las Palmas, Teneriffe, and Madeira, the round trip occupying some twenty-four days. Occasional vessels trading down the Moorish coast may be picked up at Gibraltar, Las Palmas, or Teneriffe; but these are very uncertain, and they are usually of foreign nationality. The Royal Mail boats will be found far preferable in every way; on them the comforts of the traveller are carefully catered for, and every facility is offered for visiting the ancient and most fascinating towns that lie along the Moorish coast-line from Tangier to Mogador.

PETER AND JANE.

CHAPTER XV.

THEY carried Toffy home in the evening, when the sun had set; and on the day following, according to the custom of the country, they buried him. Some peons dug the grave in a corner of the little estate, and sawed some planks and made a railing round it; and Ross read the burial-service over him from Toffy's own Prayer-Book, and Peter kept the well-worn Bible for Kitty Sherard.

Peter sought solitude where he could. His grief was of the kind which can only be borne in solitude. The love of David and Jonathan had not been deeper than the affection he and his friend had had for one another. The small *estancia* house became intolerable, with its sense of void and the feeling that at any moment Toffy might appear, always with some new project in hand, always gravely hopeful about everything he undertook, always doing his best to risk his life in absurd ventures such as no one else would have attempted. It was only the other day that Peter had seen him trying to break a horse which even a gaucho felt shy of riding, and he loved to be in the thick of the herd swinging a lasso with that air of imperturbable gravity always about him. Or Peter pictured him in the long chair, where during a feverish attack he had lain so often, ruffling up his hair and puzzling his head over problems of Hebrew theology. Every corner seemed to be full of him, and yet no one had ever seemed to have a less assertive personality than he, or a lighter hold on worldly possessions. Peter thought of how he himself had always gone to Toffy's dressing-table to borrow anything he might require—the boy was so much accustomed to have his things appropriated by other people! And then, again, he saw him in the big, ugly drawing-room at Hulworth, nursing one of his appalling colds or looking with grave resentment at his priceless collection of vases in the glass cases in the hall. He remembered him riding in the steeplechase at Sedgwick, and quite suddenly he recollected how sick and faint Kitty Sherard had become when Toffy fell at the last jump. He thought of the silver box Toffy had bought for her at Bahia, and he wondered how it was that he had been so blind as not to see how much the two had cared for each other. His feeling of loss amounted almost to an agony; and once, when he had ridden alone far out on the camp, he shouted his dead friend's name aloud many times, and felt baffled and disappointed when there was no response.

Good heavens! was it only two nights ago that he was picking out hymn-tunes with his finger on the piano? At dinner-time they had been teasing him about the Prophet Elijah, Toffy having calculated the exact distance that the prophet must have run in front of Ahab's chariot. 'It was a fearful long sprint,' Toffy had said in a certain quaint way he had. And now Toffy lay in his long, narrow grave under the mimosa-tree, and the world seemed to lack something which had formerly helped to make it charitable, simple-hearted, and kindly.

No one asked after Purvis; no one had seen him. He had disappeared in the mysterious way in which he usually came and went; but his little boy was still at the *estancia*, and his bitter crying for the friend who was dead added to the unhappiness of the day. He was a child not easily given to tears, and his efforts at controlling his sobs were as pathetic as his weeping. Peter found him, the morning after Toffy's death, curled up behind some firewood in an outhouse, where he had gone so that his tears should not be seen. Peter comforted him as well as he knew how, and wished that Jane were there, and thought how well she could console the little fellow; and he said to himself, with an upward stretch of his arms which relieved the ache of his heart for a moment, 'Oh, if women only knew how much a man wants them when he is down on his luck!' He thought he could have told Jane everything, and he could have talked to her about Toffy as he could talk to no one else about him; and he wished with all his heart that he could climb up there behind the stack of wood and give way to tears as this poor little chap had done. He wondered what they were to do with him, suppose Purvis never came back again.

But Purvis came back. Men often said of him that he had a genius for doing the unexpected thing; but no one could have expected even of him that he would venture to a place so near his own estate and the men who had attempted his life. He travelled by night of course. His cat-like eyes seemed capable of seeing in the dark, and even his horse's footfalls had something soft and feline about them.

The other men were sleeping as men do after two long, sleepless nights and a day of stress and exertion. Even grief could not keep away a feeling of exhaustion, and Purvis could hear their deep breathing in the corridor when, having tethered his horse to a distant *paraiso* tree, he stole softly up to the door.

His boy's room was at the back of the house, and Purvis crept round to it, and called him softly by name. Dick's short life had been full of adventure and surprises, and he never uttered a sound when his father's light touch awakened him from sleep and his voice told him softly to get up. Purvis dressed the child with something of a woman's skill, and then he bade him remain

where he was while he (Purvis) crept softly into the drawing-room of the house.

He came back presently as noiselessly as he had left the room, and whispered, 'I am looking for a tin box; is it anywhere about?'

'They opened it to-day, and took some papers out,' said Dick.

Purvis drew one short, quick breath. 'Then let us be off at once,' he said.

He crossed the room once more in his stealthy fashion, and took from the mantelpiece a small bottle of nerve-tabloids which he had forgotten, and slipped them into his pocket, and then went out into the dark again. Once he paused at the entrance of the corridor and listened attentively, and then crept down the garden path, and found the horses tethered to the *paraiso* trees. They led them softly through the *monte*, and there Dick paused.

'I am going to say good-bye to him,' he said. 'I don't care what you say!'

He went to the grave under the mimosa-trees, and with a queer, elfin gesture he stooped down and kissed the lately disturbed sods, and made the sign of the cross upon his narrow little chest, as he had seen his Spanish mother do. The dignity of the action, with its unconscious touch of foreign grace, and the boy's pathetic attempt to keep back his tears as he stood by the grave in the darkness, at an hour when any other boy of his age would have been safely tucked up in bed, might well touch the heart of any one who stood beside him.

'I didn't know he was hit,' said Purvis suddenly; and probably he spoke the truth for one of the rare times in his life. Toffy was one of the few men who in many years had trusted him, and he had been a good friend to Dick. 'Well, the game's up,' said Purvis. And he and his son mounted their horses and rode off into the blackness of the night together.

Ross had rescued the black japanned box from the boat, and had kept it under his care until such time as he should have an opportunity of giving it to Peter. It was a wish to provide some sort of distraction to a man almost dazed with grief that made him bring it into the drawing-room the evening of the day Toffy was buried, and suggest that perhaps Peter had better open it and see what was in it. The key was gone of course; but they prised it open with some tools, and at the top of the box there was a letter which made Peter lay his hand over his pocket for a moment. It was as though by some sleight-of-hand the packet which lay there had been transferred to the interior of a black japanned box discovered upon a river steamer in the Argentine Republic. The cover was a duplicate of the one he himself held, and was addressed in his mother's writing: 'To my son, to be given to him at my death.'

Peter could not see quite straight for a moment. The finding of the packet seemed to establish his brother's identity conclusively; and he took out the folded sheets which lay inside the cover with hands that were not steady.

The very words in the opening sentences were the same as in his own letter, and written in the clear, strong handwriting which he knew so well.

'When you get this letter I shall be dead,' he read in the words which were already painfully familiar to him, 'and before I die there is something which I think I had better tell you. I am not haunted by remorse nor indulging in deathbed repentance, and I shall merely ask you not to hate me more than you can help when you have finished reading this letter.

'You must have often heard of your elder brother who died when I was in Spain, the year of your father's death. He did not die'——

So far Peter knew the letter by heart, but there seemed to be many pages of writing to follow.

'And as far as I am aware he may be living now.'

'If it is anything bad,' said Ross kindly, 'why not put it off until to-morrow? You are about used up to-day, Peter, and whatever there is in that box can wait.'

'I am all right, thanks,' said Peter without looking up. And Ross went out to the *patio* and left him alone.

'I must go a long way back to make myself intelligible,' the letter went on. 'I suppose people of Spanish descent are generally credited with an unforgiving spirit. I have never forgiven my sister-in-law. I did not at first attempt revenge; possibly because there was only one way in which I could deprive her and her children of their inheritance. That way was denied me. My eldest boy died at his birth, and the girl only lived a few weeks. After that I had no other children. I think the grief this caused us entered into both our lives with a bitterness which is unusual, and which I shall not attempt to recall. I shall only say we both mourned it, and that Lionel Ogilvie and his wife, by their conduct, made what might have been merely a sorrow a matter also of almost unbearable disappointment. I mention this regrettable emotional feeling in order to make my subsequent conduct intelligible to you. In the course of years, during which your father hardly attended to any matters concerning the property, because to do so would seem to be benefiting his legal successors, I urged him to go abroad on an exploring expedition such as he loved, hoping in some way to mitigate his disappointment or keep him from dwelling upon it. I have probably not conveyed to you how deep the quarrel was between him and his brother; but if I have not done so it is not of any great importance.

'When your father had sailed for Central Africa I went out to Spain to visit my property there, and I took a sea voyage to Lisbon for the benefit of my health. There was a young couple in the steerage of the boat, going out to settle in Argentina. They were people of the working-

class, and very poor; and before we reached Lisbon, on the night of a storm, the woman gave birth to a child and died, and the father was left to start life in an unknown country with a helpless infant dependent upon him. Some kind-hearted people on board the steamer made up a subscription for him, with the English people's quaint notion that all grief can be assuaged with food or money; and one night, when I was on deck alone, the stewardess brought me the baby to see.

'When we got into Lisbon the following day I made an offer to the man to adopt the child; and when my maid returned to England I got a Spanish woman for him, and took him with me to my own estate. He was greeted everywhere as my son, and, allowing myself the luxury of the deception, I pretended to myself that he really was mine; but weeks passed before I ever dreamed of deceiving anybody else on the subject. It was a letter which my sister-in-law wrote to me which decided me to stay out in Granada during my husband's two years' absence, and to announce in course of time that I was the mother of a son. The plan was quite stupidly easy, and everything lent itself to the deception. The child was fair and not unlike the Ogilvies, and his father had given him up entirely to me on the understanding that he was never to claim him again. It may seem strange to you, but it is a fact that after I returned to England there was not the vaguest suspicion in any one's mind that he was not my own child. When my husband returned from abroad I was convinced, if I had ever doubted it, that I had acted wisely. Under the circumstances I should act in the same way again.

'Of course events proved that I had made a mistake; but I had in the meantime made my husband perfectly happy and my sister-in-law perfectly miserable, and that was what I desired.

'You were born a year after your father's return home, and when the other child was two years old. To say that I then found myself in an intolerable position would not be to overstate the case. If your father had lived, my difficulties would have been greater than they actually were, and it was during his lifetime and after your birth that I suffered most. I suppose only a woman, and one, moreover, who has longed for children, would be able to realise what my feelings were, and I shall not urge your compassion by dwelling upon that time. I have never accepted pity, and I should prefer not to have it bestowed upon me when I am dead.

'It was only after your father's death that I saw a way of escape out of the intolerable position in which I had placed myself. I was in very bad health for a time, and my husband's affection for the alien child was more than I was able to bear. There is always a touch of the savage in motherhood, and I am naturally jealous.

'After my husband's death I went out to my own property in Spain, and by judiciously moving about there from one place to another and changing my personal servants frequently, it was a comparatively easy matter to say that the child had died, without exactly specifying where his death had taken place.

'It was absolutely necessary that he should be got rid of. A common emigrant's boy was taking the place of my son in everything. The very tenants about the place treated him differently from the way in which they treated you. My husband had decided that the bulk of his property was to go to him; and all the time I knew that his father was of the class from which perhaps navvies are drawn, and that his mother was some girl from Whitechapel or Mile End.

'He had to go; but I treated him fairly. I took him down to Lisbon myself, and sent him back to his father, with a trustworthy couple who were going out to Argentina. From my own private fortune I bestowed upon him a sum sufficient to educate him and to place him in the world.

'I think I never breathed freely or had one undisturbed moment from the time you were born until he had gone to Argentina.

'The people to whom I entrusted him both died of fever in Rosario, and from that day to this I have never heard of the boy who was called Edward Ogilvie. The money which I had bestowed upon him had proved too tempting to some one. The child disappeared, and so far as I am concerned he was never heard of again.

'For four years he had lived as my own son, and it was I who took him away from his father and from his natural surroundings. I want you to find him if you can. If he has been brought up vilely or treated brutally by strangers, the fault of course lies with me; this will probably distress you, but I think it will be an incentive also to you to try to find the man.'

The letter was signed in Mrs Ogilvie's name, and it finished as abruptly as it had begun.

(To be continued.)

THE BACILLUS OF LONG LIFE.

By Loudon M. Douglas, F.R.S.E.

AMONGST the Eastern nations it has been the custom from time immemorial to consume milk in the soured state; indeed, in the East the drinking of milk in the fresh condition is hardly known. In ancient times soured milk formed one of the principal articles of dietary, and a well-known incident in connection with its use is the tragic scene between Jael and

Sisera described in the Book of Judges. The fugitive Sisera, on the defeat and annihilation of his followers, fled to the tent of Jael, the Bedouin woman, and begged for a little water to drink; but, as the tale is told, she opened a bottle of soured milk and gave him that, and afterwards assassinated him. The story is interesting as showing that in biblical times soured milk was well known, and its use under different names from then till now has been common in Egypt, Turkey, Bulgaria, and many other Eastern countries, not so much as a beverage, but as an article of food. It was found then, as now, that during the warm weather it was impossible to keep milk fresh for any length of time, and the custom was to add the fresh milk to a vessel or a skin sewed up so as to form a receptacle, in which the previous supply of milk had been kept in the soured state; this ensured the souring process taking place immediately, so that there was no question at any time about milk being consumed in the fresh state. It must be remembered that milk in Eastern countries did not necessarily mean the milk from cows, as that of camels, buffaloes, sheep, and goats was used as well; and at the present day such milk is in common use throughout the East. In Russia, soured milk of mares, under the name of *koumiss*, is largely consumed on the steppes, and is not only considered to be nourishing and wholesome, but is also regarded as a cure for pulmonary diseases; and it is also looked upon as the principal agent in the prolongation of existence. In India the soured milk is termed *dadhi;* in Egypt it is called *leben;* and in the Balkan Peninsula, where it is most commonly used, it is known under the name of *yoghourt*.

It is curious to find, in connection with the history of this wonderful preparation, that its use has been confined principally to the Eastern nations, and that it is only during recent years that it has come to be known in Western countries. There is little doubt but that the value of soured milk in the prolongation of life was known in ancient times, and if the apparently impossible ages which are credited to the patriarchs are reduced to the denomination of the present day, they will be found to be quite in accord with very ordinary phenomena in the Balkan states. In these countries thousands of centenarians are alive to-day, and many men and women live until they are one hundred and twenty years of age, not because of their hygienic surroundings, which are not always of a satisfactory character, but because their principal article of diet is soured milk.

Some years ago the fact that so many people lived so long in Bulgaria attracted the attention of a number of investigators, who proceeded to study the life-history of some of these centenarians, with the result that they found that the sole cause of the abnormal prolongation of life seemed to be the daily use of soured milk. The principal amongst these investigators was Professor Metchnikoff of the Pasteur Institute of Paris, and he conducted researches into the whole subject with the same thoroughness that has characterised his other investigations, and with the result that he has found conclusively that, provided the milk is treated in a certain way, and soured by means of a particular organism, it will have a beneficial effect on the human system. Metchnikoff studied the matter from beginning to end, and eliminated from the innumerable micro-organisms which find a lodgment in milk one which predominated over them all, and is now known to science as the *bacillus Bulgaricus*, and which, if added in the pure state to milk which has been boiled, will produce souring of a particular character. The milk thus inoculated becomes a valuable article of diet and a health-giving food.

It will be remembered that throughout the alimentary tract there are countless organisms present, and in the large intestine these seem to predominate more than anywhere else. As a consequence many diseases, including senility and the gradual breaking-up of the human system, are traceable to poisons which originate from the putrefactive organisms which congregate in the large intestine. It was found that, while such was the case, there were no agents of a harmless character known to science which would overcome these putrefactive organisms; and it is only within recent years that it has been shown that the particular souring agent referred to, the *bacillus Bulgaricus*, is in reality the one master-bacillus which will pass through the alimentary tract uninjured, and finally predominate over the putrefactive organisms referred to. It will thus be seen that the *bacillus Bulgaricus* is well entitled to be called 'the bacillus of long life,' which is the name I have given it, and which, if it appeals to the imagination, is also strictly true.*

'The bacillus of long life' is, therefore, a useful organism, and belongs to that category of bacteria which are in daily use for the souring of cream, the ripening of cheese, the making of vinegar, and similar operations. There are other bacteria of a putrefactive character which decompose foods and cause ptomaine poisoning, or they may produce disease. There are others again which are of an indifferent character, and do not affect the human economy either one way or another. Any one of these organisms, however, can be cultivated artificially; that is to say, they can be isolated from their surroundings and made to propagate alone on certain media, and by this means we are enabled to utilise such artificially cultivated organisms in any way that may be desirable. That is how it comes about that we can now procure a perfectly pure culture

* *The Bacillus of Long Life* (T. C. & E. C. Jack, Edinburgh).

of 'the bacillus of long life;' and, that having been done, the preparation of soured milk in the home becomes a comparatively easy matter.

It is desirable to take certain precautions in dealing with milk in the house, as it must always be remembered that it contains overwhelming numbers of different kinds of bacteria which have been taken up from the atmosphere of the byre, or in the passage between the dairy and the house, or which may have been taken up in the house itself. These organisms multiply enormously in a very short time, and the familiar souring of milk in hot weather is due to their presence. Such milk, it may be said in passing, is not fit for human consumption.

The best thing to do when fresh milk is received into the house is to boil it for about five minutes. The milk should then be allowed to cool for some little time, and should be poured into bottles, which, by the way, must be scrupulously clean, and which have been washed with scalding water and allowed to drain in the inverted position. A little tube of the pure culture to which we have referred is poured into the bottles containing the cooling milk, and a clean cloth should then be put over them so as to keep out the dust. The temperature should be maintained at about a hundred degrees Fahrenheit, which can easily be done by keeping the bottles in a warm place. One or two trials, and the use of a clinical thermometer so as to ascertain the temperature, will make any one quite an expert at this simple business. What happens is that the bacillus which has been introduced from the tube begins to multiply in the milk at once, and it does so because the temperature of about a hundred degrees Fahrenheit is suitable for its propagation, and as a consequence the milk assumes in four or five hours a thickish consistency. In this condition, and at the end of this time, it is in the best possible form for giving to children or to any one who does not care for the acid taste which develops later on. For the use of adults, the milk is kept in the warm state for from eight to ten hours from the time it was first inoculated, and by the end of that time it will present a cheesy texture and have an acid taste. The soured milk may then be taken either after stirring it up briskly, or it may be spread on bread, and a pleasing addition to many palates is a little fine sugar and just a sprinkling of cinnamon. Another pleasant way to take the soured milk is to mix it with scalded fresh milk and sip it slowly.

I have entered into the preparation of this wonderful article in detail in order to show that there is no difficulty in its preparation in the home, and also that the use of soured milk, far from being merely a medicinal one, can be made very agreeable and pleasant; and I feel sure that in a few years' time its use will become universal amongst all Western nations.

THE WHITE APRONS.

CHAPTER III.

WITHOUT a second's hesitation I turned aside on to one of the steamboat-piers moored alongside the bridge, and thus avoided detection. It at once occurred to me that Bloch would most certainly be staying at the Pera Palace, the big hotel where I had put up. So I hired a cab, and driving direct to the hotel, paid my bill and removed my traps to the Embassy, where I knew there was always a room for me, especially as his Excellency and the staff were moving on the morrow to Therapia, their summer palace on the Bosphorus.

Next day, and the next, Verney and I watched Bloch's movements. He seemed to be dancing attendance upon the two fair strangers—a Madame Fournier and her daughter—but with what object was a mystery.

I left the observation to Verney, with whom the sharp-eyed Belgian was not so well acquainted, and then turned my attention into a different channel. Employed in the Sublime Porte as translator was a middle-aged Frenchman named Gustave Nathan, with whom I was acquainted during my period of service in the Turkish capital. I knew that he, like most other Turkish employés, was not averse to receiving palm-oil. Indeed, under the régime of Abdul Hamid money accomplished everything in Constantinople. The palace spies were everywhere, and by paying one of them you could denounce your enemy to the Yildiz, so that he would either disappear and never be heard of again, or else be ordered to quit the country at a few hours' notice. In business, as in private life, this unscrupulous mode of dealing with one's opponents was constantly resorted to, and the palace spies even had a tariff for certain denunciations.

In such fear of assassination did the ex-Sultan live that it was sufficient for one of his personal attendants only to whisper a name into his ear to bring upon the unfortunate victim disaster and probably death. As proof of this I may add that the secret reports of spies found in the Yildiz after the deposition of the Sultan weighed over five tons, and contained revelations so shocking and unheard of that the Young Turks decided to destroy them, fearing lest they should ever come to the knowledge of the public. Truly, the secrets of the marvellous and beautiful Yildiz Kiosk will never be revealed.

I made an appointment with Nathan, and he

met me one night down near the Sweet Waters of the Bosphorus. I wore the frock-coat and fez of the Turk in order to avoid being conspicuous as a European; while he, of course, was dressed in similar garb. In the bright moonlight—that white, clear moon of the East—we strolled together, smoking cigarettes and chatting.

'It certainly is true that there has of late been a quantity of diplomatic correspondence with Sassonia, the nature of which is remarkably mysterious,' replied the Frenchman in a low voice. 'It has been given me to translate, but only in small portions, in order that I may not know the drift of the negotiations.'

'You have not suspected what I have just told you—a Balkania-Sassonia agreement?'

'There has been nothing to show that it refers to any such proposal,' replied the Frenchman. 'A good deal of it seems to refer to some present which the Emperor of Sassonia desired to make to His Majesty.'

'The return of the lost provinces, I expect,' I answered quickly. 'But cannot you discover the truth for me?' I went on. 'You recollect that you assisted me with information regarding the Bagdad railway a few years ago. Will you help me now—for a consideration? England is a good paymaster when necessary, as you know,' I laughed. 'Your two daughters—how are they?' I asked. 'I believe you want to send them to school in Paris. That was your ambition when we last met.'

'It still is, M'sieur Morrice,' he said with a slight sigh. 'But how can I afford it? My pay as translator is not at all a handsome one.'

'Try to obtain for me details of the negotiations in progress between our friends the enemy, and your daughters shall be sent to school in Paris, and all expenses paid—say for five years. Remember you are French. You are not betraying your own country, but will be assisting it by exposing the Sassonian intrigue against France and England.'

He nodded, but no words escaped his lips. My argument had convinced him. I knew that, as translator, he had access to much of the diplomatic correspondence. Though the secret of the negotiations would be concealed from the staff at the Sublime Porte, yet there was just a chance of his being able to secure what I so urgently desired.

We spent an hour together, walking in unfrequented ways and earnestly discussing the situation. I pointed out the extreme gravity of the affair, and ere we parted he had promised to assist me in every manner possible.

Just as I was shaking his hand at the corner of an ill-lit street, where a herd of gray pariah dogs were howling, as they do each night in the Turkish capital, a tall, thin Turk glided past us and was lost instantly in the darkness. So silently did he appear and disappear that he caused me to start. I said nothing to my friend, fearing to alarm him, for in Constantinople at that time alarm was quickly aroused in the breast of every man. The silent passer-by apparently wore rubber-soled boots, and was probably only a police-spy, of whom there was no cause for fear.

Every stranger who enters Constantinople is watched by the police just as closely as he is in Russia or in Servia, and a full report of his doings is docketed at the Central Police Bureau day by day. I was, however, known as a foreign diplomat, and therefore exempt from this perpetual espionage. So I reassured myself that, if the silent-treading police-spy had picked me up, he would very soon drop me when he learnt my identity.

Nathan, making an appointment for the following evening, turned on his heel and left me, while I continued my way up the hill toward the British Embassy. Twice on my way I turned, and on each occasion found that the slim, silent Turk was closely following me.

Over a whisky-and-soda in the Embassy I sat with my old friend Harry Chichester, the military attaché, and told him how I had been followed.

'My dear chap, we are followed and spied upon every day. The city literally swarms with spies just now. The Sultan's pet astrologer has told him that if he isn't careful he 'll come to some bad end this month. So you may imagine how nervous the old boy is! He hardly gives audience to ambassadors nowadays.'

To avoid meeting Bloch I remained in the Embassy all next day. His Excellency and the staff had left for Therapia, and Verney, myself, and Colonel Chichester were left alone in the huge gray mansion, the headquarters of British diplomacy in the Near East.

Towards six o'clock I received from Nathan a scribbled note expressing his inability to meet me as arranged that evening, but promising to communicate later. Thus was I kept in suspense for two whole days, fearing to put my head outside the great gate of the Embassy.

From the Chief at home I received a cipher message suggesting that I should return to Sassonia forthwith, and endeavour to obtain information through a certain official whom he named, and who, on more than one occasion, had sold us secrets; but I disregarded this suggestion, feeling that it were best I should conclude the inquiry I had instituted.

Teddy was all impatience, fretting, fuming, and consuming dozens of cigarettes. Bloch's movements were quite unsuspicious. As far as we could make out, he had come to Constantinople with his two lady friends upon a pleasure-trip, to show them the sights of the Ottoman capital. He had not been near the Sassonian Embassy, and, further, he was unaccompanied by his factotum and constant companion, Jules Vandam.

On the next evening, in consequence of a message from Nathan, I donned my frock-coat

and fez, and met him at the entrance to the Grand Bazaar, afterwards walking with him through that maze of stalls, which is one of the wonders of the Turkish capital. Amid that jostling crowd of all nationalities we were unnoticed, and what he told me was of interest.

'To-night the Sassonian ambassador has audience with His Majesty at the Yildiz. The Grand Vizier is ordered to be present; therefore it would seem as though some important decision is to be given,' he told me.

'I must know of that decision,' I said quickly. 'You must discover it for me; surely there is some way by which you can ascertain the truth. Have you thought it all over?'

'I have never ceased thinking, M'sieur Morrice,' he replied. 'I fully realise the grave peril in which both our nations are now placed. Any means to avert that peril are, I consider, quite justifiable.'

'Exactly. Then continue to work in the direction I have indicated.'

Hardly had the words fallen from his lips when, on turning, I recognised a man talking to the keeper of one of the stalls and idly smoking a cigarette—the thin, hard face of that tall Turk who had passed us so silently and had so quickly disappeared. I pointed him out to my friend, inquiring if he knew him.

'No,' he responded in French; 'he is a stranger. I do not know him.'

The knowledge that I was being spied upon caused me at once to alter my plans. In this most serious matter I could not afford to court failure. If the truth were discovered by that lean, sinister-faced spy, then it would fare badly for both my friend the Frenchman and myself. So on my return that night to the Embassy I transformed myself into a wharf-labourer, there being many foreigners following that humble calling, and passed out of the big gates unrecognised by our uniformed porter. At midnight I found quarters down by the wharf at Galata, where the Alexandria steamers come alongside, quarters that were horribly dirty and where half-drunken scoundrels quarrelled and fought the whole night through. I wished to efface my identity, and this was the only means by which to evade espionage.

I had made a rendezvous with Nathan for the following night near the Custom House, and had told him that I should, in all probability, appear in the guise of a labourer.

I think I must have presented a curious sight in the torn trousers and shirt, the turned-up Albanian shoes of string, and the greasy old fez; for both Verney and Chichester, with whom I had had a parting drink before leaving the Embassy, declared that I presented an excellent picture of unwholesome humanity.

I paid a Turkish equivalent of fourpence for my night's lodging, and idled away next day stretched lazily upon the quay in the shadow, eating figs, smoking cigarettes, and watching the shipping. At four o'clock I went to the bridge, and there met Teddy. But he had nothing to report. Bloch had left by the two-twenty train, bound for either Budapest or Vienna.

Now that I was freed from the attentions of the lean police-spy I felt at liberty to call at Nathan's house, which I did that evening, and there renewed my acquaintance with his two pretty, dark-eyed girls—Lucie, aged fifteen, and Julie, a year older. They were quite children when I was attaché, yet they remembered me, and I spent a very pleasant evening in the family circle, notwithstanding my ragged dress. Nathan had explained to his wife—a well-preserved Jewess from Caen, in Normandy—that I had adopted that guise in order to avoid undue attention from police-spies; while the two girls appeared highly amused at entertaining a dock-labourer in their pretty *salon*.

Nathan took me aside, and, having closed the door, said in a low voice, 'Something serious is in the wind.' Then from his pocket he took a sheet of thin ruled paper, which he handed to me. 'I translated this despatch from Turkish into French this afternoon, and it has been sent by special courier to Balkania by way of Constanza and Bucharest.'

I took it, and in eagerness read it through. It was an official despatch, signed by the Minister of Foreign Affairs, acknowledging a copy of a certain draft agreement, and stating that the Imperial Ottoman Government would agree to the suggested terms, providing that the Balkanian occupation of Bosnia be withdrawn, and that the Turkish occupation of Montenegro be allowed.

The despatch concluded with the following words: 'The whole matter has been thoroughly considered by His Imperial Majesty the Sultan, who orders me to convey to your Excellency his warm appreciation of the spirit of friendliness in which you have approached him, and to say that he heartily endorses the general principle of the proposed secret agreement between your Excellency's Government and the Empire of Sassonia.'

This showed that the intrigue, which had for its object the overthrow of England, was on the very eve of completion. The royal princess who had first given us warning had made no mistake! The peril was both real and imminent.

'Well,' I said, 'it only now remains for us to learn the actual clauses of the secret understanding. They must be in the Sublime Porte somewhere.'

'Of course they are,' replied the translator. 'But where? Locked in that big safe in his Excellency the Minister's private room, I believe.'

'Do you never go to that safe?'

'Never. Only Noury Bey, the Secretary-General, is entrusted with the key. He has, as

you know, dictated all diplomatic correspondence with the Powers for the past sixteen years.'

'He is my friend,' I replied, 'and one of the cleverest and most charming diplomats that Turkey possesses. He does not agree with the old-fashioned ideas of his countrymen. He connived last year at the elopement of his two young daughters in order that they should go to a finishing school in France.'

'Yes,' laughed my friend. 'A good story is told of that affair. As soon as His Majesty heard that the two young ladies had eloped he sent for Noury, and told him angrily that he must at once follow them and bring them back to Turkey. The Bey was about to pass out of the audience-chamber in disgrace, when the Sultan called him back, and, with a laugh, added, "You need not go farther than the frontier." This implied that His Majesty granted the girls their liberty, for he knew well that, even while they were speaking, the Orient express had already passed into Bulgaria.'

I laughed. It was a story that is often told in diplomatic circles in Constantinople to-day, even though poor Noury is, alas! now dead, and the mighty Sultan Abdul Hamid is a prisoner at Salonica.

'I wish you to do nothing that might injure or place suspicion upon a friend,' I said. 'Remember, whatever is done, no suspicion must be allowed to fall upon Noury Bey.'

The Frenchman's face fell slightly. It seemed to me much as though he had conceived a plan to implicate his master, the Secretary-General.

'I have tried each day to get sight or knowledge of the proposed conditions, but the secret is far too well kept. The despatch I have given you is the first complete document placed in my hands to translate.'

'There will be others,' I said. 'Take careful copies of them.'

He made me a faithful promise, whereupon we rose and passed back to where Lucie was playing patience, and Julie, seated at the piano, was singing a pretty melody in the soft *patois* of the Nord.

At midnight I went back to my evil-smelling lodging in the wharfside slum, and for a long time sat by the light of the flickering candle in the wretched, tumble-down, carpetless room, where the straw-bed was unwholesome and the plaster had parted from the walls.

At least I had gained knowledge that the Sultan was agreeable to the crushing of Great Britain under certain conditions—conditions that were now made plain. Therefore at dawn I went to the Embassy, and, still unrecognised as I passed the porter's lodge, sent from there a cipher message home, reporting what I had learned.

Next day, when I met Verney on the Galata Bridge as usual, he slipped into my hand a telegram which, when unobserved, I opened and read. It had been forwarded by my man in London, and was from dainty little Françoise, in Paris, urging me to see her without delay.

I at once wired to her inquiring the reason, whereupon she sent in reply a message: 'Come quickly. I must see you—or it will be too late.'

Again I wired to her, but her response was a strange one: 'Have a care of yourself in Constantinople. Your enemies are plotting against you. Come and see me.'

(To be continued.)

HALLEY'S COMET.

SECOND ARTICLE.

By ALEXANDER W. ROBERTS, D.Sc., Lovedale, South Africa.

WHEN a former article on Halley's Comet was written for this *Journal* (vol. xii. p. 710), the whole scientific world was waiting for the approach of the comet.

There was something very impressive about this expectancy. A generation had come and gone since the day when it had last shone out in terrestrial skies. For full seventy years no eye had seen it; for over half-a-century its way lay in the outer spaces of our solar system. Its sweep was a circuit of a little more than seven thousand million miles, and its period seventy-six years. There was, we say, something impressive about men thus waiting for the advent of a star that had wandered so far afield, that had circled in a course so spacious.

Regarding this attitude of expectancy there was in many minds a feeling of wonder almost akin to awe. It seemed so strange to not a few that though the path of Halley's Comet was so far-flung, its journey so long, yet it was within the province and the powers of men to chart that journey, to determine that path, to trace its track from year to year—nay, from day to day. And to the expectancy and the wonder was added the romance of story. For the history of this remarkable comet has been intimately associated with the achievements of some of the greatest astronomers, and its coming has marked epochs along the way progress lies.

Although the movements of Halley's Comet have never been outside the range of exact inquiry since its last appearance, it was not till about four years ago that astronomers and mathematicians took up with vigour the date and position of the return in 1910. Of all those

who dealt with the problem, the most laborious and involved probably in the whole range of astronomical research, two, by common consent, Dr Crommelin and Dr Cowell of Greenwich, achieved complete success. Through their skill, patience, and outlook, the part of the sky where the approaching comet would steal into the ken of our larger telescopes was determined with an accuracy never before attained. Thus astronomers knew exactly where to look for the first faint trace of the coming visitor.

In the article already referred to in the opening paragraph of this paper, it was said that either in August or September 1909 some of the larger telescopes would assuredly pick up the comet; it was suggested, also, that as the star would be exceedingly faint, the discovery would be made by the aid of photography. Photography has this advantage over the human eye, that its power is accumulative. Looking long for an object that is too faint to be seen will not bring the object into vision; rather the eye grows tired and insensitive with prolonged strain. It is otherwise with the photographic plate; the longer it is exposed the more is impressed upon it. Hence the great value in astronomical research of long-exposure photography.

On the night of September 11, 1909, Dr Max Wolf of Heidelberg found the expected comet on a plate which had been exposed under perfect conditions. It was almost exactly in the position predicted by Dr Crommelin and Dr Cowell—surely a remarkable triumph of human prevision. The next day the news was flashed to the farthest corners of the globe that Halley's Comet had once more come sailing into our midnight skies.

On further search being made by Dr Wolf, he found the very faintest impression of the comet that could be certified to on a plate taken by him on August 28th; while it was subsequently proved that the observers at the Helwân Observatory, Cairo, had obtained photographic evidence of the comet as early as August 24, 1909. The honour of discovery, however, remains with Dr Wolf, as he was the first authoritatively to declare that the comet had been seen; while to the Greenwich observers is the still greater merit of declaring where it would be seen.

It was not till October 16th of the same year that the comet was seen visually, and only then in the great Lick telescope of thirty-six inches aperture.

When first photographed by Dr Wolf it was three hundred million miles away from the earth, and was between the sixteenth and seventeenth magnitude of brightness. To the unscientific reader this latter statement conveys no meaning. We may, therefore, put the fact thus: On a dark, starlit night, at a distance of a little over three-quarters of a mile, a lighted candle is just seen, and no more. It is at that distance of the same brightness as a star of the sixth magnitude. Now, how far should we have to place the candle away till its light would be equal to that of a star of the *seventeenth* magnitude—the faintest light yet discerned? We should require to place the candle at a distance of over a hundred miles! This was the problem before astronomers in the autumn of 1909, to detect a light as faint as that of a candle a hundred and twenty miles away; and it was this task that Dr Wolf, with his patience, his skill, and his supersensitive plates, accomplished. We need not wonder why the comet could not be seen visually till October, even in the mammoth telescopes of the Lick and Yerkes Observatories.

When first seen it was in no way different from an ordinary star, but as it drew nearer to the earth, with the passage of the days, its hazy corona appeared, which as 1910 opened developed into a rudimentary tail. But at no period of its early career was there evidence of the magnificent object that later on was to surprise and hold, and in some cases appal, millions of folk all over the earth.

True, there were not wanting the predictions of astronomers as to the exact path the comet was pursuing, which path in the later days of May would bring it right across the earth's track, a condition fulfilled but rarely in the comet's history. And there were not wanting foolish writers in papers and magazines who interpreted these predictions into words of doom and death for our poor earth, thus unkindly and ungenerously bringing fear into the hearts of timid and ignorant folk.

In the beginning of January 1910 the comet was still about one hundred and fifty million miles remote from the earth, and was of the twelfth magnitude in brightness. It was, however, bright enough to be continuously watched at all the great observatories of the world, and thus the predicted path determined by Crommelin and Cowell was corrected by the rapidly aggregating observations.

It was evident by this time that during May the comet would be an object of surpassing splendour and of exceptional interest. It was found that the path it was following would bring it nearest to the sun, to perihelion, as this position is technically called, on the night of April 19th; a distance of fifty-five million miles would then separate sun and comet. In the early hours of May 19th the comet would approach nearest to the earth, being then only fourteen million miles away—a hand's-breath in astronomical reckoning.

Further, as the comet would on that day come directly between the sun and the earth, it was just possible that it might be seen in transit across the sun's disc; while what was of far more importance to the lay mind than this matter of transit was the fact that if the

tail of the comet was longer than fourteen million miles, then it would envelop the earth as it passed. All of these facts were yielded by the earlier observations of 1910, and men acted differently with regard to them. The chief scientific societies sent out astronomers to the Pacific to watch for the transit of the comet across the sun; while the ordinary man set himself to wait for the transit of the earth through the comet's tail, vaguely wondering what would happen.

Until the end of March, Halley's Comet was an evening star. In the early days of April it became a morning star. It was then well situated for observers in the southern hemisphere. Indeed, dwellers under northern skies can have no idea of the supreme, stately beauty, the impressive, inspiring splendour, of the comet when at its highest brilliance. Those whose years gather in their folds many memorable sights aver that they have never seen anything to equal the spectacle it presented on the mornings of 16th, 17th, and 18th May.

But to go back in time, the writer first saw the comet on April 14th—that is, saw it without instrumental aid. It was then a fluffy ball of light, with a short, slightly fan-shaped tail pointing directly away from the sun. As the days passed the tail grew longer, divided into great rays, and the nucleus increased in brightness. Viewed in the telescope it seemed as if this nucleus was shedding a nebulous substance which forthwith became swept away behind as though a great wind were playing upon it. This exhaled phosphorescence found its way along the tail in sinuous streamers, all making a picture of striking beauty.

In the early days of May the nearness of Halley's Comet to Venus made the morning sky a theatre of unforgettable wonder and glory; and when to the comet and Venus there was added the crescented morning moon there were few in South Africa who lingered in bed, and there were none of those who rose betimes but wished that the dawn would tarry so that the view standing peerless at the gates of day might abide. The writer has been beside those who, he is abundantly sure, were never before awed into silence; but speech before the marvel that swept majestic across the sky seemed out of place even to the most thoughtless and undevout.

On May 3rd the comet was seventy million miles distant from the earth, but coming sweeping down upon it at a speed of over three million miles a day. Its tail was then about twenty degrees in length, and as straight as a spear-shaft. It was evident that the tail would be long enough to envelop the earth on May 19th unless something unforeseen happened. It is usually the unforeseen that does happen, even in nature. Still, the certainty that the tail was at least twenty million miles in length, and that the distance of the earth from the comet would be only fourteen million miles on May 19th, was sufficient to rouse interest—and other feelings—in the minds of most. In this connection it may be noted that a good deal has been written about the fear the comet begot in the minds of native people east and west and south. As far as the native people of this southern land is concerned, there was little fear and no panic; they viewed the spectacle, even the most unlettered, with equanimity, asked sane questions, and listened calmly to sane explanations.

By May 14th the tail was at least sixty degrees in length, and stood out along the dome of night like some vast searchlight.

On May 17th the tail reached from the horizon to the zenith. Of it, on this date, Mr Innes, the director of the Johannesburg Observatory, writes: 'It would require much imagination to desire a more impressive and brilliant spectacle than that presented by Halley's Comet on the morning of 17th May. It was indeed a "great comet," such as the writer had never seen before and can hardly expect to see again.'

And now we come to what must be regarded as the mystery of Halley's Comet, and it will make for understanding if we relate the circumstances and events simply and in order.

On the morning of May 18th the nucleus was invisible, being below the horizon; but the tail rose in a broad band of light right up to and across the zenith. It must have been at least one hundred and thirty degrees in length. It was evident, also, that we were approaching it, for it was in some parts twenty degrees broad.

On the night of the fateful 19th a slightly luminous mist swept up over the face of the land, hiding star and distant hill from view. It was apparent that if the comet meant to end the earth it would do so unseen. This dense cloud or mist was almost universal, and thus practically no observations of the comet were made on this date. Those which were made —in Jamaica, for instance—speak of the tail as ill-defined, tenuous, more like the zodiacal light than the clear, well-defined rays which observers had been acquainted with in the early days of the month. Then there was the marvel that the tail should be seen at all on the morning of the 19th. If the comet passed the sun on this date—and all calculations pointed in this direction—then the comet should have been an evening phenomenon on the 19th. This mystery was only intensified on the 20th, when in the early morning hours a beam of light was seen in the eastern sky, and in the evening the *whole* comet, nucleus and shortened tail, was visible in the western sky.

The beam of light seen in the east on the

20th was also seen on the 21st and 22nd, and by that time the comet was so high in the west that it could have no connection with this eastern appearance. After this date this strange and almost inexplicable phenomenon died away.

Before we consider the explanations offered by outstanding astronomers of this very remarkable occurrence, one or two allied or related circumstances call for note.

We have already referred to the dense mist which apparently covered the better part of the globe on the morning of the 19th and through most of the following day. This mist is described by some observers as slightly luminous; then a few speak of a distinct difficulty in breathing during the night, but this may have arisen from many causes. The very definite halo seen round the moon is not uncommon; most observers of repute refer to it, but connect the phenomenon with the misty state of the atmosphere.

Meteorological observations taken at high altitudes on the 19th reveal nothing remarkable, while the electrical and magnetic conditions were normal. As the comet drew near to the 19th many observers noticed a distinct curvature in the tail, and not a few have urged that this curvature would carry the tail to the north of the earth, and thus there would be no contact or collision.

Although the most careful preparations had been made in India and elsewhere in the East to observe visually and photographically the transit of the comet across the sun's disc, no trace of any such occurrence has been witnessed, if we make exception of one doubtful case. But this is perfectly understandable if we regard the nucleus of the comet as being extremely tenuous. We know how rare in density the tail is; one distinguished astronomer, in a moment of exalted humour, assures us that we could pack the whole structure into a Gladstone bag! There is much truth in this intentional exaggeration.

Put succinctly, the facts of the 18th, 19th, 20th and 21st May as regards Halley's Comet are as follows: On the morning of 18th May the head of the comet was below the horizon. The tail reached right up to and beyond the zenith; there was evidence that we were rapidly nearing it, and would pass through it within the next twenty-four hours. On the morning of the 19th the tail of the comet was still visible in the east, but fainter and much more indistinct. It was impossible to say if the tail was also visible in the west, as clouds and mist prevented observations; curious halo round the moon. On the morning of the 20th the eastern ray still visible; comet clearly seen in the west in the evening, but with much-diminished tail. On the morning of the 21st the eastern ray very faint; in the evening the comet high up, very clearly defined, and completely detached from eastern ray; tail slightly fan-shaped, and only a fourth the size and brightness of what it was on the 17th and 18th May.

Mr Innes, director of the Johannesburg Observatory, offers as an explanation of the separate rays, east and west, that the earth and the comet are similarly charged electrically, and that when the comet drew near the earth its filmy tail was disrupted; part, the greater part, remaining in the eastern sky till it dispersed; the other portion, and the smaller, clinging to the nucleus, and forming a fan-shaped appendage. Mr Innes follows up this idea by the assurance that it is practically impossible for a body such as a comet to harm the earth. The repulsion between the two would prove an impenetrable shield.

Whatever be the explanation of what happened on 18th to 20th May—whether we passed through the tail, or did not; whether the tail was disrupted, or was not; whether the unseasonable weather was due to Halley's Comet, or was not—this we know, that a very much beshortened and bedimmed comet went sailing out into the west, out into the darkness from which it came.

Halley's Comet is now (January 1911) nearly four hundred million miles distant from us, a speck on the brow of night, visible only in the most powerful telescopes. Soon it will have vanished completely into the spaces from which it emerged eighteen months ago.

And so, in due time, it came, long expected by some of us who looked forward for years to its coming, and who are glad to have seen it, and to have been helped by its pure, serene, and tranquil beauty! Now it is gone on its long, long journey into the cold of sun-shadowed space. Seventy-four years will pass before our race will see it again, a new generation will have arisen, a new day will have dawned upon the world's history; but so long as men delight in things beautiful and orderly, so long will our race welcome into our skies this rare visitor.

Between the times of its last two appearances, 1835 and 1910, many notable discoveries have been made in astronomy—for instance, photography and spectroscopy, to mention only two. Yet, although astronomy is vastly richer in equipment, in outlook, in possibilities in 1910 compared with 1835, it cannot be said that we have added much to our knowledge of Halley's Comet. We are, no doubt, considerably better acquainted with its movements; but that is no new discovery. We are simply working on the lines laid down by Halley and Newton, only with the advantage of more accurate data. No doubt the astronomers of 1980–86 will be able to foretell its movements with yet more marvellous accuracy than we have been able to do, simply because they will have more accurate values of the masses and motions of the planets to aid them.

Then, as regards the constitution of Halley's

Comet, we are truly a little wiser than we were in 1835, yet not much wiser. We are still in profound ignorance as to why the tail should be directed away from the sun, or why, for that matter, comets should have any tail at all. An interesting subject for future inquiry, also, will be the relation that exists between comets and eccentricity of orbit. All comets move in elongated orbits, while planets and satellites move practically in circles. Why should a comet move along an ellipse?

To return to the constitution of such bodies, it is certain that the tail is composed of gas at a very low pressure and of very tenuous density. And it is abundantly certain that one of the constituents of Halley's Comet is cyanogen gas —hence the scare when it was known that our world would pass through or near the tail —and also olefiant gas, one of the carbon compounds so common in cometary bodies. Then both sodium and iodine have also been found in the nucleus. While the nucleus shines mainly with its own light, the tail shines partly by borrowed and partly by its own light. So much we are able to say regarding the constitution of the comet. As regards its temperature we are quite in ignorance. The nucleus, no doubt, is at a white heat; but there is no need to demand a high temperature for the tail. It is well known that gases will glow at a low temperature under certain conditions of electrical or even mechanical tension. Then its weight is known to be a negligible quantity, taking astronomical weights and densities as our standard. If the comet had any appreciable mass it would have disturbed to a measurable degree the earth's path; but, so far as has yet been ascertained, there has been no displacement due to this cause.

With regard to the existence of a planet exterior to Neptune, a question referred to in the previous article on Halley's Comet, the results may be read either way according to the temperament of the reader. For our own part, we would say that the balance of evidence turns to the negative side; but this view also may be due to temperament.

Whether the comet has fallen off in brightness during the space of time that men have observed it is a question often raised. Yet here, too, we are on very uncertain ground. Imagination comes a great deal into play in the description of any occurrence, and the personal equation of the beholder also is a governing factor. I have met men in South Africa, men of great intellectual gifts, who did not consider Halley's Comet worth an hour's lack of sleep; yet some of us would have crawled all night on our hands and knees, were that necessary, to gain one glimpse of it. Thus it is difficult to compare the mental vision of one man, finding expression in words, with that of another, likewise expressed in language; and how much the more when centuries in time and continents in space separate the two men! Then at each return the comet is differently situated with regard to the sun and earth, so that here also we have a disturbing element.

If my own view be worth anything, it is this, that the comet has not changed within the short period of years that men have viewed it with intelligent eyes and understanding minds. I could not conceive it more wonderful than I saw it on the morning of 19th May, when it rose a perfect shaft of silver from out the shadowy, distant hills.

Whether it will fade away in the lapse of countless æons is another matter, and one on which inquiry is useless. We know not what resources nature has for repairing and restoring old garments. The same force that sustains may also renew; and if there be any fact in nature more wonderful than another, it is the unseen energies which are ever making old things new.

And so we part with Halley's Comet. It linked us for a time with those men in the past who laboured and strove so that other generations, ours among them, might have more knowledge of the way of a star through the sea of space; it brought to our thoughts long-gone tragedies, wars and famine, fire and sword—one saw great Cæsar bleed, Jerusalem in all the horror of its awful siege, William the Conqueror, the Turkish invasion, and all the pomp and circumstance, sad and otherwise, that the comet had looked down upon; and in imagination one can picture other days down the centuries when the comet shall rise on a world happier and more contented than any we wot of.

CHANGE.

I LOV'D a pure white cloud!
It melted quite away
In lines of red, in lines of pink,
Along that lonely way.
But sometimes, as I see
White clouds arising there,
I think they are the souls of clouds
I viewed when life was fair.

I loved a maiden sweet,
All rapture and surprise;
She faded in the bleak, cold March,
And winged her to the skies.
I cannot love again,
But sometimes think I see
Her beauty in a little child
That prattles unto me!

O dear lost love! lost cloud
Of whiteness fine and rare!
There is no death, for Beauty lives
In love and hope fore'er.
Transmuted in the sun,
The cloud may merge and pass;
Its sweetness in the mind abides,
A lasting mirror-glass!

FUNERAL EFFIGIES OF OUR KINGS AND QUEENS.

By Mrs SARAH WILSON.

IN a small upper chamber in the Islip Chapel in Westminster Abbey were put by and locked up some of the figures that were laid upon the coffins of former kings and queens in the ceremonies attending their funerals. As these presentments or likenesses were of no particular use after the occasion for which they were made, it is not singular that many have disappeared; but it is a matter for congratulation that some have been preserved. Before their use was prevalent the faces and forms of personages of high degree were left exposed to view; after it was discontinued these figures were exhibited, with additions of later date, as a means of raising remuneration for the choir. For many years they were withdrawn from public gaze and carefully guarded from destruction or removal; but they are now removed to the Norman undercroft. A short time ago a committee of the Society of Antiquaries was allowed to make a close examination of them, and the secretary, Mr St John Hope, was enabled to draw up a precise record of their present number and condition, to which Lord Dillon contributes descriptive notes, and Dr Robinson, Dean of Westminster, adds information concerning their identification. The result of this union of scholarship, observation, and research has now been issued in the most recent of the publications of the society, illustrated with photographs of the relics.

Some of these images or representations or pictures, as they are variously called in old documents, are stripped of the robes and appurtenances with which they were once provided; others have fragments and items adhering to them. The earliest are made entirely of wood; those of later date have wooden cores or framework covered with canvas padded with hay, on which in some instances a coating of plaster was laid. The latter have jointed limbs. And there are a few loose items not yet assigned to their original owners. Readers of Pepys will remember he wrote in his *Diary*, February 23, 1669, that he kissed the mouth of Queen Katherine de Valois when he was shown her parched remains in a chest as a particular favour when viewing the Abbey on the day he was thirty-six years old. Among the effigies still left to us is that of this queen. It is carved out of a block of wood hollowed at the back. We learn from it that she was five feet four inches in height, and wore a tightly fitting dress cut square at the neck, and shoes enriched with gold and colour. The earliest of these relics is considered to represent Edward the Third. It is in one block of hard oak, five feet ten and a half inches in height. The hands are gone and the feet broken off, yet it is not without an expression of kingliness. The latest is that of James the First. The other royalties represent Philippa, wife of Edward the Third; Anne of Bohemia, wife of Richard the Second (of which the body has disappeared, leaving only the head, covered with paint and gesso); Elizabeth of York, wife of Henry the Seventh; her husband (the height of the latter is six feet one inch); Queen Elizabeth; Henry, Prince of Wales, and his mother and father (Anne of Denmark and James the First). The feet and hands of some are missing. The Prince of Wales and his father are both headless. On account of its more modern make, the figure traditionally known as Queen Philippa is thought more likely to have originally represented Queen Mary in 1558. The body is of oak, the legs of pine or deal, and the limbs are jointed to admit of being moved. A double chin is clearly indicated, though the features are somewhat damaged. There are two sets of accounts extant relating to the funeral of this 'most excellent princess Queen Mary.' They state that Nicholas Lisarde made her presentment, and furnished the numerous items required for it.

In turning from these figures so fraught with pathos and so touching in their contrast to the pearl-gray splendour and serenity of the surrounding masonry, it is pleasant and of possible interest to numerous descendants to find ample mention in the public records of the clever carvers, joiners, and painters who made and embellished them. Edward the Third's similitude or image was made by Stephen Hadley, who was paid twenty-two pounds four shillings and elevenpence for it. The name of the artist who made the figure of Henry the Seventh has not been ascertained; but Thomas Mountey was paid six guineas for satin to put on it, and Stephen Jasp six shillings and eightpence for making it up. Three persons were engaged upon the effigy of his wife, Elizabeth of York:

[*All Rights Reserved.*]

Item, to Mr Lawrence for kerving of the hedde with Fredrick his mate . . . xiij *s.*
Item, to Wechon kerver and hans van hoof for kerving of the twoo haunds . . iiij *s.*
Item, for ij joyners on friday at night to frame the body . . . . . xvj *d.*

The figure of Queen Elizabeth, the fair virgin throned in the west, was made by John Colte, who was paid ten pounds for it; her robe was made by William Jones, and her sabbatons and coif by William Marshall. These articles may have been renewed when James the First brought the King of Denmark to see the Abbey, as there is a note that he gave Dean Neale fifty pounds to have the clothing of the figures renewed; and in 1760 another renewal was recorded.

The face and hands of the representation of the son of King James, 'being very curiously wrought,' were the work of Abraham Vanderdort, and the rest of it was made by Richard Norris. A State paper dated April 9, 1616, records that this figure was robbed of its rich robes when it had been in the Abbey but three years and a half. The image of Anne of Denmark was made by Maximillian Coulte, a relative, it is presumed, of the John Colte who made the effigy of Queen Elizabeth. King James's effigy was also made by Maximillian Coulte. It is five feet seven inches in height.

The Dean quotes a work by Henry Keepe, published in 1682, in which ten of the curiosities in question are catalogued. It is entitled, *Statues of our Kings, Queens, and Princes of the Blood Royal which lay on their cenotaphs when their exequies were celebrated in this church, being here preserved in the Robes of Estate with their Royal Habiliments and other Ensigns of Majesty, in the Presses of Wainscote—viz. Edward III., King of England, and Philippa his Queen; Henry V. and Queen Katherine; Henry VII., with Elizabeth his Queen, and Henry Frederick, Prince of Wales, in one Press; with Queen Elizabeth, King James, and Queen Anne his wife, in the other.* He points out another testimony as to their history in a work by Dort, forty years later, who says, in relation to their condition at that date, 'the ancientest have escaped best.' He described the crimson velvet robe of Edward the Third as looking like leather, and doubted whether the wooden presentment of Henry the Fifth was the original one, which was made of tanned leather. He mentioned that Queen Elizabeth was entirely stripped; and that, with the exception of James the First, the rest of the figures were past identification. In Horace Walpole's day they were 'a ragged regiment.'

Of the figures in these lists, that of Henry the Fifth is the only one not now in evidence. But there is the testimony of Thomas of Walsingham that when the body of that king was brought from France there was an image of him upon the chest containing it, arrayed in purple furred with ermine, with a sceptre in one hand, and a round gold ball with a cross infixed in it in the other. There is documentary evidence, too, of several more of these royal images than have been preserved. We learn from accounts of payments that the mother of Henry the Eighth had one; his queen Jane Seymour had another. Mary Queen of Scots had one when her remains were removed from Fotheringhay to Peterborough (the head resting on a pillow of purple velvet fringed with gold). The widow of Charles the First was also represented in this way, and is thought likely to have been the last of the queens so honoured. Curiously there does not appear to have been an effigy of Queen Eleanor, wife of Edward the First, though her funeral was conducted with so much ceremony in the long journey from Harby to Westminster. There was 'a personage lyke to the symilitude of ye kinge' above the coffin containing the remains of Edward the Fourth in the journey to Windsor.

The association of ideas called forth by these relics of departed kings and queens, as to their joys and sorrows, aims and ends, the long past and the hereafter, seems to make the vistas of the magnificent Abbey more glorious, the long lines of uplifting arches more aspiring, the lights and shadows more delicate, and the deep silence more fraught with reverence.

PETER AND JANE.

CHAPTER XV.—*continued.*

THE first thing that roused Peter from the sense of bewilderment and almost of stupor which beset him was Dunbar's arrival at the *estancia*.

'Purvis has given us the slip again!' said the detective. 'The man has as many lives as he has names! He has disappeared more than once before, and he has even died, to my certain knowledge, two or three times, in order to get out of a tight place.'

'Oh, Purvis—yes,' said Peter absently; and then he pulled himself together and briefly told Dunbar the whole story.

'It doesn't alter the fact,' said Dunbar, 'that I have got to find him if I can.'

'No,' said Peter stupidly. 'No, I suppose it would not;' and he added in a heavy voice, 'I believe Toffy would like me to look after the boy.'

'The mystery to me is,' said Dunbar, 'how Purvis, as you call him (to me of course he is E. W. Smith), could have got hold of this box

of papers. It may be a fraud yet,' he said truculently, 'and it will require investigation.'

'I know my mother's writing,' said Peter; 'and Purvis was in the act of trying to burn the box before we took him off the steamer. It is the last thing in the world that it would suit him to have about him if he meant to establish his claim to be the heir.'

'That 's so,' said Dunbar thoughtfully.

'The box could not have come out with him when he sailed to Argentina as a child,' said Peter, 'because the letter is dated long after that.'

'And you say you never saw the man until you met him out here?' Dunbar went on. He brought out a note-book from his pocket and began to jot down Peter's replies.

'No,' said Peter; 'or if I did, I can't recall where it was. At first when I saw him he reminded me of some one whom I had met; but afterwards, when it seemed pretty well established that he was my brother, both Christopherson and I thought that this vague recollection of the man, which I mentioned to him, might be based on the fact that there was some sort of likeness between him and some members of my family.'

Dunbar jotted this down also. 'And you positively have no recollection of having seen him,' he said as he fastened a band of elastic round the book. 'If that is so, he must have had accomplices in England who stole the box for him. I shall have to find out where these boxes were kept at your home, and as nearly as possible I must discover who Purvis was in communication with in England. Or he may have gone there himself. I know that he went home in one of Lamport & Holt's boats only a few months ago—that was after the wreck of the *Rosana*, you understand—and it was while he was in England that I saw him, and knew for certain that he had not gone down in the wreck. My warrant against him is for a common hotel robbery. It was when he came back to Argentina that he began this river-trading, which was in the hands of a better man till he took it.'

'The plan will be for you and my lawyer to work together,' said Peter; 'but at present I can't furnish you with the smallest clue as to how these papers came into his possession. I know the look of the box quite well. There were several of them in my mother's writing-room, which was in the oldest part of the house. They were all destroyed one night last autumn when we had rather a serious fire there.'

Dunbar began to write in his note-book.

'*By Jove!*' exclaimed Peter, suddenly starting from his seat. He saw it all in a flash: the burning tower, with volumes of smoke rising from it; the line of men, with hose and buckets, pouring water on the connecting bridge of the tower; the groups of frightened guests on the terrace, and his mother standing unmoved amongst them in her sumptuous purple dress and with the diamonds in her hair. He remembered the arrival of the fire-engine from Sedgwick; and then, almost at the same moment, the figure of a man appearing on the bridge with a cloak wound round his head, and dashing into the doorway through which the smoke was issuing in great waves; and then Jane, at his elbow, clasping his arm and saying in a terrified tone, 'Oh Peter, for a moment I thought it was you!'

Dunbar was scribbling rapidly in his note-book. 'It is as clear as mud,' he said at last. 'Purvis, after the *Rosana* incident, was missing for a considerable time, and it is believed that his English wife at Rosario hid him somewhere. There he probably heard the story of his adoption, and determined to prove himself the eldest son.'

The Scot was very seldom excited; but he got up from his chair and began to walk rapidly up and down the room, his under-lip stuck out and his tough fair hair thrown back from his forehead. 'The whole thing depended upon his getting what direct information he could about the property, and he must have worked this thing well. The fire, I take it, was accidental?'

'Oh, the fire was accidental enough,' said Peter, 'and was found to be due to some electric lighting which was put into the tower.'

'Purvis's visit to England must have been to ascertain if Mrs Ogilvie were still alive, and in the first instance he probably meant to levy blackmail upon her; he must have discovered where she kept her papers, and have tried to effect an entrance on the night of the ball when many strangers were about.'

'I believe,' exclaimed Peter, 'we saw him in one of the corridors of the house during the dance, and decided that he must be one of the guests, unknown to us, who had come with some country neighbour, and that he had lost his way amongst the almost interminable passages of the place.'

He saw himself and Jane making for the leather-covered door which led to the bridge, and the shrinking stranger, with his hopelessly timid manner, drawing back at their approach, and he thought he heard himself saying, 'Shall I get him some partners, or leave the people who brought him to the dance to look after him?' It was only a fleeting look that he had caught of the man's face, and he recalled it with difficulty now; but it was not a far-fetched conclusion to decide that the two were one and the same man.

Dunbar was in a sort of transport. 'It 's the best case I ever had,' he said; 'and we only want the man himself to make the thing complete! Purvis has played some pretty clever and some pretty deep games in his time; but this is about the coolest thing he ever tried to pull off, and he has as nearly as possible won through with it.'

Mr Dunbar always relapsed into a strong Scotch accent in moments of excitement, and he became almost unintelligible at last, as he rolled forth his r's and gave it as his opinion that the man was a worthless scoundrel.

'I can't think,' said Peter, 'why Purvis did

not claim the inheritance sooner. He had the whole thing in his hands.'

'Yes; but Purvis did not know that!' exclaimed Dunbar. 'I'll take my oath he's been pumping you about how much old servants knew, and the like; and there are men working the business in England, judging by the number of telegrams he has had. He would have been over in London before many months were past, or I am very much mistaken, and as soon as the train was laid; but it would have been a fatal thing for him to have attempted a case before he knew how much was known. Your arrival in Argentina probably precipitated the very thing he was working for.'

'He remarkably nearly succeeded,' said Peter.

'There ought to be a training home for criminals,' Dunbar exclaimed, 'to teach them once and for all to destroy all evidence, rather than keep that which incriminates, alongside of that which may be useful. A man will sometimes keep a bundle of letters which will bring him to the gallows, together with information which might make his fortune.'

Peter described how he had found the tin case on the top of a bundle of shavings in the cabin of the river steamer. 'He was in a tight place there, and must have known it,' said Peter. 'Why not have burned the letters before our boat got up?'

Dunbar laughed. 'You can't very well make a fire on a small steamer on a dark night without showing where you are, for one thing,' he replied; 'nor can you overturn a paraffin-lamp on the top of a bundle of shavings without a possibility of burning yourself up at the same time. There was a love of sensationalism, too, about the man. He would like his steamer to flame away at the right moment, and disappoint the men who meant to board her; or, what is still more likely, there was a considerable amount of gunpowder on board the boat, and a boarding-party arriving at the right moment would have been blown sky-high.'

'He never showed mercy,' said Peter.

'The Lord will need to have mercy upon him if he gets into my hands,' quoth Dunbar, 'for I have none to spare for him.'

'But I,' said Peter, 'have got to remember that my mother charges me to befriend the man.'

'But then,' said Dunbar tersely, 'your mother never knew what sort of man you would have to deal with.'

'God knows,' said Peter, 'things are a bit difficult sometimes.'

'Well, it's a hanging matter if we get him,' said Dunbar cheerfully. He and the *comisario* had their orders, and they would be obliged to execute them. The results must be left for a court of justice to decide.

They rode away the following morning, and there seemed nothing for it but to wait at the *estancia* until more news was forthcoming. For Peter, the days were the saddest of his life, and left an impression upon him which nothing ever quite removed afterwards. He became older suddenly, and a certain boyishness which was characteristic of him was gone, and never returned again. Life, which had once seemed so simple to him and so easily lived, so full of pleasures and of good times and of good comrades, had suddenly become complex and filled with difficulties, and made up of grave decisions, and shadowed by a sorrow which would probably be felt as long as he lived. Ross would not let him stay indoors, and mercifully gave him a double share of work to do. The weather was cooler now, and the days could be filled with outdoor occupations from morning till night. There were no siestas in the afternoon or lazy dawdling over coffee in the heat of the day to remind him of long gossips with Toffy, and the evenings were shorter and not so difficult to fill.

'I'm an awful bore, Ross,' said Peter, having sat silent from dinner-time until he went to bed one night; 'but I can't help it.'

'I know you can't,' said Ross kindly.

The big man, who was a poor player of cards at the best of times, became seized with a desire to learn picquet; and, strange as his method of consolation may have been, Peter knew what the good fellow meant by it, and taught him the game and got through the time somehow.

There was still no news of Purvis; the man seemed to have vanished in his own mysterious way, and nothing could be heard of him. It was ascertained that he was well supplied with money, and it was thought that, as his child would be incapable of any very long journeys or unusual hardships, the discovery of his whereabouts near home might lead to the discovery of his father. But the thing remained a mystery. Dunbar's long, lean frame grew leaner than ever as he searched and journeyed and telegraphed without obtaining any results.

It was the boy who appeared first, and then without his father. Perhaps Purvis discovered that escape would be easier without the burden of the child, or it may have been that his queer affection for the boy had determined Purvis to seek safety for him somewhere. But it was part of the man's extraordinary coolness that he should send him to Peter Ogilvie to look after.

The boy arrived at the *estancia* one night, a poor, tired little object, with a letter from his father in his pocket. The two had made their way as far as the province of Salta, and from there the boy had been sent to Taco, where, unaided, he had found a horse and had ridden over to the *estancia*. He was thin and weak-looking, and had evidently suffered a good deal from his many journeyings. Ross took him and looked after him, and gave him some light work on the farm to do, and there he remained while Dunbar journeyed to Salta, to find that Purvis had left the place long before he arrived. Only a woman at Rosario knew where he was, and

this woman had learned not to tell. She had married Purvis years ago, soon after she arrived in Argentina to be governess to some English children. Her employers had not been kind to her, and in a country where comforts were few she had had less than her share of them. She was a girl of twenty then, and very pretty, and hers was a faithful heart. Cynical as the expression may sound, she had had its faithfulness forced upon her by the fact that she was utterly friendless in the world. When Purvis married her she went to him gladly. When he deserted her she even pretended to believe in him for the pitiful reason that there was no one else in the whole of that strange land to whom she could turn. She was a woman whom the easy excuse of 'business' could always silence, for she had been brought up to believe that that very comprehensive word signified something almost as mysterious as affairs of the spirit. It was not safe to predict of those who were engaged in business whence they would come or whither they would go. Sometimes she did not see her husband for months or even for a year at a time; he did not always share his abundant days with her, but he had nearly always come back to her when he was in trouble.

He arrived one night in Rosario without disguise of any sort, and knocked at her humble door in one of the meanest parts of the town. He was never beaten for long, and he announced to her that he wanted her help in a new scheme that he had planned. His fortune was to be made once more, but the scheme itself must remain hidden for a time. His wife upon this occasion was to help him by acting as cat's-paw.

'It's a big thing,' Purvis said, 'and will require all my strength;' and he announced his intention of remaining hidden in Rosario for a few weeks while he rested completely. But his chronic inability to sleep made rest impossible. He was calculating and adding up figures during the watches of the night, and his strange, light-coloured eyes, with the constant tear in them, became paler in colour and more suggestive of bad nerves. He began to find his calculations difficult to balance, and he even made some mistakes in his long rows of figures. The thing worried him, and he began to wonder if his head were going. He had always overcome difficulties and fought dangers with an absolute belief in his own success. He was unscrupulous and cunning, but he had never been beaten yet. It was horrible that sleep was the thing that he could not command; but, alas! the exercise of will-power is not the force by which sleep can be induced, and a placid or submissive mind was unknown to Purvis. His wife watched him anxiously. She would go for long walks with him in the early dawn or after it was dark, hoping that the fresh air and the cooler weather might bring some sort of repose to the wide-open, pale eyes; but no sleep came, and Purvis took to swallowing more tabloids, and planning and contriving his rows of figures in a nervous way, while his hand trembled and his plaintive voice became irritable and his eyes watered more than they were wont to do.

He had money in hand, and it was some sort of comfort to his wife to be able to purchase for him the nourishing food which he required. She had often been in sore straits for money herself; but she believed with pathetic conviction that a woman can do with fewer comforts than a man, and she had never felt deprivations for herself as much as she would have felt them for her husband. She cooked tempting dishes for him, and enjoyed his companionship, and asked no questions. She even allowed herself the purchase of a few new clothes now that money was plentiful again; and these days, even with the anxiety of her husband's ill-health hanging over her, were not by any means the unhappiest of her life.

'I sha'n't be able to pull this business through,' said Purvis one night, 'unless I sleep, and I can't live unless I succeed with it.'

He made his wife write innumerable letters for him in her own handwriting, and signed with an entirely new name. But it made business affairs more difficult to do them through another person; and even his meek wife might some day ask questions!

If only he could pull himself together and get a firmer grasp of things than he had at present! The commercial instinct was strong within him, and he had a genius for figures, but the state of his nerves and insomnia seemed to have deprived him of half his powers. He envied his wife her gentle breathing and her deep sleep; and he would often wake her in the night when he was most restless, and demand something at her hands—a very weak cup of tea, or a little milk and hot water—in order to hear the restoring sound of a human voice.

Lately, however, he had purchased a new sort of tabloid, which he used sparingly according to the chemist's directions, but at which he often looked longingly, believing that a little sleep lay within the tiny glass bottle.

He had lain awake for hours this night, noting the ticking of his watch, counting the hours as they struck on the neighbouring clock, falling sometimes into an uneasy slumber which lasted only a few minutes, and then waking at the sound of his own voice calling aloud in his sleep. He tried every plan and contrivance, however childish, by which men have sometimes courted slumber; and through the nights, while other men rested, he was walking up and down, or brushing his hair, bathing his face in cold water, smoking cigarettes, rubbing himself with a towel, and going through strange acrobatic efforts by which wearied men hope to tire themselves into sleeping.

He lay in bed very still to-night, his wide-staring eyes looking into the darkness. He

heard every hour as it struck, and his active brain refused to be quiet for a moment. Difficult things looked gigantic in the darkness, and everything upon which his thoughts dwelt became hopelessly exaggerated in his mind. Brandy and other stimulants had never been a temptation to him; his life had too often depended upon his head for him to risk a muddled brain. But he still believed in tabloids; and as the day dawned, and light crept through the window, he looked longingly at the little glass phial lying on the dressing-table. It was three o'clock, and if only he could get a couple of hours' deep rest before the noise of the city began, he might yet be able to pull himself together and take his affairs in hand.

He rose from the bed and went with unfaltering steps to the dressing-table and shook the tiny discs into the palm of his hand, and then he counted them deliberately.

'It's kill or cure!' he said with that queer courage which never deserted him, even if it was based entirely upon self-seeking and self-interest. He threw his head back with the characteristic action with which he always swallowed his medicine, and went back to bed again.

Purvis slept; and it may have been that he was glad to sleep on for ever, for he was tired through and through, and the only way to escape failure was by death.

His wife mourned for him deeply and sincerely as many better men have not been mourned. There was only one thing she dreaded in the whole world, and that was loneliness. She had endured much of it in her lifetime, and now that her husband, whom as a matter of necessity she had believed in, was gone, she was quite alone. She knew nothing of business, and it never struck her as being strange that there should be money amounting to quite a little fortune in a box in the house. With the fear of want removed, the poor creature blossomed into youthfulness again, and she married an engineer on a new railway line, who was very good to her, and to whom she ever held up the late lamented Purvis as one of the best of husbands, and one, too, who had left her well provided for.

CHAPTER XVI.

PETER and Jane were married the following autumn with the ring which Toffy had kept wrapped up in a piece of tissue-paper in his waistcoat-pocket. For an account of the rejoicings the Culversham local paper must be consulted. It devoted columns to accounts of feastings and fireworks, tenants' dinners, and school children's teas.

Mrs Avory, dressed in black, went very quietly to the wedding, with her little girl beside her. She wept sadly during the service, but she looked stronger now, and seemed to be suffering less than she had been wont to do. A niche seemed to have been found for her in the village of Culversham, where she loved the poor people, and went about amongst the cottages, and read to sick people, and was happier perhaps than she quite knew, in her own pathetic little way.

Kitty Sherard was bride's-maid, and never cried at all. She wore rose-colour, and carried Jane's bouquet, and during the whole of the long day she laughed and was admired and behaved as a bride's-maid in rose-colour should. It is a comforting supposition which many people hold as a belief, that there are guardian angels, or spirits, who watch round the beds of those who weep. Such a spirit keeping watch at Kitty Sherard's bed that night, and hearing her sobbing, may have known something of her sorrow. Soldiers, men tell us who have seen many battlefields, cover their faces when they are wounded, so that their comrades may not see their drawn features and their pain. So Kitty waited until the lights were out before she began to cry. Perhaps a certain joy of living will come back to her some day when hounds are running and a good horse carries her well. To-night, in the dark, she felt nothing but an intolerable sense of loneliness and a longing which seemed as if it never would be lessened. Probably in a sorrow of this sort the ache of it consists in a curious longing to get up and go at once somewhere, anywhere, to the one who is loved; who is gone, and the blankness and the pity of it all centre round the fact that this is impossible. The impotence of the feeling increases as means of communication in this life are made easier. It seems absurd that whereas we may actually speak, and hear the voices in reply of those who are hundreds of miles apart from us, there yet should be an insuperable barrier between those who, for aught we know, may be quite near us. Almost it seems as if we are under a spell which prevents the communication which we long for, and as though any day we may wake up to find how unreal the separation is. Kitty buried her face in the pillow and called Toffy's name, and—who knows?—perhaps he heard her.

In saying good-bye to our friends at Culversham one may be allowed to wonder what their futures will be. Sometimes I think Mrs Avory may marry again. But I never think of Kitty Sherard as caring for any one else except the boy who, whatever his faults may have been, had never an unkind or ungentle thought of any one, and who played the game as honourably as he knew it, and then laid down his life in the simple manner of a gentleman.

Peter will never forget him. When he has boys of his own he will call them after his dead friend, and will tell them absurd stories about him, for even when his name has become a memory only, it will be surrounded with something whimsical. Toffy's old jokes and stories are much more a reality than his death. He often risked his life for a really good sporting race;

and he did not grudge giving it up during that last lap on the Argentine river when day was breaking. He was trying to help a friend to do the right sort of thing at considerable cost to them both; and when all is said and done, none of us can do much better than that.

Miss Abingdon will probably be a despotic grand-aunt, and we shall continue to hear much of her own maidenhood, and all the virtues and discipline which surrounded it.

Well, good-luck and long life to bride and bridegroom! They love each other in a manner refreshingly whole-hearted and delightful, and we will, if you please, ring down the curtain upon them in orthodox fashion to the sound of wedding-bells. Good-luck to Kitty, who will never tell her mad little stories again, or enjoy herself as she used to do when she goes to race-meetings or drives her horses tandem through the lanes. Good-luck to Mrs Avory, with her pathetic brown eyes, doing her daily work amongst the poor; and good-luck to the genial vicar and his wife, whose soul has always been free in the midst of a rather narrow life. Good-luck to all our friends in this book, and to you, dear reader, who have followed them so far.

And so, good-bye.

THE END.

THE EVOLUTION OF THE THIN RED LINE.

By E. Bruce Low, M.A.

WHEN, at Balaklava, Sir Colin Campbell rode down the line of waving plumes and tartans of the gallant Ninety-third (the second battalion of the Argyle and Sutherland Highlanders), then drawn up, five hundred strong, in two-deep line, with bayonets fixed, prepared to receive the attack of nine hundred Russian cavalry,* he proudly addressed them. 'Highlanders,' he said, 'remember there is no retreat from here; you must die where you stand.' And the men replied cheerily, 'Ay, ay, Sir Colin, we'll do that.'

The scene has become impressed upon the memory and imagination of our nation as the realisation of the high ideal of soldierly conduct in the presence of the enemy. Literature and art have vied with each other in depicting this incident of the Thin Red Line tipped with steel, when the two battalions of Turks posted on the flank of the kilted regiment turned tail and fled, and left as the sole defenders of the strategic base of the British army this handful of firm and resolute men.† Lord Raglan and his staff, who were spectators of the dramatic incident from the ridge, could see, as the combatants could not, that behind this swift attack of raiding Cossacks there was a full division of three thousand Russian cavalry moving up the Causeway Heights, and that behind these again were heavy columns of infantry and artillery bent, it seemed, on reaching the same objective—the key, in truth, of the whole position of the Allies. As the horsemen approached, the Scarlet Thread, hitherto stretched behind a rocky knoll, swept forward to crown the crest, and instantly came under the fire of the Russian artillery, directed from the series of redoubts which had formed the first line of defence, and from which the Turks had fled in dismay before the overwhelming number of the assailants. On that moment depended not only the fate of the base of supplies, but probably the result of the war itself; for, with Balaklava taken, the Allies could not have remained a day longer before Sebastopol.

To seek the genesis of this great development in tactics we must cast our survey back to June 1808, when one evening, after dinner, in his house in Harley Street, Wellington sat with his friend Croker, and fell into a deep reverie. Croker rallied him on his silence, and Sir Arthur (as he then was) replied, 'To say the truth, I was thinking of the French I am going to fight. I have not seen them since the campaign in Flanders [1794–95], when they were capital soldiers, and a dozen years of victory under Bonaparte must have made them better still. They have, besides, a new system of strategy which has outmanœuvred and overwhelmed all the armies of Europe. 'Tis enough to make one thoughtful; but, no matter, the die is cast. They may overwhelm me, but I don't think they will outmanœuvre me; first, because I am not afraid of them, as everybody else seems to be; and, secondly, because if all I hear of their system be true, I think it is a false system against troops steady enough to receive them with the bayonet. I suspect all the Continental armies are half-beaten before the battle begins. I, at least, will not be frightened beforehand' (Croker's *Memoirs*, vol. i. p. 12).

This conversation took place on the night before Sir Arthur left London to take command of the first British expedition to the Peninsula. But even before 'this General of Sepoys,' as Napoleon was pleased to call him in derision, had closed his fighting career in India, he had remarked to his confidants that the French were sweeping everything before them in Europe by the use of the formation in column, but that he was fully convinced that the column could and would be beaten by the line.

The great intellect which was to prick the

* General Todleben's Russian official account.

† The reader will recall the famous painting of the 'Thin Red Line,' by Robert Gibb, R.S.A., His Majesty's Limner and Painter for Scotland.

bubble of Bonaparte's reputation as the greatest soldier in Europe had already weighed the worth of those dense French columns which had well-nigh conquered the Continent, and had found them wanting.

What, then, was the new system which Wellington put to the test at the epoch-making battle of Vimeiro?

The answer to this question is probably found by considering the formations of the French army which it was intended to oppose.

The French military schools where Napoleon himself was educated adopted the system of Mesnil Durand, which from 1774 influenced the tactics of all French armies. During the Consulate and Empire battalions were formed in close columns of double companies, with two of the ten companies thrown out as skirmishers. Several battalions acting in concert were formed in line of double companies, the flank companies being used as skirmishers. The object of this company formation was to allow the free movement of cavalry and artillery through the intervals.

The objection of Durand to the line formation arose from the fact that it produced an inclination among the men to halt and fire. The column, on the other hand, was, he thought, the better formation for a rapid advance. We conclude, therefore, that the basis of Durand's tactics lay in the small battalion columns, covered by strong lines of skirmishers. Regiments did not exist in the French army till Napoleon formed the camp at Boulogne for the invasion of England. Till then battalions were combined in demi-brigades of three battalions. The new formation in regiments was first tried in battle at Austerlitz (1805).

At Jena, in 1806, the old column formation of Frederick the Great, which consisted of open columns of companies marching in two or more lines, but which made no provision for supplying skirmishers in front, was opposed to the formation of Napoleon. The contest ended in the victory of the new column formation owing to its combination of rapidity in deployment and in forming square to receive cavalry, which the company column of the Prussians could not form so effectually. The French had also the advantage of the fire of their strong skirmishing-line. In this way the French secured superiority in both 'fire' and 'shock' tactics. The result was the overthrow of the Prussian and Austrian armies whenever the French forces were under the command of competent leaders.

Napoleon also introduced the system of concentrating great forces of artillery to prepare the way for the advance of his heavy attacking columns, formed out of entire divisions, which he used first at Eylau (1807).

After this period the great Continental armies —Russian, Prussian, and Austrian—adopted the French formation of close columns, and later (July 1809) they also introduced the firing-line of skirmishers. It was, then, to meet the ever-victorious column formation of Napoleon that Wellington had to devise his new system.

Selecting a good position, with cover for his men, Sir Arthur (as he was in 1808) sought protection for his infantry behind the crest of a hill, and proceeded to deploy his regiments into line, with bayonets fixed, and there calmly watched the approaching columns. The enemy, covering his front with skirmishers, advanced in solid masses, often consisting of a whole division, and were received by the fire of artillery securely posted on the ridge and by innumerable skirmishers firing from cover. As these unwieldy columns approached, the British line, only two-deep, moved up steadily over the crest and waited the attack without firing till the enemy had come within close range, when a tremendous volley from the front rank, followed immediately by another from the rear rank, invariably destroyed the head of the column and spread consternation into the swaying mass behind. The widely extended British line of fire outflanked the narrow front of the column, and carried death and demoralisation along the flanks also. At the next moment the whole red line advanced at the double, and with loud cheers and vigorous bayonet-thrusts completed the destruction of the column. Such, in a few words, was the oft-repeated result of the fights in the Peninsula and during the Hundred Days, when the Thin Red Line met the column in action.

Here is a description by Marshal Bugeaud, who had felt the tremendous moral force of the silent line which awaited calmly the approach of overwhelming numbers without flinching, and at the word of command dealt out a tornado of shot, followed by the flash of the terror-striking bayonet: 'The British generally occupied well-chosen defensive positions, having a certain command, and they showed only a portion of their force. The usual artillery action first took place; soon, in great haste, without taking time to examine if there were means to make a flank attack, we marched straight on, taking the bull by the horns. About one thousand yards from the British line the men became excited, spoke to one another, and hurried their march; the column began to be a little confused.

'The British remained quite silent, with ordered arms, and from their steadiness appeared to be a long red wall. This steadiness invariably produced an effect on the young soldiers.

'Very soon we got nearer, shouting, "*Vive l'Empereur! En avant! à la baionette!*" Shakos were raised on the muzzles of the muskets; the column began to double; the ranks got into confusion; the agitation produced a tumult; shots were fired as we advanced.

'The British line remained still, silent, and immovable, with ordered arms, even when we were only three hundred paces distant, and it appeared to ignore the storm about to break.

'The contrast was striking. In our inmost

thoughts each felt that the enemy was a long time in firing, and that this fire, reserved for so long, would be very unpleasant when it did come. Our ardour cooled. The moral power of steadiness, which nothing shakes, . . . over disorder, which stupefies itself with noise, overcame our minds. At this moment of intense excitement the British wall shouldered arms. An indescribable feeling rooted many of our men to the spot; they began to fire. The enemy's steady, concentrated volleys swept our ranks. Decimated, we turned round, seeking to regain our ranks, recover our equilibrium; then three deafening cheers broke the silence of our opponents; at the third they were on us, pushing our disorganised flight. But, to our great surprise, they did not push their advantage beyond a hundred yards, retiring calmly to their line to await another attack.'

The groundwork of Wellington's tactics was based upon his confidence that the British troops in line could always be relied on to defeat the column both in offensive and defensive operations.

At Vimeiro and Talavera, where his men stood on their defence, the test was first applied; and at Salamanca he proved, by his magnificent advance in line, that the new formation was equally effective for the attack.

At Vimeiro the enemy came on in two powerful columns, supported and flanked by weaker bodies; the right, which consisted of about six thousand men, moving upon the Lourinho road; the left, of about five thousand, directing its efforts against the tableland. The first onset of both was, as the first onset of French troops always is, extremely impetuous; insomuch that on the left of the tableland the skirmishers were fairly driven in, and the head of the advancing column presented itself, almost without a check, in front of the Fiftieth Regiment. The Fiftieth, which was drawn up in line, permitted the enemy to approach till scarcely twenty yards divided them, and then, pouring in a well-directed volley, made ready to charge. The enemy stood for a moment, as if determined to await the shock; but the bayonets of the British corps were hardly crossed when they began to waver, and before the rush was made they broke and fled.

At Talavera, on 28th July 1809, the French, under King Joseph and Marshal Victor, attacked Wellington, who commanded an inferior force. The principal fight took place on a hill on the left of the British position. It is well described in the hitherto unpublished journal of a sergeant of the Gordon Highlanders, a company of whom formed part of the regiment of detachments engaged in the fight. He says: 'As daylight appeared each army gazed on the other. The French fired one gun from the centre as a signal for their line to commence action. Their guns began to pour grape-shot and shell into our lines, and three columns came bearing for the hill. We were ordered to lie close to the ground; but when the enemy was about fifty yards from us we started to our feet and poured in a volley, then charged with the bayonet, and ran down into the valley, cheering and firing upon them, for they proved better runners than we.'

General Jomini, who served as chief of the staff of Marshal Ney, records that in conversation Wellington told him that he was convinced that the manner of the attack of the French upon him in column more or less deep was very hazardous for them against a solid, well-armed infantry having confidence in its fire and well supported by artillery and cavalry. Jomini then asked the Duke if he had not formed the foreign troops under his command in columns at Waterloo. He said, 'Yes, because I could not depend upon them so well as upon the British.'

The terrible fight at Albuera (1811), the bloodiest battle of the Peninsular war, supplies us with an even more startling example of the overpowering strength of a steady, deployed line when opposed to a solid column of great size. After the defeat of the Spanish troops and the charge of the French cavalry on the flank of the Fifty-second (under Sir John Colborne), two French divisions were formed in close columns of double companies, with a front of only two companies. They ascended the hill in this formation, and were on the point of reaching the crest, covered by clouds of skirmishers, when the long British line, composed of three battalions, deployed, suddenly opened fire, and threw these great masses into disorder. The ranks got broken and mixed, and they became a mob, which all attempts failed to restore to discipline. The British in line, with bayonets fixed, attacked the columns on the hill and dispersed them. The French commander, Marshal Soult, afterwards said of the conduct of the British infantry on this occasion: 'There is no beating these troops. For I turned their right and pierced their centre; the day was mine, yet *they did not know it, and would not run.*'*

At Waterloo the same formations were adopted by the French and British commanders respectively, with exactly the same results. About one o'clock Marshal Ney led four great masses in columns of double companies against the British left. The advance was covered, as usual, by clouds of skirmishers and supported by the divisional artillery, which followed close in the rear. The British awaited the attack in deployed line, screened by a beech and holly hedge, then opened fire suddenly on the front and flanks of the columns. The Forty-second and Ninety-second Highlanders charged in line, and the French masses, shaken by the heavy fire and unable to

* At Quatre Bras the Forty-fourth and Ninety-second Regiments received the French cavalry in deployed line, two-deep, and defeated them.

open out their front, wavered, became broken, and fell an easy prey to the charge of the Household Cavalry Brigade, and the Greys, Royals, and Inniskillings of the Union Brigade. Three thousand prisoners, two colours, and fifteen guns were the fruits of this famous charge, which Sir Evelyn Wood has described as 'one of the most brilliant charges ever achieved by horsemen.'

But by far the grandest exposition of the Thin Red Line at Waterloo occurred later in the day, when Bonaparte, having destroyed his magnificent squadrons by futile charges upon the solid infantry squares of the Allies, determined to stake his fortune on the last cast, and ordered his veteran Guard to attack the British right wing, and to seize, if possible, the crest of the position, between the outworks formed by the farms of La Haye Sainte and Hougomont.

Advancing as usual in close column, the eight battalions drawn from the Old and Middle Guard, saluted their beloved 'Petit Caporal' for the last time. As they did so they took their leave of history. Covered by dense clouds of skirmishers, they marched in double-company formation towards the ridge, where only the death-dealing guns and a few mounted officers were visible.

'When the tall caps of the Grenadiers of the Guards, with their large plaques bearing the Eagle, appeared, symmetrical in line, tranquil in the midst of that combat, the enemy felt a respect for France; they beheld twenty victories entering the field of battle.

'The red regiment of the British Guards lying flat behind the hedge sprang up, a cloud of shot riddled the tricolour flag and whistled round the Eagles, all hurled themselves forward, and the final carnage began. In the falling darkness the Imperial Guard felt the army losing ground around it. Ney, bewildered, great, with the grandeur of accepted death, offered himself to all blows in that tempest. He had his fifth horse killed under him there. Perspiring, his eyes aflame, foaming at the mouth, with uniform unbuttoned, one of his epaulets half cut off by the sword-stroke from a Horse Guardsman, his plaque with the great Eagle of the Empire dented by a bullet, bleeding, bemired, magnificent, a broken sword in his hand, he cried, "Come and see how a Marshal of France dies on a field of battle!" But in vain.'

The French in their advance at first saw only the empty ridge before them, only the cocked hats of the few mounted officers—one of them Wellington himself—being dimly distinguishable.

Suddenly the Iron Duke called up his Guards; and in a moment the smoke-wreaths resolved into a Thin Red Line of British Guardsmen, with bayonets fixed, silently waiting the fateful command. Both sides gazed for an instant into the eyes of their enemy. To the British, the tall Frenchmen with their high bearskins seemed like 'a corps of giants' rising out of the smoke. To the Frenchmen, this unexpected array of bristling steel appeared to leap out of the earth by some miraculous power; and hesitation, mixed with the sense of impending calamity, spread through the ranks. An instant later a blaze of flame blinded the combatants, and the head of the French column had disappeared, blasted irremediably by that storm of hail.

> Have you seen the tall trees swaying
> When the blast is sounding shrill,
> And the whirlwind reels in fury
> Down the gorges of the hill;
> How they toss their mighty branches
> Struggling with the tempest shock,
> How they keep their place of vantage
> Cleaving firmly to the rock?—AYTOUN.

Even so the proud veterans of the Bridge of Lodi and Arcola, of the Pyramids and Mount Tabor, of the Passes of St Bernard, of Marengo and Hohenlinden, Ulm and Austerlitz, Jena and Auerstadt, of Eylau and Friedland, Aspern and Wagram, of Borodino and Beresina, Lützen and Bautzen, of Dresden and Leipzig, struggled manfully, with set faces and eyes flaming, to maintain their foothold on that fateful ridge. It was not to be. In this final struggle for the Empire of the World, the British Guards, by dint of their steady discipline, with one titanic effort were to overthrow these victors of a hundred fights, and end for ever the legend of the Man of Destiny. The Old Guard, unable to deploy, refused to retire, and were slain where they stood. When Lord Wellington ordered the charge, the wave of British valour burst like an inundation from its pent-up lines, and swept over the crest. The veteran column broke, and the whole shaken fabric dissolved into tossing wreckage borne by the tide to the plain beneath.

Some minutes later a similar fate awaited the second column of Napoleon's Guards, which advanced in echelon behind the first column against the position held by the British Guards, and dared to expose its flank to the fire of the Fifty-second, then one thousand strong, and fresh upon the scene. This gallant regiment, supported by the Seventy-first Highlanders and the Ninety-fifth Rifles (which with the Fifty-second formed Adam's Brigade), with the long line of bayonets fell fiercely upon the bewildered Frenchmen, and, four to one though the Frenchmen were, with loud cheers drove them headlong across the British front in a confused and broken mass. Packs, belts, and weapons were thrown down, and all semblance of discipline disappeared.

While success does not always follow the big battalion, it always comes to the disciplined force which aims calmly and straight; and Wellington the great mathematician had discovered that a force with a firing-line of seventy muskets, even though supported by forty files in column, is no match for a firing-line of seven hundred men supported only by a single rear rank. A deeper secret, however, lay in recognising and using the self-confidence and discipline of his men.

'Wellington was tenacious, but the least of his foot-soldiers and of his cavalry were as tenacious as he. The iron soldier is worth as much as the Iron Duke. As for us, all our glorification goes to the British soldiers, to the British army, to the British people.' Such is the verdict of the greatest French writer of the nineteenth century, Victor Hugo. Napoleon himself, after Waterloo, wrote that his defeat was solely owing to the invincible courage of the British infantry.

The Crimean war again opened the eyes of European strategists, who might have forgotten the lessons of Waterloo, to the superiority of the line-formation for attack as well as for defence; and at Alma (where rifles were first employed in European warfare), Balaklava, and Inkermann the test was again applied. All Europe was surprised to find that a two-deep line of Highlanders dared to withstand a charge of cavalry at Balaklava, and with the Guards ventured, at the attack on the hill-batteries across the Alma, to assault a strongly fortified series of redoubts supported by massive columns of infantry.

'We were all astonished,' says a Russian writer in describing the advance at the Alma, 'at the extraordinary firmness with which the red jackets, having crossed the river, opened a heavy fire in line upon the redoubt. This was the most extraordinary thing to us, as we had never seen troops fight in lines two-deep; nor did we think it possible for men to be found with sufficient firmness of morale to be able to attack, in this apparently weak formation, our massive columns.'

Von Moltke, when reviewing the campaign in Russia, remarked that at the Alma the Russians, occupying a purely defensive position, had formed all their battalions into deep columns of attack. The British adopted that line formation in which they had fought in the Peninsula, and in which they had withstood the shock of Ney's veteran columns at Waterloo. In this formation they had to cross a river with steep banks and to ascend a rocky slope in close proximity to a burning village and among enclosed vineyards. Opposed to the British stood at least two-thirds of the Russian force. The Russians felt confident of breaking this line at any point with their massive columns; but the same results were obtained everywhere. The Russian army, formed into column, composed of several battalions one behind the other, advanced with a resolute and imposing bearing; and the thin, weak-looking line of the British held its ground, and directed its fire on this dense mass at a range at which bullets could not fail to take effect. Still, for a short time, the column stood firm; soon, however, it lost its wall-like appearance, and, becoming more of the form of an irregular cloud, at length gave way. The British, advancing in line and keeping up their fire, twice broke into the principal Russian entrenchment, which was defended by sixteen guns.

At Inkermann, while the heavy mist enabled the massive columns of the enemy to surprise the British in their cantonments totally unprepared, the steady fire of the line formation again proved superior to overwhelming numbers.

It is instructive to note that throughout the long period of the Peninsular campaign the British relied upon the bayonet as their surest ally when the fortunes of the day appeared hopeless; and one need only recall the desperate plight of our troops at Albuera to convince one's self that in war it is the sterling quality of the men, armed with this weapon, and not the number engaged, which is the decisive factor.

It is also gratifying to remember that the formation which Wellington introduced, and to which the British soldier is by his steadfast nature peculiarly well suited, must in the future become the system of tactics best adapted to the requirements of our age, and that in the coming Continental wars the principle of the Thin Red Line must necessarily be adopted; so that the British troops will enter the field better equipped by their nature and training to face (as did the stalwart Japanese in the last campaign) the terrible strain to which all troops must be subjected on the battlefield where quick-firing-guns and magazine-rifles are in universal use.

In the recent Boer war there were cases innumerable where the deployed line, sweeping round the flanks of the Boer position, strongly placed, as it might be, on an impregnable kopje, compelled victory to descend on the side of our troops (see Scobell's *Lessons of the War*); and in many cases it was the use of the bayonet which extricated our men from what appeared to be hopeless defeat. As Colonel Caldwell remarks: 'The great success which attended bayonet-charges during the South African war and in Manchuria has drawn very general attention to the use of cold steel by infantry. . . . When our men got to close quarters . . . the bayonet proved perfectly invaluable to our side' (*Tactics of To-day*, second edition, pp. 87, 88). The fight at Thaba Mountain (May 1, 1900) must occur to all who have made themselves familiar with the details of the campaign. A party of Gordons, commanded by Captain Towse, V.C., were completely surrounded; and, acting on the principle which distinguished this regiment throughout the years of the war, they refused to surrender. Ammunition was running short, and certain defeat faced the men, when their brave commander gave the order to form line, fix bayonets, and charge the enemy. The result is well known. Their leader, suffering from a painful wound which permanently destroyed the sight of both eyes, was gallantly supported, and the little party—the latest exponents of the Thin Red Line—fought their way, by the free use of the bayonet, back to the main body, though with their number sadly diminished. While the maxim of the great Russian General Suwarrow is still true, 'The bullet is a fool; only the bayonet

is wise,' much of its point is lost in encounters where an adversary knows how to get full value out of the capabilities of improved firearms.

The main lesson learned by us in South Africa has been to rely less upon the forms and more upon the innate common-sense of our intelligent soldiers; and in this respect the enormous improvement in the education of the recruits now drawn to our regular army and also to the ranks of the Territorial Force must have a decisive influence in our future campaigns. The benefit of education was clearly proved in the campaigns of 1866 and 1870, when the Prussian troops always felt the consciousness of possessing superior knowledge over their adversaries. '"When," said the Prussian officers, "our men came in contact with the Austrian prisoners, and on speaking to them found that they hardly knew their right hand from their left, there was not one who did not look on himself as a god in comparison with such ignorant beings, and this conviction increased our force tenfold"' (STOFFEL).

Devotion to duty, high courage, and intelligence are to-day the distinguishing qualities of the British soldier.

After detailing how our men, in the later stages of the campaign, gave up the cast-iron rules hitherto in use, and applied their common-sense to the tactics employed against the Boers, the German *Official Account of the War in South Africa* proceeds: 'Justice demands the acknowledgment of the fact that the British soldier, if only he is well and skilfully led, does not fail in the devoted and thorough performance of his duty, and that he understands how to make a forward movement. . . . Fortunate is that army whose ranks, released from the burden of dead forms, are controlled by natural, untrammelled, quickening common-sense.'

To-day, the armies of Europe have adopted to a greater or less extent the tactics of Wellington, and the present system of attack in extended line formation, with its frequent supply of reinforcements feeding the firing-line, is simply the Evolution of the Thin Red Line adapted to meet the altered conditions produced by the rapid fire of modern breech-loaders and maxims.

THE WHITE APRONS.

CHAPTER IV.

MUCH puzzled, I left the Turkish capital next morning, and three days later, in the afternoon, entered Françoise's pretty flat in the Avenue Kléber.

'Ah, my dear Hugh,' she cried, rising from the tea-table to greet me as I entered, 'how glad I am to see you here, safe and sound!'

'Why?' I asked, laughing. 'What do you mean? What do you fear?'

'I fear for your life, my dear friend,' she answered in deep earnestness. 'Sit down, and I will tell you. You look tired. Have you only just arrived?'

'I have driven straight from the station,' was my reply. Truth to tell, I was much fagged by the constant apprehension and the long journey. 'I shall leave again at three o'clock to-morrow morning for Turkey. I have only come here at your request, because you wish to see me.'

'Then listen for a moment,' she said, seating herself in her low chair and gazing straight into my face. She looked inexpressibly charming in a pale-gray tea-gown with a bunch of crimson roses at the girdle. 'I have heard something—something of which I must warn you.'

'I am listening,' I said. I was wondering if my sweet-faced little friend had at last discovered that, in addition to being a diplomat, I was a secret-service agent!

'Do you know a certain Adolphe Bloch?' she asked, her splendid eyes still fixed upon mine.

'Certainly. He is my enemy—the man you know as Herr Siegel.'

'Herr Siegel!' she gasped, staring at me. 'Is he really the German spy and criminal, Adolphe Bloch?'

'The same,' I replied quietly. 'As he and you were friends I did not tell you this before.'

'Ah!' she cried excitedly, 'it is indeed well that I know the truth. I never suspected that this man, who is your fierce and bitterest enemy, is actually Herr Siegel.'

'He is,' I said. 'And your friend Madame Martin is also a spy, whose real name is Freda Marcus.'

'Are you quite certain of that?' she cried. 'I really can't believe it.'

'I have proof. That woman collects official information here in Paris on Bloch's behalf. Does she not move in the highest official circles, and does she not entertain on a large scale? Though Martin is in ignorance, the cost of entertaining is paid for by Sassonian gold.'

'Well,' she declared, 'you have utterly astounded me; and yet'——

'Go on,' I said.

'Well, what you have told me throws an entirely new light upon certain recent events. I see now how I have been duped and misled. But if what you say be true, then I will assist you, Hugh; I will help you to secure a just and terrible revenge.'

'You have not yet told me the reason you have recalled me to Paris,' I said, a little impatiently.

'Briefly this,' she answered. 'I had in my service, until a year ago, a maid whom you have seen, a girl named Suzette Dupuy. She was a

most excellent maid; but one day I suspected her of stealing a hundred-franc note, and dismissed her. She afterwards confessed; but as she pleaded that she had stolen it in order to pay a fine for her vagabond brother and prevent his imprisonment, I did not hand her over to the police. From that moment she became very warmly attached to me—so much so that when she entered a new situation I omitted to state the reason why she had left my service. For this she was undoubtedly grateful.'

'Rather unfair to her new mistress,' I remarked. 'I recollect Suzette—a rather tall, smart girl, with good eyes.'

'It may have been unfair, but I resolved to give her another chance,' replied Françoise. 'What she had told me was perfectly correct. She stole the money so as to extricate her young brother from trouble. Perhaps if I had been a maid I might have done the same. Well, Suzette has had two situations since then, and I had lost sight of her until two or three days ago, when she called here, and asked whether I had seen you of late. Naturally I inquired the reason of her sudden interest in you; whereupon, after some hesitation, she told me a very curious story—that she knew of a certain man named Bloch who had followed you to Constantinople with a sinister object.'

'How did she know that?' I asked in surprise.

'She is in the service of a lady named Hauptmann, who is apparently a friend of this man Bloch. According to her story, she one evening overheard her mistress and her visitor planning a plot against you in Turkey—a plot in which some woman named Nathan is to take part. Do you know any woman of that name?'

'Yes,' I replied, 'I certainly know a Madame Nathan in Constantinople, the wife of an intimate friend of mine.'

'Well, it is somewhat peculiar, is it not? I thought you certainly ought to know of what is in progress.'

'Did this girl Suzette learn from the conversation of the pair anything concerning myself?' I asked with some hesitation.

'She said that Bloch had declared you to be a secret agent working against Sassonia, and that it was in the interest of their diplomacy that your accidental death should occur.'

I smiled grimly, and by that smile I knew that my little friend fully realised the truth. 'Did she learn any details of how the attempt upon me was to be made?'

'Only that you were friendly with Madame Nathan, and that they intended that your friendship should cost you your life,' she replied.

'Was nothing said concerning madame's husband, or the reason why I had gone to Constantinople?'

'They were evidently not quite certain of the reason of your visit to Turkey. I do not think that madame's husband was mentioned.'

I reflected for a few seconds. Was this Madame Hauptmann one of those ladies who had been in Constantinople with Bloch? One fact was plain—namely, that while I had been in utter ignorance, every movement of mine had been noted. Truly, Adolphe Bloch was a man of marvellous cunning.

'The girl's story is certainly a curious one,' I exclaimed. 'Did she explain how she came to overhear the conversation?'

'Not exactly. Her object in calling upon me was to warn you. She wishes to see you personally, she says. Here is the address she gave;' and my friend handed me a plain card with the name Suzette Dupuy and an address in an obscure street off the Boulevard Montmartre. 'That, of course, is not her mistress's address,' she added. 'She asked that you would make an appointment to meet her at that address. If I were you I would go there quickly. You might learn something more. I had, of course, no idea that the man she described as Adolphe Bloch was actually Herr Siegel.'

I then explained frankly the situation, whereat she sat amazed. She had never suspected that her friend Madame Martin was the notorious Freda Marcus, the spy of Sassonia.

'But if this was known at the Prefecture of Police they would at once be arrested!' she cried. 'Surely they ought to be denounced!'

'To denounce them would be to denounce myself,' I said. 'At present it will be sufficient for me to see Suzette, and thus become forearmed.'

The reference to Madame Nathan had both alarmed and puzzled me. It seemed impossible that she should be my enemy. There could be no motive, as Nathan had told his wife nothing regarding our confidential transactions.

That evening I sent a *petit-bleu* to the address which the lady's-maid had given, and impatiently awaited a reply all next day. I had put up at the Grand Hotel, and a dozen times had I gone to the bureau for a note, but in vain.

A response came about six o'clock, a neatly written letter saying that she would willingly meet me at the address in the Rue Arnay at ten o'clock that night, she being unable to get away from her mistress before that hour. Therefore at the time appointed I alighted from a cab in the long, narrow street of high, dingy houses, and subsequently knocked at the door indicated in her note. The neighbourhood was a low one, so I was not surprised when my summons was answered by a thickset, beetle-browed fellow, who gruffly admitted me when I told him I had called to see Mademoiselle Dupuy.

He showed me along a dark, ill-lit passage into a frowsy sitting-room at the rear. The place was filled with the vile fumes of a smoking lamp, the windows and shutters being hermetically sealed. I had been there only a few moments when the door opened, and another man, a younger fellow of the Apache type, came

in, and explained that mademoiselle had not arrived. She had sent a message asking me to await her for twenty minutes or so.

Then he went out, and shut the door behind him. I took out a cigarette and lit it. The room was oppressive, stifling. Yet I possessed myself in patience, anxious to see madame's maid, who had overheard that strange conversation concerning myself. I chuckled at my own good fortune to be thus forewarned against disaster. And yet was I not wasting valuable time in Paris when duty was calling me elsewhere? In a sense I regretted that my curiosity had induced me to leave the Bosphorus instead of remaining vigilant and active. Yet was it not strange that Madame Nathan herself had been named as my enemy? That point I desired to clear up more perhaps than anything else.

The room in which I stood was the reverse of inviting; the old carpet was threadbare, the cheap furniture, with the exception of a very heavy arm-chair, rickety and dusty, while the atmosphere was that of a chamber long closed and neglected. Why did Suzette make an appointment in such a place? Perhaps it was because she feared to be spied upon by one or other of Bloch's agents.

I suppose I must have been there ten minutes or more, standing with my eyes fixed upon the cheap bronze paraffin-lamp burning upon the table, when the door suddenly reopened, and both the scowling man who had admitted me and the low-looking scoundrel who had informed me of mademoiselle's non-arrival entered.

'I'm sorry she hasn't come yet,' the latter remarked in French with a grin, 'but of course you will wait a little longer. I expect she is detained this evening. Take a seat;' and he indicated the heavy arm-chair, at the same time taking a cigarette from his pocket and lighting it.

'I'm in no hurry,' I assured the fellow, and sank into the big chair; but scarce had I touched the seat when, of its own accord, it tipped backward, and my legs went high into the air. It seemed set upon a pivot, so that any one seating himself in it would be thrown entirely off his balance. I grasped the air in wild indignity, but ere I could realise what had happened the two ruffians had slipped cords upon my wrists and ankles, and a minute later I found myself bound to the seat hand and foot.

'What do you mean by this, you scoundrels?' I shouted in wild anger.

But the pair only laughed at my helplessness.

'What have I done that you should hold me thus?' I demanded, in an instant realising that I had fallen into a trap.

'Look sharp!' cried the man who had admitted me. 'See that he is secure. We must run while there is still time!'

'Time for what?' I asked.

'Time for us to escape,' replied the man with the beetling brows. Then he added quickly, with a sinister laugh, 'See that lamp upon the table? Well, within is a powerful explosive. Three minutes from now the oil will be exhausted, and then it will explode, and you, together with this house, will be blown to atoms.'

'You fiends!' I shrieked, glancing at the innocent-looking table-lamp. 'Then you intend that I shall die! This is a dastardly plot of your employer, Adolphe Bloch, who put up Suzette Dupuy to tell the fictitious story to Mademoiselle Orliac in order that I should be enticed here to my death! By Heaven!' I cried, 'the ingenuity of it is essentially Bloch's; I know too well the bitterness of his hatred towards me;' and I struggled frantically to free myself. The chair had not, however, recovered its proper position, and my legs being up in the air rendered me entirely helpless. I lay like a trussed fowl while the two hired assassins laughed in my face.

'Quick,' cried the beetle-browed man to his companion; 'let us get out of here!' And they both hurriedly left, locking the door behind them —left me there to my terrible fate!

I was horrified. I shouted for help, but to my appeal came no response. My eyes were fixed upon that fatal lamp. It seemed to possess a weird fascination. Only a few moments remained, and I should be hurled into eternity.

A wave of recollection swept through my brain, frozen as it was by terror of instant death. I remember reflecting upon the ingenuity displayed by my enemy in employing the maid Suzette to pretend to give information against himself, and at the same time to denounce Madame Nathan as his accomplice. I reproached myself for leaving the Bosphorus before my mission was accomplished. I longed to communicate with my chief, to tell him the truth about the infernal conspiracy against me, to——

Of a sudden, before I was aware of it, there was a bright, blinding flash, followed by a deafening concussion which hurled both chair and myself among the débris of falling walls and ceilings, a noise as though the very earth itself were rent in twain. I remember a feeling of being crushed by an enormous weight encumbering me, and then I suppose I must have lapsed into unconsciousness.

When I recovered I found myself lying on the sanded floor of a small café. A group of excited people were about me, and my head was being supported by two policemen, while a man, evidently a doctor, was in attendance.

'*Dieu!*' exclaimed the latter, 'you have had a narrow escape, monsieur. Such an explosion, and not even a bone broken!'

At first I looked around me in amazement; but, finding myself free, and hearing the doctor's report, I struggled to sit up and rubbed my eyes, greatly to the amusement of the curious onlookers. They evidently put me down as one of the *drôle Anglais*.

Later, after a glass of cognac, I went in a cab

to the nearest commissary of police, and there related what had occurred, whereupon the machinery of the detective service was at once placed in motion. The house, which I subsequently revisited, had been utterly wrecked, together with the two adjoining houses wherein three people had been injured by falling débris.

At two o'clock that morning I called upon Françoise, and related to her the story of my night's adventure, while at the same hour two detectives went to the house of Madame Hauptmann in search of Suzette; but, to their disappointment, they found she had disappeared.

Soon after dawn a stout brigadier of the Sûreté was ushered into my room in the hotel, and producing a photograph of Suzette Dupuy which he had found among her effects, asked me what I knew of her. I replied that I had only seen her on two occasions.

'Well, monsieur,' explained the detective, 'we have been anxious to arrest this girl for the past couple of years. Her right name is Marie Lacroix, and she is head of a remarkable band of thieves, numbering nearly a hundred, whom we call the White Aprons, and who act as ladies'-maids and domestic servants. We have recently discovered that, when not in service, she lives in an expensive flat out at La Muette, and actually entertains guests there! The place has been watched for the past three months, but she has not yet returned. The White Aprons seldom commit thefts themselves, but give information to other members of the band, male and female, who visit houses in various disguises, and take away whatever is indicated. Some of the greatest burglaries of recent years have thus been effected. We have always kept their existence a secret for fear of alarming unsuspecting householders.'

Such then, it seemed, was the ingenious accomplice of the unscrupulous Adolphe Bloch!

(To be concluded.)

COUNTING THE AMERICAN PEOPLE BY MACHINERY.

By Day Allen Willey.

TAKING the American census means counting the people of the United States every ten years. When the census of 1910 was computed nearly ninety million people were counted by the Government agents. But this is not all of the census statistics. Information is obtained as to the occupation, sex, age, and other matters, so that a miniature biography of each man and woman is obtained and recorded; but to read this record, as it is preserved in Washington, is impossible unless one knows how to decipher it, for each record is no more than a pasteboard card or tag punched full of holes. When it is explained that each hole stands for some answer, the enormous saving in time in writing all the data with the pen can be realised. Think of a city directory with nearly a hundred million names, each name merely a hole on a card instead of written in a book. Yet all the cards are put in boxes and filed at Washington, so if one wants to know if Uncle John, who went to Kankakee or Kokomo to live, has a mother-in-law or a wife, the file-clerk can tell by merely turning to John's town box and selecting the tag that stands for him. The bit of pasteboard looks like a potato-barrel label which has been fastened to a barn door and perforated with a charge of buckshot; but when the clerk begins to tell what the holes stand for you would be pardoned for believing he is a sorcerer. The record he reads is of so many things that the inquirer cannot think of anything else he wants to know after all the holes have been 'translated.'

The card is a cipher, as they say in a stock-broker's office when the broker's messenger throws down a slip of paper which says: 'Buy ten fast horses when easy.' Yes, it is a cipher language that is supposed to save the people a hundred thousand pounds sterling every time the census is taken, in contrast with the old method when the typewriter and the pen put the record in plain English. So the census-recorders punch the nation on paper. The statistics needed for the census are mostly obtained from these riddled tags; and not only are the old-time data, such as age, sex, who was your father, where you were born, what you are doing or not doing, 'holed' into the card, but whether you are married or single, widow or widower, your 'schooling,' and other facts your inquisitive neighbour would like to know but can never find out because Uncle Sam won't allow them to be put in print. He has his reasons.

The American people are of all kinds—the Belgian, the Bohemian, the Sicilian, the Herzegovinian, and other people from abroad, who, coming by liner-loads over the sea to the nation's welcoming arms, help to render the task of the census-taker harder. But with the dozen or more children the would-be citizen brings with him, fifty families are enough to create a town that will support a school, church, 'racket store,' butcher's shop, blacksmith, and town tavern. The census-man, however, takes no chances, and for the thirteenth count of the people has calculated to tag them to the number of at least one hundred millions, so as not to be short of the total number.

It is a task to get the facts and figures for the punching. An army of sixty-eight thousand enumerators, as they are called, are paid most of the fourteen million dollars the Government

must expend to learn something about who Americans are and why they are Americans, and to count them. Now it might be thought to be easy to go around town with a badge on the coat and a leather record-book under the arm, and say, 'I am the Government census-taker;' but it isn't like turning a faucet and causing the water to flow. The bell may bring no answer; everybody is down town or visiting mother's. This means a hunt to find out when they will be home. After a little experience the census-taker would rather talk with a woman than a man. The female of the household finds answering questions a break in the routine of dish-washing and floor-scrubbing. It raises her ideas. Here is the Government wanting to know about her and her family. In imagination she grows an inch or two taller, and if the man with the fountain pen has the tact, he can get what information he wants from her in a fourth of the time it would take if he had to ask the head of the house; for it is a curious fact that the average man regards such inquiries as prying, and may tell the questioner it is none of his business. This may mean a policeman on the scene. The effect of the brass and blue uniformed officer generally opens the man's mouth.

In the rural districts the enumerators visit every house, even those on the mountain-top and in the desert, to fill their schedules or records. Then all this mass of material is returned to the district headquarters, assorted, and sent to the Census Bureau, sometimes by railway-car loads, such is the number of schedules. Here the information of the census-taker is put into—not on—the cards by the punching-machines, which have keys working like a type-writer, but making holes instead of words. The card is ruled off into sections, and in some are single letters or single figures, sometimes two letters or two figures. There are as many spaces or sections on the card as words on the schedule. It is a form on which every item of information on the record is 'copied,' merely by punching a hole in the space on the card which corresponds to the space wherein is filled the item on the schedule. One key of the machine is provided for every section ruled on the card. Thus the arrangement of these punch-holes allows the recorder to note all the data on the record to which it corresponds. There must not be a word printed on the card, for the symbols, as the figures and letters are called, express everything reported.

But this is not all machinery does in the census. In another apartment one sees a row of 'tabulators.' They may remind you of the room-calls in the hotel office that fall down when you press the button, and tell the night-clerk whether you want iced water or another blanket. This register stands at the back of what looks like an ordinary flat-top desk. At one end of the desk is a trough in which moves an endless belt. Into the trough the cards that have been punched are fed just as a farmer feeds his corn into the husking-machine. The female operator puts them in one by one as fast as she can move her fingers. Then something happens that reminds one of magic. One of the dials on the register begins showing figures in rapid succession—one, two, three—just as a taximeter adds up every mile the motor runs whether the cab is standing still or moving. On another dial appear such combinations as 'col,' 'sg,' 'N.S.,' and others that are indicated on the punch-card. At the end of the register-board are reels of stock 'ticker' paper tape like the security recorders in security-brokers' offices. In this machine the data 'holed' in every tag can be all or partly recorded on another form. As it is recorded, each item, such as birth, marriage, death, is counted, and the figures that stand for the total are shown on the dial. As the counting is performed the results are noted on the tape. Merely the pressure of an electric button, and the ticker-wheel stops, the total number of cards recorded being printed on the tape. It is an automatic recording and printing system, on the plan of the familiar stock 'ticker' that is connected with each dial. When the operator wishes to make a reading of the dials a button is pressed with the left hand, and the figures on the dials are printed on the ticker paper, from which they can be read. The dials reset themselves. In the machines used in former census work the dials had to be read and the results recorded by hand, a proceeding productive of many errors; and all the dials had to be reset by hand, a time-consuming operation. The daily output of the old machines averaged eighteen thousand cards per day, while that of the new machines is twenty-eight thousand cards.

When the hundred tabulators get into action they can overtake the daily output of tags from the three hundred punching-machines. So much for the discovery of James Powers, an employé of the American Census Bureau, who designed this remarkable mechanism.

LIGHT IN THE DARKNESS.

THOUGH great thy sorrow, lift thy troubled eyes,
The glory of the sun still fills the skies.
What though a hush has fallen on thy song?
'Tis in the silence that the soul grows strong.

The rainbow paints itself upon the cloud!
Know this, what time thy heart and head are bowed,
A golden thread runs through the grayest years,
And there is healing for the heart in tears.

Thy cross will shape itself into a crown!
Look up and find that God is looking down;
And thou wilt see at last, with unveiled eyes,
'Twas *Love* that walked in Sorrow's dark disguise.

THE HEART OF THINGS.

By Henry Leach.

London, *Yesterday.*

It will be a Coronation in superlatives. Nothing like it will ever have been known. Vast and magnificent as were the expenditure and festivities attendant upon the Coronation of King Edward, they will not equal those to take place in the coming month of June, when George the Fifth will be crowned in Westminster Abbey. For several weeks past it has been the chief topic of conversation. Hardly had we turned into the new year than the great ceremony and all that would go with it began to press themselves forward upon the attention, and by the end of February they had the mastery. From that time it was seen that the extent and magnitude of the proceedings would be such that the Coronation would impress its mark upon almost all that was done in the middle of the summer, whether of a public or private character and upon whatever scale. All business and social engagements were to be made with regard to the Coronation. In no detail of one's private schemes was it to be ignored. The Coronation was coming, the Coronation would come, the Coronation would be everything, and nothing else would be anything. It was a prospect that was at once exciting and disturbing, gladdening and, in a certain sense, oppressing. Of course all this was only to be expected; but in London the Coronation period really began in March, and this early start was the sign of the greatness and grandness and the intensity of what was to come. Before the end of the month we had begun to reckon most things in millions that would bear such a reckoning; we put the tens and the hundreds up to thousands; we made up our minds to increase the numbers and the price and the cost of everything beyond the point which had at first been most considered. Why should any one frown and murmur that even the very greatest of occasions could hardly justify such an upheaval of all things, including the lives of millions, the capital of the country and the empire, and also the country and the empire? The occasion is unique; it must be made the most of. This is an age of luxury and extravagance, and people wish to spend and be festive. But it is not that, or only partly that. Imperial considerations are important—more important now than perhaps they have ever been. They will be well served by the greatness of the Coronation. The British Empire will be shown at the height of its power as it has never been shown to the world before. It is the intention that there shall be a great display of our richness, and all the people, from the highest to the lowest, are entering into the spirit of that intention. Their Majesties are foremost in encouragement of the display, and when the Coronation is over they will set a unique precedent by going to India.

* * *

As yet nobody in London can realise what the Coronation will mean to the biggest city in the world. It is such a mighty city, so vast in extent and so thickly populated, that it takes an enormous influx of people from outside to make any real difference to it. Here and there on great occasions there may be crowds. At the time of the last Coronation, and of the Royal funeral which preceded it, and of the other event of the same sad kind last year, a little pressure was put on the capacity of London in certain parts. But according to all the best estimates it is to be different in June. In the first place, the influx of people from the country will certainly be the record. So too probably from the Continent, for despite all that the statesmen and newspapers tell us about jealousies, hatreds, and looming wars—all of which may be quite true—England is far more popular with the Continental peoples as a holiday ground now than ever she was before. This has been very marked during the last two or three years. The French come among us in very large numbers because they like us better than they did before *l'entente cordiale* was effected through the beneficent and highly diplomatic endeavours of the late King; and the Germans are coming now, not for any reason of that kind, but chiefly because quite recently they have set themselves up as travelling holiday-makers on the British system. It really seems to be that they suddenly discovered an inclination in this direction only last year, for it was then that they swooped down in thousands on the French Riviera, and they have been there again in more thousands this year. It was a sudden inspiration to begin to spend money abroad in this way, instead of not spending it at all, or only in the Fatherland. They thought

[*All Rights Reserved.*]

they would copy the English example, and they seem to like it, and are extending their operations. Then the contribution of visitors from the Colonies will be enormous. It is semi-officially calculated that there will be ten thousand guests from Australia, and eight thousand from Canada. But all these will be as hardly anything compared to the addition that the United States will make to the temporary population of London. The great country which has no coronations, not even any coronets, no orders, not even any grand ceremonies, but insists always on a very formal plainness, loves to see them elsewhere; and the Americans, always numerous in London in the summer-time, will be specially so in June. At the American Embassy in London they say that they quite believe there will be a hundred thousand of them. One great ship will be coming across filled, as it is said, with millionaires. They are calling it the 'millionaires' ship.' Another, the fastest boat on the Atlantic service, will leave New York at the very last moment that will permit of its arrival on this side in time for its passengers to see the great processions. This is the 'busy men's ship,' the one that will convey the business men who cannot spare a moment of their most valuable time, but who still feel that they must see the Coronation, as it is likely they will never be able to see another. This thronging of London will be a most wonderful thing.

* * *

It follows from the circumstances and the general disposition of everybody that money will be spent in London this summer as it has never been spent in any city before. Never at any time will so much money have been spent in any one place as it will be in London next June; and, with all that is left behind by the guests, the capital will be very well paid for the inconvenience she will be put to—as the grumblers will call it. Londoners themselves will be spending freely, but not so freely as their guests. Millions and millions and millions will be spent in all. It is reckoned that the average American will spend not less than fifty pounds in London. There are many who will spend five hundred or more, but on the fifty-pounds-average basis, and reckoning upon the hundred thousand Americans who, we are told, are certain to come, there will be five millions spent by the Americans. And London will be a terribly expensive place at the time of the Coronation. Higher prices are being charged for most things than were charged at the time of the last one. It is stated that a thousand guineas is being paid for the use of one flat in Pall Mall on June 22, and five hundred for the day of the Royal progress through London, June 23. A good window anywhere from which a view of the procession may be gained is worth from fifty to a hundred guineas, and some have been let for six times that sum. Another aspect of the Coronation expenditure is the official one. It is likely that the Royal and Government expenditure will reach three hundred thousand pounds, of which that from His Majesty's privy purse will be, it is estimated, as much as a hundred thousand. All that money and many people, and the desire for splendour and magnificence, for display and imposing spectacles, for great festivities, can accomplish will be fully accomplished in June. Surely then the sun will shine.

* * *

Special arrangements and special fashions are being set in all matters for this most wonderful Coronation. In so far as it is possible to prevent it, nothing will be as it generally is at the time of this amazing festival of the greatest empire. There will be Coronation clothes, Coronation decorations; there may even be Coronation manners. Orders to those who should be ordered, and hints to those who should not, are given from high places as to what will be right and proper. All will be so very different from the normal, so much so that for my own part I cannot resist an idle and quite useless speculation as to what London will feel like in August when she is clearing up and trying to get back to herself again. Amid so much ordained fashion and so much special arrangement, there is one little detail that has some pathos attached to it. Coronations after all, even the very finest of them, are purely artificial functions. They are not a part of the process of Nature. Man makes them as he likes. Reflecting in this way, when we think of all the gorgeous robes, the magnificent processions, the splendid decorations, the feasts, the fêtes, the fireworks, all the money that will be spent, we see everywhere how purely artificial is it all; and of course when we ponder to such effect it is not in any sense derogatory, for how could it be otherwise than artificial? But when we get this fancy, we search all through the scheme of this grand business, trying to find some way in which Nature inanimate is officially represented as it were, and at last we find it. For there is a Coronation flower. Queen Mary has given word to the Worshipful Company of Gardeners that the bouquet they are to offer her in honour of the Coronation is to be made of carnations, and so the carnation becomes the Coronation flower. Never before in England has it risen to such distinction. It is not so new to England as some may fancy who are familiar with the glorious blooms that are grown in the south of France in the middle of the winter and sent here when we are short of flowers. The poets from the days of Chaucer have made mention of it. But it was beloved in other countries long before that, and in some of the facts of carnation history we may suspect a reason for Her Majesty's selection beyond the leading one that it is her favourite flower. We have it on the authority of Theophrastus that the ancient Greeks cultivated the

flower to a good perfection, and that they called it Dianthus, 'the flower of the gods.' These Greeks and the Romans also showed the keenest appreciation of it, and they used it for chaplets, and so it came to be called the Coronation flower. Possibly 'carnation' is but a corruption of 'coronation.' Some of our own earlier poets have indicated their knowledge of this circumstance, and it seems strange that it has been so generally overlooked in the comments on the choice by the Queen of the flowers for the bouquet of all bouquets. But of course our own early carnations were simpler things than most of those we know to-day, and carnation cultivation was carried to a fine point in other countries before it was here. Many years ago in America a grower achieved a great success by producing the vivid pink 'Mrs Lawson,' which he sold for no less a sum than ten thousand dollars. The French have produced many and most wonderful varieties, and no person who has not been in the flower-markets at Nice and Cannes, or where the blooms are grown at Hyères, can fully appreciate the beauty of those varieties. It was about seventeen or eighteen years ago that the first real advances were made in carnation cultivation in this country, the late Mr Martin Smith being an earnest pioneer; but really little was known of the flower and its possibilities, and its recognition might have been delayed for many years beyond 1889 if it had not happened to be the favourite of the Duchess of Portland, and when she was married in that year her wedding was a carnation wedding. There are stories told of how the Duke gave orders for the greenhouses of England and France to be scoured in order to obtain sufficient to make the bridesmaids' bouquets of it. The flower was not plentiful at that time. Henceforth it will have a more frequent and more honoured place in British vases than ever before, and it is worthy of being studied and understood. It is the Coronation flower once again.

* * *

Of all important matters that are connected with the great ceremony and festivals that are coming on, we seem for the time being to hear least and to think least of one small item which stands for the emblem of it all, and which will be the most indispensable at the grand climax to the ceremony in the Abbey, the literally crowning moment. We have heard so much of the splendorous decorations and precedents for them, of the magnificent attire and the manner in which it is justified in general and in detail, of many ceremonies, privileges, and customs that are being ordered and settled with the finest exactness; but, while the proper authorities are attending to their duties in the matter, and will duly see that there is no hitch or slip, no others seem in any measure to be inquisitive in regard to the crown. True, it is but an emblem; but then the crown of King George is the greatest of all emblems concerned with earthly matters, and it is the central feature of this great Coronation which, as we shall see it, is after all but an emblem of the greatness of Britain, the unity of her empire, and the loyalty of the subjects to the throne. But at a certain second on Coronation Day a message will go forth from the Abbey, will be printed in all the newspapers, and will be the signal for the pealing of bells from thousands of towers, 'The King is crowned,' and then at the climax, and with some reaction from the previous suspense, with the knowledge that all the formalities belonging to the full and complete establishment of a new king on the throne are at last completed, there may be talk of crowns. One only suggests this possibility, or rather probability, because it is well remembered that at the time of the Coronation of King Edward one hardly saw or heard mentioned a word about the crown until it came to be needed. Allowing for the difference in scale, one might suggest some analogy between the crown and the wedding-ring were it not for one's reassurance on what should be a vital point in any such analogy, that there is no danger of the crown ever being forgotten and not produced, as paragraphs in newspapers frequently inform us is a distressing accident that sometimes occurs to the little emblem of the marriage. But crowns are very interesting things. I have been examining the facts concerning many of them, of different ages and different nations, and their various peculiarities make a somewhat entertaining study. There are very considerable diversities in cost. One is inclined to the belief that the cheapest emblem of its kind used for the crowning of a king, and yet, though cheap, of a special value in a peculiar way, was that used for the crowning of King Carol at Bucharest in 1881. A little while since the Queen of Roumania told us how her husband had been strongly averse to any new emblem of the kind, but, in deference to the popular wish, consented; at the same time stipulating that no expense in the matter of gold or gems should be lavished upon it. 'We will send to the arsenal for a piece of one of the captured cannon,' he said, 'and it shall be melted down, and out of that very steel, that once cost so many Roumanian lives, our crown shall be made, in token of its having been won upon the field of battle, and bought and paid for with our own blood.' And that is what was done. Those who have read or heard anything whatever about crowns and crowning may have been disposed ere this to offer a reminder that this iron crown of Roumania is not the only iron crown in Europe, nor the most celebrated. In the correction that they would make they would be both wrong and right. They would be thinking of what is known as the 'Iron Crown of Lombardy.' Perhaps this is the most famous of all the circlets that have ever been laid upon the heads of

monarchs, and now, kept as it is generally in the Cathedral of Monza, on the mountain heights above Milan, it is about fifteen hundred years old. Beginning about the end of the sixth century, it was used at the coronations of the Lombard kings. Long years afterwards other monarchs who had little enough to do with old Lombardy had it poised upon their heads. Napoleon Bonaparte was one of them. In 1805 the senators of the Italian Republic petitioned him to become king and be crowned at Milan Cathedral, and in May of that year Napoleon went to Milan for the purpose, occupying the palace of Monza. The old crown was brought out from the dust in which it was buried, and Napoleon, receiving it from the hands of the Archbishop of Milan, placed it on his own head, at the same time uttering the traditionary words, '*Dieu me l'a donnée; gare à qui la touche*' ('God has given it to me; beware who touches it'). To commemorate his coronation as King of Italy Napoleon subsequently founded an Order of the Iron Crown, of which this naturally became the motto. When King Victor Emmanuel was lying in state this crown was at his head, and at his feet there was another and handsomer one that had been given to him by a rich friend, the King requesting that it should be buried with him. What would be wrong in the correction that was suggested a moment since would be the implied confidence that this 'Iron Crown of Lombardy' is really an iron crown; for it is not. It is much of an impostor. It is said of it, for one thing, that it was made out of the nails used in the Crucifixion. Leaving aside that point, however, we may state that all the iron there is in it is a little band three-eighths of an inch broad and a tenth of an inch thick, and this is embodied in an external circlet of beaten gold in six sections, held together by hinges and set with gems of great value.

* * *

But considering economy in crowns and the case of the King of Roumania's disinclination towards any needless expense being incurred in the matter of his Coronation, there was an almost exact counterpart in the case of our own King William IV., our previous Sailor King, whose Coronation did not cost any more than forty thousand pounds all told. If the sensitive economist should be disposed at this moment to make comparison of this inconsiderable sum—a little item that perhaps a thousand men in the City could each individually pay without being seriously inconvenienced—with what is to be spent at the Coronation of the second of the Sailor Kings, he should be reminded that times have changed, that this is the age of opulence and display, and, above all, that empires have their needs in splendour. William, in a veritable madness of economy, actually petitioned that he should merely take the oath before Parliament in the House of Lords, and that the whole business of his accession should begin and end at that, with no coronation ceremony whatever, which he considered to be 'a useless and ill-considered expense.' But even the lesser England that was then could not countenance such an unconventional omission of the rarest of national ceremonies, and King William was told in effect that he must go through a coronation whether he liked it or not; but, being thus coerced, His Majesty held firmly to a determination that the business should be carried through on the smallest possible scale.

* * *

But it may be possible that King William's own personal tastes in the matter of simplicity in ceremony were encouraged and stimulated by the knowledge of what his predecessor had accomplished at his Coronation and a suspicion that something very different would be pleasing to the people. In one way and another the value of the crown of George IV. and all the expenses attached to its preparation amounted to a cool quarter of a million of money. His Majesty determined he must have something exceptionally wonderful. The value of the crown itself when completed is said to have been a hundred and fifty thousand pounds; although it is only fair to the memory of the monarch, whose faults need not be exaggerated, to state that it was partly made up of old crowns and partly from gems borrowed from Rundell & Bridge, the Court jewellers. Still, that was the value for all that, and according to the accounts some fifty or sixty thousand pounds was disbursed in expenses attendant upon the preparation. One of the many odd and amusing tales that hung upon this Coronation of George IV. has a special interest for us now in view of an announcement that our present King at his Coronation may wear the robes that were worn by his predecessor of the same name, said robes having cost originally some twenty-five thousand pounds. One thing to be said for this idea, no doubt, is that tradition is thereby served and a kind of Georgian succession in costume is maintained; while it is possible that a reason for the selection is the special magnificence of the robes, magnificence being the set feature of the coming Coronation; and then, again, an expenditure of another twenty or thirty thousand pounds on a new costume of equal splendour for the one wearing only would not be expedient at a time when expenses are high enough already. However that may be, it is desirable to state, before relating the incidents that follow, that these old robes will be modified somewhat for the new occasion, and we may take it that they will be considerably reduced in weight, although if they were not his present Majesty is not physically so constituted that he would suffer like his predecessor. The plain fact is that, as it would be colloquially put in these days and probably was in the old ones,

these Coronation robes that may probably be worn (modified) at Westminster Abbey in June nearly killed the last King who wore them. It was an exceedingly hot day on that occasion, and Georgius Quartus not being in such good condition as was desirable in the circumstances, the result may be guessed. If the King could have been permitted to take the mantle off during the ceremony he would certainly have done so. The robes were so long and so heavy that by the time the King had reached the altar in his walk from Westminster Hall he was in a half-fainting condition. As to what took place afterwards Dean Stanley wrote: 'The heat of the day and the fatigue of the ceremony almost exhausted the somewhat portly Prince, who was found cooling himself, stripped of all his robes, in the Confessor's Chapel, and at another part of the service was only relieved by smelling-salts accidentally provided by the Archbishop's secretary. During the long ceremony of the homage, which he received with visible expressions of disgust or satisfaction as the peers of the contending parties came up, he was perpetually wiping his streaming face with innumerable handkerchiefs, which he handed in rapid succession to the Primate, who stood beside him.' And the Lord Salisbury of the period, who was one of the train-bearers on the occasion, said in conversation a long time afterwards that 'the King had an hour's rest and freedom from his robes; for after the Coronation he retired for a time before he left the Abbey, and Lord ——, going into the room which had been fitted up as a dressing-room, found the King walking up and down in a state of nudity, but with the crown on his head!' There are several pictures in existence of George the Fourth in Coronation robes, mostly painted by Sir Thomas Lawrence, who assisted in designing them. The mantle is neo-classical, of blue velvet, embroidered in gold and lined with ermine. And now we may just round off this gossip on crowns and crowning with two facts which may be considered apposite. When Queen Victoria was crowned, the crown that was set upon her head at Westminster Abbey, with the jewels and gems with which it was adorned, was said to be worth over three hundred and fifty thousand pounds. In the setting were eleven emeralds, seventeen sapphires, four rubies, two hundred and seventy-seven pearls, and no fewer than two thousand seven hundred and eighty-three diamonds. One of the rubies was that to obtain which Pedro the Cruel murdered his guest, the Red King of Granada—which ruby he afterwards gave to the Black Prince. And the other fact is just this, that as we began with some statements concerning crowns that were cheap, we may end with mention of that which is esteemed as the most valuable, though whether it is really worth what it is estimated at is a little doubtful. That estimate is one million six hundred thousand pounds. For one crown! And, alas! there is no monarch at the present time who may wear it, for it is the crown of Portugal.

THE WHITE APRONS.

CHAPTER V.

MUCH gratified at my escape from the hands of the White Apron and her blackguardly accomplices, I again left at noon for Constantinople. I wondered where Bloch might be. Certainly he would not be again in the Turkish capital; but if he were, then I would face him boldly and accuse him of this attempt on my life.

In due course I arrived in Constantinople, and there again met Nathan. He had news for me. According to a despatch he had translated two days previously, Balkania had declined to allow the Sultan to rule over Bosnia. They granted to him the occupation of Montenegro and its absorption into Albania, but they claimed that Bosnia was Balkanian territory. To this no reply had yet been sent. Both the Sassonian and Balkanian ambassadors had had long audiences at the Yildiz, and the Minister for Foreign Affairs had held long conferences with his imperial master.

An hour later I sent home a cipher message stating that Turkey was proving a stumbling-block in the way of Sassonia. Then I waited to detect some evidence of reprisal. At that moment it did not appear. Yet when, six months later, Abdul Hamid fell foul of the Young Turk party, did not the Emperor of Sassonia, to the surprise of all, withhold the protection he had promised, and allow the Sultan to be deposed and sent to banishment?

That Bloch was aware of my friendship with Nathan was certain, yet my friend Gustave assured me that neither he nor his wife had ever met the keen-eyed little Belgian—an assurance which I had no cause to doubt. The denunciation of Madame Nathan had, no doubt, been made with the object of enticing me to that house with the fatal lamp.

I had again resumed my guise as dock-labourer, and in ragged clothes and greasy fez had returned to my sordid lodgings in Galata, feeling that in such disguise I should be safer from the attentions of Bloch or his friends. They might, of course, denounce me as a secret agent, but by doing so they would only expose themselves. Hence I did not fear they would adopt a course so entirely suicidal. But it was a weary time of idleness, waiting for what information Nathan might gather.

Letters from Sir Charles in London showed plainly in what constant apprehension the Cabinet remained. Neither Press nor public dreamed of the acute crisis which had arisen; but the war-cloud hovers over Europe when to the world the horizon appears entirely unflecked. The screeching section of the Press is the bugbear of the diplomat, for a single expression of what the Powers call their 'policy' is too often the wrecking of all the long-cherished plans of skilled diplomats.

This intrigue on the part of two of the Great Powers against British supremacy which was being kept such a strict secret would, if accomplished, mean the greatest combination of power against us since the days of the Norman Conquest. It meant, as I well knew, the invasion of England within a year. With such knowledge, little wonder was it that I strained every nerve to get at the truth; and yet I was compelled to idle along those hot, dusty quays by the Bosphorus, idle amid all the squalor and the hordes of gray wolf-like dogs, waiting—daily waiting—for Nathan to send me word of success.

In accordance with the chief's suggestion, I had sent Verney to Sassonia; but I felt the utter hopelessness of obtaining any tangible information in that quarter. Our ambassador was down at Therapia, and would, of course, be the last person to know what was being kept a secret from his Government.

A week of enforced laziness upon those sun-baked quays, smoking cigarettes eternally or doing the round of the mosques as a means of killing time, almost drove me to distraction. Yet if I lived at the Pera Palace or at the Embassy, I feared that Bloch or his spies might get wind of my return, and that another plot like that of the White Apron be formed against me. It troubled me when I reflected that Bloch, being aware of my friendliness with Nathan, had, of course, guessed its motive, and might at any time denounce my French friend to the Sublime Porte. His fate as a traitor I shuddered to contemplate.

The week passed uneventfully, and I began to console myself that I had at last escaped the vigilance of my arch-enemy. Yet one evening, three days later, while idling along the Grande Rue, in Pera, I discovered to my chagrin that I was once more being followed by that tall, lean Turk, that same man who had watched me take leave of Nathan. This unwelcome fact caused my heart to sink. I had again been betrayed! Was Nathan really suspected?

I pretended ignorance of the fact that I was being watched, and, buying a handful of dates, sat down in a doorway and ate them. But the spy lounged in the vicinity, and refused to leave me, even though I gave him a long walk through the night. At dawn I took the steamer across to Scutari, the crooked streets of which I knew well, and there, by dint of some sharp manœuvring, managed to slip through that maze of narrow alleys until he lost track of me. Then I walked through the wonderful cemetery, and over the hill-tops to Haidar Pasha, at the head of the Bagdad railway, whence I took steamer again across the Bosphorus to the Galata Bridge. My fear was that the spy might be aware of my hiding-place; therefore I went to the Embassy, and again changed into decent clothes, remaining within the high walls, but fearing to go forth again.

Never shall I forget those hot, fevered days, when each hour of our ignorance brought the nation nearer disaster and ruin.

One afternoon, however, while chatting with my old friend Dick Carmichael, whose fine steam-yacht the *Atalanta* had come in that morning, a servant entered saying that a young lady had called to see me. I immediately crossed the big marble hall to the waiting-room, and there found Julie Nathan, a slim little figure in a well-made summer gown.

'Father is most anxious to see you,' she explained. 'He has sent me to ask whether you will meet him at nine o'clock to-night, down by the Porte Egri [the Crooked Gate]. He has something most important to tell you.'

'Certainly I will be there,' I replied, prepared for any emergency. 'Is your father at home?'

'No; he is at his office. He sent me word to find you and deliver the message at once.'

Then I asked after her sister and mother, and, thanking her, showed her out.

I returned to my friend Dick, whose father, the great sugar-refiner of Glasgow, had died three years before, leaving him a million and a half sterling. He and I had been great friends in Paris years ago; and, hearing that I was in Constantinople, he had come ashore to find me. I had pleaded duty; therefore it had not surprised him that I could not go on board the *Atalanta* and spend the afternoon. He was a tall, fair-haired, merry-eyed man, in a well-worn serge suit and yachting-cap—a man who had not a care in the world.

For a couple of hours we smoked and chatted in the half-darkened room, for the heat outside was terrific.

'I 've kept steam up,' Dick told me. 'I shall leave for Malta about ten to-night, I think. You really ought to come for a cruise with me, old chap. I've only two pals on board—Sturmey, who crossed from the Niger to the Nile last year; and Thomasson, whom you met with me at the club a little time ago. Can't I persuade you to come?'

'I only wish I could!' I sighed. 'But I'm a fixture here for the present. I'll come some other time—if I may.'

'Come, my dear chap, whenever you like,' he urged. 'We 'll go up to Spitzbergen, or somewhere fresh, eh?' And then he rose, adding, 'I may look in again this evening, just to say good-bye.'

Then I walked with him as far as the big gates, and he went forth into the city.

Just before nine, wearing some clothes I borrowed from one of the Embassy servants, I set out down the hill, past the long, white Artillery Barracks until I came to the dark, secluded spot beside the Bosphorus known as the Crooked Gate, which Nathan had named as our meeting-place. Hardly had I approached when his dark figure loomed up out of the shadow.

'I have been successful—at last!' he whispered. 'But we are watched, I fear.'

'How far successful?' I inquired breathlessly. 'What have you discovered?'

'Everything. I have a complete copy here—in my pocket. But evil eyes may be watching;' and he glanced furtively around.

No one was in the vicinity, a fact which I pointed out to him. Yet he seemed highly nervous and excited.

'To-day at noon,' he explained, 'I found a document lying upon his Excellency's table, he having been called out suddenly to consult with the Grand Vizier. It was not a long one, so I succeeded in scribbling a copy in pencil.'

'Does it give everything?' I asked in quick eagerness.

'Yes, it is complete—a draft of the proposed agreement—and exposes the whole intrigue against Great Britain.'

'Then give it to me, and let me get away with it at once,' I urged. 'Your recompense for this service shall be made immediately I return to London, I promise you.'

With some reluctance he drew from his pocket a small square envelope and handed it to me in such a manner as to avoid observation. Yet ere I could transfer it to my own pocket we were pounced upon suddenly by three Turks, one of whom was the thin spy who had kept me for so long under observation. With them was a short, rather stout man in European dress, whose face I could not well distinguish in the darkness.

'We are police-officers,' said the latter gruffly in French, 'and we arrest you both as spies.' Then, to me, he commanded, 'Give me that paper!'

I stood speechless. I was foiled at the very moment of my success! It was evident that they had no knowledge of what was contained therein, for if Nathan had really been suspected by the Turkish authorities he would not have been allowed sight of any confidential document.

'I flatly refuse to give up anything to you,' I replied with an affectation of dignity; 'not before you prove yourselves agents of police.'

'Come, give it to me,' commanded the man. 'Give it to me, with a little backsheesh for my men, and we will say nothing further about the matter. Otherwise—well, we shall do our duty and take you to prison,' he added, with a short, dry laugh.

It was that laugh which attracted me, a laugh curiously triumphant.

I again defied him, but ere I could define their intention all three men set upon me, their revolvers pointed at my head, and forcibly took from me the precious copy of the official document—evidence sufficient to send us both to prison for life!

When I found myself thus deprived of the envelope I fought with all my might, being aided by Nathan, who was broad-shouldered and pretty powerful. The tussle was a severe one. I remember planting the European police-officer a blow full in the face, whereupon his fair beard fell from his chin, disclosing the countenance of none other than my enemy, Adolphe Bloch! He had regained possession of the Sassonian secret!

'Ah,' I cried, 'I recognise you as my would-be murderer!' And I dealt him another blow.

At this he fired his revolver, but happily missed me. Then our assailants raised the alarm for the police.

'Quick! Let's fly! A boat!' I cried to Nathan, and both of us sped as fast as our legs could carry us down to where several caïques were moored. I dashed across from one to another until I reached the outside boat, and just as my friend Gustave gained my side I drew off and began to pull with all my might.

The others naturally rushed after us, and for a few minutes Nathan and I rowed wildly across the dark waters of the Bosphorus. It was an exciting race for life.

Suddenly, as I glanced ahead, I saw a row of lights. My heart beat quickly. It was, I knew, the *Atalanta*. Loudly I yelled out Dick's name as I approached. Thrice I shouted it, when at last I heard an assuring voice—for he was smoking on deck—asking, 'Hallo, who's there?'

'Hugh Morrice!' I cried. 'Some fellows yonder are following me. Keep them off. I'm coming on board.'

In a moment my friend had alarmed his crew, and, pulling hard, I soon found myself dragged by a dozen strong arms on to the clean deck of the yacht, while Nathan followed.

The anchor had fortunately been already weighed; therefore, as soon as I explained the situation in a few breathless sentences, the propeller began to revolve and we moved away.

Our pursuers, however, were not to be baffled. They were quickly upon us, for scarcely had the engine-room telegraph sounded when Bloch, accompanied by the thin-faced Turk, came alongside and shouted authoritatively to the captain to stop.

'You have on board an escaping thief!' he cried. 'See, the police pinnace is just putting out! I command you to stop!'

Dick Carmichael, looking over the side, replied in French, 'You won't command me, my dear friend. Take care, or we shall swamp you.'

The rower turned the caïque toward the side of the yacht in order to allow Bloch to scramble on board, but next moment its bows were stove in, and both the Belgian and the thin Turk found themselves struggling in the swift-flowing stream.

'Shall we stop, sir?' asked the captain.

'No. Go on,' replied Dick. 'They must take their chance. We don't want to court trouble.'

I strained my eyes out upon the black waters behind, but saw my enemy no more.

We watched the green light of the police-pinnace put forth from the quay; but we quickly drew away, and, rounding Seraglio Point at full steam, soon left in the distance the thousand lights of the Golden Horn.

'Well,' I said, turning to Nathan in despair, 'we were outwitted by that scoundrel after all, even though he has lost his life by his own foolishness.'

'No,' replied the Frenchman; 'it is we who have outwitted him. The envelope he secured only contained an ordinary letter, one that I had prepared, fearing a *contretemps*. The actual copy of the draft Balkania-Sassonia agreement, as submitted by Sassonia to Turkey, is here.' And he took from his pocket another envelope, which he handed to me.

I carried it into the saloon, and, opening it eagerly, read the pencilled transcript of the six amazing clauses of the proposed secret treaty, whereby Sassonia secured Balkania's assistance and Turkey's connivance at the breaking up of British supremacy at sea, and consequently the power of the British Empire. The document was an utterly astounding one. Its clauses showed plainly Sassonia's hostile intention toward us; but now that the plot was exposed, I knew British diplomacy would be instantly set to work to combat and defy the enemy's intentions.

When I had told Dick of the urgency of getting to a telegraph-office, he ordered all steam to be kept up until at last we arrived at Volo, in Greece, whence I telegraphed in cipher to Whitehall the full text of the draft, receiving in reply a few words of sincere thanks from the chief himself.

Dick then took us round to Trieste, whence I made all haste home by train. Ere I reached London, however, the perilous intrigue had been already exposed to France and crushed out, for British diplomacy works quickly, and is defiant when defiance is needed and the security of the nation is at stake.

How near our country was to disaster will never be known outside Downing Street and our own Nameless Department; nevertheless, I may as well add that Sir Charles, our chief, declared to me that never in the history of England was such a powerful combination or so ingenious an intrigue instituted against her. By prompt and firm action His Majesty's Foreign Minister was able to turn the tide of affairs in our country's favour, and at the same time to show a bold front to our friends the enemy in a manner in which the Foreign Office of Sassonia will not easily forget. The exposure of the plot no doubt averted invasion, otherwise we might have been attacked and conquered in the year of the lamentable death of His Majesty King Edward of blessed memory. Yet the Press and public have been in ignorance of it until to-day.

For his services, my friend Gustave Nathan was well rewarded out of the Secret Service Fund, and given a lucrative post as a translator at the Foreign Office, which he still retains, living happily at Norwood with his family.

Of Adolphe Bloch, I afterwards learnt that his body was picked up beyond Seraglio Point by some fishermen a week after our departure.

My own recompense was far greater than my service merited, for after the war-cloud had been dispersed I had a royal command to audience, and there received the thanks of the sovereign, together with the insignia of the commandership of a certain Order, my pride in which may perhaps, in the circumstances, be forgiven.

As for Suzette Dupuy, I was present two months ago with Monsieur Lépine, the prefect of the Paris police, when he interrogated her at the Prefecture, and she admitted receiving payment from Adolphe Bloch for my betrayal. I was also present another evening when Monsieur Hamard, with a body of detectives, raided a certain house not far from the Rue Arnay, and there made eighteen arrests of her accomplices, all of them 'White Aprons.' Therefore I think you will agree with me in expecting some very interesting revelations at their forthcoming trial at the next session of the Assize Court of the Seine. So if you watch the newspapers, you will probably read something further concerning them.

THE END.

BRIDGING TIME (1745–1910).

IT is a far cry from the chivalry and romance that cling to the memory of the lost cause of the Stewarts to the wordy warfare of Veto and Referendum of our prosaic days; from the last struggle for the divine right of kings to the triumph of the will of the people. We look back on the good old days, it may be, with a sigh of regret for the glories that are departed, but too often with the detached interest of the student of history unable to realise the conditions of life under which those ancestors of ours wrought out the strenuous issues of their times.

Yet for all our advance in science and the art of government, a century and a half is no great matter in the lapse of time. Two lives will bridge it over comfortably; but it is surely exceedingly rare for two memories to stretch back across five generations. Such an instance has lately been brought to notice by the death, on the 10th October 1910, of Colonel John Bower, of Studwell Lodge, Droxford, at the age of one hundred and one years.

In a letter to the *Standard* on this subject of memory, four years before his death, Colonel Bower wrote: 'In my boyhood I knew a man called Sandy Both, who hailed from Douglas Town (a village in Forfarshire), and when between nine and ten years old was an eye-witness of some of the tragic events at my paternal home (Kincaldrum), in the cause of Prince Charles Edward in 1745,* and in after years he often recurred to the subject. . . . He was born in 1737.'

Here we have an instance of two lives bridging over one hundred and seventy-three years, and of two memories which extend to one hundred and sixty-five years between them. It is a still more remarkable fact that one of the actors in the tragic events at Kincaldrum referred to in the above letter was actually the grandfather of the writer, Colonel John Bower. Thus we find three generations of one family extending from 1738† to 1910.

That the 'tragic events' were likely to live long in the memory of all who had the misfortune to be at Kincaldrum on the occasion is not remarkable, for they were of a nature to brand themselves indelibly on the minds of the most callous; and in an age when the mere suggestion of a possible foreign invasion of our shores is ridiculed by the vast majority of the people, it is not inopportune to recall what happened in the middle of the eighteenth century, when Great Britain was looked upon by her foreign king as merely an appanage of his native kingdom of Hanover.

The story is told in a pamphlet issued by the late Colonel John Bower, and also in a memorandum by his father, Mr Graham Bower, who died in 1844. The two accounts differ in some of their details, and it was the intention of Colonel Bower to revise his pamphlet. In fact, as lately as the 26th September last he wrote a letter on the subject; but he did not live to carry out his intention. The following account is taken from both sources of information, due weight being given to the fact that Colonel Bower himself considered that, where differences exist, the memorandum written by his father is probably the more accurate.

In 1746 Culloden was fought and lost, and the last of the Scottish chivalry who were to draw sword in defence of the Stewart cause were dispersed over mountain and glen, whilst the Butcher Cumberland harried their homes in search of them. George the Second could not find soldiers enough in Great Britain to hunt down these rebellious subjects in the far north of the kingdom; but in his own country there were men who could be trusted to carry out the task without remorse, and Hanoverian troops were extensively engaged upon this congenial duty. They had not distinguished themselves in the earlier battles of the campaign; and the hunting down of the scattered remnant of the defeated army was infinitely more to their liking than the charge of the Highlanders at Prestonpans.

Among those who took to the heather to avoid capture was Alexander Bower, the laird of Kincaldrum and Meathie, in Forfarshire. Mr Bower had returned from Spain in 1744, partly to look after his estates and partly to watch in secret for the landing of Prince Charles Edward. After Culloden he retired to Kincaldrum with his cousin, Colonel Ker of Graden. Colonel Ker, who was an officer in the Spanish service, had received a commission as a colonel in Prince Charles Edward's army; and it was he who led the Highlanders to the attack over the marsh at Prestonpans.

In the daytime Mr Bower and Colonel Ker lay in hiding among the hills, and at night they returned to Kincaldrum, where Mrs Bower (Margaret St Clair of Roslin) had supper and provisions for the following day ready for them. It must have been a time of tense anxiety for the family at Kincaldrum. The household consisted of Mrs Bower and her sister, Miss Sarah St Clair, the Bowers' little son, a boy of eight years old, with his nurse, Betty Maxwell, and other servants. There appears to have been also another lady in the house, whose death took place in the midst of the disasters which befell the unhappy household; but her name is not given in Mr Graham Bower's memorandum, and in Colonel Bower's account there is no mention of her.

One night when the laird and his cousin were in the house a patrol of English dragoons rode up to Kincaldrum. The fugitives were hastily secreted, and when the officer in command of the patrol, who is described in Mr Graham Bower's account as 'a most gentlemanly young officer,' made his entry, no one was to be found but the ladies of the house. The young officer disclaimed any intention of making a search of the premises, but he gave the ladies to understand that he was aware that Mr Bower and Colonel Ker were hidden in the house. On their part the ladies begged the officer to remain to supper, and entertained him to the best of their ability. On taking his leave the friendly officer gave a word of warning. The Hanoverian troops, he informed them, were also scouring the country, and he would not answer for their

* The date apparently should be 1746.
† The colonel's grandfather was eight years old in 1746.

conduct should they find Mr Bower and his cousin about the place.

Incidents of this character were no doubt of frequent occurrence when English gentlemen were despatched on the odious duty of hunting down their Scottish fellow-countrymen, and in a great measure account for George the Second's preference for his own Hanoverians for the work. In the case under notice, Mrs Bower seems to have taken the hint; for without delay she started for Traquair House in Peeblesshire to intercede for her husband with the Duke of Cumberland. The only charge that could be brought against him was that he had worn a white cockade in his bonnet, and had been seen shaking hands with Prince Charles Edward at the Salutation Inn in Perth.

During the absence of Mrs Bower a party of Hanoverian dragoons paid a visit to Kincaldrum. The laird and the colonel, thinking themselves secure, had not paid sufficient heed to the friendly warning they had received, and once more were forced to hide themselves in the house, with their enemies at the gate. Here is Mr Graham Bower's description of what took place:

'A few days afterwards a party of Hanoverian or Hessian dragoons came up. The first of their operations was to hamstring all the cows, cattle, and horses they could lay their hands upon; even the little Shetland pony kept for my father's use did not escape. On entering the house they amused themselves slashing the family pictures with their sabres [these pictures are still in my possession]. All the windows of the lower story had what they call upright iron stanchions. Colonel Ker, hearing the uproar, betook himself for escaping from one of the windows where he knew there was a false stanchion. On getting out he found two soldiers placed, who immediately made him a prisoner. The sergeant of the party went into a bedroom. On removing an old black cabinet they found a hole where my poor old grandfather was concealed [this cabinet is also in my possession]. On the officer commanding the party demanding fifty pounds from my grandfather to let him off, he told him he had no money, on which the officer struck Mr Bower a blow on the back with the flat of his sword, which was returned by Mr Bower taking up a poker and knocking down the officer and two or three of his men. However, he was soon overpowered by numbers, and his hands tied behind his back. Having a fine head of hair, they knotted it to one of their horses' tails, and dragged him in this way for about two miles to a place called Cothiewards near Fendrick, where a poor man of the name of Saunders Kinair was holling broom, who on his bended knees interceded for his master, saying, "If you will only put the gentleman on a horse I will gi'e you a' the siller I ha'e," which amounted to ten pounds. The relief seems to have come too late, however. He was mounted behind a trooper, carried to Dundee, from there to Perth prison, where it soon pleased God to relieve him from his tormentors, having expired from the brutal treatment he had received.'

As for Colonel Ker, on his producing his commission as an officer in the Spanish service the Hanoverian officer did not think it prudent to keep him a prisoner, and he was released.

Mr Graham Bower's narrative proceeds:

'While all this business was going on there was a lady's corpse laid out in one of the bedrooms. Betty Maxwell, who kept my father (then a little boy), got him in her arms and secreted herself—with her charge—behind the bed containing the dead body to prevent his being taken hold of by the Hessian soldiers.'

The faithful nurse's ruse was successful; and though the Hessians appear to have entered the death-chamber, they did not discover Betty Maxwell and her charge. But after the soldiers had decamped, Miss St Clair did not think it prudent to allow her little nephew to remain at Kincaldrum. Mrs Bower had not returned from Traquair, and the responsibility for the safety of the child must have weighed heavily upon her. A few days after the raid she took the child and started for the coast. The first night of their wanderings was spent at the house of Graham of Fintry, whose daughter Margaret was about the same age as the boy. The children played together, and Betty Maxwell made so bold as to suggest that some day, when the trouble had passed away, the little lairdie would return and marry his playmate. And in after-years Betty Maxwell was justified; for when young Bower returned from France he became the husband of Margaret Graham.

Thereafter Sarah St Clair and her charge wandered over the Scadly Hills, and came at last to Borrasteness,* where she found a small sloop on the point of sailing for Hull. Eventually they made their way to Holland, and thence journeyed to Paris, where, on the advice of Lord Ogilvy—then a colonel in the French service—young Bower was placed in the Scotch College. Miss St Clair started to return home; but in the Forest of Cressy the diligence in which she travelled is supposed to have been attacked by robbers. Miss St Clair was never heard of again.

The last act of this tragedy is best told in the words of Mr Graham Bower:

'My grandmother, finding she could make nothing in favour of her husband from the Duke of Cumberland, returned home. On her arrival in Dundee she, of course, asked the news. On being informed of her husband's fate and the disasters at Kincaldrum—her boy being obliged

* In Colonel Bower's account the seaport is given as Broughty Ferry, which seems more probable than Bo'ness.

to fly with his aunt—on entering the Red Lion Inn she requested the landlady to show her into a bedroom; the moment after entering it she complained of being a little sick, dropped down, and never spoke more. The hearse that brought the remains of my grandfather from Perth took up the body of my grandmother in Dundee, carrying them to the family burying-ground at Meathie, where they were laid side by side.'

The sequel to the story concerns the restoration of young Bower to his family estates. Through the kindness of the French king and many friends, the boy received the best instruction that Paris could afford, and was then attached to the Court as page of honour to Louis the Fifteenth. Whilst acting in this capacity 'he took the natural smallpox'—a disease that proved fatal to Louis the Fifteenth some years later—and his features were much marked by the scourge. About the year 1764 young Bower returned to Scotland, the Government having agreed to restore the confiscated properties to the heirs of the attainted lairds provided they were of tender years when the rising took place. He arrived home, to find his estates in the possession of a kinsman, James Bower, who claimed to be the next heir, and stoutly maintained that the newcomer from France was an impostor and not the son of the late Alexander Bower and Margaret St Clair. Identification was a difficult matter, for young Bower had grown to manhood in a foreign country, and he was much disfigured by the smallpox. None of the witnesses called in the court at Forfar could identify the stranger as the son of the late laird and his lady. But his counsel had another way of settling the matter. If the witnesses could not recognise the claimant, the claimant could recognise the witnesses.

'On a man being brought into court, Percy [Wedderburn of Percy] asked my father if he knew who that person was. "Yes," answered my father; "it is William Maxwell, the miller of Kincaldrum." The next person brought in—about his own age—my father went up to him saying (and taking him by the hand), "Jamie, man, dinna you mind when you and I langsyne took puddocks wi' a girn in the Barn Hill Dub?" Percy rose, saying, "Gentlemen, I fancy you are a' satisfied noo."'

So the laird came to his own again. And he married Margaret Graham of Fintry. Their son, Mr Graham Bower, the author of the memorandum from which the greater part of this narrative is taken, lost the estate of Kincaldrum in 1817 through misplaced confidence in a friend. He died in 1844; and the last of his children, Colonel John Bower, died, as already stated, on the 10th October 1910.

It would be interesting to know whether this record for three generations of one family can be surpassed, and whether there yet lives a man whose grandfather played a part in the turbulent days of the 'Forty-five.'

JOTTINGS FROM THE NOTE-BOOK OF A TRAMP.

THE CASUAL WARD.

By the Author of *Leaves from the Diary of a Tramp.*

A STONE wall stretched frowningly along one side of the road, a very high wall, that somehow made one tread quietly as one went along, and listen for the clinking of chains on the other side. At one end there was a gateway, and by the side of the gateway there was a small door; and leaning against the wall was a long line of men, with here and there a woman, the units of the line seeming curiously small and insignificant, overshadowed as they were by that prison-like wall. It was the thin line of hunger, for hidden behind was the workhouse, and we were waiting for a pauper's uncomfortable shelter and a pauper's most miserable dole.

Well-fed, prosperous-looking men passed along on their way from business; but they scarcely glanced at us as they passed. They were accustomed to the sight; the line would always seem the same to them, and every evening it was there. Yet it was a sight calculated to fill them with a sense of humbleness and shame, for not all in that line were tramps. Some had once been industrious, skilled workmen for whose labour there was now no market. Unable to find a buyer for their labour, they had had to find a buyer for their homes. What hopes had they planted as they gathered those homes together stick by stick, and to what a harvest had they ripened! Near me stood a gray-haired old woman with her husband. They were both very neat and clean, though their clothes were shabby and old. Both had an air of respectability that spoke of better days, I thought as I looked at them.

Just then the door rattled. Those who had been dozing against the wall became alert; then the line moved up as we were slowly admitted. I had to undergo an inquisition at the hands of an official, to give up all my valuables (a halfpenny and a broken-bladed knife); then I received from another a piece of bread and a tin of skilly, and was permitted to enter a long room furnished with tables and seats. The bread was brick-like and the skilly detestable; but, helped by the salt placed in heaps on the table, it at last disappeared. One poor fellow who sat near me,

knowing what to expect in the way of food, had brought in with him a bloater; this he had placed within his vest, next to the skin, hoping thus to smuggle it in undetected. Alas, he failed, and the luxury was confiscated!

On the other side of me sat a man about thirty years of age. He was an iron-turner, he said, and had left Newcastle six weeks before in search of work.

'I've stood it long enough,' he told me. 'If I can't get nothin' honest, I'll have from them as has plenty, or I'll know the reason why. If I couldn't get a job when I started off, smart-lookin', what chance have I now—my boots burst, my togs creased an' dirty, an' a fortnight's whiskers on my chin? I've slept out once, an' I'm not havin' any again. An' I'm sick of walkin' ten miles from spike to spike, when I've no chance of gettin' a job.'

It was all quite true. When a man's shoes begin to gape, and his clothes to crease and fray, and he cannot shave, and his linen from doubtful becomes disreputable, and people begin to look askance at him for fear he should ask alms, the accumulated effect of it all makes him feel like turning round on society and wringing from it the living it denies him, or saying, 'You won't find me work so that I can keep myself; therefore you must keep me, for I'll hunger and tramp no longer.'

Of the thirty men in that casual ward I would say that more than half were, or had been, thoroughly respectable unemployed. Two of them were from Oldham. One had left a wife and family behind him. 'Two o' t' lads are workin',' he said. 'They'll piece out enough for th' owd woman, if they an to hauve clem theirsel's;' and as he could not get work at home, he had started off on the long road, content to rough it so long as 'th' owd woman' was looked after.

Yes, I know that labour exchanges are supposed to do away with the need of tramping; but I cannot understand the attitude of mind of the people who think so. I registered at three exchanges. But when I received my card, did I then not need food and bed? Without money, could I stay in a town? On the road there is always the chance of picking up an odd job here and there. A man earns, say, twenty-five shillings per week. He is thrown out of work. The little money he has saved soon goes if the period of unemployment is prolonged. Then, when all is gone, what can he do, even if his name is on the register? He can do one of two things. He can sponge on his friends and relations, who probably are not in a very secure position themselves, and let them keep him until something turns up, or he can go farther afield in search of work, in the hope of picking up enough odd jobs as he goes along to keep body and soul together.

My conversation with the 'Owdhamers' was interrupted by an official who not very politely ordered us to get a move on. We had to strip; our clothes were gathered together anyhow, and tied up in bundles—what a state mine were in the next morning!—then each one had to have a bath—in pea-soup. At least that's what it looked like before the last man was reached. Then we were given a night-shirt each, evil-smelling and certainly far from clean, and a couple of blankets, and marched off to bed. In other places I have had to take the bath before the supper. Twenty-five of us slept in the same room, and before midnight the atmosphere was horrible. The beds were, I should think, specially designed as sleep-preventers; they were all swung at the foot on one bar which ran down the centre of the room, and if one man moved uneasily the whole of the other hammocks moved in sympathy. I was by no means sorry when six o'clock came and we were given our clothes, smelling strongly of some fumigating agent, and then supplied with 'breakfast'—bread and skilly. After that came the task. I had to chop wood; and, thinking that the sooner the wood was chopped the sooner would I be out, I set to work with a will, and by half-past nine the task was ended. Then the official brought me another pile. It didn't matter, I was told, how much or how little work was done. We must stop in the labour-yard until the official hour of dismissal, and then, whether we had skulked or worked, we could go.

Until eleven I skulked.

THE MONTH: SCIENCE AND ARTS.

A NOVEL SUN-CLOCK.

DURING recent years the sundial has undergone many interesting developments, the scope of which has been to render it more useful. Though it was extensively used up to the eighteenth century, the difference between sun-time and mechanical clock-time caused it to fall into desuetude as a timepiece when standard mean time was adopted. The result was that the sundial fell from its proud position and became a mere ornament of the garden. It is obvious, however, that if the sundial could be caused to show the correct mean time—that is, the hour and minute which your watch ought to show according to Greenwich—and that infallibly, then the sundial would usurp the place of the mechanical clock, especially in those countries and places where the conveniences for adjusting the watch and clock

are scanty. A Scottish inventor, after several years of patient investigation and experiment, has devised a sundial which at all times of the year shows absolutely dead correct clock-time, and when once set correctly it can never gain or lose. Consequently it is really more reliable than the finest type of clock that has yet been devised. Moreover, the system has been worked out so simply that any one can set and use the instrument. The device consists of a hemispherical bowl of copper about thirteen inches in diameter, supported on a base of the same metal by a single screw which facilitates the setting of the bowl in the correct position, the base being rigidly clamped to a suitable pedestal. The bowl is spanned vertically by a thin metal rod which throws a shadow across a band placed at right angles centrally round the inside of the bowl. This band is the time-scale. The instrument is made in two forms—a sun-clock and a solar chronometer. The first-named shows standard sun-time, which, as is known, differs from clock-time. To bring about the requisite correction, and to ascertain quickly the absolute time your watch should indicate, there is a table by means of which equation is secured. In this arrangement there are no moving parts, which in some cases is an advantage if it is liable to be tampered with after erection. In the solar chronometer standard mean time or clock-time is shown. Here the time-scale has a moving band slipping slightly right or left. The fixed part of the scale is divided into the months of the year and their days. The upper part of the moving scale is similarly subdivided, but the lower half is divided into hours between 6 A.M. and 6 P.M., with each hour split into minutes and periods of ten minutes plainly marked. All that one has to do in this case is to bring the day of the month on the sliding scale opposite the corresponding date on the fixed scale. In the bottom of the bowl is a small map, and in setting up the device it is only necessary to bring a plummet depending from the centre of the shadow-rod over the country in which the instrument is being set up. This secured, the bowl is then simply turned sideways until the time thrown by the shadow on the time-scale coincides with that shown by your watch to the very minute. It is only necessary in the first place to make sure your watch is correct. The chronometer is then fixed in that position, and ever after the sundial will show Greenwich time for the twelve hours between six in the morning and six at night, irrespective of season. The instrument is the most simple of its type that has ever been evolved, and in isolated districts and countries such as India, Australia, Canada, where it is difficult to correct a timepiece periodically, it will be found eminently valuable. In price it compares with the ordinary mechanical timepiece, and can be adapted for use in any part of the world.

PORK AND BEANS A RATIONAL DIET.

Recently attention has been conspicuously drawn to the nourishing potentialities of a humble class of food—pork and beans. In this country the dietetic value of this food is ignored; but in other parts of the world, especially in Canada and the United States, it is of pre-eminent importance, large establishments being devoted to the canning of this commodity. Yet it is a dish which can be prepared cheaply and easily, though an air of mystery has been given to the art of preparation. The bean advocated in Britain is the small white haricot, which can be purchased for about twopence per pint. In Canada, however, outside the large towns of which pork and beans are considered a staple food, the brown kidney-bean is preferred. From personal experience the writer can affirm that the latter bean is sweeter, more tasty, and filling. Cooking is very simple. All that is necessary is to place the beans in a saucepan with an adequate supply of cold water. A small piece of bacon, say two streaky rashers to one pint of beans, is then put in—more can be added if it is desired to make the meat a dish as well; and, if preferred, the meat can be added in chunks instead of thin slices. The contents are then brought to the boil quickly, and kept so for an hour or two until the beans become softened and the meat has shredded somewhat. It will be requisite to add water from time to time to compensate for that lost by evaporation, and for this purpose a kettle should be kept boiling beside the saucepan, care being taken to add only boiling water. The preparation is extremely simple, and so long as an adequate charge of water is kept in the saucepan, burning of the contents will be avoided. When the dish is cooked it is only necessary to add pepper and salt to taste, though it can be rendered more appetising by the use of a little tomato sauce. The liquid is as nourishing as the solid vegetable. The writer can testify to the staying-powers of such a dish, as well as to its body-building powers, for during a hard journey of twelve hundred miles over the Canadian north-west trail last year pork and beans figured in one or more meals nearly every day—for over a week it formed the staple dish three times a day; and after a good matutinal charge of this commodity one could face with equanimity an eight or ten hours' journey without food through the tumbled wilderness and mountain fastnesses. For the trail no more sustaining dish has yet been found; and as a body-building medium for the humble home or a simple diet for the epicurean suffering from gastronomic troubles it will be difficult to excel.

THE 'SPRING' THE WORLD'S FRIEND.

It would be interesting to know authoritatively how important a part the simple mechanical device known as the spring in one or more of its

different forms plays in our everyday life. It is omnipotent and ubiquitous. Moreover, it has been harnessed in many ingenious ways with a view to removing the little worries of life. Recently a whole collection of insignificant though utilitarian novelties working on this principle have been evolved by an English firm. For instance, a bodkin which will take any width of tape, which is easy to thread and simple to work, and from which the tape cannot slip out when in use will appeal to the housewife. It is quite distinct from the usual type of article for this purpose, being a solid little rod of metal slit almost from end to end, which has the action of a flat spring upon the inserted tape, gripping it tightly. The amateur gardener and his professional colleague also have often been worried in the nailing of trees to walls. This is now rendered an absurdly simple task by a patent wall-clip, in which the branch is held loosely yet firmly by a spring at one end, while the other is secured to the fencing by mere tacks. The clip is made from specially prepared steel which cannot rust, and which cannot inflict any injury upon the most tender plants, while it can be moved from place to place as desired and attached firmly to any class of fencing or wall. Then who has not indulged in wrestling with a tie under a double collar, and more often than not ruined the appearance of the latter in the ordeal? But there need be no further trouble in this direction. The tie can be tied in a sailor-knot or bow over the side of a spring adjuster, and the latter slipped under the collar in an instant. Nothing short of a sharp tug will remove the device after it has once been set in position. This device also enables a fresh part of the surface of the tie to be brought into the essential position every day. The man who prefers to work in his shirt-sleeves, or my lady accustomed to gauntlets, experiences trouble in keeping the cuffs well above the wrist, and endeavours to meet the difficulty by using elastic bands which cut into the flesh. This end can now be more conveniently and painlessly achieved by means of flat spiral spring armlets or bracelets which will fit the slimmest or thickest limb with the greatest ease, and, what is more, keep the offending attire firmly in position. He of immaculate dress who devotes especial and unremitting care to the crease in his nether garments will find the 'avecta' trouser-presser of incalculable use, especially as it can be packed in a hand-bag and taken about with one. It consists of two flat pieces of wood about two inches in width, between which the folded garment is laid, and then gripped by three powerful spring clips which are slipped over the edge in an instant. This device will give a crease superior to that produced by the ordinary cumbersome presser, while the fact that it will slip into an ordinary hand-bag is a decided advantage. One well-known inventor expressed the opinion that a device which would slip into the waistcoat-pocket would be of the greatest value to mankind, and certainly the foregoing examples of the application of the simple spring fulfil that requirement with complete success.

DICKENS IN POTTERY.

One of the sanest hobbies of the present day—and this is an age of crazes—is the collection of china in one or more of its various forms, from the hoarding of rare specimens of Dresden, Wedgwood, and Royal Worcester to heraldic miniature china. The spirit is laudable, since, unlike some collecting manias, it provides a means of beautifying a room. The latest development in this direction is one of the most enterprising, and one which will make a world-wide appeal. This is the manufacture of specimens of pottery of all descriptions and in a wide variety of forms, from plates to mugs, vases to bowls, embellished with characters of Dickens, especially when it is carried out in such famous ware as that issuing from the ovens of the Doulton establishment. 'Dickens "Doultonised"' has become a colloquialism, and it is a development which will be keenly appreciated by all lovers of the novelist who taught us to laugh. The pottery will be prized, apart from its technical excellence, for the faithful portrayal of the various characters as they have been presented to us through the creations of 'Phiz.' Mr Pickwick is depicted just as he has been immortalised by the Dickensian artist, for no one could conceive a different characterisation. The pottery artist, Mr Charles J. Noke, has achieved his difficult task with conspicuous success, and he has kept uppermost the popular conceptions of the persons moving through the novels. The execution of the work is in the famous Doulton manner, and the colouring is delicate and beautiful. In transferring the *dramatis personæ* to pottery the artist has been careful to preserve the atmosphere of the surroundings. Americans, who are among the keenest admirers of Dickens, have extended an enthusiastic welcome to this movement in pottery, and are developing an acute rivalry in the acquisition of specimens of the ware embellished with characters from their favourite author. In this country, too, the collection of such promises to develop into just as keen a hobby, which is additionally interesting owing to the variety of the articles. You can secure railplates for the decoration of the dining-room walls, bowls for the embellishment of the table-centre, quaint tankards and jugs for the side-board, or vases for the mantelshelf; while the fact that they are the creations of the Doulton works is sufficient guarantee of their perfection.

SOLID PETROL.

Considerable interest has been created by the announcement that a German scientist, Dr V. Rosculetz, has succeeded in perfecting a method

for solidifying volatile liquids such as petrol, ether, and so forth. The extremely evaporative character of petrol has rendered its use somewhat dangerous, and inasmuch as the perfection of the internal-combustion engine, more particularly typified by the petrol-motor, has resulted in the widespread utilisation of this fuel, efforts have been made to render its handling less dangerous. But solidified petrol is by no means new. About five years ago, in a laboratory, the writer saw small blocks of petrol which emitted gas as they were 'thawed.' Half a century has been devoted to experiments in this direction, but their commercial value is somewhat difficult to comprehend. For instance, the chemist of one of our leading refineries expressed his readiness to prepare the product if requested, and the process is quite devoid of mystery. All that is required is a little soap prepared in a certain manner, and this will solidify petrol or any other volatile liquid. If stearic acid, which can be obtained easily, is boiled with hydrochloric acid for some hours, it becomes non-crystalline, amorphous, or colloidal. On its then being dissolved in petrol or petroleum, a permanent jelly is formed when it cools. In some parts of the world petroleum can be drawn from the borehole in a form like red-currant jelly, and this under natural conditions. The German invention is by no means new, though the method adopted for solidifying the fuel may be so. Moreover, solid petrol is just as dangerous to handle as the liquid form, for Dr Rosculetz depends upon the gasification of the substance under currents of air; and the danger of combustion is quite as great. The fact is that petrol, like gunpowder or coal-gas, is not dangerous if handled properly. No sane person would think of looking for a gas-leak with a lighted match, or sample gunpowder while smoking. Then why attempt to take such liberties with petrol? The danger in handling this liquid is caused purely by carelessness or crass ignorance.

LUCYTE.

A new material which, from its character, should be certain of a great future is that to which the generic name of 'lucyte' has been given. In appearance it resembles celluloid, but differs therefrom in that it is non-inflammable. The distinctive feature of this substance, apart from its transparency when desired, is that it is waterproof and washable. For advertising purposes it appears useful, inasmuch as it carries colours brilliantly and permanently, and can be put to any use that may be imagined. It can be made to any size, shape, and thickness with equal facility, from a thin strip more like a shaving to a thick pane resembling glass, and either opaque or transparent. It is eminently adapted, owing to its sheen, for Christmas cards, box-tops, and even book-bindings, where beautiful effects are desired. It is offered as a substitute for glass, and, its general characteristics being borne in mind, should be useful for glazing. It is possible that it may be applied to photographic purposes, especially in connection with kinematography. The films of the latter, for the most part, being made of celluloid, are highly combustible. Recently, however, the non-inflammable film, so called, has been used in this connection; but its claims to non-combustibility are in fact more imaginary than real, for the substance, as a rule, when subjected to heat melts or boils away, and in so doing emits copious clouds of smoke, which, from the point of view of frightening the public, is almost as bad as bursting into explosive flame.

A BUTTER MIXER AND MOULDER.

The necessity for packing articles attractively in order to catch the customer's eye and enlist his interest has been driven home to British firms very strongly during recent years. This is a field in which the Americans excel, inasmuch as they have learned that the pleasing external appearance of an article generally doubles its sale. British merchants have followed their example, and to-day the majority of articles can be purchased in a tastefully packed manner. But if there is one commodity more than another in which there is great scope for improvement, it is butter. The shopkeeper invariably gives the customer a depressing-looking mass which no self-respecting housewife would think of putting on the table. Many a shopkeeper selling an inferior article has secured greater trade than a colleague vending the best produce just because he knows how 'to put it up' in an attractive manner. A machine has now been placed on the market whereby butter can be moulded and weighed in the form of a circular drum, a rectangular brick, or a roll, cleanly and appetisingly, and in any desired quantity, from a small pat of half-a-pound weight to a chunk of two pounds. The machine can be used by hand or power according to the requirements of the vendor, and will turn out the weighed and moulded article at the rate of from four hundred to seven hundred and twenty pounds per hour, according as to whether the drive is manual or mechanical. It should be a useful machine for dairies, and appreciably increase the demand for an article of local production. It can be applied similarly to margarine and lard.

THE LUMINATOR AND PERMUTIT WATER-SOFTENING PROCESSES.

The formation of scale in boilers is one of the greatest enemies against which the steam user has to contend. Softening of water is of vital importance also to the domestic user, inasmuch as thereby the consumption of soap is reduced to the minimum, and no injury is inflicted upon the most delicate fabrics, as is often the case when the water used is hard. Processes of foreign origin for achieving these desired ends have recently

been introduced into this country. The first is the 'luminator' system, which is designed solely for the treatment of boiler feed-water. The water before entering the storage-tanks passes over a corrugated plate of aluminium, whereby a physical change is effected, the result of which is that the calcium and magnesium salts conducive to scale are deposited in the boiler in a slime which can be easily removed. No chemicals whatever are used, the improvement being brought about purely by physical means. Many of our leading railways have adopted the system, the Great Northern having an installation at Peterborough capable of treating thirty thousand gallons per hour. The 'permutit' softening system is one of chemical application, and has proved highly successful in Germany. In this instance the water to be softened is filtered through a manufactured substance known as sodium permutit. The idea is strikingly elastic, and can be applied to a small domestic supply for treatment of only a few gallons, or to one in a large manufactory where thousands of gallons are required. In this process the calcium and magnesium salts are withdrawn from the water to combine with the sodium permutit, and are retained by the filter, while the sodium originally combined with the permutit is released and passed through the water. By this means the elements contributing to the hardness of the water are entirely eliminated. A feature of this system is that when the sodium of the permutit has become exhausted in the course of time, it can be regenerated by passing a solution of common salt through the filter. For the removal of iron and manganese and for the destruction of germ-life, manganese permutit is used in place of the sodium permutit. The regeneration in this instance is accomplished by a solution of permanganate of potash. Over two hundred of these installations are in use in industrial establishments in Germany, and the process appears to have been a complete success, especially in establishments devoted to wool-washing, cotton-bleaching, laundry-work, dyeing, papermaking, and so on. Hotels, offices, and private dwellings have adopted the small permutit installation, and in this field there appears to be considerable scope, since pure, soft, palatable water for domestic and drinking purposes is a great desideratum. Hospitals should also find the process of distinct service.

THE NEW WIRELESS TORPEDO AND AERIEL WIRELESS TORPEDO.

In our Christmas Number we referred to the invention of a wireless torpedo controlled by Hertzian waves as being that of two Australians, Messrs F. J. Healey and A. J. Roberts, and also to an aerial wireless torpedo as having been invented by Mr F. J. Healey and as being known by his name. These statements having been brought to the notice of Mr A. J. Roberts, he has informed us that we were entirely misinformed in attributing the invention of these to Mr Healey, and that they are the sole invention of Mr A. J. Roberts, Mr F. J. Healey having only a business connection with them. We regret that we unwittingly deprived Mr Roberts of all or part of the merit of these interesting inventions.

To Correspondents who wish fuller information regarding new inventions mentioned here, addresses will be furnished, when possible, provided a stamped and addressed envelope or post-card be sent to the Editor, 339 High Street, Edinburgh.

A DREAM.

I WENT last week in a railway train—
Whiz, and a roar, and away;
I thought we flew like a swift-winged bird,
Off, on a blue-skied day.
But, fast though we went, I also saw
There was something faster far;
For the houses spun as we rushed along
Till they looked like a twinkling star.

All day, when I'm old, I'll ride in a train,
In summer or winter, in fine or rain;
Houses and hedges and stations shall fly,
Running in terror when I whiz by.

I woke last night, in the midst of a dream,
All hot and trembling and cold;
I thought I could hear an engine scream,
I thought I was gray and old.
I'd turned to a man, and I sat in a train
That whizzed and whistled and roared.
Though I tried my hardest I couldn't get off;
'Sit still!' cried the guard. 'All aboard.'

Then away we went at a lightning pace,
As if we were running a fearsome race;
I longed to become just a boy again,
But I'd turned to a man, and I wished in vain.

EDITH L. ELIAS.

The June Part of *Chambers's Journal* will contain the opening chapters of a novel of powerful interest, entitled

THE LUCK OF THE ST AUBYNS,

being a page from the History of a Notable House,

By DAVID LAWSON JOHNSTONE,

Author of *The Lost Cause*, *The Rebel Commodore*, &c.

*** TO CONTRIBUTORS.

1*st*. All communications should be addressed 'To the Editor, 339 High Street, Edinburgh.'

2*nd*. For its return in case of ineligibility, postage-stamps should accompany every manuscript.

3*rd*. To secure their safe return if ineligible, ALL MANUSCRIPTS, whether accompanied by a letter of advice or otherwise, *should have the writer's Name and Address written upon them* IN FULL.

4*th*. Poetical contributions should invariably be accompanied by a stamped and directed envelope.

Printed and Published by W. & R. CHAMBERS, LIMITED, LONDON AND EDINBURGH.

Chambers's Journal
SEVENTH SERIES

THE LUCK OF THE ST AUBYNS:

BEING A PAGE FROM THE HISTORY OF A NOTABLE HOUSE.

By DAVID LAWSON JOHNSTONE, Author of *The Lost Cause*, *The Rebel Commodore*, &c.

FOREWORD.

FOR close upon fifty years there had been war—bitter, unrelenting, unscrupulous—between the houses of Heathcote and St Aubyn, albeit they had long been neighbours and were near akin in blood. The great feud had its beginnings when the eighteenth century was still young and Queen Anne was keeping the triple throne warm for the little Hanoverian whom she hated. It was in 1710 that Sir Simon Brayden died, full of years and ill-gotten riches. Mr Sam Pepys has it that the worshipful knight started life as a sutler's boy in the army of the Parliament; and the Clerk of the Acts, having been associated with him at one time in the mismanagement of Tangiers affairs, was not unlikely to be well informed. During the three reigns which followed the Restoration, and through all the mutations of the sordid politics of Stuart and Dutchman, Sir Simon had pursued two objects with unswerving fidelity and a rare dexterity—firstly, to keep place whatever befell, and therewith the power to dip deeply and at will into the public purse; and, secondly, to get together a vast landed estate. Perhaps he was fortunate in the times. His success, at least, was the envy of two generations of placemen; and when he passed peacefully to his account he left possessions—in half-a-dozen counties and on both sides of the Irish Sea—such as were then the heritage of only a few of the greatest nobles. No fortune so made, said the moralists, could fail to carry a curse. Sir Simon had evaded retribution; it fell upon his descendants. To them, in truth, the inheritance proved an inheritance of hate. For he had no son to succeed him. His single aim was to preserve intact that which he had built up so laboriously, and to that end he had devised the will which involved his grandchildren—the sons of his two daughters—in a lifelong struggle for mastery. They were boys when it began, and for half a century the fight had been waged with ruthless persistence, carrying with it the memories of irreparable injuries, of insults and mortifications beyond forgiveness; on one side of acts that were almost crimes, and on the other of ruin and expatriation. And the issue was in the hands of neither; for to neither, while the other lived, was complete victory possible.

How, in the year 1759—that ever-memorable year so big with fate for the Empire to be—the feud came to an end is here set down.

CHAPTER I.—MINDEN—THE CAVALIER WITH THE CANE.

CALL it Providence or Chance as you will, there is no gainsaying the consequences of the accident that flung young Lord St Aubyn into the fighting-line of the Twelfth Foot, where he had no right to be. It all happened in the few breathless minutes between the first and second charges of Contades' cavalry. To the end his lordship could never quite explain it. Somehow, his horse had gone down under him. The next moment, as it seemed to him, he was taking snuff with an old acquaintance.

Suddenly the major snapped the lid of his box, and, with a bow to the hatless aide-de-camp, returned it to his pocket.

'They are coming on again,' he remarked quietly. 'Will you take a hand with us, my lord?'

'With pleasure, sir,' answered St Aubyn. He could not get back to headquarters just then; and, besides, he desired nothing better. 'Consider me a volunteer with the Twelfth; it will always be an honour to have served with them.'

'Unless our friends break us,' said the major with a grim nod towards the enemy.

St Aubyn stepped into place by his side. 'Then it will be my epitaph, major,' he said.

There was no time for further words. Through the swirling smoke of the artillery, twenty ordered squadrons of the finest cavalry in Europe, superbly horsed, magnificent in breastplates and waving plumes, were sweeping down upon them. The first charge had been smitten into utter ruin. Now the second had been launched.

'Ready, Twelfth!'

The line seemed to stiffen as the word ran along. St Aubyn's pulses quickened; his new

[*All Rights Reserved.*]

comrades, to all appearance, might have been on parade in Hyde Park. Yet theirs was no light task. It looked as if no obstacle could survive the impact of the tremendous force that came on with ever-gathering impetus, gallantly led, fired with the zeal and discipline of their race. Then the signal was given; and, midway in their course, the thundering squadrons of Gray and Red Mousquetaires met the torrent of lead that broke from end to end of the slim, long-extended line of scarlet-clad foot. It was an inferno of flying bullets, through which no troops in the world could force a passage. In a moment all was over; the second charge, like the first, was shattered and hurled back by that hail of deadly and incessant fire; and in front nothing remained but a wild, confused, struggling mass of men and horses—the stricken remnants of a splendid column.

'Our trick again, egad!' remarked the major in St Aubyn's ear. 'Look at that, my lord! It's a Fontenoy—for them.'

St Aubyn scarcely heard him. In battle it often happens that a single incident will engage and engross the attention of the individual soldier to the exclusion of what is passing around him. So it was with St Aubyn. It was at the height of the enemy's charge, just before the British front broke into flame, that he first noticed the Cavalier with the Cane. He was riding at the head of a squadron of Red Mousquetaires straight towards the Twelfth—a slight, erect figure on a gray horse, conspicuous in that he wore no breastplate or helmet, but was dressed in a plain blue uniform and plumed hat, and (above all) that he carried a cane instead of a sword. It was this fact, indeed, which caught his lordship's regard. He saw also that, with an officer of the Mousquetaires for company, he was leading his men by a couple of lengths; no more, and yet in the few short seconds that preceded the catastrophe he had eyes for him alone. Then for a minute the scene was blotted out by the musket-smoke.

St Aubyn was conscious of one feeling only. Confronted by the tragedy of a great carnage, he was strangely anxious regarding this one man. It was as if he were personally interested in his fate.

He saw him again as soon as the pall of smoke lifted a little. The gray horse had carried him well beyond his comrades, and had then fallen within seventy or eighty paces of the Twelfth. The cavalier himself was on his feet, apparently unhurt. He was walking back to the broken line of Mousquetaires, quietly and with no sign of hurry, until, as St Aubyn watched, he sprang suddenly at the bridle of a riderless horse galloping past, and with surprising agility for a man of his years (for he was evidently beyond middle-age) caught and mounted the animal. It was bravely done, and a low cheer from the ranks of the Twelfth told St Aubyn that others beside himself were interested spectators. Nevertheless, glancing round, he perceived several muskets being pointed at the cavalier.

'Don't fire! Give him another chance, lads!' he cried in sudden impulse.

'Right, sir!' said an old sergeant on his left. 'He deserves it, to be sure. He's good enough to be English, which—begging your honour's pardon,' he added—'I believe he is, with that there rose in his hat for token.'

For, as if aware of their courtesy, the cavalier had half-turned in his saddle and doffed his hat in salute. It was as he did so that they observed the red rose.

'English!' repeated St Aubyn.

'Or Scots perhaps,' put in the major, who was again taking snuff; ''45 man, you understand, my lord?'

'And the cane?'

'Oh, one cannot say! But I'll wager there are scores of them over there with something sharper.'

He of the cane, meanwhile, had rejoined the wreck of his squadron. English or not, he was plainly a man of note; his appearance had its effect at once; and it was round him, encouraged by his voice, that the disordered survivors strove to rally. They had their last glimpse of him for the time being as these fell back, which they did with some precipitancy when they realised that the British line was once more in motion. After dressing its front it had resumed the steady and inexorable march against the enemy's centre.

St Aubyn moved forward with the Twelfth. He had little choice, and he was enjoying himself too much to wish it otherwise.

It was a new experience for George Courtenay St Aubyn, by courtesy Earl of St Aubyn, only son and heir of the Marquis of Thanet, a captain in the Blues, and at present on the staff of his Serene Highness Prince Ferdinand of Brunswick, commander-in-chief of the allied armies. Ordinarily he was quiet, reserved, more unsociable than his twenty-five years warranted. People said that he was weighed down by the sins of his notorious father; and, in truth, my Lord Thanet was the last man to carry them himself if a substitute offered. To-day, however, St Aubyn was all cheerfulness and bonhomie. The blood of twenty generations of fighting ancestors was stirring within him; he forgot his friendless boyhood and youth and the shame and humiliations that had since been his, and he threw himself into the fray with whole heart and blithe spirit. A good fight acts differently on different men. St Aubyn was one of those on whom it acts like old wine; and a new and fuller life seemed to have opened before him since the dawn of that eventful morning—the morning of August 1, 1759.

Minden was his first taste of war on the grand scale. Here one cannot describe with sufficient

fullness how Prince Ferdinand, defending Hanover with a mixed force of British and Germans and Austrians, drew Marshal Contades, by a skilful and daring piece of tactics, from his strong positions between the Weser and the Bastau, and lured him out to meet him in the open; how, as the day broke, the two armies found themselves confronting each other across a narrow stretch of heath; and how, having still the advantage in numbers, the Frenchmen promptly took up the challenge of battle. Nor are we concerned with the earlier stages of the encounter—the feints and *ripostes* of two great generals, ending in a hot artillery duel. It was between eight and nine o'clock when the real attack began. Suddenly Prince Ferdinand's centre, composed of six regiments of British foot, extended in three lines, was seen to be advancing against the enemy, with flags uncased and drums sounding. Opposite was the full strength of Contades' cavalry, ten thousand strong—seventy-five magnificent squadrons in all. To send six thousand infantry in line against such a force looked like sheer madness. Certainly it was contrary to all the rules of war. According to some, indeed, the movement was due to a mistaken order. But the soldiers were British; and the blunder, if such it were, was amply justified by one of the finest feats in the annals of our army. The French, on their part, were quick to grasp the chance that offered so temptingly. You know the result. Twice already had they swept down on the exposed, slowly moving ranks of scarlet; and twice had they been stopped and flung back in disorder by the steadiness and valour and terrible fire of the islanders.

Throughout the long morning Lord St Aubyn had borne himself as became one of his name. Fortune had been kind to him. Two horses had been shot under him; he had lost hat and wig, but never his head; and now, in the very thick of the fighting, he was doing duty as a willing volunteer with the gallant Twelfth.

And the end was not yet. Again and again, with unbated courage, the squadrons of King Louis spent themselves in the vain attempt to reach and overwhelm the British line. Only once did a section, some sixty or seventy in number, manage to pass through the zone of fire. They came upon the Twelfth with all the suddenness of a surprise; and the leader, as chance would have it, was none other than the Cavalier with the Cane. St Aubyn caught sight of him, well in front and conspicuous as before, as the horsemen emerged from the smoke. It was the impression of a moment, but face and figure stamped themselves upon his memory as those of the born captain, filled with the joy of bringing his men into actual contact with a worthy foe. For that is what he did—he alone, of all the commanders of Contades' cavalry. The Twelfth were taken entirely unawares. But the major, as beseemed a veteran of Dettingen, was a man of coolness and resource. Following his quick command, the line swung back on either side; and then, as the Frenchmen dashed cheering through the gap—the cavalier first, with no weapon save his cane—it poured a close and deadly volley into their flanks. The effect at such close quarters was crushing. The few survivors charged on, to encounter the fire of the second line of foot. Let it suffice to say here that not a single man or horse returned.

Of this, however, St Aubyn saw nothing. The Twelfth had not escaped scatheless; for it was only the leader of the attack, as many of them found to their cost, who carried a cane. His lordship was among the first to go down, and if it had not been that the blow was given with the flat and not with the edge of his assailant's sword—probably it had turned in the man's hand as he struck—there would have been an ending to a hopeful career. Even as it was, the stroke was shrewd enough to stun him for a minute or two. Recovering, he was helped to his feet by the grizzled sergeant, to find that (short as the interval had been) the episode was over, and the line forming up again at the double. He was just in time to reach his old place.

The major nodded welcome. 'Never go into a fight bareheaded, my lord,' he remarked, laughing. 'None the worse, I hope?'

'Not a whit! All that I need is an inch of plaster, and, as you say, a hat. And the enemy, major?'

'Well—not one came back.'

'Not even our friend with the cane?'

'Oh, for him,' he replied, 'he got through *us* all right, and then I lost him. Down, I take it. The Twentieth were just behind, you know. After all, 'tis the luck of the game.'

There, for the present, St Aubyn had perforce to leave the matter. In the crowded half-hour that ensued he had scanty leisure for idle speculations concerning the fate of another. It was the crisis of the battle; and slowly, but not the less surely, the long line of British foot pressed onward, galled by a cross-fire and losing heavily, but smiting with volley after volley of destructive musketry all who dared to oppose it; until at length (in the Marshal's own words) it tumbled Contades' centre into ruin, and drove the remains of his seventy-five squadrons back to the Bastau in disorderly rout. Nothing, it seemed, could arrest it. Two brigades of Swiss infantry were hastily brought up to essay the task, but in a few brief minutes they had shared the doom of the horse. It meant defeat for the gallant Frenchman; and only a general charge of the allied cavalry was wanted to make the defeat absolute and irretrievable. Repeated orders to that effect were sent by Prince Ferdinand to Lord George Sackville, who commanded the combined force of British and Hanoverian cavalry stationed on the right. They were straining to be off, and it appears incredible that such a chance should

have been refused by any sane general; but the shameful fact remains. Sackville, incensed by some fancied slight, evaded the commands of the Prince, and refused to budge until it was too late. He was court-martialled and broken for his conduct; and thus it is that the glory of Minden is the glory of the six regiments of foot alone.

Meanwhile the work of the Twelfth was done. There was a slight mêlée at the last, in which they got home with the cold steel among a crowd of fugitives who had rallied, and St Aubyn had a stiff wrestle on his own account for possession of a tattered flag—the flag of the *mestre-de-camp*, as it turned out. When it ended it would have been difficult to recognise the trim, sedate Guardsman of the morning in the dirty and smoke-blackened soldier, with torn uniform and a blood-stained kerchief round his head. But the flag was his, with its embroidered lilies and the cipher of Louis the Well-beloved, and he was happy.

Presently he heard a voice at his ear. Turning, he saw his orderly waiting with a horse.

'Begging your pardon, my lord, I've been looking for you,' the man explained. 'Caught this horse a minute ago. And General Pole's compliments, and would your lordship take a message to the Prince?'

There was a lusty cheer from the ranks as St Aubyn shook hands with the major and mounted.

'My thanks, lads!' he cried. 'It has been a good fight, and I am proud to have gone through it with the Twelfth. And send the sergeant to-morrow to remind me that I owe you all a big drink for letting me serve with you!'

. . . . . .

It was many hours later, and indeed day was waning, before Lord St Aubyn found the opportunity to retrace his steps across the field. He had a self-imposed mission to fulfil.

The battle was lost and won. Contades was in full retreat to the Rhine, pursued by the cavalry and fresher Prussian and Hanoverian regiments. He had left thirty guns, thirteen flags, and many hundreds of prisoners in the victors' hands. As to his loss in men, the heath bore sickening testimony to the carnage. St Aubyn, as he rode slowly past the heaps of slain, began to realise for the first time the other and grimmer aspects of war.

The horror was not lessened by the sight of the hordes of miserable creatures who were already gathering like vultures to prey upon the dead. More than one party, interrupted in their ghastly work, glanced at the passing officer with unfriendly eyes. His orderly, who was riding behind, drew nearer.

'Get your pistol out, Peter,' he said, 'and be ready to use it. Somehow I mislike the looks of these ghouls.'

Peter willingly complied; and, perhaps because he did so, they met with no interference in the search which presently began.

St Aubyn's task proved to be less easy than he imagined. He had been too busily engaged in the morning to notice landmarks, and now one stark group was very like another. Yet he persevered with dogged will. In the end, it was by the simplest chance that he recognised a plumed hat decorated with a Lancashire rose; and then, lying at a little distance, the blue-uniformed figure of the cavalier, the cane still gripped firmly in his right hand. Jumping down, he ran to examine the body.

A few seconds were enough.

'Quick, Peter! the brandy!' he cried eagerly. 'Yes, I believe he is alive after all! There now, hold his head up. That will do, man! Ah, he's coming to!'

It was speedily done, and as gently as might be the cavalier was laid in a more comfortable position, and the brandy forced between his lips; and before long they had the satisfaction of seeing by the flickering of his eyelids that their efforts were not in vain. It was some time, however, before he came fully to himself. Lying there, he seemed to St Aubyn a man of fifty-five years or more, and one who had been eminently handsome in his day.

His eyes opened at last, and he tried to speak. St Aubyn had to bend low to catch the words. He was asking in English where he was.

'With good friends,' he assured him.

'It is not that—it matters little—there are two bullets in my body, and 'tis useless to trouble.' Then his voice strengthened, and the home-accent was not to be mistaken. 'But if you are my countryman, sir, I have a favour to beg of you,' he said.

'Then you are English?' asked St Aubyn.

'Why, of course!'

'But, you will pardon me, you were fighting against us?'

'The blood on my cane is my own, sir,' he replied with just the suspicion of a smile. 'And you will not refuse even an enemy when he asks that you will see him buried like a gentleman, and that he is not left to the prowlers of the night?'

St Aubyn gave him his promise at once. 'You are not going to die, nevertheless,' he said cheerfully. 'If we had only a surgeon here! But if you will tell me where you are wounded, sir, perhaps I can do something for you in the meanwhile.'

'You are very kind, sir, but I fear it would be time wasted. By all the rules, I should have been dead hours ago; only, an old campaigner is so confoundly hard to kill!' Then, as if to add point to his words, he slipped down in St Aubyn's arms; the exertion of speaking had been too much for him.

What was to be done? St Aubyn did not hesitate. An hour later, after infinite trouble and care, the cavalier—still nameless and unknown, and still unconscious—was safely installed in the aide-de-camp's quarters.

(To be continued.)

A HOBBY OF KINGS.

By Edward Vivian.

THERE is some mysterious attraction to almost every one in things of unusual size. The primitive mind revels in tales of monsters and giants, the most modern delights in stupendous exhibitions and mammoth ships. Yet weapons (no doubt greatly to the regret of their makers) have had limitations necessarily imposed upon them regarding their size, for no ordinary soldier would have enjoyed a prospect of cumbrous swords or pikes and spears big as weavers' beams.

It was only with engines of war—the catapults, battering-rams, and ballistas of antiquity—that military engineers could revel in hugeness. These, however, could be taken apart for transport, which greatly simplified matters. When cannon superseded the older engines ambitious monarchs increased the size of their guns till they became positively unwieldy and almost useless, so considerable were the difficulties attending their movement from place to place. But so great was the awe and respect inspired by these giant cannon that they became the prized or coveted possession of nearly every prince and general of the Middle Ages.

Particularly among the potentates of India and the East was the desire for great guns carried to a mania paralleled by that of the father of Frederick the Great for giant grenadiers. Like everything else in medieval ages, the use of cannon came from the East, and as early as the thirteenth century they were used in a naval engagement between the princes of Tunis and Seville. Even Bacon assures us that 'it is well known that the use of ordnance hath been in China above two thousand years.' So cumbrous were the guns and slow the artillerists of the fourteenth century that in many instances they could be fired only twice in the same battle.

The Indian princes nevertheless delighted in large trains of artillery, and one of the most famous generals of the Emperor Aurungzebe, Mir Jumla, the conqueror of Assam, captured as many as one hundred and fourteen pieces of cannon in a single victory near Allahabad. Mir Jumla took two large guns to Dacca, in Eastern Bengal, and placed them one on each side of the steps of the palace of Sultan Mohammed Shujah, on the bank of the Buriganga. In time the neglected embankment crumbled and the mighty guns fell into the river. The larger gun disappeared altogether; but some eighty years ago the smaller one, with the aid of elephants, was secured, fished up, and dragged to the centre of the market square, where it stands, one of the many similar giant memorials with which India is dotted. The gun, once elaborately adorned with designs in hammered metal, is now so worn that inscriptions and adornments are practically obliterated. The more superstitious natives from the surrounding villages bring it offerings of garlands, place pice and cowries in its bore, and smear its muzzle with red paint. It stands on a massive carriage of solid masonry, and weighs sixty-four thousand eight hundred and fourteen pounds, or nearly thirty tons. The Dhool Dhanee, or Great Gun of Agra, also weighed thirty tons, and had a bore of 23 inches. It was cast in 1628, and broken up two centuries later, in 1832.

Yet this hobby of Oriental monarchs led to the casting of still more colossal cannon. One of these was the Malik-i-Maidan, or Lord of the Plains, cast at Ahmednuggur in 1548. A monster of forty tons, that in its day cast a ball of one thousand pounds, it still lies on the ground amid the ruins of decayed Bijapur, in the Bombay Presidency. The giant, within whose muzzle a man may easily recline, was revered by the natives, who made it offerings of money and garlands of flowers.

In Europe, also, guns of large size were highly prized, though few were made approaching these Indian monsters in dimensions. In 1380, during the great struggle between Venice and Genoa, Pisani, the Venetian admiral, planted two cannon, which for the period were huge indeed, in his redoubt on the promontory of Fossone. One of these bombards cast a stone weighing one hundred and fifty pounds, the other threw stones of one hundred and eighty pounds, and these were fired off each morning, being loaded again at night. 'They could be fired only once a day,' writes the historian Sismondi, 'and more often missed than hit; but when they struck the mark their effect was serious.' Admiral Pietro Doria, the Genoese commander, was killed by one of the shots, and the next day twenty-two men were killed by another.

Forty-three years later the English left two great bombards at Mont St Michel in Normandy, which still remain. The larger one weighs about five and a half tons, and according to Colonel Chesney would throw a granite ball 19 inches in diameter and weighing about three hundred pounds.

Large-sized guns began chiefly to be cast in England under Henry VIII. Stow in his *Chronicle* says: 'One Peter Baud, a Frenchman born, and another alien, called Peter Van Collen, a gunsmith, both the King's feed-men, conferring together, devised and caused to be made certain mortar-pieces, being at the mouth from eleven inches unto nineteen inches wide, for the use whereof they caused to be made certain hollow shot of cast-iron, to be stuffed with firework or wildfire.'

Aware of Henry VIII.'s interest in ordnance, the Emperor Charles V. presented him with a gun which still exists, and has given rise to a multitude of errors. Standing in Dover Castle, it has been commonly known as Queen Elizabeth's Pocket-Pistol, and reputed to have been presented to that celebrated monarch by the Low Countries in recognition of her favour and assistance in their struggle for liberty. It was cast at Utrecht in 1544, and has a length of 24½ feet, with a calibre of 4¾ inches.

A chronicler of the sixteenth century, visiting the court of the Czar of Russia—or Muscovy, as it was then called—relates that among 'the ordinance that is in the citie of Mosco . . . they have sixe great pieces whose shot is a yard of height, which shot a man may easily discerne as they flee.' The great gun of the Kremlin, 18 feet long, of ninety-seven thousand five hundred pounds weight and 36 inches calibre, which bears the date of 1586, still exists as a witness to the substantial accuracy of the old traveller's statement.

A century later, Oliver Cromwell, writing from Edinburgh on 24th December 1650, said that 'all Scotland hath not in it so much brass ordnance as this place. I send you here enclosed a List thereof;' and among the other guns is 'the great iron murderer called Muckle Meg.' This great Scottish gun, about which as Mons Meg so many apocryphal stories have been told, is made of hooped staves, and is 16 feet long, and its charge is said to have been 'a peck of powder and a granite ball nearly as big as a Galloway cow.' It is reported to have been made in 1455, has a 20-inch bore, and weighs some five and three-quarter tons. This antique weapon was used at the siege of Dumbarton in 1489 and at Norham in 1497; whilst, according to tradition, a ball fired from it went through Threave Castle. Evelyn, in his *Diary* for 1645, mentions seeing in the Venetian Arsenal a cannon weighing sixteen thousand five hundred and seventy-three pounds, cast while Henry III., King of France, dined; and in the arsenal at Florence 'lusty pieces of ordnance, whereof one is for a ball of three hundred pounds weight, and another for one hundred and sixty, which weighs seventy-two thousand five hundred pounds.' This was more than twice as heavy as the great gun of Ghent known as Marguerite Enragée, or Raging Meg, which weighs thirteen tons. Evelyn calls this once famous weapon, which dates from 1430, a 'basilisco.'

In 1802 a Turkish gun, originally 20 feet long, taken at the battle of Alexandria, was placed on the parade-ground of the Horse Guards.

The Turks, coming as they did from the East, had all the Oriental appreciation of heavy artillery. Sultan Mohammed II., with the aid of a European, established a foundry at Adrianople, and there, among others, cast an enormous gun of brass. 'A measure of twelve palms is assigned to the bore,' says Gibbon, 'and the stone bullet weighed above six hundred pounds.' This projectile was thrown above a mile, and buried itself deep in the ground. After the cannon was made, the problem was how to move it. Thirty wagons were linked together, to which an immense team of oxen was harnessed; two hundred and fifty men marched in front to prepare the road, and nearly as many more were employed in keeping the gun in position on its carriage. Even so it required two months to transport the ponderous weapon one hundred and fifty miles. After such particulars it is hardly surprising to hear that one gun like this sank a Venetian vessel in the Bosphorus with a single shot. So expert did Turkish gunners become that in 1470, at the siege of Negropont, their artillery fired fifty-five cannon-shot a day, a remarkable number for the age.

Mohammed II., who made giant guns so ardent and terrible a hobby, employed fourteen of them at the siege of Scutari, in Albania, in 1478. The smallest of these huge bombards threw a stone shot of three hundred and seventy pounds weight; the largest cast a ball 32 inches in diameter and weighing one thousand six hundred and forty pounds. Five others threw stone projectiles of one thousand five hundred pounds weight each. The same sultan, in his siege of Rhodes, caused sixteen basilisks to be cast on the spot that would throw shot from two to three feet in diameter. The great sultan imbued his successors with the same propensity for monstrous cannon, and grim memorials still exist of the skill and energy of their gunfounders. Guarding the Dardanelles are series of these gigantic old weapons, their dates ranging onward from 1458 to the end of the first quarter of the sixteenth century. Travellers have described these guns with astonishment. Thevenot viewed them at a distance in 1655; a century later Pococke said there were about a score on each side of the strait; and Von Hammer, who saw them and measured the shot, said a tailor who had fled from his creditors concealed himself in the muzzle of one for several days. Baron de Tott, who fortified the Dardanelles for the Turks against the Russians about 1770, declared the discharge of a gun that fired an eleven-hundred-pound shot gave a shock like an earthquake to one standing behind. The great Von Moltke, who was engaged to remodel the Turkish army, said there were sixty-three of these bombards, but many have since been broken up; and Wrench, forty years afterwards, enumerated only twenty-one. Two of these hurled shot one thousand two hundred and forty-five pounds in weight, and three others of as much as one thousand pounds.

In modern times this once formidable artillery has been in action with serious consequences to a British squadron. During the rupture with Turkey in 1807 an English squadron under Vice-Admiral Sir John Duckworth made the pas-

sage of the Dardanelles, and on their return on the 3rd of March its batteries opened fire upon the ships. The *Repulse*, a seventy-four gun ship, had her wheel carried away, ten men killed, and ten wounded by a single shot. An eight hundred pound stone shot cut the mainmast of the *Windsor Castle*, of ninety-eight guns, three-quarters through; another of seven hundred and seventy pounds, 6 feet 8 inches in circumference and 2 feet 2 inches in diameter, led to the death of eight men and wounded forty-seven on the *Standard*, of sixty-four guns; whilst the other ships were badly damaged. It is interesting to remark that the heaviest gun in use in the British navy at that time was the 68-pounder carronade. As a matter of fact, the brief repassing of the Dardanelles under the fire of these obsolete batteries cost the English squadron one hundred and sixty-seven men killed and wounded.

These giant bombards have long ago been dwarfed by modern weapons. The 110-ton gun, which, though now obsolete, was once the wonder of the English navy, threw a projectile 9 feet long, 17·72 inches in diameter, and weighing one thousand eight hundred pounds.

The largest gun in the world is said to be one guarding New York Harbour, a colossal piece of artillery, 50 feet long, weighing over one hundred and twenty tons, and hurling a two thousand three hundred and fifty pound projectile a distance of sixteen miles. Yet its calibre is only some 16 inches—less than half that of the old bombards.

There is preserved at Woolwich Arsenal one of the famous 'Mallet mortars,' which weighs forty tons, the second of a pair made for use against the Russian fortifications in the Crimean war. It was never fired, for its companion burst at the nineteenth trial-round; besides, the war was over before they were finished. Some of its huge round shells are near it, each 36 inches in diameter, with a weight of more than a ton and a quarter, and able to hold a bursting-charge of four hundred and eighty-seven pounds of gunpowder.

It is doubtful if cannon will increase beyond these dimensions, for more and more attention is being directed to the speed of its projectile rather than to its immense size. Moreover, as a hobby of kings, the forging of giant cannon has had to give place to the creation of great navies and the building of stupendous battleships.

THE LAST SHOT AT BODH GAYA.*

By J. MORTON LEWIS.

CHAPTER I.

A GREAT man has written that the East will never meet the West; that the day will never come when the two great races, the black and the white, shall lay down their mutual animosity.

It was in the summer of 191–. The discontent which had been seething throughout India for years was threatening every hour to come to a crisis. Daily messages were passing between the Viceroy and those at home. A dozen transports lay ready to start within twenty hours should a sudden necessity for the troops arise.

While all Europe looked on, those who stood with their handfuls of men representing England waited at their various posts, from Madura to Peshawar, wondering where the first blow would be struck—men who had spent their whole lives in India, and others who had yet to receive their baptism of fire. It is a glorious heritage the British army, and it is in such moments that the true character of every man is shown. The wastrel at home has his chance, and becomes the hero.

In Bodh Gaya, the sacred city, surrounded by the jungle of Bengal, the streets were deserted. A hot sun poured mercilessly down upon the dusty roads. On the veranda of the club, beneath the shelter of the sacred tree, a few officers were sitting smoking. The weather was too hot almost for speech, and a silence had fallen upon them, broken only by the soft sighing of the punkah.

Suddenly one put down his glass with a laugh. 'Yes,' he said, following the train of his own thoughts, 'a queer fellow Denvers. I knew his people in England very well. He was always getting into trouble over there. He once nearly killed a fellow who had insulted a girl in the street. You know what his fist is like.'

A smile went round those present. Lieutenant Denvers was an enigma, and, since he was all that a man should be in respect of courage, a universal favourite. He had left England as 'Dare-devil Denvers,' and the name had followed him to India. A second Lumsden, the natives looked upon him as a demi-god.

Colonel Taylor, an Indian veteran, was seated at the club. 'It is men such as Denvers that we want in India just now.' He rose. 'I am going home. I do not expect I shall be wanted. If I am, you will know where to find me.' He walked leisurely into the compound, where a native servant held his horse. The next moment he was riding through the sun-baked streets. There was a silence in Bodh Gaya, and he—who

* Dramatic Rights reserved.

knew India so well—turned his gray eyes towards the jungle and the hills. There was a look of weariness in them, the weariness of a man who is for ever waiting for the long-delayed but inevitable. Colonel Taylor was a bachelor. It was his belief that no soldier should marry.

When he reached his bungalow he dismounted, and called for the native boy who should have come to take his horse. He waited a moment, then tied the reins to the wooden post of the door and entered. Commencing with the dining-room, he passed from room to room. The bungalow was empty.

There was no sign of surprise visible upon his countenance. As a matter of fact he did not experience any. A long sojourn in India had made him wiser.

He walked quickly back to the door and untied his horse. Then he mounted again, and rode towards a long, white one-storied building which showed amidst a plantation of trees to the north of the town. The building was Bodh Gaya barracks.

Entering the gates, he acknowledged the salute of the sentry, and gave his horse to an orderly.

His spurs clanked as he walked down the stone passage to a door marked 'Private.' On the way he encountered a youthful subaltern. 'Lomax, I want you to go to the club and tell the officers to come here at once.'

Then he entered his private room, and went to a safe which stood in a corner. Taking some keys from his pocket, he opened it, and drew from it some papers. He was looking through them when there came a knock at the door.

'Come in,' he said.

The door opened, and there stood on the threshold Lieutenant Denvers, Devil-may-care Denvers. He was a man of medium height, well knit, with the sloping physique which tells of strength. His face was clean-cut, and a pair of light-blue eyes surveyed the world with an unceasing twinkle.

'You have heard, sir, that the native servants have nearly all left the town?'

'Yes,' said Colonel Taylor.

'And that there is a big force between us and Behar?'

'Yes,' said the colonel again.

'Things may go hard with us if we are beaten—for the women-folk.'

Colonel Taylor ground his teeth. 'Things may,' was all he permitted himself to say. 'Why are you asking this?'

'Because I propose, with your permission, to try to get through to Behar in disguise, and bring back some soldiers with me. They can easily spare them, and a rear-attack may make all the difference.'

Colonel Taylor looked at the figure before him, and there came to his mind his words of little more than an hour before.

'Do you realise what it means: that for four days and nights you will carry your life in your hands?'

'And every soldier will do the same in Bodh Gaya.'

'You know what your end will be if they capture you?'

Denvers tapped the revolver at his side. 'They will never take me alive,' he responded.

Colonel Taylor surveyed him. He was a brave man, and he admired courage in others. 'An hour ago I said we had need of men such as you in India. I never made a truer speech in my life. How will you disguise yourself?'

'As a fakir. I've studied their ways a bit since I've been out here.'

Colonel Taylor walked along the passage with Denvers. 'When do you start?'

'As soon as it is dark, so that no one will see me leave.'

By the door which led out of the barracks Denvers stopped. 'I have left my gloves in your room,' he said.

Colonel Taylor smiled. The thought was so typical of the man! It was like the Denvers he had learned to love almost as a son to remember such a thing at such a moment.

A couple of minutes and Denvers rejoined him. The two men mounted their horses.

'Which way are you going?' asked the colonel.

'I am going up to the Levesons' just to say good-bye. One never knows!'

'Ah!' said the colonel; and he understood at that moment what had prompted the action which might save Bodh Gaya, or send a man to his death—an action which, if it succeeded, would add yet another name to the long list of heroes whose names are bound indissolubly with that of India.

Outside the gate of the Levesons' bungalow they parted. Colonel Taylor held out his hand. 'Good-luck to you, my boy,' he said.

'Good-bye,' said Denvers. He hesitated. 'If anything happens I'd like my people to know how it occurred. I've been a bit of a rotter up to now.'

'I'll see to that,' said the colonel. Through one of the windows of the Levesons' house he had caught sight of a woman's face, and had seen the smile which had passed over it when she saw Denvers. Then he rode up the road.

As Denvers entered the compound a figure came to the door to meet him.

Sibyl Leveson was a tall, slight girl, fair as Denvers himself. There were not many English women in Bodh Gaya, and she was the recognised beauty.

'Dicky,' she said, 'I thought I saw you with the colonel. You are coming in?'

'Only for a few minutes. I have to go up-country for a few days, and I thought I would come and say *au revoir*.'

He was steeling himself for the part he had to

play, fearing it more than the unknown dangers which lay ahead.

They were standing in the dining-room, and she was facing him.

'Where are you going?'

'To Behar.'

She understood what the journey meant, perhaps none better.

'That is the nearest large garrison,' she said, 'and you are going to bring back troops to save Bodh Gaya?'

She waited for his reply. For a moment he hesitated; then she saved him from the lie which he would have spoken to spare her pain.

'I know,' she said. 'There is danger for us here. The servants have all left, and you have volunteered to go to Behar.' A look of pride came into her eyes. 'That is like you, Dick,' she said.

Hot words rose to Denvers's lips, but he checked them. A man who may be going to his death within a few hours has no right to speak to any woman of love, and he knew it.

A silence fell between them; then he walked to the door.

'I must be going,' he said. 'I shall leave as soon as it is dark, and I have heaps of things to do.'

'When do you expect to be back?' she asked.

'In about a week, if I am not delayed.' He held out his hand. 'Good-bye, Sibyl.'

Sibyl Leveson came of good stock, and, although her heart was nearly breaking, she smiled upon the man she loved. 'Good-bye, Dick,' she said.

For a moment their hands lingered together, and though no word was spoken they both understood.

Then he left her.

With dry eyes she saw him mount and ride away. She watched him until the trees hid him from view. Then she turned from the window. 'God grant you may come back safely, dear!' she said brokenly.

She sat on the couch near to where he had so lately stood. Though it was still early, the room seemed suddenly to have darkened, to be full of shadows. As she sat there, alone with her thoughts, she remembered how he had stood before her, with one hand resting upon the table. It is so with women when they love.

By the time Denvers reached his quarters Colonel Taylor had returned to barracks. In the mess-room a small group of officers awaited him. There were not a dozen, but they represented the British army in Bodh Gaya.

He bowed gravely. 'You have heard the news, gentlemen. All the native servants have left us, an action to which we can only give one interpretation. There may be a rising at any moment.'

His words were received in silence. One and all knew the dangers which lay around them on every side.

'Between us and Behar there may be ten thousand men, and there may be two hundred thousand. You may have noticed there is one man absent from amongst us—Lieutenant Denvers. He has volunteered to go through the rebel lines and bring back reinforcements from Behar.'

A murmur of admiration rose from those present.

Colonel Taylor waited for silence. 'We can only hope for his safety. In the meantime we must take every precaution.'

Following this he gave some orders for the safeguarding of the town during the night. Darkness had fallen as a company of soldiers were marched out of barracks to reinforce those already guarding the walls and gates.

As the steady tramp of their feet died away, Colonel Taylor left the now deserted mess-room and went to his own private room. On entering the first thing that met his eye was the safe wide open. He frowned. Carelessness he deprecated in all, most especially in himself.

He went over to it, and drew the keys from his pocket. Before locking the door he glanced through the few papers it contained. His face turned white, and he made a careful search. The plans of the mines which safeguarded Bodh Gaya were missing.

'My God!' he said. Like a flash he realised that the most important weapon in the scheme of the defence of the town committed to his charge had been lost through his own folly. If the town fell it would be as the result of his negligence.

Then he remembered more: the last time he had been in the room, and how Lieutenant Denvers had left him at the door to return presumably for his gloves. 'He can't have taken them,' he said.

He rang the bell lying by his table, and an orderly appeared.

'Stanger,' he said, 'you have been on guard here all the afternoon?'

'Yes, sir.'

'Has any one entered my room?'

'No, sir.'

Colonel Taylor's brain was working quickly. 'Then you will go round to Lieutenant Denvers's quarters and see if he has left. If he has not, tell him I must see him here at once.'

The man saluted and withdrew.

Colonel Taylor sank down in his chair and buried his face in his hands. A new difficulty had arisen—one of his own creating.

In half-an-hour the orderly returned. 'Lieutenant Denvers had been gone nearly an hour when I reached there,' he said.

'Thank you,' said Colonel Taylor. 'I can't believe he has taken them,' he said when he was alone. 'I can't believe it.'

(To be continued.)

THE WILD RED-DEER OF DEVON.

NOT very long ago, in the swale of a July evening, the writer was picking his way on horseback down the northern slope of Dunkery Beacon, on Exmoor, looking for a path to take him across a deep ravine studded with trees in their soft green dress. At the head of the goyal a little stream rippled its young song as the horse's feet splashed through it to a track higher up on the rising ground. Oaks spread their boughs overhead and shaded the turf on the right-hand side where the land fell suddenly to a little glade such as King Arthur and the Knights of the Round Table knew. There was no sound of human voice, the night-jar had not begun its tireless whir, and the silence was intense. A break in the trees gave a wide and fairly open view of the little park, but it was not the play of light and shade nor gleam of gold on leaf and bark that caused the sudden halt. For, look! Brow, bay, and trey! The heaviest, tallest antlers a full-grown stag may bear! Hush!

The horse has caught the excitement of the time. He stands with pricking ears and startled gaze, ready for action at the word.

The antlers move. Slowly the great red body on its slender legs and well-shaped feet emerges from the shelter, and but a few yards away one of the wild red-deer of Devon browses peacefully. The silence becomes oppressive. Wait! A rustle of the branches brings relief. Another set of antlers, but far smaller, announces the approach of the great stag's squire. He is keeping guard, and looks our way; but the horse stands motionless and the wide branches of a tree help to obscure the rider. The sentinel is reassured, and begins to graze like his master.

This is a sight which will remain in the memory while life shall last. Many a man has seen it, certainly. To 'the harbourer' it is a frequent experience; but of the hundreds who will flock to the meets on Exmoor for the summer hunting in August, how many will have so much as heard of the knightly service which young stags are taught to render to their lords? Even of those who love the wild red-deer as the most beautiful as well as the most interesting of the few survivals of a time when this land of ours gave sanctuary to other game, none may see this sight too often.

This is the month of all the year in which to find the perfect setting of the forest scene; the month when all the moor is quiet and the dreadful music of the great hounds has ceased long enough to kill the wild deer's fear; the month when lord and squire have their best companionship.

That evening, of deer and 'calves' the writer counted seven; but all were in the distance, and, excepting one which was lying down, were alert and nervous. But here behind the leafy screen it was possible to watch at close and convenient range the natural, undismayed, unfettered movements of the wild things of earth and sky, as in the days of William the Hunter, who made a New Forest for the chase, and gave the *coup de grâce* to the beautiful ancestors of these red stags more than eight centuries ago.

How silently they move! It is almost uncanny to watch them; not because they are strange, but because we civilised beings who live in a world where men delight to make hard roads, and trim the fences, and cut down the hedges, are far more out of touch with the spirit of the forest than we are aware of until we are brought close up to it in the presence of her own native-born children. One has only to consider the preparations people think necessary for a picnic and compare with them the hunter's fire, and the freshly killed food cooking before it on a spit of wood or in the gipsies' oven of hot stones in a hole in the ground, to find a ready illustration of the gulf that lies between us when we are trying to be primitive and the real thing.

So when we find ourselves watching some wild creature in its natural home amid the surroundings which really belong to it, we need time before we can fit in with our new environment. Perhaps one of the first things that strike the man who surprises a wild red-stag in his native haunts is the kingliness of the creature. He moves as moves the master in his own house, calmly, quietly, but with an assurance of demeanour which proclaims him what he is. One is impressed by the consciousness of power which marks a full-grown stag. He has no fear. It is true he prefers to graze where he will be undisturbed, and the associations of centuries of hunting have bred in him a natural instinct to retire from the presence of man; but who, having seen a stag disturbed by hounds, and marked the casual manner he adopts as he stands and looks about him while he calmly makes up his mind whither to betake himself, can truthfully say that he is afraid? One thing is certain: once a stag has made up his mind to take a certain course, neither horse nor man may safely block his path.

This consciousness of power is due, perhaps, to more than one cause—his indomitable courage proved in many a fight with other lordlings of his kind, his wonderful speed and power of leaping fence or wall by which he trusts to shake off all pursuers, and the pride and strength of antlers in their prime.

Whatever be the cause, the stag in his own domain moves like the aristocrat he is.

One does not often see the red-deer in the daytime unless flies or other pests have driven them from covert. Many districts of Exmoor

carry enormous quantities of bracken and are prolific breeding-grounds for the winged insects which hover in clouds about one's horse's head. But the bracken, with all its faults, is the natural habitat of the royal beast, whose antlers grow at much the same rate as, and with, the ferns. The colour of the heather may help to absorb the red-brown skin at a distance, but the fern hides him completely from his foes. Here the hinds seek shelter for their calves—there are no fawns on Exmoor; they belong to the small park or fallow deer, not worthy of comparison with ours—and the stags sleep out the summer days. But the bracken is not up when he would shed his antlers in April or early May, so he retreats to secret places in the woods where he may tide over the days of shame and degradation, as a soldier deprived of his sword, until he feels the embryo horns begin to sprout, and with recovered spirits betakes himself to the open moors again.

For until they are firmly established, the new antlers are very tender, and on the hills he has no fear of striking them against the branches of a tree.

Now he is 'in velvet,' which is by no means the same thing as 'in clover,' for his fresh horns are covered with a vascular substance like velvet, and are very sensitive until the bone is thoroughly hardened, about the 10th September, when it peels and is rubbed off against the bark of trees which frequently do not survive the ordeal. However, he is fit to be hunted by the first week of August, when the stag-hunting season begins, and the dark line of carriages stretches for a mile along the road from Cloutsham Ball, where the opening meet is held.

But before that day brings 'the harbourer' upon the slot of our hart, and the huntsman puts 'the tufters' on, and the deep-throated warning of the pack bids him rouse from his bed and choose a line across hill and vale in the sweltering heat, he will have done more damage than a dozen foxes. For some reason his lady-wife and daughters are much less harmful. Whereas our hart will slip into a field of oats and nibble a bit here and a bit there, leaving the injured ears to die, the hinds will bite off a whole ear at a time; so, too, in a field of turnips the farmer may tell whether the visitant of the night before was male or female. 'You may judge the hind by her feed, because she croppeth the springs round like an ox, and feedeth greedily; and, contrarily, the hart of ten doth take it delicately, breaking it off endways, to have the liquor as sweetly and tenderly as he may.' Thus the book of *The Art of Venery*.

But on this particular evening, when the lord of the forest, with his attendant squire, was grazing on the soft sweet grass, it was beyond the invention of man to make any accusation against him. There he stood in the forest glade with the tumbling hills of Exmoor on every side, and the gray clouds of advancing night above his head, asking nothing, taking nothing, that man could claim as his.

As one rides over Exmoor it is noticeable that near the coverts where the red-deer are accustomed to lie by day are broad, shallow depressions with, it may be, a little stagnant water in the deepest part. These are the 'soiling pits,' where the creatures roll in the hot summer months in order to get rid of the flies, and also to secure a mud-bath by which their coats may be caked sufficiently to protect them afterwards from the bites of maddening insects.

The older stags are acquainted with various private hiding-places in the combes and cliffs; but they do not always show them to their squires, for whom they appear to have no affection at all. Their object in keeping a retainer is twofold. In the quiet, peaceful days when hounds are not thought of, and the long hours are spent in leisure, it is companionship that the elder values. When the close season has ended, and the eager pack are pressing hard upon his track, and the breath in his body comes shorter with every hill, he remembers his young friend, and making for the bed where the latter lies, turns him out of it on peril of a thrust with the mighty antlers. The frightened squire may resent but cannot resist the command, and, leaving his hiding-place to the intruder, flees away to his favourite wood or stream, with the hounds in full pursuit. If he escapes them it is the end of his probation. Henceforth he will grow to his full strength without feeling it necessary to lean upon the experience of his elders, and at a later day will summon a young pricket to his side to treat him exactly as he himself had been treated.

The horse moved. The squire looked up and noticed something unusual on the track among the trees above him. The hart is browsing, head down and unobservant, in the bushes. The squire goes up to him and whispers what he fears. The mighty animal in the pride of weight and antlers steps out into the open and gazes upward. It is enough. Silently, so silently that it is hard to realise their speed, they move away. Now the trees hide them. There is a gap a yard or two ahead of horse and man, but when they reach it the wild red-deer have gone. Soon they emerge upon the distant upland, and stand at gaze once more. A moment later they have disappeared.

AN AIRWOMAN'S ROMANCE.

By Frank M. Dudeney.

SHE was the queen of the day. All conspired to emphasise the fact—all, that is, except Paul Rodney, and even his silent disapproval was a kind of homage. Already the crowds were collecting at the barriers of the great aerodrome to see the first English airwoman make her widely advertised attempt on the height-record. True, she was to have competitors, men who bore names that were famous in the flying-world; but it was her feminine daring of which every one was talking, and which promised to draw an exceptional crowd of sightseers.

She was enjoying her triumph. Good wishes and anticipatory congratulations were showered on her by the other pupils of the school in which she had learnt her craft. To a girl of her character it was a keen delight thus to be the centre of public enthusiasm and applause, to be the recipient of flattering compliments and attentions, a heroine to her fellow-pupils and to the public outside. And it was not all vanity, for she was sure of herself and her ability, and in her mood there was much of masculine glory in bold action and achievement.

Very fair and very feminine she looked as she stood at the door of her hangar, watching the mechanics giving a final overhaul to her monoplane, and listening with pleased satisfaction to the steady roar of the powerful engine under test. She was not of the fragile type of womanhood, but possessed a robust grace of outline and boldly cut features radiant with that bloom of health which is essential to all physical perfection. It was easy to foresee that maturity would make her handsome and stately rather than beautiful. Very apparent, too, were the characteristics of sex in her glittering eyes and sweeping movements, while her mobile expression leapt eagerly to serve every wave of thought or feeling stimulated by the conditions of the moment. In a man such nervous activity would have been ominous of danger in the forthcoming exploit; in a woman—well, she knew Paul Rodney's opinion, and laughed softly at his ignorance of her sex.

After all, if she succeeded in breaking the record he would have his share of her triumph, for she was using one of the new engines which he had invented, and she was unaccountably pleased at the thought. But for her entry, the competition would have been a mere battle of engines, Rodney's and the design introduced by the Austrian Count von Rombach. Neither had hitherto been submitted to a crucial test in public, and it was the opportunity afforded by the height competition which had brought Rodney to France, and induced him to enter his own name for the event. She knew that he disapproved of the spectacular flying-meetings which were producing such a series of disasters, and was more concerned to develop the aeroplane on practical commercial lines; but the advantages of a public triumph for his engine called for this departure from his usual policy, so he was among the competitors. But for that fact, she reflected, they might never have met—nor quarrelled.

It had happened the day before. He had sought her out, and spoken plainly of her adventure. They had parted with anger on his side and resentment on hers.

'Why are you doing this, Miss Belmont?' he had asked.

'Why should I not?' was her feminine reply. 'Besides, I have a good chance of success; you see, I have perfect faith in the Rodney engine, and it is largely a question of engine-power.'

'You should never have had an engine of mine if I had known what its possession would lead you to.'

'I believe you had my cheque for it.' Instantly she regretted the retort, and added, 'Why should a woman be debarred from flying? Have we less courage or less ability than men?'

'That is not the point,' he began, eagerly seizing the opening for argument.

'That is the point which interests me,' she interrupted, quite aware of the objection he was about to put into words. 'You are the only competitor I fear; and'—she laughed mischievously—'I do not fear you because of your superior skill, but merely owing to your more powerful engine.'

'The engine you have now can develop too much power for your light monoplane,' he urged.

'Yes,' she agreed, 'it is no use envying you your bigger machine, and I'll promise not to if you will admit that I am a more expert aeroplanist than yourself, and that there is consequently no possible objection to my flying.'

'Oh, I will admit your superior skill,' he replied; and then, his tone changing, 'I admit your superiority to me in more important things than that. Won't you understand that it is a deeper feeling than petty prejudice or jealousy which makes me urge you to give up this project? Haven't you seen'——

'Oh!' she exclaimed, breathlessly checking the words on his lips, 'if you admit so much, why not withdraw from the competition and let me use your machine? It is the triumph of your engine you desire, and if my greater skill may assist in securing that'——

'No, never,' came his deep-toned refusal.

'You force me to put the truth brutally. I will not help a woman whom I love and admire to make an unwomanly exhibition of herself in public. I would rather see you turning somersaults on horseback or giving a display of high diving for a living than unnecessarily seeking the plaudits of the crowd here.'

'How petty! How unjust!' She could find no other retort, and so she had left him.

Now that the morning had arrived, and already she was enjoying a foretaste of the popular plaudits he despised, she could think more kindly of him again. For the moment she was alone with her mechanics, the score of club members and officials who had besieged her with complimentary expressions of goodwill having dispersed, and she found herself wondering if Paul would seek her out before the day's programme of flying commenced. Even as the thought framed itself she heard footsteps, and, glancing up, saw emerge from behind the projecting corner of the hangar—not Paul, but Count von Rombach.

'Well,' he said, studying her face with careful scrutiny, 'and the nerves are quite steady—firm-as-a-rock you call it?'

'Quite,' she answered with a smile.

'And the new engine?'

'See for yourself;' and with a touch of a lever she started the motor.

He stood hand to chin, watching the flying pistons and listening to their rhythmic beat.

'It is a great invention,' he presently said; 'but so is mine. It will be a duel; but, *ach!* my engine will conquer. I say it. Haf I not spent money—much money—and years of labour in its creation? I haf lived for nodings else, and, *mein Gott!* the world shall acknowledge that it has no rival.'

She watched him with curiosity, and suddenly his manner changed.

'*Ach!*' he exclaimed, 'I forget to be polite. I come to wish you success, and instead I talk of my own engine.'

'I prefer sincerity,' she said lightly. 'Neither of us can wish the other success.'

'But we could if'—— He hesitated, choosing his words with care. 'I come to you, mademoiselle—mees—with a proposal. I haf shown you my engine, and you haf studied it and called it—g-r-reat, is it not? Yes! And you haf not asked for my reason for thus showing you my beautiful invention? *Nein! Ach!* but you must haf asked yourself. All my life I haf not loved a woman—I haf felt no interest. I loved my work. Always I haf had much money and friends, but my pleasure I haf taken in my workshop. I am an engineer, and not a rich idler. So my engine haf been my wife. Then I meet you, and I find the woman I did not believe could exist. Perhaps if you had been nodings more than a beautiful woman I would haf conquered my feeling. I will tell you now—I was jealous for my engine; but, *ach!* you held me with your dear ways and your—what is the word?—genius. Yes, yes! I know it when I see it in you. You haf the genius for flying. Not one man of them all can equal you if you keep your nerve. Joost as a lady will ride a horse with more perfect touch than any man if she haf genius for it, so you can drive and steer and balance an aeroplane so cleverly—*ach!* so dainty and clever. I say to myself, "Here is the true partner with the inventor of the Rombach engine." And so I do myself the proudness—the honour, to ask you to become my wife.

'*Nein, nein,*' he continued hastily, as he saw the astonished refusal which had been gathering in her face. 'Think of what I offer. I ask you to be the Countess von Rombach, to be mistress of the Rombach engine and its inventor, to drive the Rombach engine for always. Yes, yes! You desire so much to win the competition to-day. Well, I out-back from it and ask you to accept my machine. With it you can do anydings; with your own little machine you will pull it to pieces if you try to make power enough to beat me. Even Rodney will win over you if he is not clumsy. You cannot refuse such a chance. You will make the Rombach engine famous.'

She had listened with amazement, but now the humour of the situation struck her, and she almost laughed in his face.

'No,' she said decidedly, 'I must decline the honour you wish to do me. I love another—engine.'

He took her whimsical reply seriously.

'Rodney's?' he snapped. '*Ach!* but you will regret it;' and there was a sullen menace in his words.

He did not linger, for the moment was rapidly approaching when the competitors were to make their great effort. The stands were filling with sightseers, and in every direction crowds of people were being ordered back to safety by perspiring officials. At last the broad bosom of the aerodrome was clear, and the machines were run out in full view of the public. They were to start at sufficient intervals of time to avoid all danger of collision, and it was arranged that the first to leave the ground should be Miss Belmont, followed by the count, and then two other competitors, with Paul Rodney last.

The noisy excitement of the spectators suddenly became stilled. An impressive silence fell on the crowds like a spell, and a word from the starter rang out sharply. The airwoman, on whom all eyes were centred, pulled a lever, and the rising song of her engine smote the air. Instantly her graceful monoplane glided forward; swiftly and more swiftly it moved over the level turf; the front planes tilted, and the machine seemed to leap upwards; next moment every eye was strained to follow the aeroplane's passage

in great sweeping circles skyward. Never a tremor of uncertainty affected the course of the beautiful craft as the wind-currents struck it in its spiral flight, and with a roar of delirious enthusiasm the great assemblage recognised the skill of the expert hand at the levers. With cheer after cheer they drowned the diminishing drone of the motor, the chivalrous Frenchmen, who predominated among the onlookers, rending their lungs and flinging dignity to the winds in their frantic endeavours to find adequate methods of expressing their admiration for the daring English girl.

Even when the other competitors started, one by one, in pursuit of her, they were allowed to do so almost unnoticed; but presently the five aeroplanes hung clearly outlined against the sky, and it was realised that the struggle for supremacy had commenced in earnest. Higher and higher they circled, and then the importance of engine-power began to make itself felt. The count's machine was steadily decreasing the distance which separated it from the light monoplane driven by the girl; while, far below, Rodney was as certainly overhauling the other two competitors, both of whom eventually retired from the contest owing to slight mishaps which rendered further effort dangerous. As the ground fell farther and farther away from him, Rodney needed all his iron nerve to persist in his upward flight. For all his skill as an engineer and designer, he knew that inexperience made of him a very mediocre airman, and time and again he only saved himself from the results of errors of judgment by his superb coolness and quick decision. Every curve was an ordeal, every gust of wind a deadly menace. Once his nerve nearly gave way as the machine reeled and staggered out of poise, but with a great effort he controlled himself and called out every reserve of stubborn pluck he possessed to enable him to accomplish the task which he had set for himself and his engine. He refused to think of risks and chances; he ceased to calculate heights and distances; he flooded his mind with the one all-pervading idea that he must go onward and upward—onward and upward—for ever if need be. He would not even glance above to see what had become of the count and the girl. He knew that they were battling for supremacy some hundreds of feet higher, but he also knew that, handled skilfully, his own magnificent engine would enable him to outdistance either, and with that he was content.

But from the ground the multitude of spectators, aided by the cloudless atmosphere, watched the struggle of the two leading competitors with breathless interest. Even when word went round that the previous record had been passed there was but a faint cheer, for almost simultaneously the Austrian, aided by the superior speed of his craft, was seen to have attained the same level as the English girl. Then commenced a Homeric battle between skill and strength. The great biplane, urged resistlessly on by its powerful motor, swept upward in wide circles; but the girl in the smaller monoplane met the challenge of the conquering armada of the air with new and daring tactics. More steeply she tilted her elevating planes; narrower and more precipitous grew her spiral path; she coaxed from her engine—Rodney's engine—its last ounce of power; with feminine sensitiveness she felt and judged the slightest air-currents, making every breeze give of its lifting-power. It was a superb display of aircraft, and for a time at least she held her own in the dizzy struggle.

But the daring of it awed the crowd below, and in place of rapturous cheers the only sounds were choking exclamations of wonder and quick catchings of the breath. They feared for their heroine. Some would have clamoured to her to give up the contest and return to earth. This was not sport, but stern warfare, and it seemed that feminine nerves could not stand the prolonged strain at such a height. They could not see the tightly compressed lips and glittering eyes of the girl; they could not realise that a woman's fighting instinct might equal that of any man.

Neither could the count as he drove remorselessly round in space-devouring circles. When he drew level with the girl he thought the battle was already won, and chuckled triumphantly. He saw the answering tilt of the monoplane, and laughed again at this outburst of womanish effort. As he came round once more in a wide curve he was already calculating how much higher it would be worth while to go beyond the record distance; but his smile became grimmer when he saw the monoplane still level with him. Another circle, with the same result, and he began to feel annoyance.

'*Ach!* she is persistent,' he muttered, and studied her tactics.

He dared not meet her with shorter tacks and a steeper ascent. He acknowledged her superior skill in aircraft. His trust was in his engine, and to that he turned his attention. Before another circle was completed he realised with satisfaction that his pace had increased, and—yes, he was above the monoplane now. It was but a matter of feet, but sufficient to demonstrate to her that she was beaten.

Round again, and his eyes told him that the two airships were once more level, though his reason was prepared to deny it. Twice and three times was this repeated, one circle offering him assurance of victory, and the next withdrawing it. What was the girl made of? Her pluck and skill seemed more than human. It began to shake his nerve. Desperately he ventured on a shorter turn; savagely he tilted his elevating planes to a more acute angle. It was a clumsy effort, and the great biplane staggered ominously, bringing him to his senses with a sudden shock. He realised for the first time

in the flight that his life hung by a thread, and the thought of the enormous height to which he had attained made him dizzy. A fit of air-sickness overwhelmed him, and he almost lost control of his craft. When he regained his equilibrium he saw the girl was once more above him, and this last disappointment seemed to open the floodgates of his fears. Such persistency was like a palpable menace, and his nerves gave way completely. In that moment he surrendered not only his chance of victory, but every vestige of manliness he possessed. His one thought was to regain solid ground as he reversed the elevating planes and stopped his engine; but even so he had not the courage for a swift and spectacular glissade. With trembling hands he steered a wavering course, making irregular circles, crouched low in his seat with bloodshot eyes and quivering lips. Something seemed to have snapped in his brain, and his face was that of a madman. As he swept down he passed Rodney's machine, almost oversetting it with the rush of his passage. The Englishman swore with vigorous brevity, and then, catching sight of the other's face as he flashed by, was startled by the look of something more than fear that he saw imprinted on it.

'That was not all accident,' he thought. 'The brute would not have been sorry if he had broken my neck.'

Then Rodney realised that Miss Belmont had won, unless he chose to pit his engine against her skill, as the Austrian had done. Strained as she must be by the struggle from which she had just emerged, he knew that he could probably defeat her, and for a while he held on grimly, boring his way upward.

Suddenly the cruelty of it dawned on him. He knew that she had set her mind on victory, and he knew, too, that nothing would break her will except physical collapse. He saw himself pushing her heartlessly to her death, for she would only give up the struggle when no longer able to drive her machine. Horror at the thought rushed over him, and without a moment's hesitation he flung back a lever and commenced to descend in the track of the Austrian.

The framework of her machine shut off her view downward, and at first she did not realise that all rivalry was abandoned and that her victory was secure; but presently a wider circling sweep gave her a glimpse of the two aeroplanes sinking earthward, and with a cry of mingled triumph and relief she greeted the knowledge of her success. In the exuberance of the moment she felt capable of any feat, and without a tremor started upon a magnificent series of glissades, sweeping downward at treble the speed of her defeated competitors.

Rodney watched her meteoric flight with nervous admiration. He conjured up a vision of her face as she sat in triumphant command of her bird-like craft, her whole soul in her eyes at such a moment. A rush of tenderness came over him, and he could have withdrawn every boorish criticism he had passed on her determination to fly in public. He called himself insular, brutish, when a roar of shouting from the spell-bound crowd below burst forth. It jarred on him, and his original jealousy of sharing her with the multitude returned. He thought they were applauding her victory, but a different note suddenly struck his ear. He was now barely one hundred feet above the ground, and skimming easily along the boundary of the aerodrome; while about the same height from the ground was the count's machine, moving steadily out toward the centre which the swiftly dropping monoplane would reach a moment later. Every faculty was paralysed with horror. He saw the girl's machine coming down with long gliding leaps, gracefully checking its flight at every hundred yards or so, its driver ignorant of the impending danger. He saw, too, the count's attitude, and understood. The people below probably thought the defeated airman was merely blundering unwittingly into danger; but Rodney saw the Austrian's upturned face, saw how he was checking his speed with careful judgment, and realised that the madman—mad with anger, fear, and disappointment—was guilty of a deliberate act of murderous vengeance at the cost of his own life. In his frenzy he was about to thrust his machine under that of the girl, and drag her with him to a frightful death.

On the impulse of the moment Rodney swung his unwieldly biplane round, putting his engine to the full extent of its tremendous capacity as he did so, and rushed full tilt at the count's machine. A crash, a chorus of agonised shrieks, a mound of débris on the ground—and less than twenty feet away the monoplane gracefully alighting.

. . . . . .

After they had withdrawn Rodney's mangled and scarcely breathing body from the wreckage, and moved the heavy engine which had crushed the life out of the Austrian, they found her unconscious, still in the driving-seat of her monoplane. Unable to realise what had happened, she had sat helplessly watching the salvage until she saw the Englishman placed on a stretcher, and then she had fainted.

Weeks later she saw him again in hospital, crippled, but fighting his way stubbornly back to life and health. She had come to surrender.

'It was all through my obstinacy,' she sobbed. 'How can I ever hope to repair the harm you have suffered?'

'By giving yourself to me,' he suggested, knowing that she was his already.

'But that is not enough,' she protested presently. 'In doing that I am only seeking my

own happiness. Nothing I can do will make up for this;' and she touched his bandages.

'Then give up flying—for my sake,' he asked.

She shuddered. 'I could never fly again after such an experience.'

And so the world lost—or saved—its greatest airwoman.

THE SEA AS A BATTLEFIELD.

By F. G. Aflalo.

OUR association of the sea with the clash of battle goes back to the rout of Xerxes at Salamis; and, after Salamis and Syracuse, the first great sea-fight that can be called decisive, in Creasy's sense, was that fought at Actium, where Antony, despite his numerically stronger fleet, lost the day through his infatuation for Cleopatra, who fled with sixty ships, only to be followed by her bemused admirer.

Perhaps, however, the first momentous battle on the water on comparatively modern lines was that of Lepanto, in which Don John of Austria broke the Moslem power; a day when, as Motley has it, 'personal audacity, not skilful tactics, was demanded, and the imperial bastard showed the metal he was made off. Every bullet of the Christians told on muslin turbans and embroidered tunics, while the arrows of the Moslems fell harmless on the casques and corslets of their foes.'

It is improbable that anterior to that period special vessels had been fitted out for fighting purposes. At Sluys, for instance, the ships which Philip fastened together to form a floating pier would, we may assume, have carried passengers or merchandise as occasion might require. The *Great Harry* and *Santissima Trinidad* stand in the Middle Ages for the English and Spanish ideals of fighting-ships, massive enough to resist all manner of attack in an age that knew not torpedoes.

As a theatre of duels between hostile nations, the sea has advantages over the land which it would be difficult to exaggerate. Issues fought out on the water avoid many of the worst consequences of war on land: the sufferings of non-combatants, outrage of women, burning of farms, ravage, rapine, loot—in short, all the excesses of an invading host and the reprisals of the defenders. Even in England, where no battle has been fought since Sedgemoor, and where no invader has set foot since the abortive descent on Fishguard more than a century ago, we are not blind to the charm of perspective in our campaigns. In continental Europe the horrors of war are much more present in men's mind, since its awful signmark is indelibly written even to-day on many a fair landscape and plainly graven on the memories of living men and women.

There is about the story of sea-fights, as described by writers of every land, from Æschylus to Southey, the peculiar glamour of old history which we seek in vain in the chronicle of land campaigns. Specialists like James and Mahan may no doubt draw useful lessons in tactics from those old engagements, but to the lay understanding the conditions of Trafalgar can never recur with modern artillery. The long-range duels of to-day between vessels, each representing a million of taxation, miles apart, must of necessity lack the hot romance of the old-time hand-to-hand affairs with cutlass and boarding-irons. No doubt something of the same change has come over the spirit of military warfare; yet neither heavy cannon nor light field-guns seem wholly to have superseded the brilliant cavalry charges with the 'white arm' or the dogged stand made by the thin red line or glittering square, which have always lent so much colour to the fierce clash of elemental passions. Only one master of war, the greatest, indeed, in all history, was always worsted on the sea, trusting to his admirals while he was busy elsewhere. Had the splendid genius of Napoleon Bonaparte been trained in a battleship the last hundred years of English history might have been very different.

SOFT WIND.

Soft wind that lifts, so fine and fair,
The radiant ripples of her hair,
That archly plays at hide-and-seek
With the rare dimples on her cheek,
And with audacious daring slips
So freely o'er her scarlet lips.

Ah that my eager, yearning hands
Might wander 'mong those golden strands!
I—loitering, happy wind, with thee
Where those bewitching dimples be—
Would claim thy privilege of bliss,
And snatch one rare, elusive kiss.

Soft wind, soft wind, I pray thee, sweet,
My lady's tender grace entreat;
Tell her when she withdraws her eyes
The sun is blotted from the skies,
And the sole light mine eyes behold
Is dim reflex of glimmered gold.

Take my soul's lute, and win from it
Such music low and exquisite
That all her slumbering soul may stir
And every pulse throb fast of her,
So her fair hands the bars remove
That hold me far from her and love.

THE BROWN RAT AND ITS DESTRUCTION.

OF late this destructive rodent has loomed largely in the public eye as a plague disseminator. The Local Government Board and the Board of Agriculture have formulated schemes and issued leaflets dealing with the ubiquitous plunderer, and it is hoped that local authorities and others will take steps to exterminate or greatly reduce the number of such pests. What is imperatively needed is joint action on the part of our citizens, proprietors, and farmers. Local authorities should see that slaughter-houses, granaries, &c. are kept clear of them as much as possible; a clause should be inserted in every tenant's lease binding him to keep his holding clear of rats, and every gamekeeper should be given to understand that the presence of many rats on his beat would be regarded as evidence of incompetency. Substantial reward should be paid for rat tails, not only to keepers, but also to farmhands; and each individual should be allowed to choose his own means of destruction, so long as poison is used only under well-defined conditions. The proprietor or tenant who allows subordinates to fail in their duty should be liable to prosecution, for if the rodents are allowed to multiply in one place, it becomes impossible to keep the surrounding areas quite clear.

When we consider the great destruction of eggs and young birds by rats during the nesting-season, it is astonishing to find that the main body of proprietors can scarcely be prevailed upon to declare a methodical war against the audacious freebooters. Vermin-money is cheerfully offered for the repression of weasels, cats, crows, falcons, ravens, and squirrels, but the estates are few indeed where any bounty is given for rat tails. Farmers are equally tolerant of rats, and they have had a bad time of it as a result of the general apathy and indifference.

In addition to the destruction of food-stuffs, &c., in our towns, it would be difficult to overestimate the enormous quantities of farm produce and the vast number of eggs and fowls which annually go to maintain the myriads of rats which infest farm-steadings and country lanes and hedges. An authority on the subject says: 'If we estimate that there is one rat for every human being in these islands, or less than one rat for every acre of ground, the number would be at least forty millions. It has been calculated that a rat does at least seven shillings and sixpence worth of damage during a year; and if this be true, the annual bill against these rodents in great Britain and Ireland exceeds ten million pounds.' In France rats and mice are estimated to be responsible for damage to the amount of over eight million pounds per year. A single rat will eat two ounces of corn a day, but destroys and spoils more than it eats. The greatest indictment against the animal, however, is that it is one of the most dangerous mediums for the dissemination of disease, due to the parasite with which its fur is thickly infested.

As regards the effects of the crusade against the brown rat, it may be mentioned that at a recent meeting of agriculturists and others comprising the East Lothian Farm Pests Committee, the chairman intimated that nine thousand four hundred and eighty-six rats had been killed in four months by means of dogs, traps, ferrets, &c., excluding those accounted for by virus. At a meeting the other week of the Rat Extermination Committee of a rural district council in Essex the chairman estimated that two hundred and fifty thousand rats had been destroyed since the campaign began against these pests. Taking the average cost at a penny per week for the keep of a rat, this worked out, he said, so far as the damage done by these rodents was concerned, at a saving of something like one thousand pounds per week. The question of exterminating the rat from the Isle of Man has also been discussed in the House of Keys.

The brown rat (*Mus decumanus*) seems to have come originally from Western China, having been conveyed to this country in ships about the middle of the eighteenth century. At the same time large numbers crossed the Volga and entered Russia. Prior to the immigration of the brown rat, the black rat was very common throughout the land, having travelled and been carried over England and the Continent before the thirteenth century. The brown rat has been successful to a large extent in exterminating its weaker ally. Its power of reproduction is extraordinary; several litters are produced annually, each containing from ten to fourteen young, which become capable of breeding when about three months old. If three litters of ten each are produced every year, a single pair, if permitted to breed unchecked, and no losses from death were experienced, would in three years have a

[*All Rights Reserved.*]

progeny of ten generations, numbering twenty million one hundred and fifty-five thousand three hundred and ninety-two. When pressed by hunger they perform extensive migrations, which take place at night, and it is dangerous to encounter a swarm of them. They lead their blind by means of a straw or twig held between two other rats.

The various methods employed for the destruction of rats may be divided into three heads; first, by the aid of trained dogs and ferrets; second, by traps; and third, by poison. In 'running' a ditch or drain with a few good terriers, it is absolutely necessary that they work quietly and, as nearly as possible, together, each taking one side of the ditch, so that if one dog disturbs a rat and it takes to the water, the other can secure it before it escapes into one of the many holes that line the banks. Failing a ditch or drain, barns, stables, and other places where ground food is plentiful are good spots for the dogs. When ferrets are employed the rat-holes must be carefully located; and it is wise to place a dog at each end of the holes, and to watch that the ferret does not get away by some other exit. In hunting houses for rats, ferrets are necessary, and there must be a good supply, for they will soon tire on account of the many fights they will probably have. It is a good plan to renew the supply of ferrets directly they begin to show signs of fatigue.

The following is a good method for getting rid of rats in the ground-floor of a barn. It is necessary that there should be two or three men, each with a good stick, a dog or two if possible, and a bucket or two of limewash. Plug up some of the holes, and station a man at each hole that is, or appears to be, mostly used by the rats. Pour the limewash down the hole, and keep a sharp lookout for the pests. The rats are washed out by the lime-water, which gets into their eyes, and the first thing they do on coming out of the hole is to sit up and try to get it out. Then is the time to kill them.

When traps are employed against rats, the vermin must first be fed before you start to catch them; steel traps with four-inch jaws are the best to employ, although they may be supplemented by others to advantage. They must be quick to act, and not liable to stick, as the rat is a very light-footed creature at times. By feeding them at first you learn how numerous they are, and draw other rats which may not have come hitherto to the same feeding-place. It is essential that the traps should be set and covered properly, so the places chosen for them must be such as admit of easy and correct setting. When the traps are set, place a small heap of grain above the flap or tongue of the trap, with a few grains leading over the jaws and plate towards it. In this way the rats will be caught across the body and killed at once, without seriously alarming the others. It is also advisable to lure the rats for many yards to the traps with grain placed in quite thin lines about six inches apart. It is sometimes more advantageous to employ wire-cage traps indoors where steel traps cannot be used. It is necessary to put them down set, but tied up, for a few days, and to place food well round about them, so that the rodents may become accustomed to running over them before they are prepared for the actual catching.

The use of poison can never be confidently recommended, and great caution must be exercised in laying down any kind of virus. Poultry, dogs, and cats suffer frequently from poison put down for rats in an indiscreet manner. As in the case of traps, rats show considerable intelligence in avoiding poisoned foods, and they must first be fed for several days with food to which no poison has been added. Among the poisons, plaster of Paris mixed with meal is one of the most effective. The rat viruses, the Danysz and the Liverpool, now so largely and worthily advocated, are also very successful, but their employment must be wholesale and cover large areas. A new rat and rabbit exterminator is being tested in India and Australia. It consists of an outer and inner metal shell, like a small egg within a larger one. In the outer shell is sulphuric acid, while in the inner one is dry cyanide of potash. The outer shell is filled with the acid and placed in the rat-hole or burrow, and all rat-holes are tightly sealed. After an hour or so the acid eats into the cyanide, and sets free a lot of most deadly prussic-acid gas.

Another excellent method of getting rid of rats is by using an 'asphyxiator' which is made by Messrs J. Watts & Co. of Bristol. The machine may be used in any wall and bank with great success. A good plan is to blow in a quantity of smoke before closing the holes, so as to get the rats to bolt. Old manure-sacks, freely sprinkled with coal-tar or sulphur, make a perfect smoke, and the sacks should be cut into small pieces before the tar is used. Those who have tried this contrivance say the rats disappear in a marvellous way.

The presence of a few cats about farm and other buildings exercises a strong protective influence against invasion by rats and mice.

There can be little doubt that the increase of these pests is due, to a large extent, to the ruthless destruction of their natural enemies. The kestrel, owl, stoat, and weasel annually destroy a considerable number of rats; but owing to the prejudice that exists with reference to them among gamekeepers, they are killed in large numbers. It is very difficult to convince these men that owls are practically harmless to game, and that the rat does far more harm than kestrels, stoats, and weasels. In France and Germany these natural enemies of the rat are much more highly valued, and consequently protected, much to the advantage of the agriculturist and game-preserver.

THE LUCK OF THE ST AUBYNS.

CHAPTER II.—THE INEVITABLE CALL.

DOUBTLESS it was one of Destiny's little ironies that while the battle-smoke was still hanging over Minden my Lord Thanet lay dying in his great house in St James's Square. In all the sixty-three years of his life there was no prospect that he had ever faced with less zest.

The world had many names for William Nassau, first Marquis of Thanet, and the best of them would have invited a sword-thrust from anybody indifferently honest. His public record may be summed up in the fact that without ostensible service to king or State he had climbed three steps in the peerage. For his private record, is it not set down in its naked blackness in the pages of Horace Walpole? Enough that there was none worse in a bad age. But the day comes when the luckiest gamester must throw a losing cast; and now that it had come to Lord Thanet, whom no man and few women (and these to their sorrow) had ever loved, it found him filled with a wild, unreasoning anger against the inevitable. He had been false to friends and implacable in enmity; he had broken his wife's heart, and driven his son from his doors; he had plumbed the depths of evil; and if he railed at fate, it was neither fear nor remorse—still less was it the desire of repentance—that impelled him. It was merely because his prime object in life, for which he had sacrificed reputation and honour, must needs remain unaccomplished.

The minutes ran on to noon. In the silent room, the doctor and lawyer were awaiting the lord with the half-veiled impatience of busy men whose interest is entirely professional. The only other watcher by the deathbed was my lord's valet.

Sir Hugh glanced at his patient. 'He is dying hard,' he remarked in a low tone.

'As he has lived.'

'It does not often follow, sir,' replied the doctor dryly.

There was another pause.

'How long, Sir Hugh?' asked the lawyer at last.

'Two hours at the most,' said Sir Hugh Biddulph with the precision expected of the king's physician. 'No, he cannot conceivably last longer, and it may be less. When it reaches the heart'——

A weak voice from the bed startled them both.

'Lies!—all lies, Biddulph! I'll wager you a hundred guineas against your fees that I see the night through—unless you poison me! Come, do you take me?'

'Done, my lord!'

For Sir Hugh, good man, was never averse to a modest bet, especially when he was sure of his ground.

'Montgomery!' Then, as the valet stepped noiselessly to the bedside, 'Not you, Roberts. Where the devil is Montgomery? Oh, I forgot! In Germany, looking for that young fool St Aubyn, is he? Well, book the wager, Roberts, and pray do not forget it if I win. Sir Hugh will attend to it otherwise.'

The man bowed.

'And, Roberts!'

'My lord?'

'Bring me a bottle of the '39 port—now, at once!'

Here the doctor tried to interpose. 'Let me beg of your lordship!' he expostulated. 'It will kill you, on my honour; it is sheer madness!'

'All the better for you, Biddulph,' his lordship retorted, with his wicked smile.—'You heard me, Roberts?'

Roberts bowed again, and went off incontinently on his errand. My Lord Thanet, well or ill, was not in the habit of repeating a command. The doctor, shrugging his shoulders, prepared to leave.

'I can be of no use here as things are,' he said in his most stately manner. 'With your lordship's permission, I will return in an hour or two. It will be over before then, thank Heaven!' he added under his breath as he passed the lawyer.

'Fool!' commented his lordship, with a lurid adjective.

No more was said until the wine had appeared and he had taken a generous draught. It brought a tinge of colour into the sunken cheeks and a flash of the old keenness into his eyes. Then, bidding Roberts give the lawyer a glass, he motioned him to draw closer.

'Is it not worth a slice of one's life—or what remains of it, Headlam?' he asked. 'At the least, it has rid us of Biddulph. And I wanted to speak with you alone, as long as I have breath.' Abruptly, 'Is there any news from Germany yet?'

The lawyer—he was a youngish, pleasant-featured man, whose father and grandfather before him had advised the house of St Aubyn—seemed a little surprised by the question. Hitherto the marquis had never inquired for his son even directly, although he was aware that Headlam, in the first stages of his seizure, had assumed the responsibility of sending his confidential servant to bring the heir home from Germany.

'None, my lord,' he replied. 'It is only six

days since Montgomery left; and, at the best, I fear we can scarcely expect Lord St Aubyn for another week. There is some word, too, of an expected battle.'

'A battle! Well?'

'In that case, his lordship might consider it his duty to stay with the army.'

'And, in any case, he will be too late for the paternal blessing, eh?' said the marquis, grinning. 'But if he has any filial love he can finish his father's life-work. Tell him that, Headlam—to clear out these d——d Heathcotes neck and crop, and leave them not a stone or an inch of ground. Gad! I wish I could do it myself! And, by the way, when does the mortgage fall in?'

'The money is due on September 15th, my lord.'

'So soon? 'Tis a cursed fate to miss it after all! But you must foreclose at once, and make an end of them for good. After fifty years! If I thought that son of mine would refuse—— But, pshaw! curses are out of fashion. The bargain is a good one, and that will be enough for St Aubyn.' He lay quiet for a while, thinking hard. Then, 'Have you heard anything of Gilbert Heathcote of late, Headlam?' he demanded.

'Nothing whatever,' said the lawyer. 'Neither has Mr Crooks. I met him the other day, and he had not heard of Sir Gilbert these six months past. He was in Paris then.'

A gleam of excitement came into Thanet's eyes. 'Six months!' he repeated. 'Then he must be dead; there is not a doubt of it, I tell you! How we have fought and schemed for that fortune of old Sir Simon's! But I'll back the luck of the St Aubyns. Perhaps, after all, it is mine now—forty thousand a year! Think what one could have done with forty thousand every year, Headlam! And now'——

He closed his eyes and lay back. Headlam watched him curiously, wondering what thoughts or recollections were his at that moment while the sands of his evil life were running out. In all likelihood they were not for edification.

It was nigh upon an hour before he spoke again.

'Still there, Headlam? Surely it is growing dark! Pray bid my man draw the curtains. I want to sleep.'

'Your lordship has no other commands for Lord St Aubyn?' asked the lawyer, rising.

'Let him seek out and exterminate the Heathcotes, show them no mercy, end the feud for ever. These are my last words to him! If he is a St Aubyn and a son of mine he will obey them. I think that is all, Headlam.'

There was one thing more, but it was with some natural diffidence and little expectation of success that Headlam ventured to suggest it.

'You will pardon me, but would your lordship not like to see anybody else—your cousin the Dean'——

The marquis broke into a cackle of laughter. 'People say I have every vice save one,' he returned. 'And, even to please you, I have no mind to die a hypocrite.'

He lived for more than six hours longer. To be exact, the clocks were striking seven that summer evening—the evening of August 1, and of the battle of Minden—when he died. Sir Hugh had won his wager, but the patient had falsified his prediction.

. . . . . .

The cavalier lay in one of the two little rooms of the mud hut which St Aubyn shared with half-a-dozen fellow-officers. The surgeon's examination had banished hope; the end was a matter of hours; and all that could be done was to make his passing easier. St Aubyn sat by the pallet through the long night, dozing sometimes, and again waking into watchfulness. So hour after hour sped, and still the wounded man remained insensible.

At last, in the early hours of daylight, the tired-out aide-de-camp fell fast asleep in his chair. When he awoke it was to find his guest conscious, and regarding him with an intent, rather puzzled look. Catching his eye, he smiled in greeting.

'I have it now!' he said. 'I was wondering where I had seen you before; and, faith! I have seen you twice. Once was in the charge, and once after you picked me up on the field; though why you did so much for a stranger,' he added, 'is, frankly, more than I can guess.'

'Frankly, you must thank your cane for my interest in you,' said St Aubyn. 'I am only sorry it is so little one can do, sir.'

The cavalier glanced up quickly. 'The surgeon has been here, then?' he inquired.

St Aubyn nodded gravely.

'My case was hopeless from the beginning—so much I knew. But, if I may, I should be glad to hear how long he gives me?'

'Not more than a few hours, I fear.'

'Well, it will serve. A soldier should always be ready for his call, and an oldster like me has no right to repine even when the call is unwelcome.' Breaking off, he stretched out a weak hand. 'But I am forgetting myself, sir. Your kindness taxes gratitude, and I do not even know whom I have to thank.'

'Let me introduce myself,' said the aide, bending down to take the proffered hand. 'I am George St Aubyn, at your service—more commonly called Lord St Aubyn.'

'Lord St Aubyn!' The cavalier's expression underwent an instant and surprising change, and there was quite another (and a less pleasing) tone in his voice as he asked, 'The son of my Lord Thanet, if I am not mistaken?'

Now it was no new experience for St Aubyn to feel a certain constraint when his father's name cropped up, and it cannot be said that he

had succeeded in accustoming himself to the discomfort. Sensitive to a degree, he was quick to notice the cavalier's perturbation. Insensibly his own manner stiffened.

'The same, sir,' he replied rather curtly.

The other muttered something under his breath. 'Here's a pretty coil, egad!' he added audibly.

'If you have my father's acquaintance, sir'——

'His acquaintance? Oh, I have known him —in past years. A very old acquaintance, if you like it so.'

His tone did not encourage St Aubyn to pursue the matter further, and for a time they fell upon silence. The cavalier, on his part, seemed to be thinking out some weighty problem. Plainly the revelation of his host's identity had summoned up ideas not altogether to his taste, and he did not seek to hide his concern. Presently, however, a humorous smile showed itself on his expressive countenance.

'On my life, sir, Fate plays us odd tricks now and then!' he cried.

St Aubyn looked at him interrogatively.

'Oh, there is no use ripping up old stories,' he went on. 'Yet that I should owe so much to the son of my Lord Thanet—faith! 'tis a strange thought for a dying man. You will forgive me, my lord, and believe that I am not ungrateful for all your kindness?'

'I hope your sense of obligation is not too great,' said St Aubyn. 'It has been a pleasure to me, and if I can serve you further—if I can send a message to your friends, or do anything more—pray command me.'
